
Close-up of typical suspended-type Cubi-Trac showing Channel, Curve, Carriers and Ceiling Hanger Assembly consisting of (top to bottom): threaded Ceiling Flange, threaded Suspension Tube (15/16″ O.D.) and Track Socket.

Recommended spacing of Ceiling Hanger Asembly: every six feet.

ECONOMICALLY PRICED • REMARKABLY QUIET AND SMOOTH

Suggested Fastening Methods for Various Types of Ceilings
(For Ceiling and Suspended CUBI-TRAC Installations)

TYPE OF CEILING	FASTENER
Plaster over Wooden Lath	**Toggle Bolts**
Plaster over Metal Lath	**Toggle Bolts**
Plaster or Block over Furring Strips	**Toggle Bolts**
Acoustical Tile	**Toggle Bolts**
Concrete	**Lag Bolts, Lag Shields, Wall Plugs, Masonry Screws, or Anchor Plugs***

Toggle Bolts should always be used to fasten track for recessing in a plaster ceiling or other types of recessed ceilings, unless special provisions have been made for fastening.

Where a drop or non-weight-bearing ceiling is involved, metal or wooden furring should be installed first. This furring is attached to the overhead stringers or beams which are usually 4′ to 6′ apart; then the track should be attached to the furring. This is applicable to both ceiling and suspended type installations.

*Anchor Plugs are recommended **only** for ceiling-type installations and **should not** be used on suspended-type installations.

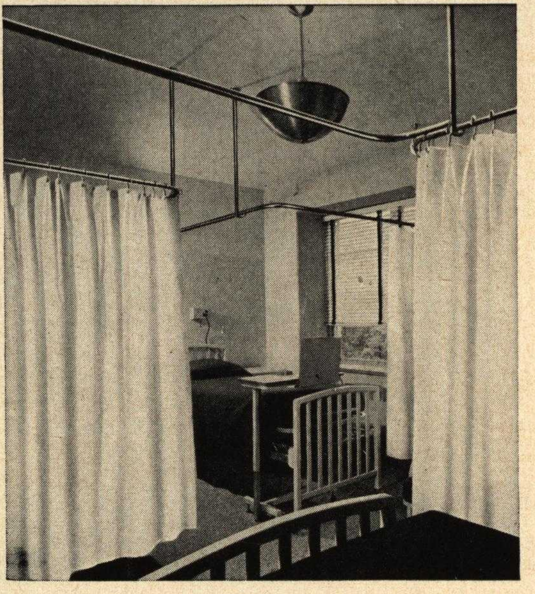
BELTOR

BEDSIDE CURTAIN CUBICLES

BELTOR MANUFACTURING CORPORATION
P. O. BOX 58   MARLTON, NEW JERSEY

beltor *bedside* curtain cubicles



description

The improved line of BELTOR bedside curtain cubicles are accepted and approved by leading architects and hospital and institutional staffs throughout the country. Years of experience and thousands of "field-tested" installations assure the highest degree of quality in all BELTOR materials and services.

BELTOR's complete line includes all types of cubicle construction easily adaptable to any installation requirement. Quick easy conversion of multiple-unit (semi-private or ward type) accommodations to comfortable private rooms is accomplished quietly and smoothly without the use of bulky, unsightly screens. When closed, the curtains completely enclose the bed area. But when open they provide complete vision of the entire room. Circulation of air and light is thorough and uninterrupted.

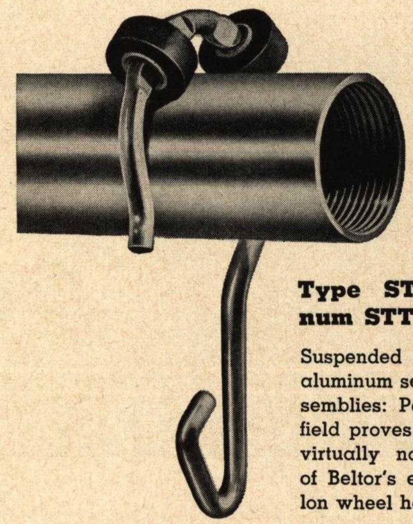
advantages

"Beltor Cubicles are of sturdy construction to give years of faultless service whether your choice is our quality chrome plated brass or our aluminum type with alumilite finish, you can be sure of extra quality. No special maintenance is required. All BELTOR Cubicles are custom fabricated ready to be installed. This service is at no extra cost, yet allows your staff to easily install the Beltor Cubicles."

scale: full size

SUSPENDED

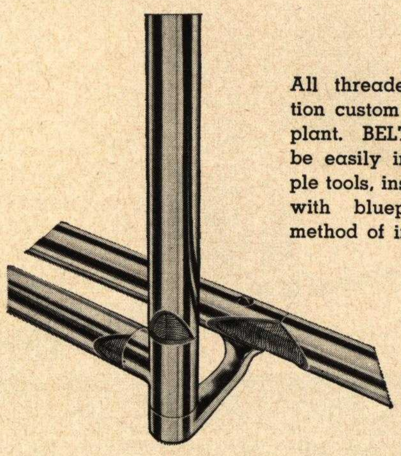
seamless



Type STTA — Aluminum STTB — Brass

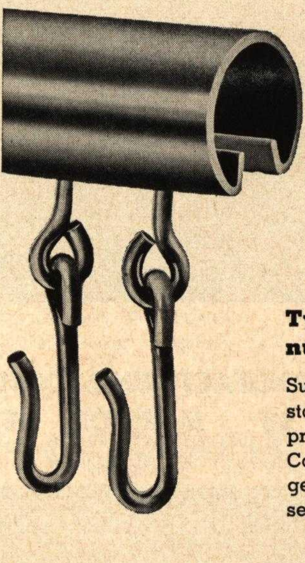
Suspended Beltor brass or aluminum seamless tubing assemblies: Performance in the field proves the long life and virtually noiseless operation of Beltor's exclusive twin nylon wheel hooks.

assembly detail



All threaded type construction custom fabricated at our plant. BELTOR Cubicles can be easily installed with simple tools, instructions supplied with blueprint for proven method of installation.

channeled

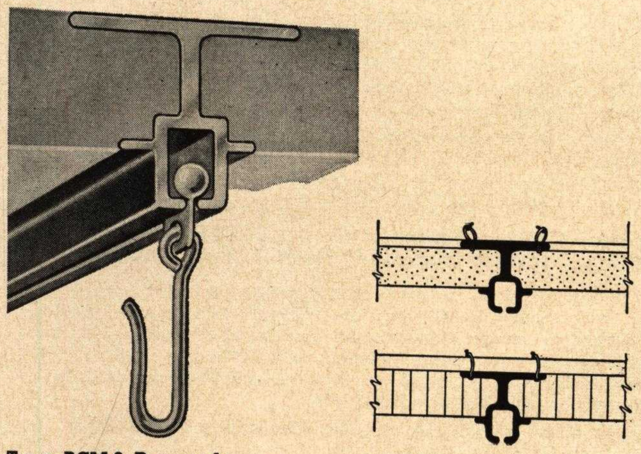


Type CTTA — Aluminum CTTB — Brass

Suspended channel-type installations feature the improved Beltor brass-cup hook. Can't jam, can't pull out, can't get lost, tested for years of service.

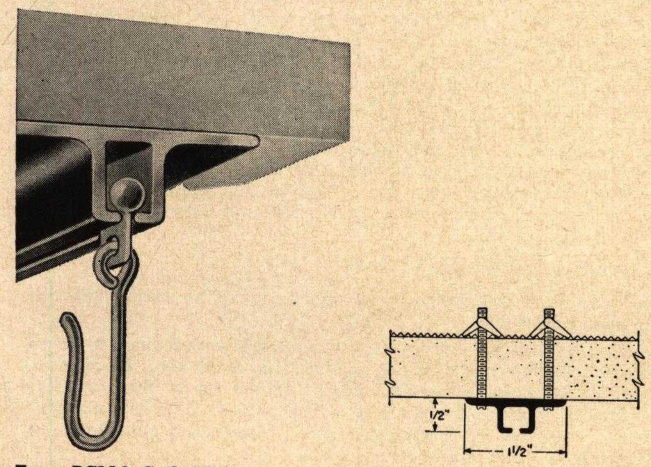
CEILING MOUNTED

concealed



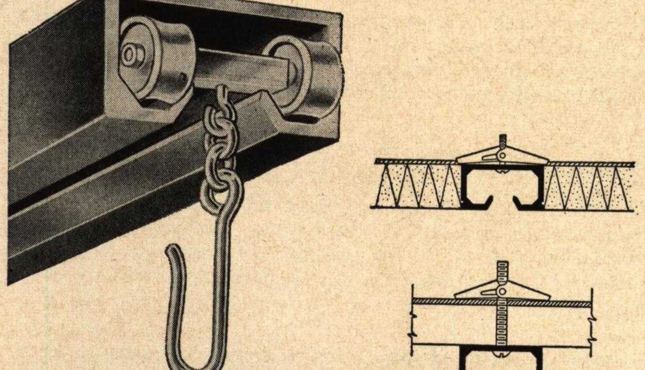
Type BCM-2 Recessed

surface mounted



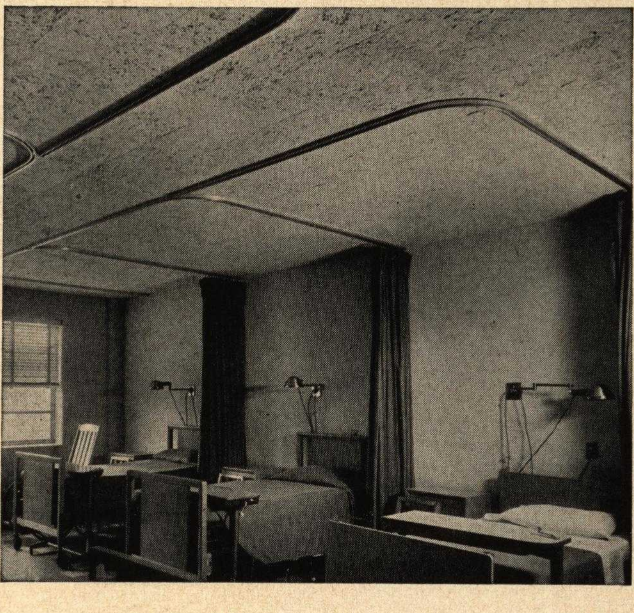
Type BCM-1 Ceil. Mtd.

concealed or surface



BSR-1 Ceil. Mtd.
BSR-2 Recessed

Nylon wheels on metal axle affords greatest durability and trouble-free operation.



features

Beltor's bedside curtain cubicles are truly overhead magic, improving patient morale in both emergency and convalescence. Notice how the curtains surround each bed, provide complete enclosure without the use of old-fashioned screens. Note, too, how the curtains may be drawn back against the wall to allow complete vision of the entire room. Beltor cubicles are engineered to fit in with the most exacting hygienic standards.

The finest engineering interpretations to meet the requirements of the architect, contractor, and management staff go into every Beltor installation. Experience, based on the accumulated and specialized "know how" of thousands of curtain cubicle assemblies, is an important part of Beltor service. Experience plus our pre-fitting method of production enables Beltor to make installations with surprising speed and unerring accuracy working hand-in-hand with your building or modernization program.

permanently rigid—Beltor installations not only look good in their streamlined beauty, they are engineered to substantial standards of quality, your assurance of complete satisfaction, a permanent investment free from maintenance.

brass or aluminum—Seamless Tubing assemblies are constructed of one-inch new hard-drawn chromium plated brass with brass and bronze fittings or alumalite-finish aluminum with aluminum fittings. All joints are threaded, precision-fitted and connected with concealed screw bushings with no open joints to interrupt the glide of the Beltor hoods. The CHANNEL TUBING assemblies feature sturdy extra long socket-type connections on the main track. The ceiling hangers are threaded and precision-fitted.

fade-proof curtains—Beltor curtains are made of top-quality materials including shadow-proof tub-fast Sanforized Jean Cloth, sturdily woven of tightly spun combed yarns. White or pastel colors, vat-dyed for permanency for new installation or replacements for your present equipment. Firmly anchored rust-proof grommets.

SPECIFICATIONS

Seamless Tube Track Suspended Type STTA, aluminum; STTB, brass

Material: To be extruded aluminum tubing 1" O.D. x .065. Type 61S-T6 aluminum alloy internally threaded at both ends. Corner bends to be formed of the same material as track and is to be bent on 6" radius to 90°. Curtain track to be suspended from ceiling, material same as track threaded internally on both ends to accommodate track suspension bracket.

Arm supporting track to be drop forged, and so designed as to allow free movement of the curtain hook. End entering suspension tube to be threaded to insure rigidity.

Joining corner bend and curtain track to be made by means of concealed tubular brass screw connectors and all connections to be fitted to hairline precision. At wall and ceiling flanges, tube shall be secured by means of oval head P.K. screws.

All fittings to be drop forged or cast aluminum and accurately machined.

Finish: Track and fitting to have high polish finish over which is to be an anodized coating consisting of a treatment by an electrochemical process so as to obtain a dense adherent coating of aluminum oxide.

Curtain hook to be of 7 gauge hard aluminum wire designed to pass suspension bracket and equipped with two noiseless nylon rollers.

Cubicle shall be installed in such a manner as to completely screen each bed separately. The assembly of each unit shall be such that no straight track shall terminate at point of the radius of the corner bend. A second bend is to be used to carry the curtain the minimum of 12" past the straight run of the rack to eliminate gaps.

The installation shall be made in the best possible manner providing a neat absolutely rigid cubicle.

Channeled Tube Track Suspended Type CTTA, aluminum; CTTB, brass

Material: To be extruded aluminum tubing 1" O.D. x .065, type 61S-T6 aluminum alloy. Straight track and corner bend to be 1" O.D. x .065 aluminum alloy with lips internally concealed. Corner bend to be on an 8" radius to 90° with ends extending 4" beyond spring line. Curtain at both ends to accommodate track suspension bracket.

Supporting curtain track to be threaded and to connect with suspension tube. Corner bend and straight track to be joined by 7" long concealed connector formed to fit accurately. At wall and ceiling flanges, track shall be secured by means of oval head P.K. screws. Fittings to be drop forged or cast aluminum and accurately machined.

Curtain hooks to be of the non-removable type and constructed of .125" aluminum wire of two interlocking, closed loops, with internal sliding cup to insure noiseless, flexible, and efficient operation.

Finish: Same as above.

Beltor Square Recessed Track (BSR Series) BSR-1, ceiling mounted; BSR-2, recessed

Material: Track to be extruded aluminum 1⅜" x 11/16" x 1/16" forming double raceways to accommodate carriers. Internal corners of track to be reinforced full length. Units to be fabricated in one continuous length with 12" radius at bend assuring maximum efficiency of carriers.

Carriers: To be constructed of twin nylon wheels on metal axle supporting interlocking closed loops with .125" aluminum wire hook.

Finish: Track to have polish finish and to be anodized.

Beltor Ceiling Mounted Series (BCM Series) BCM-1, ceiling mounted; BCM-2, recessed

Material: Track to be architecturally extruded aluminum 1½" x ¾" with opening to accommodate nylon slider. Lips to be smoothly polished to secure uninterrupted movement of carriers. Units to be formed in one continuous length with 12" radius at bend to 90°. The wing design to enable track to be either surface mounted or recessed in masonry or acoustic tile.

Finish: Track to have high polish finish and to be anodized.

"Jean" cloth curtains

Curtain material shall be selected closely woven Jean cloth .285 in weight with a count of not less than 160 threads (96 warp threads, and 64 filler threads) per inch of quality. Curtain cloth shall be sun proof, shadow proof, tubfast, and shall be sanforized and mercerized. Material to be vat dyed, only identhrene dyes shall be used, the color shall be standard as selected. Curtains shall have top hem 1½" wide, of triple thickness of material through which special rustproof white metal grommets are to be machined every 6". Bottom hem to be 1¼" wide. Seams to be sewn with two needles interlocking, preventing raveling. Curtains shall be at least 10% wider than length of track upon which they are used, for ample fullness to insure closing all gaps. Each curtain shall extend to not more than 15" from finished floor. On the top hem of each curtain shall be sewn a label to denote the size of the curtain.

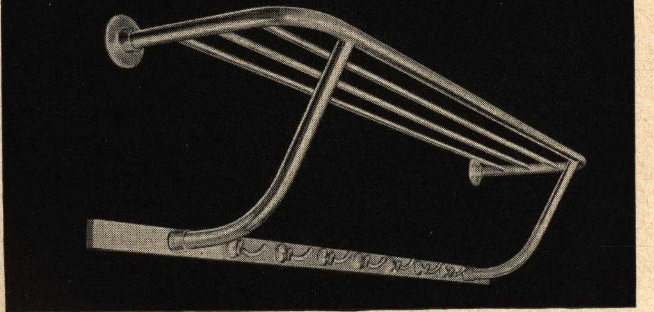
Curtains for Ceiling Track

Curtains shall follow the same specifications as above with the following added:

The top part of the curtain shall consist of a nylon mesh to afford ventilation when curtains are drawn. The mesh shall be approximately 22" wide and shall be sewn to the top of the screening curtain by two needle stitching, edges turned. Top hem of nylon to be reinforced by double thickness of screening cloth to allow machining of rust-proof grommets every 6".

---

coat and hat rack and shelf



Made of aluminum alloy tubular sections, custom fabricated to your requirements. Shipped complete ready to install. Available in double shelf models also. Used in various hospitals, schools, hotels and other related applications. All parts alumilited for lasting beauty and neat appearance.

specification

Material to be of 1" O.D. aluminum tubing for supporting and main sections, and ½" O.D. tubing for the inside connection, forming the shelf areas. All parts to be connected by concealed bushings. Larger sizes to have intermediate supports for greater strength.

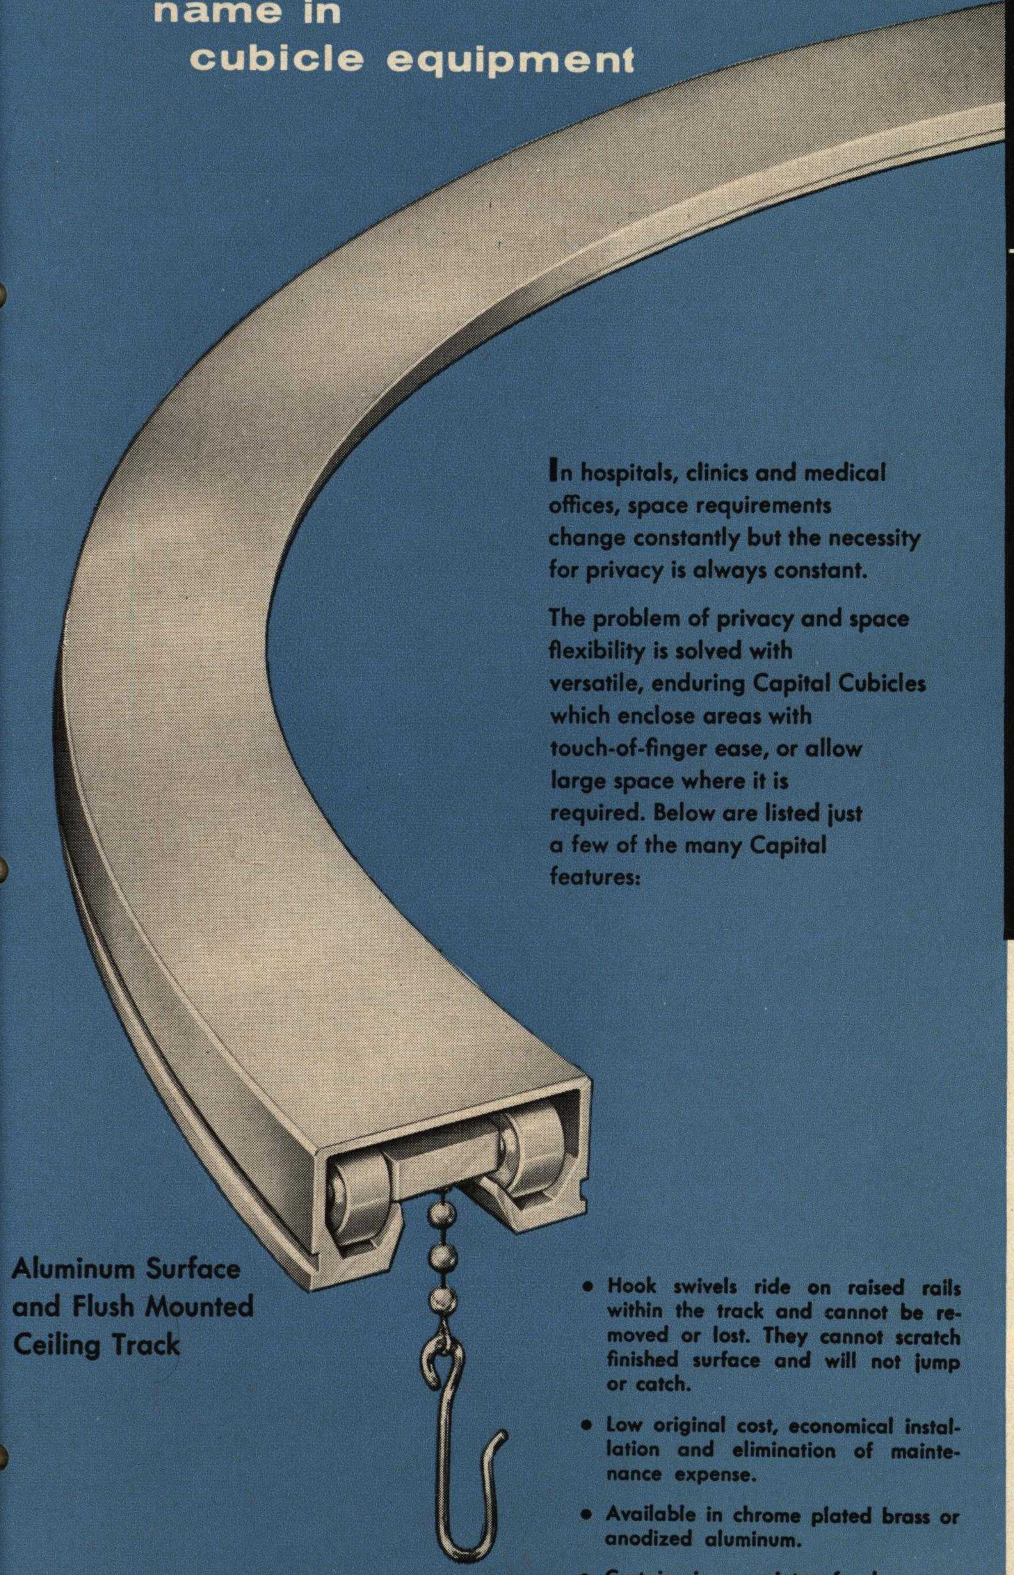
CAPITAL

america's foremost name in cubicle equipment

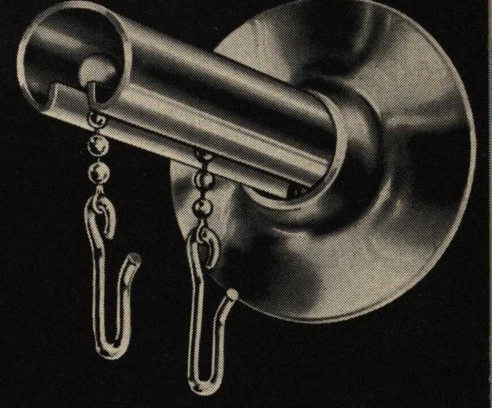


Aluminum Surface and Flush Mounted Ceiling Track

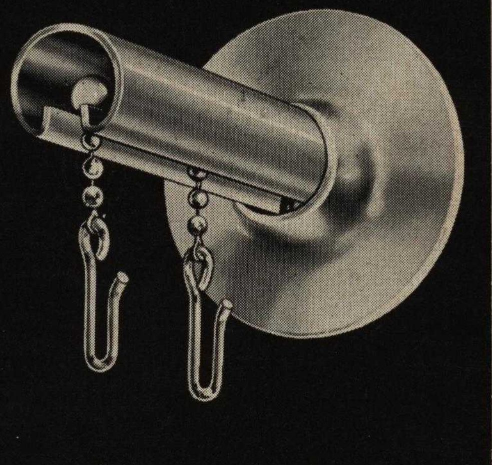
In hospitals, clinics and medical offices, space requirements change constantly but the necessity for privacy is always constant.

The problem of privacy and space flexibility is solved with versatile, enduring Capital Cubicles which enclose areas with touch-of-finger ease, or allow large space where it is required. Below are listed just a few of the many Capital features:

- Hook swivels ride on raised rails within the track and cannot be removed or lost. They cannot scratch finished surface and will not jump or catch.
- Low original cost, economical installation and elimination of maintenance expense.
- Available in chrome plated brass or anodized aluminum.
- Curtains in a variety of colors.



Brass, Chrome Plated, Suspended Trac



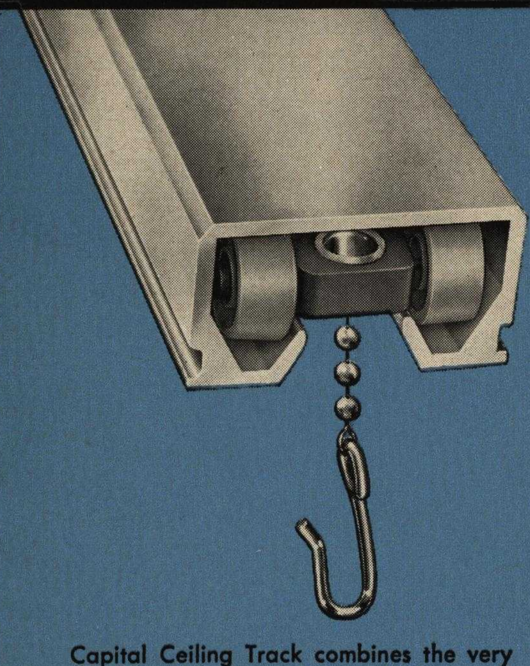
Aluminum Suspended Track

CAPITAL CUBICLE CO., INC.

213—25th STREET
BROOKLYN 32, N.Y.
Tel: SOuth 8-1020

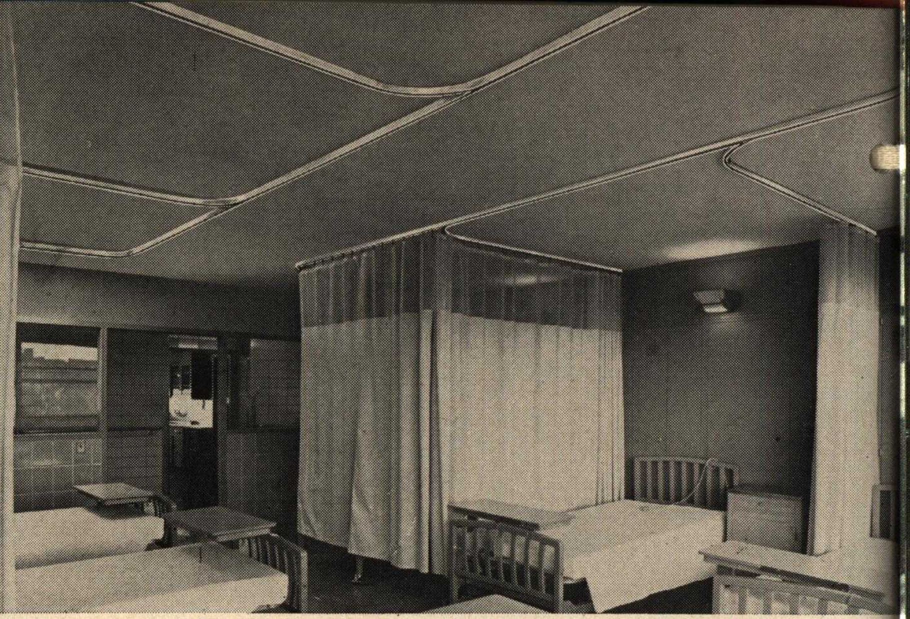
CAPITAL CUBICLE

ceiling track



Capital Ceiling Track combines the very best features of ceiling cubicle equipment with a design especially developed for ease of installation. It is particularly suitable for new building construction with low type ceilings. In design, appearance and high standard of performance it meets or exceeds the most rigid requirements.

1. May be employed with plaster, acoustic or any other type of ceiling material.
2. Track is extruded aluminum 1⅜" x ¾" with extruded sleeve type connectors.
3. Line type groove is plaster key for recessing; aligns to keyed connector.
4. Self lubricating, non-wearing nylon wheels travel silently.
5. Hooks cannot be removed or lost; ride on raised rails within the track.
6. Capital life-time hooks are of chrome plated brass with bead chains for complete flexibility.



SPECIFICATIONS

The work covered hereunder shall include the furnishing and erection of complete curtain track and curtains in rooms indicated. All dimensions shall be checked and shop drawings prepared and submitted by contractor.

TRACK

Curtain track shall be set on the finished ceiling or recessed in the ceiling as shown on the contract drawings. Fastening should be made not less than 3'-0" on centers. The track shall be extruded aluminum box-channel 1⅜" x ¾" slotted on the underside to receive two wheeled carriers or sliding internal curtain hooks.

Corner bends shall be formed on a 12" radius bent to exactly 90 degrees. End closers shall be used at both ends of the cubicle with a removable section at one end to permit removal of hooks. At the curtain stacking end of each cubicle shall be a tag designating the proper size CAPITAL curtain. Butt joints shall be secured by an extruded sleeve type connector of the same material and finish as the track.

The hooks shall be formed of chrome plated wire and bead chain riding on a carrier with non-wearing nylon wheels.

CURTAINS

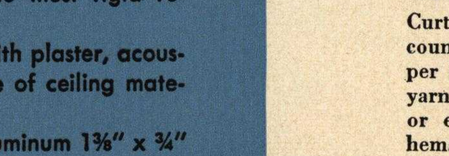
Curtains shall be made of closely woven jean cloth with a count of at least 160 (96 warp threads and 64 filling threads per inch Greige count). Curtain material shall be of a carded yarn, dyed fast colors and sanforized shrunk, and shall meet or exceed U.S. Government specifications. Top and bottom hems shall be approximately 1½" wide. All seams shall be turned in and securely sewed.

The jean cloth shall extend to within 15" from the floor, with nylon mesh of approximately 20" at the top. Rustproof grommets shall be spaced 6" o.c. and shall be securely machined into the top hem to avoid pulling out. Curtains shall have sufficient fullness so as to form a complete enclosure free from any gaps. Full size curtains shall be 2' wider than track on which they hang.

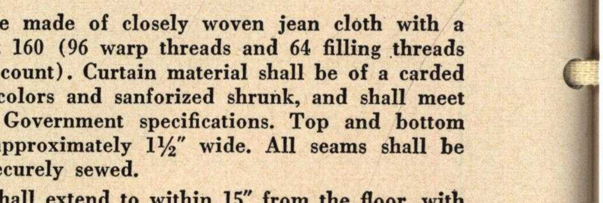
Smaller size curtains shall be not less than 10% wider thar track on which they hang.

The complete unit shall be as manufactured by the CAPITAL CUBICLE CO., INC., 213—25th St., Brooklyn, N. Y., or equal and shall be guaranteed for one year against defective materials and workmanship.

methods of installation

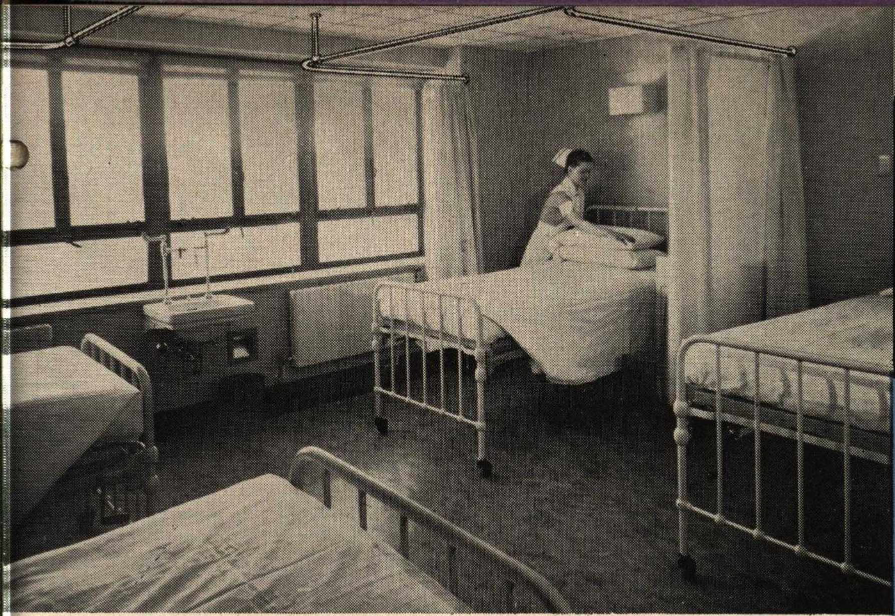


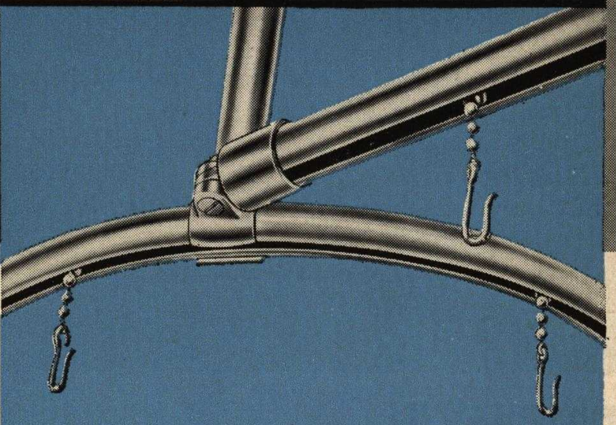
FLUSH MOUNTED



SURFACE MOUNTED

CAPITAL CUBICLE
suspended track





SPECIFICATIONS

The work covered hereunder shall include the furnishing and erection of complete curtain track and curtains in rooms indicated. All dimensions shall be checked and shop drawings prepared and submitted by contractor.

TRACK

Curtain track shall be set 7'-3" off finished floor and shall be formed of No. 14 gauge brass (*) 1" outside diameter and slotted on the underside to receive sliding curtain hooks. Hooks shall be designed so that they cannot be lost or removed. Corner bends shall be formed on an 8" radius bent to exactly 90 degrees. Tubular ceiling hangers shall be of the same material and same finish as the horizontal track. All fittings shall be of cast or forged brass.* Hooks shall be formed of chrome plated bead chain wire and equipped with a roller operating along curtain track insuring a noiseless and efficient operation.

CURTAINS

Curtains shall be made of closely woven jean cloth with a count of at least 160 (90 warp threads and 64 filling) threads per inch greige count. Curtain materials shall be a carded yarn. dyed fast colors and sanforized shrunk and shall meet or exceed U.S. Government specifications. Top and bottom hems shall be approximately 1½" wide. All seams shall be turned in and securely sewed. Rustproof grommets shall be spaced 6" o.c. and shall be securely machined into top hem to avoid pulling out. Curtains shall have sufficient fullness so as to form a complete enclosure free from any gaps and shall extend to within 15" of floor. Full size curtains shall be 2'-0" wider than track on which they hang. Smaller size curtains shall be not less than 10% wider than track on which they hang. All brass parts shall be chromium plated over nickel plate all according to U.S. Navy specifications.

The complete unit shall be as manufactured by the CAPITAL CUBICLE COMPANY, Inc. of 213 25th Street, Brooklyn, N.Y., or equal, and shall be guaranteed for one year against defective materials and workmanship.

*In lieu of brass, specifications may be written in aluminum .065 wall thickness anodized satin finish. Fittings to match track.

Designed for distinctive appearance and utmost efficiency Capital's round, suspended track has, throughout the years, become preferred equipment in hospitals from coast-to-coast. In addition to initial installations, this equipment is being constantly used for alterations to existing equipment. The brass, chrome plated Capital hook glides noiselessly in its slotted track, and cannot scratch or mar the highly finished surface. Suspended from tubular ceiling hangers, all fittings are solid, heavy castings and forgings.

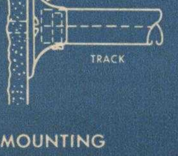
MATERIAL USED:

BRASS, CHROME PLATED

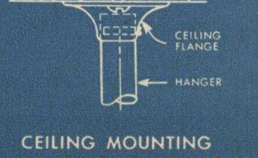
The very finest obtainable and the only cubicle with a life span equal to the life of your building. Made of No. 14 gauge brass, chrome plated over nickel plate to U.S. Navy specifications.

ALUMINUM, ANODIZED

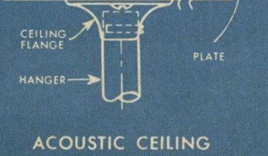
Long life at low cost! Highly resistant to corrosive elements and atmospheric conditions. It will not chip, peel or discolor. Combines Capital Cubicle features with economy price.



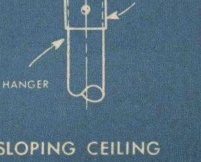
WALL MOUNTING



CEILING MOUNTING



ACOUSTIC CEILING



SLOPING CEILING

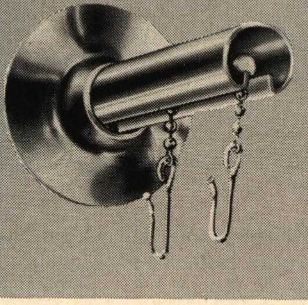
CAPITAL SHOWER TRACK

There are sound reasons why Hilton-Statler, Intercontinental, Knott and other major hotel chains specify Capital Track for their shower enclosures. This aristocrat of all shower tracks, though higher in initial cost, more than repays the initial difference in short time. Here are a few of these reasons:

- **Constructed of chrome plated No. 14 gauge brass over heavy nickel plate.**
- **Hooks slide within the track . . . no costly replacements or replating.**
- **Hooks cannot be removed . . . no more torn curtains from missing hooks.**
- **Its smooth, unbroken surface makes a perfect drying rack for lingerie and hosiery, delighting the woman guest.**
- **No maintenance expense; *first cost is the only cost!***

STATLER CENTER
LOS ANGELES, CAL.

Capital Shower Track has been chosen by Statler Hotels. Upon request we will furnish you with a list of installations in your locality



The Capital Track assembly at left shows the open bottom channel formed into two parallel tracks on which the ball bearing hooks glide quickly and noiselessly. Note that the hooks cannot be removed or lost; cannot jam or catch . . . and this simple design prevents them from scratching the chrome plated track.

STYLE SAC-69F TRACK

JIFFY JOIN PATENTED SLIDER TAPE
is a tape with cloth covered non-corrosive sliders attached.

SIMPLE TO INSTALL:

1—Put Up the Track
2—Stitch Slider Tape to Curtain
3—Insert Sliders into Track

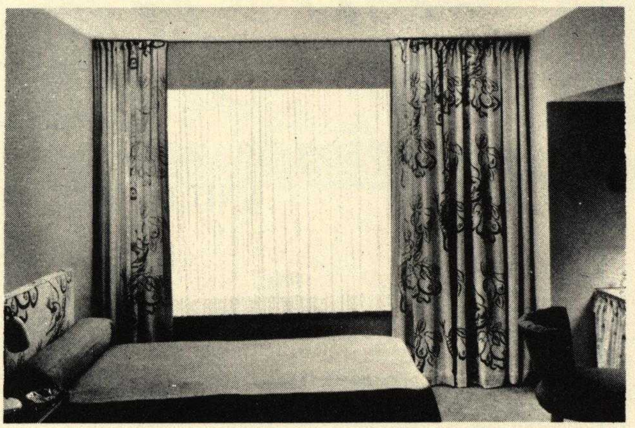
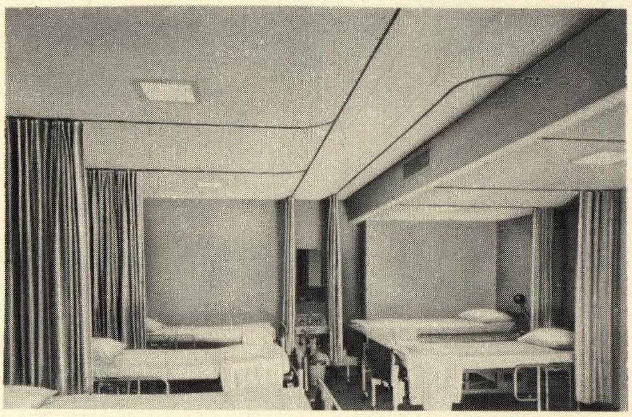
Jiffy Join silent curtain track



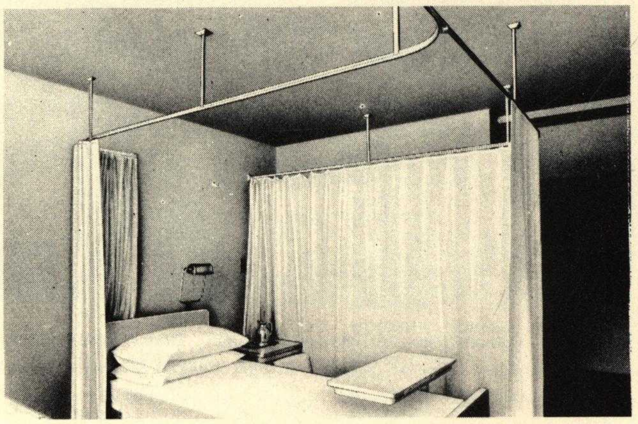
For HOMES AND GENERAL APPLICATION

SPECIFY— any of our numerous wood or aluminum styles of track or molding (see opposite page) for hotels, apartments, commercial buildings, homes, trailers, schools, churches. Use as top part of window trim or apply to ceiling, wall or window — wherever curtains or draperies are to be hung. Design track to pass well beyond window jamb for maximum exposure. Choose a triple track or a combination of tracks for light control, television, sleeping or privacy curtains or for combination use of draperies, curtains and valance or swag. Use with or without pull cord.



For HOSPITALS—ceiling track

SPECIFY—Jiffy Join Silent Cubicle Surface Mounted Ceiling Track Style SAC-69-F. Use styles SAC-74-E, SAC-75-E, SAC-76-E for imbedding in plaster or acoustical material, depending on thickness of plaster or material (see details Page Three)—extruded aluminum alloy 6063 S-T5 with polished and anodized finish. Specify "Side Apertures" which are the openings through which curtains are inserted or removed. Standard bends on 12 inch radius. Toggle bolts and screws cadmium plated. TO ORDER — Prices quoted by the foot or estimates promptly made from your drawings. CUBICLE CURTAINS with slider tape Code #34-JST-5H may be ordered to meet your specific requirements. If you wish to make your cubicle curtains, Jiffy Slider Tape and materials may be purchased from us.



For HOSPITALS—suspended type

SPECIFY—Jiffy Join Silent Cubicle track, Style SAC-70-E, size ⅜" x ⅞", with side apertures for inserting curtains. Curves 8" radius. Track is an extruded aluminum alloy #6063 S-T5 with polished and anodized finish. Ceiling suspension hangers, Style SH-70-7, made of ⅝" x ⅞" aluminum tubing. Ceiling, connecting and wall brackets are cast aluminum alloy 355-T51. Toggle bolts or screws are cadmium-plated. TO ORDER—Quotations promptly given from your drawings. Curtains with Slider Tape Code #34JST-5H can be ordered to meet your specific material requirements.

For TRANSPORTATION

Curtain Attached Top and Bottom

SPECIFY—Aluminum track style SAC-60-E or SAC-63-E, extruded aluminum alloy 6063-S T5, for Trains, Aircraft, Ships, Buses and Trailers. See detail on page 3.

SPECIFY—Jiffy Slider Tape for use at top of window and Jiffy Anchor Tape for use at bottom. Sliders to be any desired spacing.

SPECIFY—Aluminum track style SAC-69-F for roomette, berth and space divider curtains with Jiffy Join Slider Tape Code 34-JST-5H, double or triple stitched to curtain.

- **homes**

Jiffy Join Slide-a-Shade is easily incorporated in any window design. Use one or more of our wood or aluminum tracks as part of your window construction.

Jiffy Join patented slider tape is an integral part of the Slide-a-Shade. When the Slide-a-Shade is inserted in Jiffy Join track, it slides noiselessly across the window. When drawn back, it may hang behind the drapery. Or it may be used as a curtain where additional drapery is not required. It is easily removable for laundering.

We suggest choosing a neutral color to blend with the exterior of the building. Slide-a-Shades may be obtained in any desired material — hard or soft surfaced fabrics, wood fibers, cotton, nylon and dacron. The material selected will determine the cost of the shade.

Samples available to architects and builders upon request.

This product is fully covered by patents both in the United States and in foreign countries.

installations in hospitals nation-wide and throughout the world

ceiling type (with ventilated curtain)

ARNCO ceiling track

ARNCO ceiling type cubicles have been designed to meet the increasing demand on the part of architects and hospital authorities, for a system of bed screening which is unobtrusive, does not conflict with lighting or wall fixtures, and which eliminates any possibility of interference with doors and windows.

The exclusive ARNCO ceiling track may be installed in conjunction with either plaster or acoustic ceilings. Application may be either surface or flush construction (see details) and specially designed curtains provide adequate ventilation along with privacy. Conventional risers, with inherent problems of rigidity and interference, are eliminated.

Ease of operation, on straight or curved sections, and maximum sound deadening are features of the new ARNCO cubicle track.

The ARNCO ceiling track and carrier units are *not* an adaption of domestic drapery fixtures, but are specifically designed for durable performance under the rugged and continuous service required of hospital cubicle equipment.

carrier "non-contact" silent rollers

The carrier features nyon axle and "non-contact" rollers, bead chain for flexibility, and rust-proof closed curtain hook. Axle is so designed that rollers cannot touch the rollers of adjacent carriers, thereby eliminating drag or locking when curtain is drawn from the stacked position. Rollers are chamfered to present a minimum of contact surface, thus facilitating movement and reducing sound. The resultant smooth operation and durability of this unit makes it an extremely important part of modern hospital quipment.

Optional equipment is our new type glider, with bead chain and closed hook or tape, which presents smooth quiet operation under normal ceiling height conditions.

two types

1. Extruded aluminum with anodized finish, for surface or recessed application. Permanent finish will not peel or discolor.
2. Economical rolled rustproof electro-galvanized steel may be surface applied or recessed.

shower rods

ARNCO track is admirably adapted to shower rod use, whether ceiling applied or set at conventional level. Completely rust proof with theft-proof hooks.

flameproof curtains

A durable process which will not only withstand multiple launderings, regardless of the type of soap or detergent used, for the life of the curtain, but will actually extend its wearability and opaqueness. It is certified to be non-toxic, will not cause skin irritations most necessary in hospitals and complies with Federal specifications.

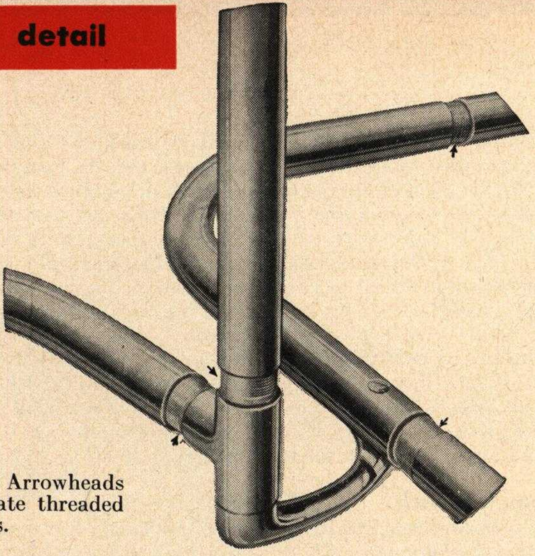
SUGGESTED SEMI-PRIVATE ROOM ARRANGEMENT

ALTERNATE ARRANGEMENTS

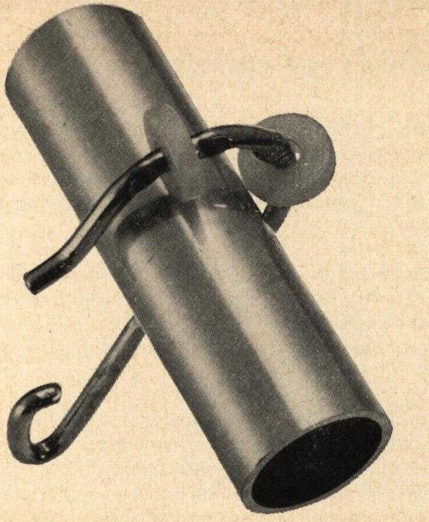
detail



note: Arrowheads indicate threaded joints.

ARNCO corner bend construction

To reinforce the most vital point of cubicle construction, ARNCO has built unusual strength and rigidity into the corner bend assembly. At the point of attachment which supports the entire structure, the improved arm actually goes into a reinforced connector with a heavy ½-in. projection. All corner bends are of the same gauge and outside diameter as the tubing for tracks, ceiling supports and braces, and are arranged so that there will be no gaps after curtains are drawn.



ARNCO roller curtain hooks and curtains

Arnco curtain hooks, made of heavy gauge finished wire, snap over the tubing which prevents their jumping off the track when being operated. The hooks are designed to pass suspension brackets and are equipped with two rollers of long lasting nylon.

Curtains are of selected, closely woven Jean cloth with machined rustproof metal grommets or laundryproof sewed eyelets approximately every 6 in. along top hem, starting 2 in. from each end to provide overlap at meeting point. They are available in various pastel shades.

ARNCO modern curtain cubicles insure complete privacy . . . increase bed capacity

With ARNCO modern cubicle equipment, hospital ward space becomes a series of "private" rooms and bed capacity of semi-private rooms is increased without any expensive additions or alterations.

ALUMILITED aluminum fixtures — tubing, corner bends and fittings . . . strong, light, economical

The entire metal assembly of the ARNCO curtain cubicle is made of aluminum, with Alumilite finish . . . a hard, smooth finish which will not peel, and which is highly resistant to abrasive wear and to corrosion resulting from atmospheric conditions, chemical fumes and steam.

all connections threaded . . . no special tools needed

All connections of the ARNCO curtain cubicle are threaded — a strength giving feature — and concealed screw bushings insure the making of flush hair line joints. Being threaded, pre-assembled and fitted at the factory, a minimum amount of tools is required for installation.

prefabricated construction reduces installation time to the minimum . . . no "on-the-job" fitting required

All specifications for ARNCO curtain cubicle installations are determined at the time of order acceptance, and all rod measuring, cutting, threading, boring, etc., as well as all curtain tailoring, is completed in the ARNCO plant before shipment of cubicle parts. The provisions necessary for anchoring the cubicles to walls and ceilings of the wards are also determined in advance.

With "on-the-job" cutting and fitting eliminated, the time required for an ARNCO installation is greatly reduced. A marked decrease in labor costs, as well as a minimum of interruption in hospital routine are effected. This time element is of utmost importance.

Extruded aluminum or rustproof steel track for recessed or surface application.

END STOP HOUSING ENGAGES PLASTER KEY IN TRACK. CONNECTORS ENGAGE TRACK IN SAME MANNER AND ARE NOT VISIBLE IN RECESSED APPLICATION.
HINGED STOP

END STOP DETAIL

ceiling type curtain cubicles

general Ceiling type curtain cubicles shall consist of extruded aluminum track, (or rolled coated steel track) roller carriers and curtains, installed on (or recessed in) finished ceiling. Corner bends shall have 12″ radius and where ever practical shall be a continuous L shape.

aluminum track To be of specially designed extruded track 1⅜″ x ¾″ with reinforcing formation at all four corners and provide raceways for "non-contact" silent two-roller carriers or gliders permitting smooth, uninterrupted movement of carriers on both straight and curved sections.

Aluminum connectors and hinged end stops shall be provided to permit insertion or removal of carriers. End stops are securely fastened to stop housing to prevent being forced out by continuous cumulative striking weight of carriers, and shall be numbered same as curtain label. Track and fittings to have anodized finish.

steel track Same general characteristics as aluminum track. To be rolled, electro-galvanized steel, .028 thickness.

carriers To consist of specially designed nylon axle with "non-contact" nylon chamfered rollers; or glider with bead chain and closed hook. Specially designed tape sewed on top of curtain may be supplied with detachable Glider instead of bead chain and closed hook.

curtains To extend from underside of track to 15″ from floor and to consist of Jean cloth, color as selected. An integral upper section of nylon mesh, neutral shade, to provide ventilation and light can be incorporated if desired. Nylon panel to be approximately 1 ft. 8 in., with balance of curtain Jean cloth to within 15 in. of floor. Curtains to be 10% wider than track and to be constructed as described in Arnco specifications for suspended type curtain cubicles.

flameproof curtains Shall be Jean cloth treated with Lynrus FR-1 durable flameproofing process and shall comply with Federal specifications, including non-toxicity. Treated curtains shall be abrasive resistant and withstand multiple launderings with any type soap or detergent for the life of the curtain.

alumilite finish The entire metal assembly shall be treated by an electro-chemical process so as to obtain a dense, adherent coating of aluminum oxide, thus providing a hard, clean, smooth finish which will not peel, and which is highly resistant to abrasive wear and to corrosion resulting from atmospheric conditions, chemical fumes and steam.

suspended type curtain cubicles

general and assembly Curtain cubicles shall be provided in a manner to completely screen each bed separately. The horizontal tubing shall be placed 7 ft. 3 in. to center of tubing above the finished floor. All connections between tubing members, and tubing, and fittings, shall be made by means of concealed screw connections to provide hairline joints, except at wall and ceiling flanges.

tubing All tubing used for tracks, ceiling supports and braces shall be seamless new drawn Aluminum-Alloy, 1 in. outside diameter x .065 type 6063 T 832, finished in a high polish.

corner bends All corner bends shall be the same gauge and outside diameter as tubing and shall be made to a 6-in. inside radius to exactly 90°.

wall and ceiling flanges Shall be drop forged, at least 3 in. in diameter and fastened to walls and ceilings by means of toggle bolts or rawl plugs concealed through the center. Ceiling flanges shall be not less than 1″ longer than wall flanges to provide added rigidity for ceiling risers. Wall flange at rear of each cubicle shall be numbered to correspond with label on curtain. Fastening of tubing to wall and ceiling flanges shall be by means of special Phillips head P. K. screws.

estimating service

Kindly send us plans and specifications or a rough floor plan sketch giving the room and ceiling dimensions, showing location of windows, doors, ceiling lights, wall variations and placement of beds.

This information will enable us to make up detail drawings and submit accurate quotation.

suspension bracket Shall be drop forged and so designed that it will allow the curtain to move freely past the ceiling supports.

hooks Curtain hooks shall be of No. 7 gauge wire, designed to pass suspension brackets and equipped with two rollers of long lasting nylon.

curtains All curtain material shall be a selected closely woven Jean cloth with a count of not less than 160 threads (96 warp threads and 64 filling threads) per inch of quality yarn. The color or colors of curtains shall be standard as selected. All curtains shall be Sanforized shrunk and only vat dyes shall be used to insure fast colors. Curtains shall have top hem 1½ in. wide of triple thickness of material grommeted approximately every 6 in. (see note), starting 2 in. from each end to provide overlap at meeting point. Bottom hem 1¼ in. wide. All seams to be sewed 2 needle, interlocked so they cannot ravel. All curtains shall be at least 10% wider than length of tracks upon which they are used and shall extend down to 15 in. from finished floor. On top hem of each curtain shall be sewed in label to denote the size. (*NOTE—specify laundryproof sewed eyelets or rustproof metal grommets.*)

flameproof curtains Same as for ceiling type specifications.

alumilite finish Same as for ceiling type specifications.

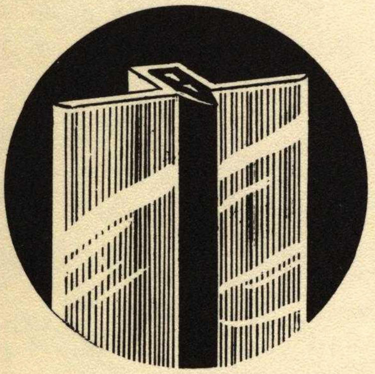
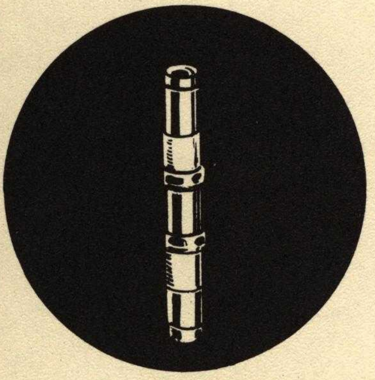
ADVANCED FOLDING PARTITION FEATURES



EXTRUDED ALUMINUM EDGE TRIM

Standard on all partitions
Protects and beautifies.

(Matching wood edge available when specified.)



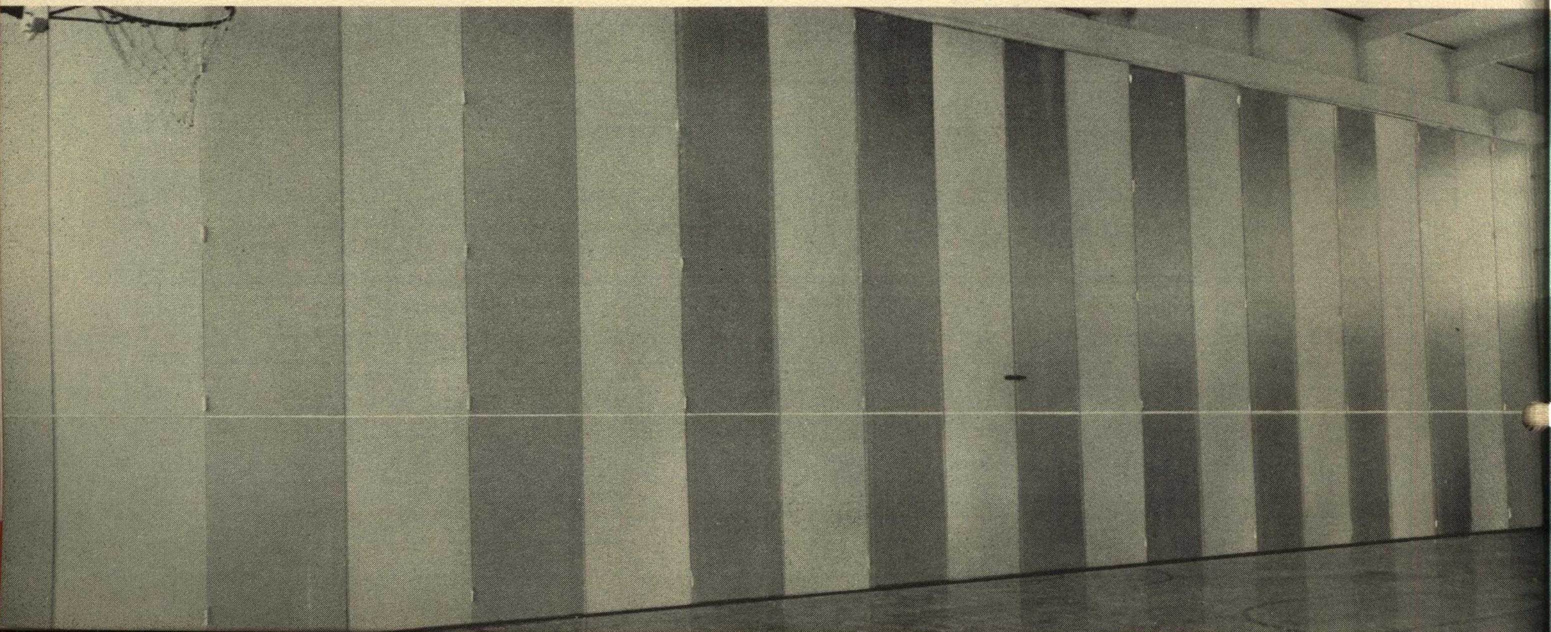
FRICTION-FREE BALL BEARING HINGES

Insure smooth, easy, trouble free operation.

Advanced Folding Partitions provide efficient, attractive and practical control of space. Rugged, superior construction affords effective sound control. Advanced offers complete freedom in architectural design and application, because the Advanced Folding Partition installation is custom engineered. Sure to meet the individual requirements of your particular job.

Investigate These Advanced Features!

1. FOLDING PARTITIONS TO MEET EVERY NEED
   - AUTOMATIC — ELECTRIC
     Remote key control
   - MANUALLY OPERATED
     Top hung or floor bearing
   - SPECIAL TYPES
     For unusual or special applications
2. MODERN FUNCTIONAL DESIGN
   - ALL PARTITIONS SOUND INSULATED
     Gives complete space division
   - WIDE VARIETY OF TRACKS AND TROLLEYS
     Insures balanced design
   - SLENDER JAMB AND HEAD SECTIONS
     Provide more opening space
3. SELECTED MATERIALS
   - DOUGLAS FIR FRAMES AND PLYWOOD PANEL FACES
     Provide maximum strength and stability
   - BALL BEARING HINGES
     Assure smooth, maintenance free operation
   - ALUMINUM EDGE TRIM
     Gives lasting beauty and protection
4. CAREFUL CRAFTSMANSHIP
   - FOR BETTER FINISHED APPEARANCE
   - PRECISE ATTENTION TO DETAIL
     Means trouble free operation



ADVANCED FUNCTIONS AND APPLICATIONS

Flexible division of floor space requiring both visual and audio separation is best achieved with Advanced folding partitions. Allowing multiple activities within a specified floor area, these folding partitions contribute substantial cost reductions.

Building construction, usage, and opening size are controlling factors in order to select the proper type of partition for a given opening. The table below lists several Advanced partition types and their applications. Information relative to size limitations, stacking space requirements, and installed partition weight should be obtained from your Advanced representative or through the factory. As a "rule of thumb," however, the weight may be estimated at five pounds per square foot of opening for standard construction.

Type 1A partitions must have an odd number of equal width panels for a partition folding one way, or for one half of a bi-parting partition.

Configuration of type 2 partitions folding one way, or one half of a bi-parting type 2 partition should be an odd number of full width panels plus one half-panel.

For greatest economy, select the maximum panel width (up to four feet wide) which is consistent with available stacking space and configuration requirements above.

Thickness for all partitions over 12 feet high and for other partitions should be 3 inches, unless stacking dimensions are critical. For reduced stacking dimensions on partitions under 12 feet high specify 2¼″ thickness.

ADVANCED — OPTIONAL FEATURES

- PASS DOORS for partitions 7 ft. 6 in. high and greater, complete with flush latch, 1½ pr. hinges, threshold. Pass door is 7 ft. high above floor; width to be same as normal panel section less ten inches.
- POCKET DOORS of same construction as partition panel, manually operated, complete with hardware, designed to close the pocket when partition is either in open or closed position.
- ELECTRICAL INTERLOCK for pocket door of type 1A partition. Prevents operation when pocket doors are not fully open.
- MECHANICAL OPERATION by means of hand crank. Specifications are similar to type 1A, including automatic floor seals, but using mechanical rather than electrical operator.
- TOP SEALS of flexible neoprene in contact with soffit.
- CORKBOARD AND CHALKBOARD installed with aluminum trim as shown on plans. Include chalk pockets as detailed.
- TRACK SWITCHES to transfer type 5 partition panels to different sections of track. Manual operation, or, for high openings, remote electrical operation is available.

TABLE OF ADVANCED FOLDING PARTITION TYPES AND APPLICATIONS

TYPE	OPERATION	SUSPENSION	RECOMMENDED APPLICATIONS
1A	Automatic—Electric Remote key control	Top Center Hung	Gymnasiums — Banquet Halls Openings Where Automatic Opening, Closing and Locking By Key Operation is Desirable
2	Manual Hinged Together Single or Bi-Parting	Top Center Hung	Room Division — Small Conference Rooms Class Rooms — Dining Rooms — Churches
3	Manual Hinged in Pairs	Top Hung W/Floor Guide	Room Division and Stages Where It Is Desirable for the Panels to Stack to One Side of Track
4	Manual Hinged in Pairs	Floor Bearing Over Head Guide	Use Only Where Over Head Support Is Not Adequate (Floor Track Must Be Level) Stacks to One Side of Centerline
5	Manual Individual Panel	Over Head 2 Trolleys Each Panel	When it is desirable to store panels away from opening, and for sliding bi-pass partitions
6	Special Designs		For Unique Conditions Where Standard Design Is Not Applicable

For detail drawings and specifications of Partition Types 3 through 6 consult your Advanced representative, or engineering department of Advanced Equipment Corporation.

ADVANCED

SPECIFICATIONS TYPE 1A FOLDING PARTITION

Advanced Automatic-Electric Folding Gymnasium Partition.

GENERAL:

Furnish and install Advanced type 1A automatic electric folding partition (partitions) as shown on plans.

OPERATION:

Partition shall be top hung, operating on steel I beam track, and equipped with sealed ball bearing hangers. Door suspension shafts shall be equipped with ball thrust bearings. Floor tracks or guides extending across the opening will not be employed.

Method of operation shall provide complete control from the key control switch located as shown on the drawings. Folding and unfolding of the partition, locking in the open and closed positions, and operation of the automatic floor seal shall be by this means.

A minimum clearance of 1 in. shall be provided below the bottom of the partition when opening or closing, but the final closing movement of the partition shall cause this space to be sealed completely by a moulded foam neoprene seal, and firmly lock all sections in the closed position.

Mechanical equipment shall include for each opening a 220 volt 3 phase electric operator designed to move the partition at approximately 24 f.p.m. Bearings to be sealed ball or roller type; gears to operate in oil bath. Motor controls, limit switches, disconnect clutch, disconnect switch and all other equipment required for proper operation shall be provided.

Power transmission shall be by roller chain of adequate capacity operating over sprockets equipped with anti-friction bearings. Moving parts of floor seal mechanism shall be protected from wear by oil impregnated bronze sleeve bearings.

Partition panel sections . . . (refer to panel specifications, normally specify DFPA Grade "A" with wainscot for gymnasium use; include pocket doors and pass doors, if required). Panel edges shall be protected by heavy, polished and lacquered aluminum astragals, full panel height. Exposed hardware with *(baked aluminum finished hinges unless otherwise specified)* finish, shall include ball bearing hinges for partition (and pocket) doors.

All finishing of wood to be by others.

Supporting steel to be punched or drilled by others, and track hanger bolts set in accordance with layout furnished by manufacturer. Electrical wiring, hook-up, and conduit by others.

GUARANTEE:

Installation to be performed under the supervision of a factory trained mechanic. Manufacturer shall guarantee the complete installation against defects in material and workmanship for a period of one year.

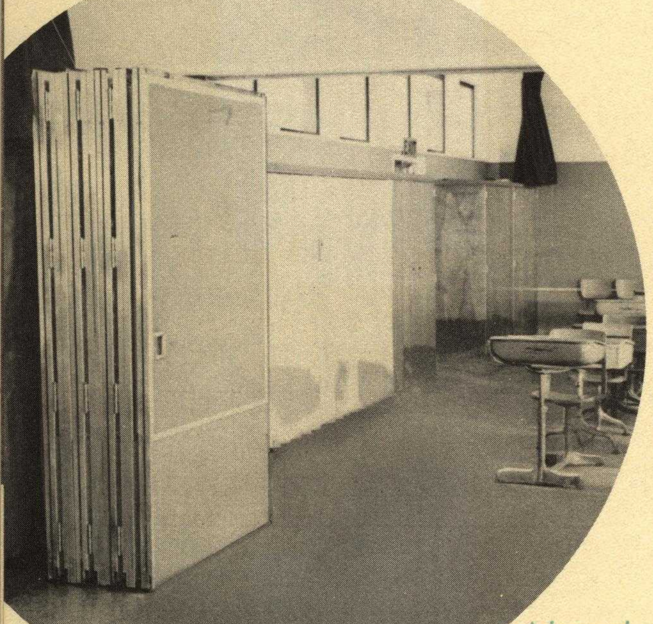
SPECIFICATIONS TYPE 2 FOLDING PARTITION

GENERAL:

Furnish and install Advanced type 2 folding partitions as shown on the plans.



Advanced Folding Partition in Multi-Use School Room.

OPERATION:

Partition shall be hinged together, top-center hung with four wheel ball bearing trolleys for alternate full-width panels. Trolleys to operate in 2½ inch by 3½ inch steel track, 13 gauge. Track shall be secured to supporting overhead structure by means of threaded hanger bolts attached to steel head brackets, with head brackets spaced at 30 inches except over stacking area where spacing shall be 15 inches. Locking of the partition in the closed position shall be by means of flush bolts engaging inlaid floor plates.

Partition panel sections . . . (insert section from "Panel Specifications").

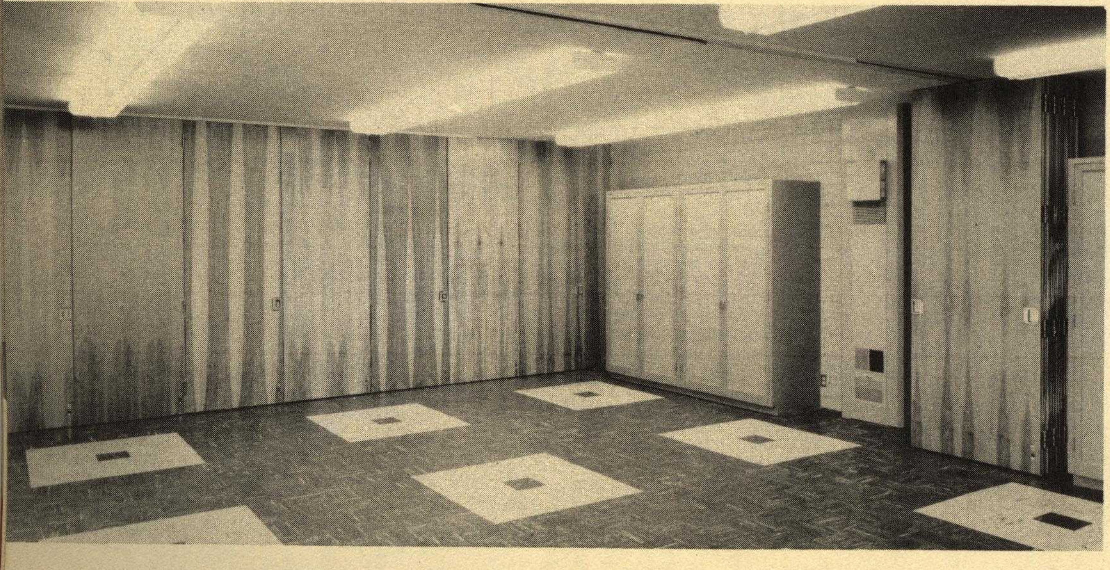
Exposed hardware with__________________finish shall include ball bearing hinges, flush bolts, and flush cup pulls. Panel edges to be protected by continuous extruded aluminum members. Each panel to be equipped with full floating neoprene floor seal. Provide ball bearing guide rolls at top of panels to eliminate wear. Partitions shall be complete in all respects, without the need for additional rough bucks or concealed head blocking.

WORK BY OTHERS:

Drilling or punching of supporting structure, and placing of hanger rods to be done by others, in conformance with template furnished by partition manufacturer. All finishing of wood to be by others.

GUARANTEE

Manufacturer to guarantee the workmanship and materials of the partition for a period of one year.



Advanced Folding Partition Used to Divide Church Classroom.

PANEL CONSTRUCTION SPECIFICATIONS

PANEL CONSTRUCTION — consists of kiln dried douglas fir core, fiberglass packing, face sheets laminated with thermo-setting adhesive.

FACING MATERIAL may be plywood of almost any grade and species. D.F.P.A. grade "A" douglas fir plywood ⅜″ thick is recommended as a durable, economical face material — hardwood plywoods are normally ¼″ thick.

When an extremely smooth surface, with no grain effect is desired, for good painting properties, specify douglas fir plywood with medium density plastic overlay.

Wainscot material, when specified, may be plastic overlaid fir plywood, hardboard or other material as desired. Wainscot normally extends to a point 7′0″ above finish floor. Covering with No. 10 roll duck is available when specified.

TYPICAL PANEL SPECIFICATION

Partition panel sections shall be heavy, lattice core, kiln dried, douglas fir frame covered with (grade) (specie) plywood full height, both sides. Panels to be_______inches thick.

Panel sections shall be constructed of frames with plywood pressure-laminated with thermo-setting adhesive to all face surfaces. All spaces within shall be packed with fiberglass. Space between extended sections shall be sealed by means of an extruded neoprene molding, interlocked with heavy aluminum astragals of width equal to panel thickness. This aluminum astragal should extend the full height of all panel sections, and be firmly attached with flush aluminum screws. Head trim, jambs to be of (grade) (specie)** as detailed.

**normally vertical grain douglas fir

For purpose of product improvement, we reserve the right to make changes in details and specifications without prior notice.

Details and specifications for other types of partitions such as pair-operated and special applications, pocket dimensions, design weights, lay-out drawings, etc. are available. For more information and professional assistance . . .

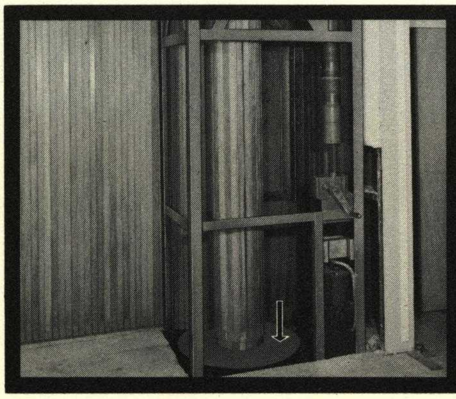
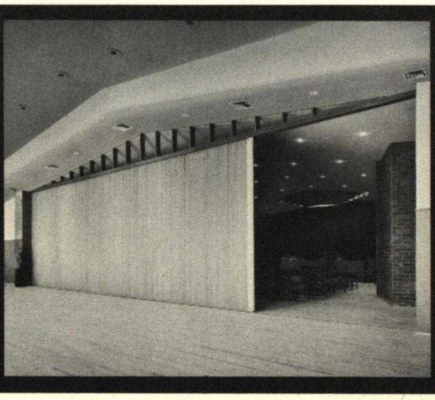
homes

Cookson Wood Side Coiling Partitions are designed to give a feeling of permanent integral structural walls in each of the rooms or areas they divide. They roll completely out of the way, giving the combined areas the appearance as well as practical application of a single larger unit. Both floor and overhead tracks are particularly inconspicuous. Whether power, crank or manually operated, the partitions roll quickly and easily in a straight line, so that no furniture or equipment need be moved to permit opening or closing. Extremely high strength of the partition and supporting members offers maximum protection against damage. Materials and workmanship are carefully controlled from the selection of finest kiln dried vertical grain woods to the final assembly of the completed coil box, operating mechanisms, track and partition. Each partition is custom built and shipped in unitized assemblies for easy specification and installation.



As the wood curtain is coiled, its weight is transferred from the overhead track to the radial bearing supported bottom plate, as shown above.

Cookson Side Coiling Wood Partitions quickly divide gymnasiums and other large rooms into smaller areas for multi-purpose use.



Arch, peak or other unusual ceilings offer no problem for Cookson Partitions. Illustrated is 54′ x 14′ partition, crank operated.

SPECIFICATIONS

partition: To be constructed of vertical grain kiln dried 1″x 2″ douglas fir, milled to the Cookson modified tongue and groove "V" faced pattern. To prevent separation of curtain and assure perfect alignment, it shall be assembled with concealed cables and spring steel ribbons. (Other woods are available subject to factory approval.)

coil box: Partition to coil around a steel pipe supported by a lifetime-lubricated Timken precision thrust bearing. Coil housing frame to be fabricated from structural steel shapes to form a single integrated unit. Application of facing is to be by others as specified by the architect.

operation: A. *Push-pull operation.* Partitions up to 80 sq. ft. and not exceeding 8 ft. in height may be manually (push-pull) operated. Type SCP-1.

B. *Hand crank operation.* Partitions up to 420 sq. ft. and not exceeding 14 ft. in height or 30 ft. in width may be hand crank operated in both directions. With this operation the curtain shall move at constant speed. Type SCP-2.

C. *Motor operation.* All partitions up to 24 ft. in height and 125 ft. in width may be electrically operated with push button control. With this operation the curtain shall move at constant speed. Drive mechanism shall consist of drive gears and cables suitably arranged to coil and uncoil curtain into box at constant speed. Drive gears shall furnish motivation force in both directions with cables, keeping curtain under constant tension at all times. No mechanical or electrically operated clutches will be permitted. The above requirements must be strictly adhered to in the interest of public safety. Any bidder desiring to quote on this item must furnish proof to the architect that his standard product complies with these requirements. Type SCP-3.

upper track: Shall be one-piece construction of extruded aluminum to support full curtain load, and is to be fully adjustable to permit compensation for deflection of truss or other mounting surfaces.

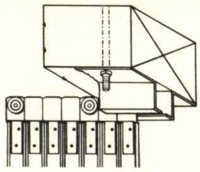
floor guide: Shall be furnished complete with cleanout boxes and shall be installed by the general contractor as per Cookson Company recommendations.

meeting stile: To be formed from "Alumilited" Aluminum with a compressible nosing. (Note — When specified on motor operated Partitions, the front edge of the Meeting Stile will be furnished, at extra cost, with Cookson Company's "Detect-edge,"® a safety device to stop forward motion upon contact with an object.)

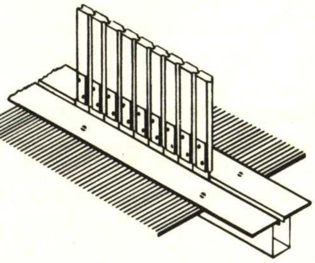
finish: Stain or treatment by others.

assembly: Partition shall be shipped completely assembled in coil box when practicable.

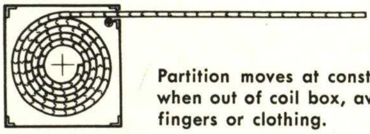
special features



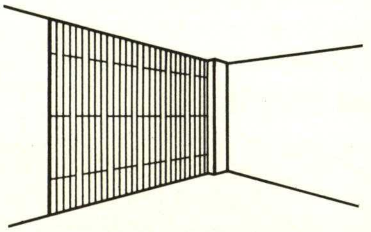
Exclusive nylon curtain-support wheels mounted on ball bearings — running in an adjustable continous track mounting — provide maximum safety, sound resistance, ease of operation.



Exclusive continuous bottom end lock and guide design retains constant alignment, gives maximum sound resistance.

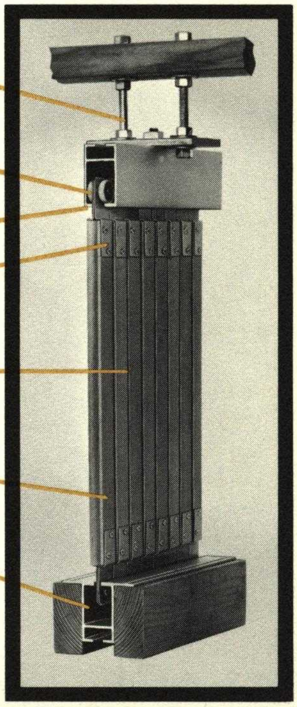


Partition moves at constant speed in a direct line when out of coil box, avoiding danger of pinched fingers or clothing.



Special adjustable concealed cables at properly engineered intervals maintain constant alignment for full length of slats.

design and construction



Adjustable track bolts can be attached to any steel or wood beam members

Nylon ball bearing wheels

Extruded aluminum track

Continuous shoes

Curtain of vertical grain wood, assembled with concealed cables and spring steel ribbons

Curtain load is only 4 lbs. per sq. ft.

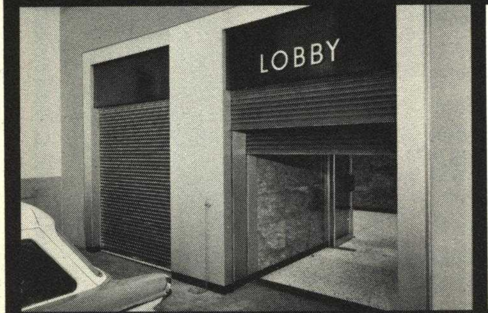
OTHER COOKSON ENGINEERED PRODUCTS

The best way to close an Opening

STEEL ROLLING SERVICE DOORS

Available for power, chain, crank or manual operation, Cookson Service Doors offer advantages for longest life, greatest safety and lowest maintenance. Exclusive continuous wall angle equalizes strain on anchor bolts and eliminates the need for heavy lintel construction. Lubricated ball bearings and the elimination of cast iron on critical supporting members are but two of many features which make Cookson Doors first choice wherever service doors are specified.

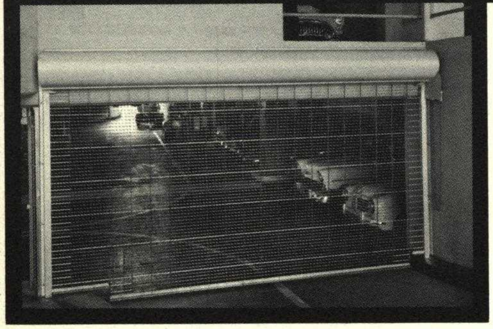


"SERVIRE"® AUTOMATIC DROP FIRE DOORS

"Servire" Fire Doors are inspected and labeled or certified by Underwriters' Laboratories and Factory Mutual Laboratories. Cookson design features fully automatic drop mechanism activated by 160° fusing link, dependable escapement governor which both controls closing speed and provides a warning signal, improved clutch which insures positive drop, auxiliary spring to augment downward operation, simple resetting system which allows immediate operation as standard service door after closing automatically.

ALUMINUM COUNTER DOORS

Durable "Alumilited" extruded aluminum slats and guides keep their sparkling luster indefinitely, requiring little or no upkeep. Peeling and chipping, so often associated with painted steel curtains, are entirely eliminated. Nor will you run into the many other costly problems encountered with ordinary lightweight "mill finish" aluminum. These trim, smartly styled doors are corrosion and rust proof, require no painting, are easy to clean. They are counterbalanced for effortless operation with lubricated ball bearings.



ROLLING GRILLES—STEEL, ALUMINUM

Designed to protect property against trespassing or illegal entry while maintaining free visibility and ventilation, Cookson Rolling Grilles have proved to be both practical and attractive for school corridors, garages, store fronts, courtyards, open air markets, industrial plants, stairways and similar applications. They offer the same basic factors of ease of installation and operation that have made Cookson Service Doors so universally satisfactory. Built for push-up, chain, crank or motor operation.

COOKSON OFFERS MANY IMPORTANT SAFEGUARDS

All Cookson Doors are designed for user satisfaction — with architect, engineer and builder problems in mind. Their easier operation and lower maintenance are a matter of record. They are easier to specify, easier to install, and offer a more effective use of space. As an additional protection of your investment, Cookson fully guarantees the quality, workmanship and material of every door delivered. Furthermore, complete specifications on every part of every door are microfilmed in duplicate for permanent filing. Master microfilms are filed in underground atomic vaults, with copies carefully maintained at the Cookson main offices for ready reference. This means you can always depend on prompt, accurate replacement of any part or assembly, or duplication of a complete door installation.

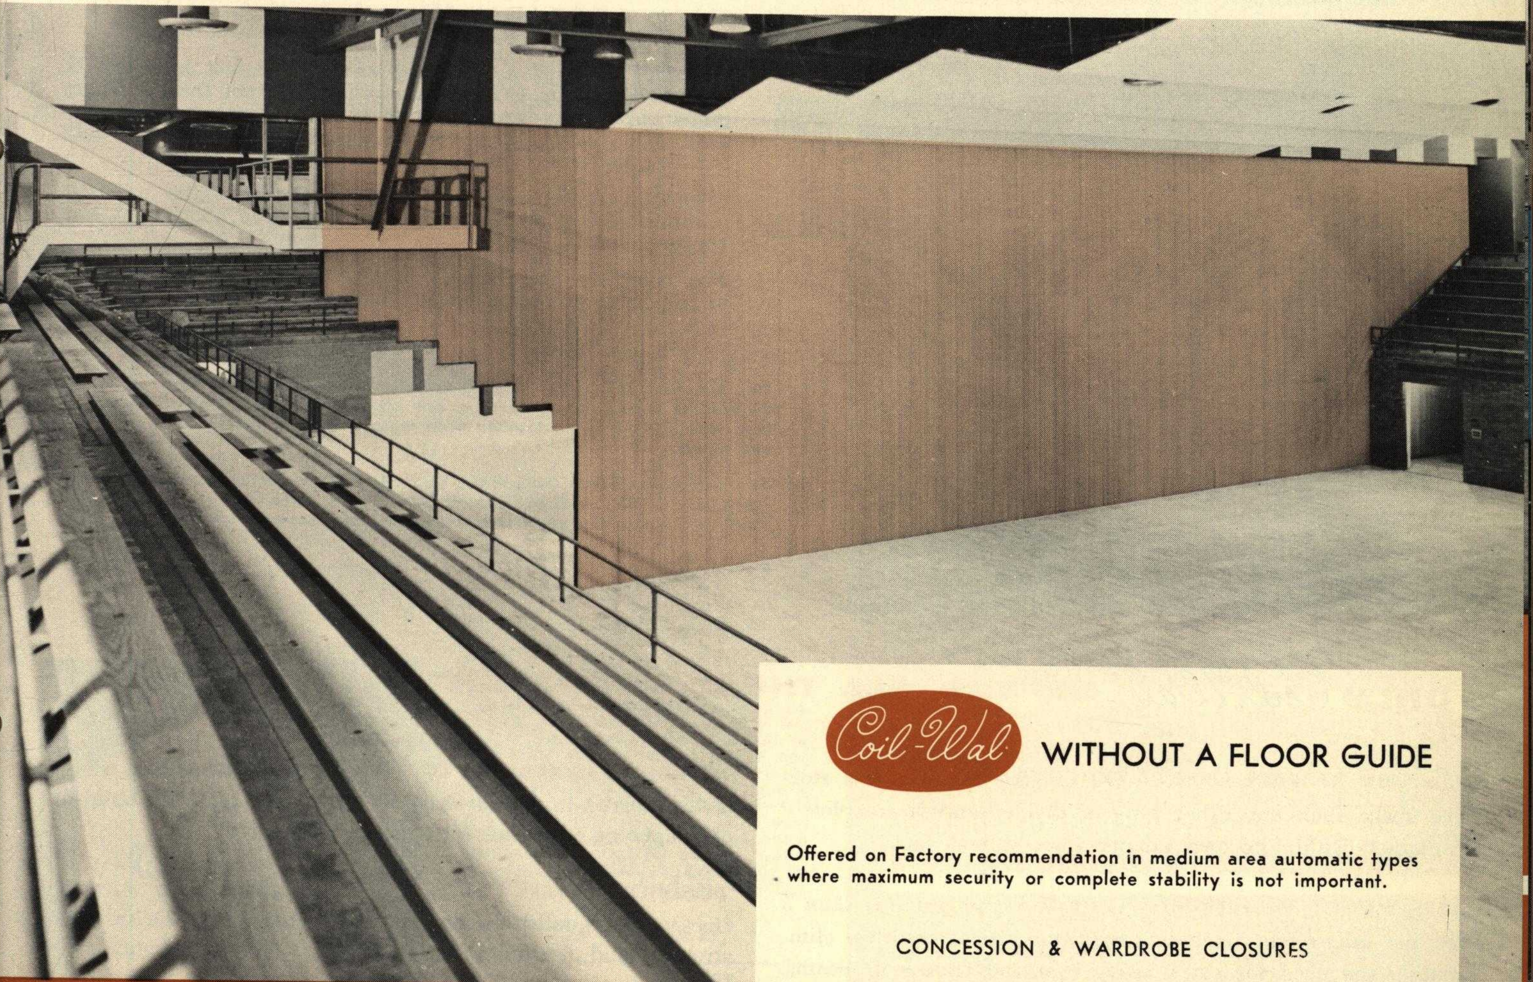
AUTOMATIC* COIL-AWAY PARTITIONS for Gymnasiums Auditoriums Stages, Etc.

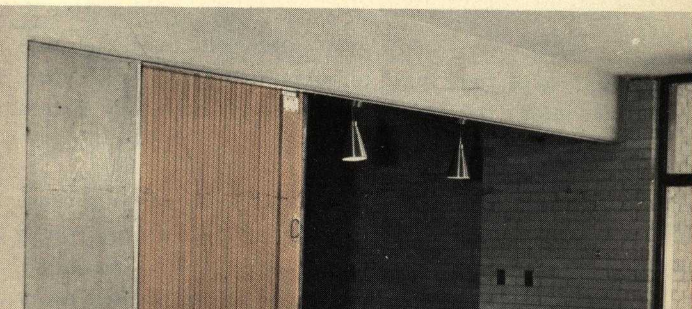


Mishawaka, Indiana High School
Automatic Coil-Wal 26'-0" x 120'-0".
Paul Frank Jernegan, Arch., Perkins and Will, Arch. & Eng.

Coil-Wal WITHOUT A FLOOR GUIDE

Offered on Factory recommendation in medium area automatic types where maximum security or complete stability is not important.

CONCESSION & WARDROBE CLOSURES



*MANUALLY OPERATED COIL-WALS are also available with push-pull or pull-crank operation.

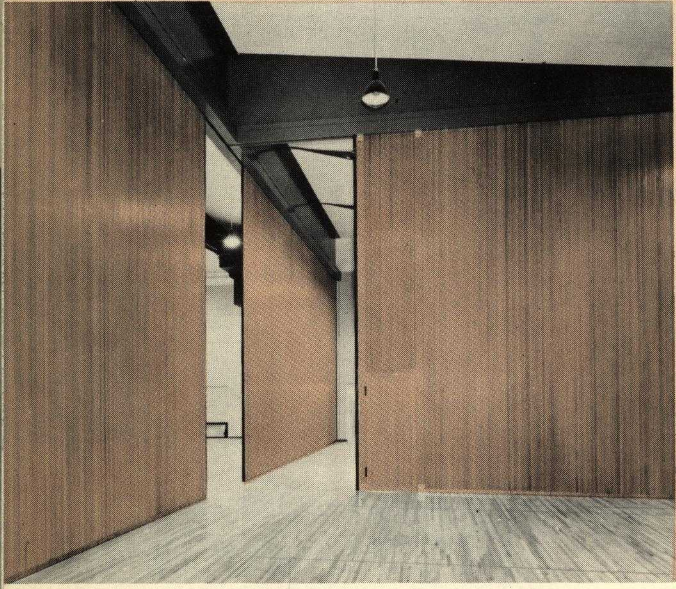
Coil-Wal®

COIL-WAL combines modern beauty with long-life durability to provide the easiest operating, most dependable movable partition built.

Openings as large as 120 feet wide by 30 feet high can be accommodated by COIL-WAL at far less cost than ordinary panel partitions — an important consideration where appearance and quality must be maintained in the face of tight building budgets.

Minimum storage space requirements permit the architect unlimited flexibility in the matter of location, placement, and concealment.

For complete and lasting satisfaction, specify COIL-WAL on any job requiring space dividers.



- **This beautiful 14' x 48' automatic-electric COIL-WAL partition divides the council chambers of a new city hall building. Note how well COIL-WAL harmonizes with modern building materials and design.**
- **Two automatic-electric COIL-WALS (one 24' x 98' bi-parting partition and one 24' x 50' single partition with pass door) serve to divide this high school gymnasium into two or three separate areas.**

ONLY Coil-Wal® OFFERS ALL THESE IMPORTANT PLUS-FEATURES!

MINIMUM STORAGE SPACE — COIL-WAL requires less storage space than any other type of divider and is completely contained within its own tamper-proof storage box.

LESS WEIGHT TO SUPPORT — COIL-WAL weighs *less than 3 lbs. per square foot* (including hardware and accessories) eliminating the need for extra heavy overhead trusses or beams.

MAXIMUM VERTICAL CLEARANCE — Straight-line travel permits mounting of track next to supporting beam, truss span, or truss to utilize full clearance under supports. This feature also permits flush ceiling installations.

GREATER SAFETY — COIL-WAL has no folding action to cause pinching or injuries. Its flexibility absorbs impacts which otherwise might result in serious bodily injury. Neoprene-covered sponge rubber on lead stile prevents accidental injury in closing — assures tight closures.

NO OVERHEAD STORAGE LOAD . . . COIL-WAL curtain weight is transferred to spindle base as it leaves track. No build-up of weight on overhead supports at any point.

DURABILITY GUARANTEED — Clear, straight-grained, warpage-free woods; quality hardware and fittings; plus the inherent strength and flexibility of COIL-WAL design withstands an incredible amount of abuse without damage to partition or operating mechanism.

BETTER ACCOUSTICAL QUALITIES — COIL-WAL'S grooved, multi-slat design greatly reduces echo over that of flat partitions. Tight closures at floor and ceiling further aid, not only in sound reduction, but in the elimination of drafts as well.

EASIER CLEANING and MAINTENANCE — Finely finished surface makes cleaning easy. There are no threshold plates or load-bearing floor channels to hinder floor cleaning. (A single ⅜ inch wide groove is the only floor guide required.)

COIL BOX

The heart of COIL-WAL's smooth automatic operation lies in its coil box design. As curtain leaves track at point (1), storage-load is guided and shifted to spindle base (2) while gear-driven spindle (3) exerts the coiling action . . . To draw curtain, power is transferred to cable (4) which runs the length of track . . . Key-switch and selector control (5) may be located at option of architect . . . In exposed installations, box is completely sheathed.

GENERAL SPECIFICATIONS

I. COIL-WAL PARTITIONS SPECIFICATIONS

Furnish and install at locations shown on plan, Dubuque Coil-Wal partitions as manufactured by Dubuque Products, Inc., Dyersville, Iowa, or approved equal and in accordance with the following specifications.

II. COIL-WAL PARTITIONS

(a) CURTAIN shall be factory assembled from select vertical grain Douglas fir, (or other suitable species), slats. Slats shall be kiln dried and treated at the factory to protect against moisture absorption. The partition shall be closely joined with prestressed steel cables and fitted with continuous slat shoes and hangers which shall be expertly attached to prevent misalignment or slat separation. PAINT OR OTHER FINISH TO BE APPLIED UNDER PAINT SECTION.

(b) LEAD STILE shall be of appropriate size to effect suitable closure and shall be fitted with sponge rubber nosing and neoprene facing, except on manually operated closures that have recessed jambs or lock-latches. LOCKING DEVICES AND PULL HANDLES UNDER HARDWARE SECTION.

(c) COIL BOX for all sizes and types of Coil-Wals shall be a sturdily designed steel frame to safely support the imposed loads when in a stored position. PANELS WITH REMOVABLE ACCESS PORTS TO COVER COIL BOX FRAME BY GENERAL CONTRACTOR.

(d) OPERATION OF COIL-WAL SHALL BE AS FOLLOWS:

(1) AUTOMATIC ELECTRIC (AE) shall include motors, reversing controls, key selector switch and limit switch, all of which are assembled in the coil box and electrically interconnected at the factory. Mechanism shall be designed with shear pins and safety controls for overload protection. Motors shall be 115 Volt single phase 60 cycle for ¼, ⅓ or ½ HP and 220 volts three phase for ¾ HP. FIELD CONNECTION TO POWER SOURCE AND REMOTE LOCATION OF CONTROLS BY ELECTRICAL CONTRACTOR.

(2) CRANK IN-CRANK OUT (CC) mechanism can be provided for Coil-Wals up to 1,000 sq. ft. with removable hand crank.

(3) PULL OUT-CRANK IN (PC) — This type is particularly suitable for single curve, ess curve or around the corner, (minimum 24" radius), installations not exceeding 1,000 sq. ft.

(4) PUSH IN-PULL OUT (PP) for wardrobe or concession closures up to 150 sq. ft.

(e) UPPER TRACK shall be minimum 18 gauge to maximum 14 gauge to safely support partition load and shall be complete with hangers, clamps and bolts that are easily adjustable for height. BOLT HOLES IN OVERHEAD SUPPORTS OR BRACKETS BY STEEL CONTRACTOR.

(f) GUIDES AT FLOOR shall be as shown on the drawings. Coil-Wal manufacturer to furnish aluminum floor guide for concrete-tile floors. Steel channel anchoring device shall be provided for wood floor guides in large room areas to control moisture expansion and bulging of floor. STEEL ANCHORING DEVICES TO BE FURNISHED AND INSTALLED BY STEEL CONTRACTOR — WOOD FLOOR STEEL CONTRACTOR — WOOD FLOOR GUIDE BY FLOORING CONTRACTOR.

(g) NO FLOOR GUIDE REQUIRED ON CLOSET CLOSURES.

(h) WRITE FACTORY FOR COMPLETE DETAILED SPECIFICATIONS.

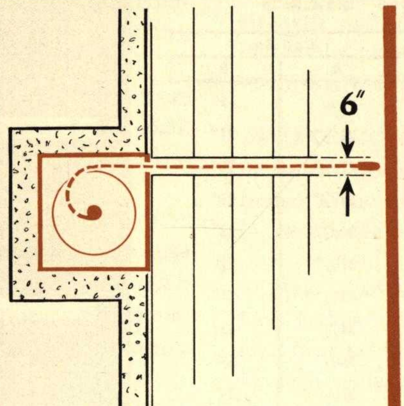
Guaranteed

for a period of one year from date of installation against faulty materials or workmanship. Manufacturer or his authorized agent will also provide inspection, maintenance, or adjustment service at a nominal cost for repairs or maladjustment occurring as the result of vandalism or failure, sagging or shifting of adjacent, attached or surrounding materials furnished or installed by other.

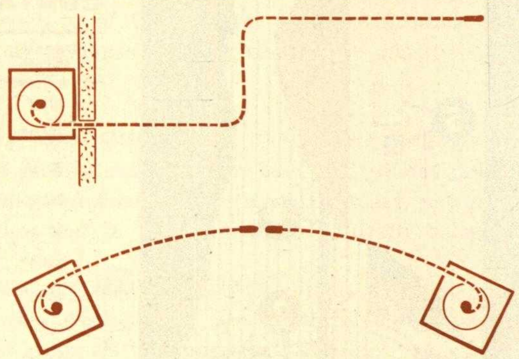
Coil-Wal®

COMPLETELY CONCEALED STORAGE

The Architect has complete freedom of design with COIL-WAL adaptability to any structural or architectural condition.



MAXIMUM SEATING



Consult factory for special curved track COIL-WALS available in automatic and manual types.

Fairhurst
TRADEMARK
First Name in Folding Walls

NOT A CURTAIN BUT A RIGID WALL

John T. Fairhurst Co., Inc.

Fairhurst "UNITFOLD" folding walls

TRADEMARK

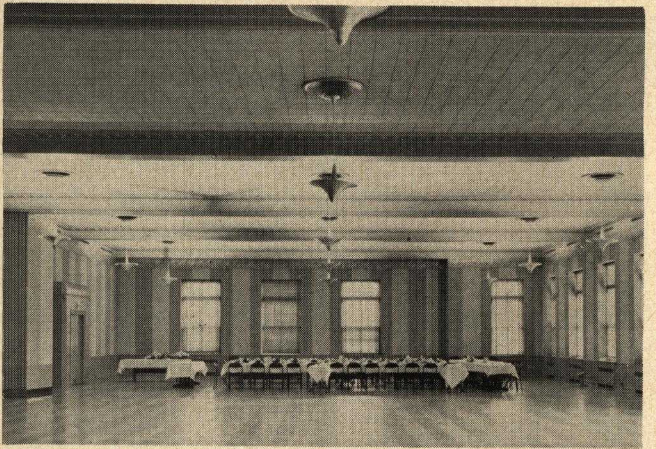
for attractive trouble proof folding walls

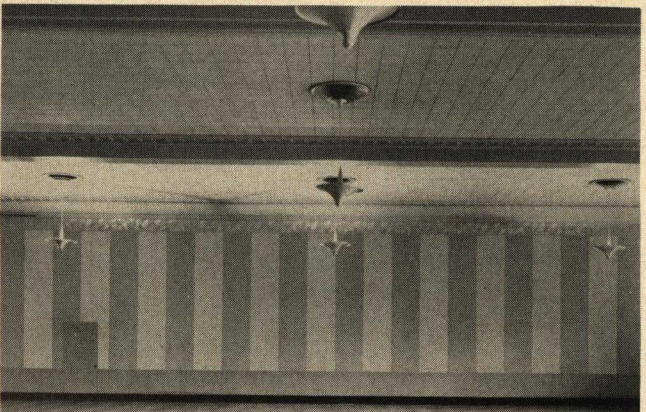
Fairhurst Unitfold folding walls are made of wood veneers built on cores of the best materials. Manufactured in separate, single units, these folding walls present the appearance of a solid wall because of their flush surfaces. They are finished to harmonize with any plan of interior decoration. The wide variety of finishes available is indicated by the typical installations shown in this catalog.

Each separate unit moves on sealed ball-bearing rollers on a guide flush with the floor to provide smooth, easy operation. Spring action prevents track-jumping by rollers.

A bronze self-adjusting guide at head mounted on a piston engaging in a metal track prevents displacement of the folding walls when they are moved into place.

All units of the folding wall are in engagement with both the floor and overhead guides until they are moved into position for folding. A locking device at top and bottom prevents moving or folding of doors except in the proper manner.





Unitfold Wall installed in 1938, Manchester Hotel, Middletown, Ohio. From Paul D. Galeese, Manager: "During the twenty years, we have found it necessary to have minor maintenance . . . on only two occasions . . . I visualize twenty more years of good service."

exclusive advantages

Unitfold folding walls are a superior type of folding wall and offer these advantages:

- automatically adjusts itself to misalignment of floor caused by settling of building
- units cannot be displaced
- *no hinges or bolts necessary;* no visible hardware
- can be locked with one key
- easy to operate, regardless of number of units
- minimum floor guide required
- folds in a minimum space
- not suspended but floor supported eliminating need for overhead reinforcement
- individual door units may be any width
- more adaptable in its uses and in layouts than most other types of folding closure
- any size folding wall may be opened and closed manually in less time and with greater precision than most other types with or without mechanical power.
- corners formed with 2⅛" radius, insuring square corners for all right angle folding walls.

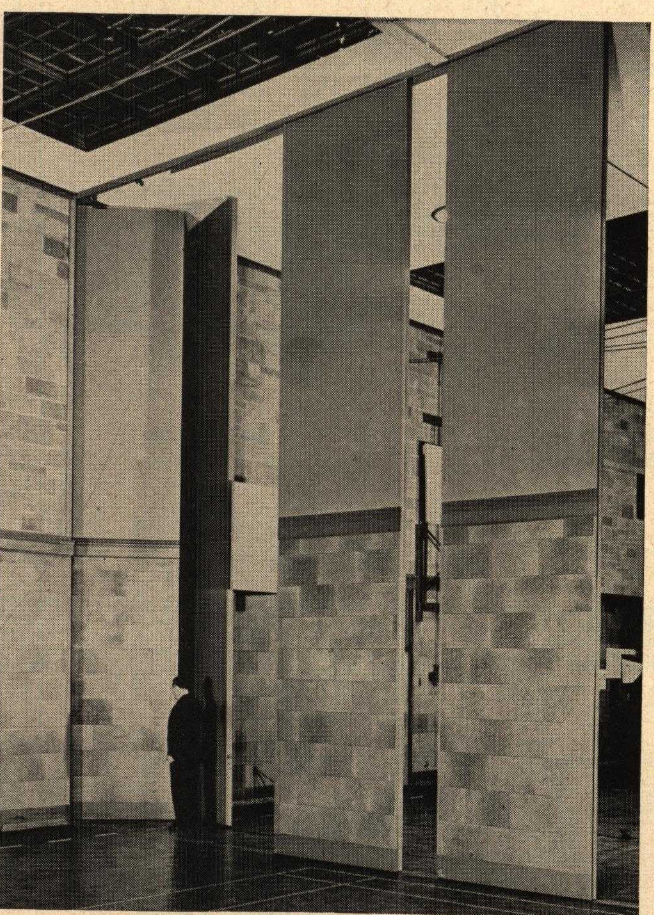
design

Fairhurst Unitfold folding walls may be installed with an odd or even number of units in any folding wall. They may be arranged to slide from either end or from center to both ends if the opening is exceptionally wide.

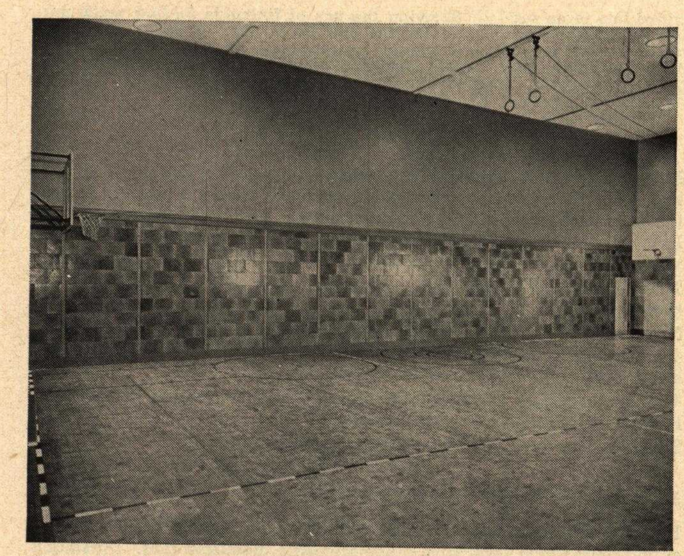
For educational buildings, these folding walls may be equipped with smooth, unbroken blackboard surfaces having no V-joints between units. Chalk rails are provided. A pass door may be provided in any unit as required.

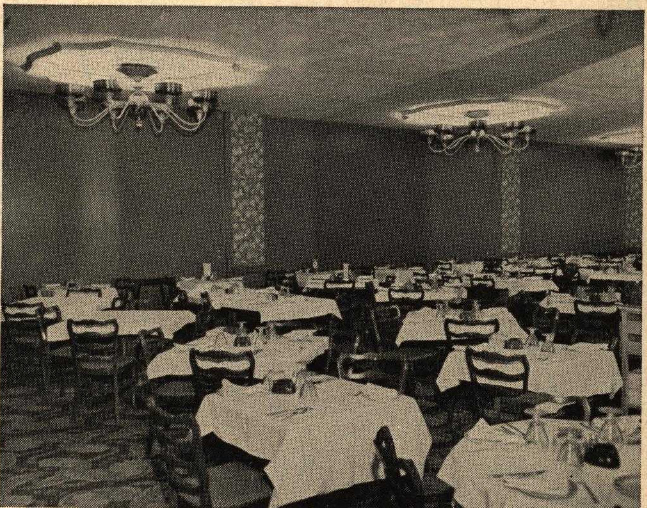
wide acceptance

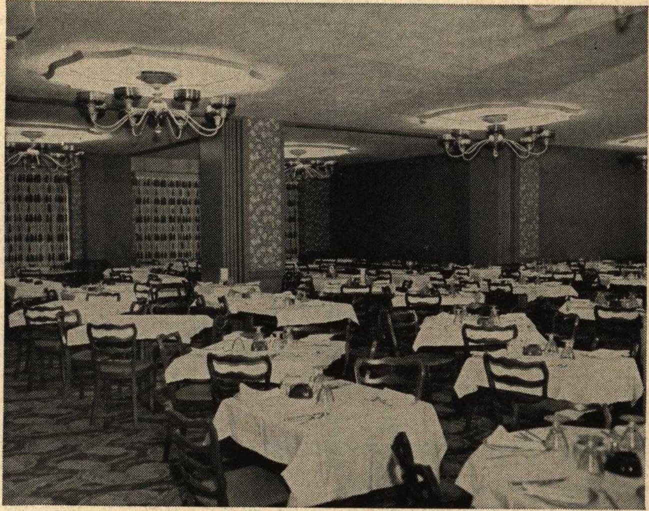
Unitfold and Unitslide Folding Walls have been perfected over the past 25 years until they are now widely recognized as the latest and most efficient answer to the problem of multiple space. As an indication of this acceptance and leadership in design and operation of folding walls, not only are **"Unitfold"** and **"Unitslide"** registered trademarks but the name **"Fairhurst"** has been similarly allowed, due to its *established association with specific and distinctive folding wall construction.*

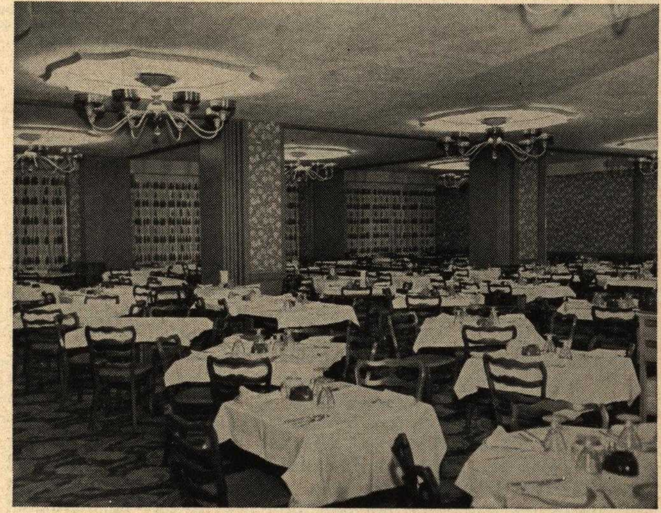


These units have the lower 10′ covered with cork squares; the upper 12′ are flush. Above, showing the pocket door open with units being folded.









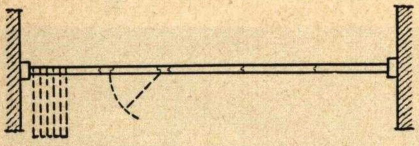
Gymnasium installation at Riverhead High School, Riverhead, N.Y., designed by Wm. I. LaFon, II, Architect. Fourteen units, each 5′ wide by 22′ high, may be folded into a shallow pocket, concealed by a pocket door.

The Brass Rail Restaurant,
100 Park Ave., New York, New York.
Architect, Louis Allen Abramson.

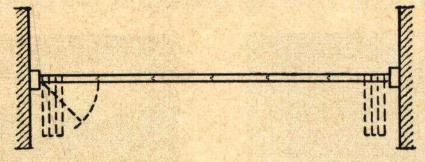
Five Unitfold walls enable the owner to have one to four dining rooms.

Typical Folding Wall Arrangements

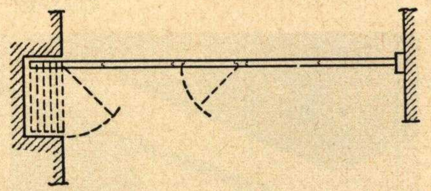
with Fairhurst "Unitfold"® folding walls



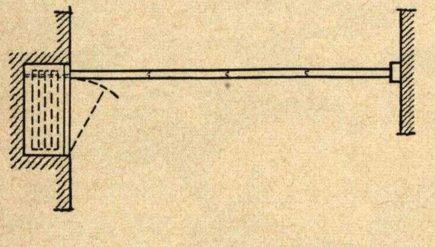
Fairhurst Unitfold Partition folded to either side with or without pass door.



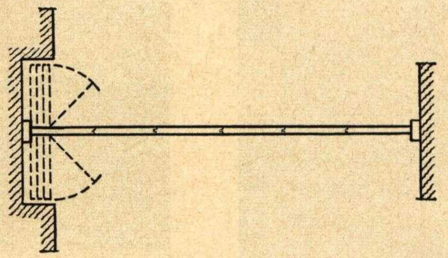
Showing the Fairhurst Unitfold Partition folded half to one side and half to opposite side. Pockets can also be used with this folding arrangement if desired.



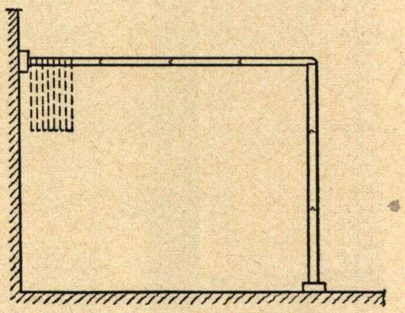
This layout is for a Fairhurst Unitfold Partition where a pocket is used without a pocket door. When partition is in use, recess forming pocket is exposed to view in one of the rooms.



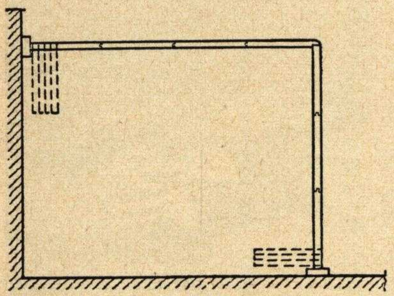
Similar to No. 3. Here pocket door is used to conceal pocket at all times.



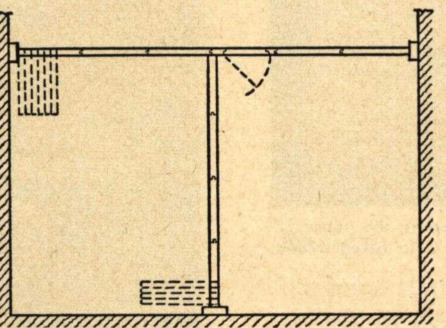
This plan affords a minimum depth of pocket. Pockets can be placed at both sides of the rooms if desired. This is an advantage where the wall thickness or general layout limits pocket depth.



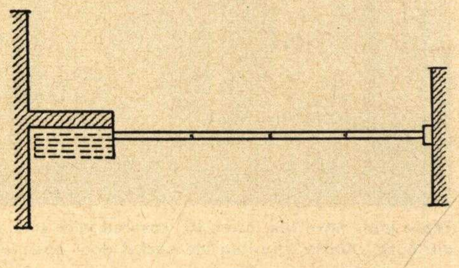
Here are shown two sets of partitions forming a right angle, permitting a corner of a large room to be used as a separate room. The layout can be continued to form several rooms on either or both sides of a large room. Units are shown all folded to one side.



Same as No. 6 with units of the folding walls folded to both walls. Pockets are optional and can be used with both arrangements.



Layout showing one room divided into three separate rooms. Pockets can be used and the units can be folded to three or two sides or all to one side, an exclusive feature with Fairhurst Unitfold folding walls.



Showing the use of Unitslide folding walls permitting the units to be stacked parallel with the opening. Pockets may be used and the units may be arranged to slide to one or both sides of the opening. For further information see pages six and seven.

standard specifications

specifications, type 1

The work under this item of the contract includes the furnishing of all labor and material necessary for the installation, complete, of the Unitfold folding walls indicated on the drawings.

The units shall be flush type construction finished 1¾" thick; cores to be of chestnut or white pine properly kiln dried and of frame construction covered with best quality veneers and all glued together with best quality waterproof glue. All rough openings to receive Unitfolds to be prepared by general contractor. Each unit to be equipped with two (2) single annular ball-bearing rollers at bottom; wheels not less than 1¾" diameter and ½" thick; one caster to be adjustable. Each unit to have hardened bronze V-shaped guide to slide in cold drawn steel track; upper guides to adjust themselves automatically; not less than 1¾" to any misalignment of floor or ceiling levels. Double head-locks to be attached to steel pistons and to engage in steel lugs attached to head at folding end.

A cold drawn steel guide to be set flush with floor with groove not more than ¼" wide and deep. The guide on pivotal caster to be cutter shaped so as to keep groove free and clean of any accumulation. The trailer caster must swing clear of floor when folding or unfolding. The end or master unit to pivot with off-set fulcrum hinges so as to compress all units when closing; this unit to have mortise lock and pull. Jambs at opposite end to have compression springs with not less than 1" compensation.

The folding walls must be rigid when drawn out, without bolts or hinges.

Each of the folding walls, when complete, shall form a rigid wall, being in perfect alignment and possible of operation with one hand, guaranteed as to material and operation.

The contractor is hereby notified that this construction is specified to set a standard quality for this item.

Specifications for Types 2 and 3 sent on request.

sound-resistant folding walls

Fairhurst Unitfold and Unitslide folding walls have obtained higher sound-retardance than any other movable closure made. Inasmuch as each sound problem has individual characteristics and factors we suggest that inquiries be sent to us and we will be glad to furnish details, data, and recommendations without charge.

Folding partition patented, John T. Fairhurst, patents 1-934-299; 2-052-089; 2-299-573.

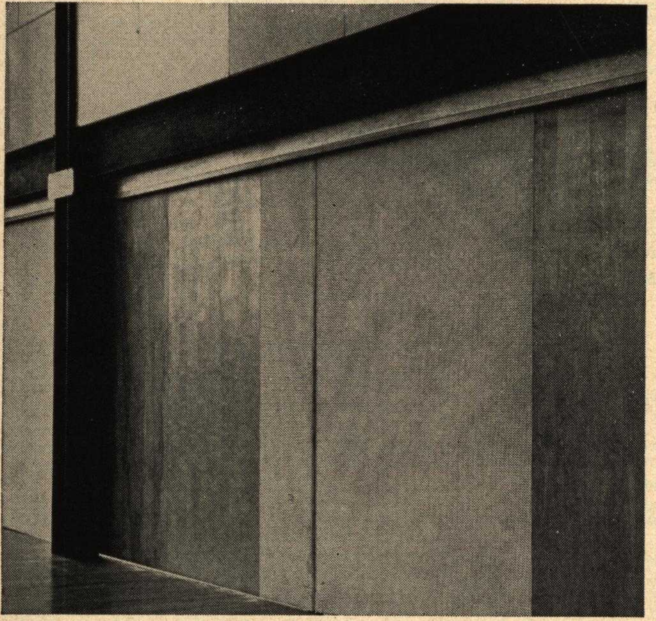
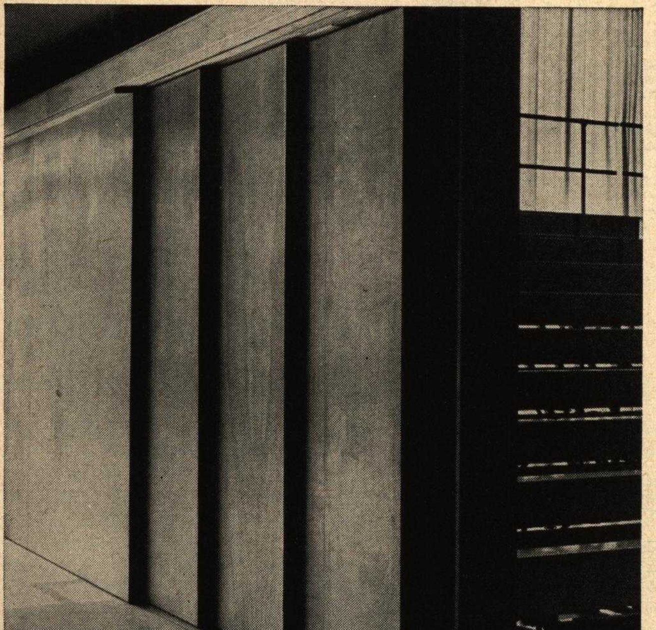
®

The latest idea in movable walls, by Fairhurst, The UnitSlide has been thoroughly tested and is being specified by leading architects.

The Fairhurst Unitslide Movable Wall for separating rooms into separate parts is of standard construction, wood veneer on cores of the best materials. These movable wall sections operate easily and quickly by hand making motors and cables unnecessary.



In this interesting installation in the Glass Center at the Corning Glass Works, the panels which appear lighter in color are veneered with sound deadening material, the other panels are wood vener.



Glass Center, Corning Glass Works, Corning, N.Y.
Architects, Harrison, Abramovitz and Abbe.

A unique feature of this movable wall is the absence of any visible hardware, and that no hinges or bolts are used in its construction.

The casters on which these walls move have annular ball bearing rollers mounted on a drop forged stem which is carried in a cast steel block. This arrangement eliminates most of the noise and friction of operation. Spring action prevents jumping by casters although the floor guide is narrower than that of other movable walls.

When weather conditions or the settling of a building cause misalignment in floors or ceilings, no mechanical attention is necessary as adjustment to those conditions is automatic.

The wall sections are not suspended. All weight is carried on the floor. The overhead action of a bronze slide running in a metal groove is as simple as is consistent with strength and efficiency.

When stacking the wall sections, automatic switches in the head and floor guides direct the units to their proper position.

design

The wall sections are built in separate units making it possible to have an odd or even number in any given wall. These units may slide from either end, or from the center to both ends.

In schools, movable walls may be furnished with smooth, unbroken slate blackboard surfaces, having no V-joints or other breaks between units.

Units may be obtained in any design, to harmonize with, or follow any plan of interior decoration.

A shuttle or wicket door can be provided in any unit for communicating purposes.

advantages

automatically adjusts to floor or ceiling misalignment
units cannot be displaced
no hinges or bolts used or necessary
forms a rigid wall in perfect alignment
can be operated with one hand, no matter what size
units operate on a single floor guide across the opening
no overlapping joints, all units in same vertical plane

Specification

Furnish and install complete Fairhurst Unitslide folding wall, as indicated on plans; to be divided into single units. Each unit to be equipped with two single annular ball-bearing rollers at bottom, wheels not less than 1¾" diameter and ½" thick; one caster to be adjustable. Each unit to have hardened bronze V-shaped guide to slide in cold drawn steel track; upper guides to automatically adjust themselves, not less than 1¾" to any misalignment of floor or ceiling levels.

Units to operate in a single guide across the opening with automatic switches at the stacking end. No overlapping joints between units will be permitted.

A cold drawn steel guide to be set flush with floor with groove not more than ¼" wide and deep.

The guide on pivotal caster to be cutter shaped so as to keep groove free and clean of any accumulation.

The folding wall must be rigid when drawn out, without bolts or hinges.

Specification for Doors

Give design, whether flush or panel, material, etc.

If Sound-Retarding Construction Is Desired

Doors to be sound-proofed construction, built as specified above and to have sound insulating material between panels. Provide and install felt seal at floor, ceiling and across edges of each door.

If Access Doors Are Desired

The folding wall installation shall include (number of) access doors as shown, complete with drop handle, latch, hinges and metal threshold, and to be constructed same as other doors in the partition. All workmanship, material and operation to be guaranteed by the manufacturer.

FAIRHURST UNIT SLIDE PARTITION

Fairhurst . . . First Name in Folding Walls

TRADEMARK

Our list of customers is our best guarantee of quality and satisfaction

To list all the hundreds of educational, commercial, public and private buildings in which Fairhurst folding walls have been installed, and the many architects who have approved their designs, would require far more space than permitted by this catalog. A partial list follows.

More complete lists, together with copies of letters from users, are available, and will gladly be furnished on request. They provide convincing evidence of the wide recognition and general preference that these designs have received as being the most practical and efficient for their purposes.

Some popular uses of FAIRHURST "UNITFOLD"® FOLDING WALLS

Schools

For subdividing assembly rooms into class rooms, with blackboards, chalk rails, or bulletin boards.

Churches

For subdividing men's or women's club rooms or parlors, also to convert large assembly halls into Sunday School class rooms.

Y.M.C.A.

To divide at will large halls into smaller rooms, for class rooms or club rooms.

Clubs

To form committee rooms, or game rooms, also to divide dining rooms into private dining rooms.

Hotels

To subdivide ball rooms or dining rooms, for small or large parties, making it possible to have building 100% in use most of the time.

Hospitals and Health Centers

To subdivide large offices into smaller private offices, or when folded, larger room can be used for meetings, lecture rooms, or clinics.

Residences

To subdivide large bedrooms into two to accommodate guests, to divide main floor into dining room, library and living room, making it possible to convert rooms into one large hall for social purposes.

Funeral Parlors

To subdivide one large parlor into two or more smaller parlors or family rooms; to accommodate large or small funerals, making it possible to hold a number of funerals at one time or accommodate large funerals.

Apartment Houses

To close off kitchenette from living room or divide dining and living room. When folded, large room can be used for social affairs and to increase or decrease number of bedrooms.

Department Stores

To provide rooms for sales meetings or furnish any size room for ladies' club meetings, and employees recreation groups.

Office Buildings

By eliminating permanent walls and using Unitfold Walls, any size office can be provided for tenant as they may require; or would be an advantage to attorneys, making it possible for them to hold a Directors' or Company meeting by increasing the size of office quickly, saving additional expense of renting additional office or room.

Restaurants

Ideal for providing small private dining rooms for small parties. This can be done by using the four corners of large dining room, providing Unitfold Walls folding at the two right angle walls and opened up to meet at one corner, without the use of corner posts.

FOLDOOR
FOLDING PARTITIONS AND DOORS
®

HOLCOMB & HOKE
FOLDOOR
FOLDING PARTITIONS AND DOORS ®

DUAL SOUND-RETARDANT FOLDOOR PARTITION

The new Dual Sound-Retardant Foldoor Partition now makes it possible to separate both space-and-sound with a flexible folding partition. Now the convenience and beauty of the fabric covered folding door are available in a general purpose, improved sound-retardant partition that operates from overhead tracks only.

Laboratory tests show maximum sound insulation over a wide range. This partition has proved its effectiveness in a number of greatly varied applications. Some of these installations are shown on the cover page: Hotel dining and ballrooms, mortuaries, bowling alley league rooms, churches, motel meeting rooms.

HOLCOMB & HOKE
FOLDOOR
FOLDING PARTITIONS AND DOORS ®

SPECIFICATIONS

GENERAL

Folding partition as shown on plans shall be Dual Sound-Retardant Foldoor as furnished by an authorized representative of Holcomb & Hoke Mfg. Co., Inc., Indianapolis, Indiana, or equal as approved by architect prior to bidding date. The partition shall consist of two Multi-V frames mounted on parallel overhead tracks, and connected at the leading edge to operate as a single unit.

Overhead tracks only shall be used. Tracks to be not less than 16-gauge steel, each having two U-shaped channels, providing high strength, free tracking of trolley wheels and minimum rolling friction. All hinges throughout the partition shall be not less than 16-gauge zinc coated steel with a minimum net dimension at pivot point of 1¾″. Exterior covering of partition shall be flame-resistant, plastic coated, supported fabric as described herein.

Sound Insulation—Partition shall be equipped with both a special sound-retardant liner and a layer of sound absorbent material on each parallel frame to provide maximum reduction of sound transmission. The sound insulating material shall be flame-retarding and must not support combustion. Sound retarding components shall include a baffle between frames at head, sweep strips to engage floor, and sound-retardant jamb mouldings.

DOOR COVERINGS

Construction— Fiberglas fabric with virgin vinyl coating, finished fabric weighing 30 ounces per lineal yard, 54″ wide. Underwriters Laboratories approved.

—or alternate—

Cotton fabric with virgin vinyl coating, finished fabric weighing 27 ounces per lineal yard, 54″ wide.

Characteristics— Coating shall be compounded and applied to backing so as to give finished fabric long life, flexibility and resistance to cold, fading, discoloration, crazing or cracking.

Flame Resistance—Fabrics and sound insulation shall comply with specifications and tests of the following agencies:

a. New York Board of Standards and Appeals
b. Fire Department, City of Boston
c. City of Los Angeles

TRACK

The track shall be of steel no less than 16-gauge, and shall have two U-shaped sections in which the wheels roll. All tracks shall be semi-concealed by cornice or cover plates. Trolleys shall be ball bearing type with Nylon tread.

HINGES

Metal hinges shall be used in the partition frame, and they must not be less than 16-gauge No. 4 tempered, zinc-coated, corrosion-resistant steel. They shall not be less than 2⅜″ in height throughout the length of the hinge. The net height at center of hinge where trolley pins support partition frame shall not be less than 75% of the maximum hinge height.

PARTITION FRAMES

Partitions less than 7′ 0″ in height shall have a row of hinges at top and bottom of frames. Frames 7′ 0″ and higher shall have a horizontal row of hinge plates approximately every 48 inches. Hinges shall be held in a horizontal position by being welded to 3⁄16″ zinc coated, corrosion-resistant steel rods which extend full height of partition frame. This assures true pantograph action throughout.

STACKING SPACE

When partition is compressed the stacking space shall not measure more than 2½″ per foot of opening plus width of end posts. The partition when stacked shall not measure more than 13¼″ in profile width.

HARDWARE

Lead post assembly and matching jamb assembly shall contain factory assembled draw latch. Handles, catches or locks shall be satin aluminum baked-on finish, or satin chrome plated. Pendant pulls, to assist in moving partition, shall be attached to each side of lead post and rolling post. Tie backs shall be provided to keep the stacked partition compressed.

WARRANTY

Foldoor Dual Sound-Retardant Partitions shall be fully guaranteed for one year against defects of faulty material and workmanship.

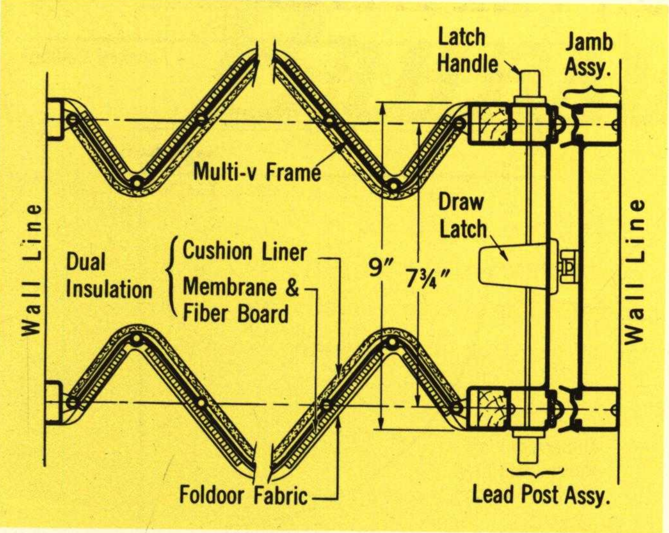
HOLCOMB & HOKE
FOLDOOR
FOLDING PARTITIONS AND DOORS ®

PARTITION SIZES

Maximum Height	Maximum Width
to 11′-11⅞″	35′-4″
13′-11⅞″	30′-9″
20′-0″	25′-5½″

Partitions may be used in pairs or joined together for wider openings.

CONSTRUCTION DETAILS



The Dual Sound-Retardant Foldoor Partition consists of two Multi-V Foldoor frames joined by a single lead post assembly so as to operate as one unit. Each frame is covered on inside and outside with flame-retardant sound insulating materials. On the inside is a heavy cushion-type liner to absorb high frequency sounds; on the outside, a continuous membrane with panels of fiber board to retard low frequency sounds. Supported vinyl fabric covers the complete assembly of insulated frames and posts.

The installed weight of the partition is approximately 5.25 pounds per square foot. About half this weight represents the four dense layers of complementary insulation which provides maximum reduction of sound transmission.

Two special sound-retardant male and female mouldings are used to seal lead post and jamb assemblies.

The partition is closed and latched by means of a draw latch which is operated from either side by short lever-type handles. Key-lock handles are available. Pendant pulls are attached to assist in moving the partition.

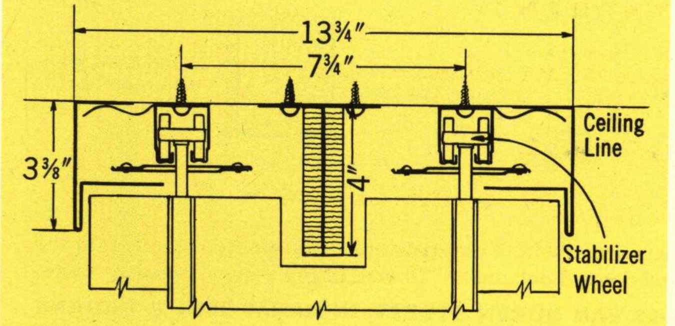
Installation is simplified by mounting each insulated frame separately, then joining them with lead post assembly.

The Dual Sound-Retardant Partition is used with straight track only. Flexibility of use can be added by installation of a pivot switch.

Foot bolts are available for field installation to anchor long or intersecting partitions to floor.

For details of Multi-V frame construction see the Foldoor Catalog, form No. 7211 (A.I.A. File 16-M). This catalog can be found in Sweet's Architectural File 16e/HO.

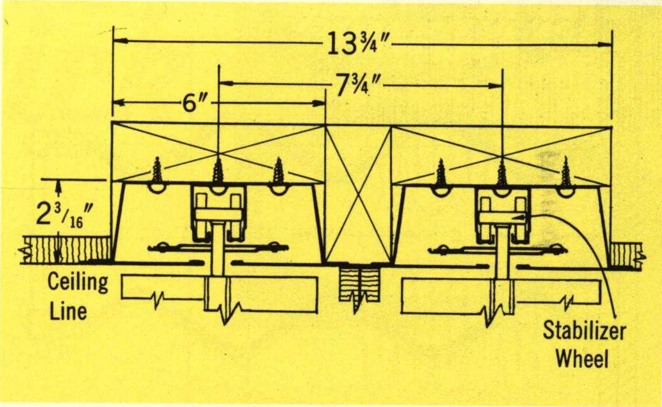
CONCEALED SURFACE TRACK



Tracks are mounted directly to header or ceiling. Cornice, which is retained by a series of spring clips, conceals tracks and pantographs while giving a finished ceiling line.

Horizontal stabilizer wheels, in lead post trolley assemblies, bear against side walls of the tracks, providing smooth, parallel tracking.

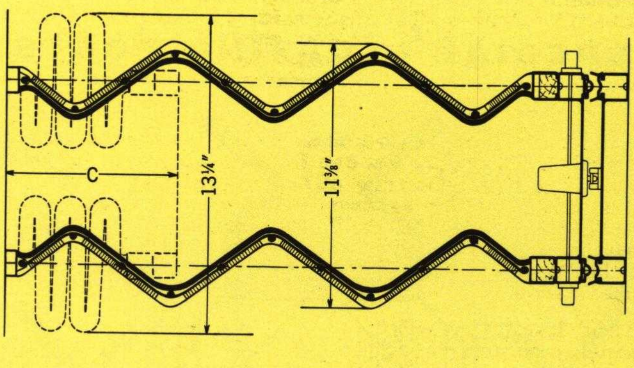
RECESSED TRACK



Recess pans and covering plates are furnished for installing tracks in a concealed position above ceiling level.

A 4″ baffle is suspended between the frames to retard the passage of sound over the partition on both recessed and concealed surface track installations. Baffle is covered with fabric to match partition.

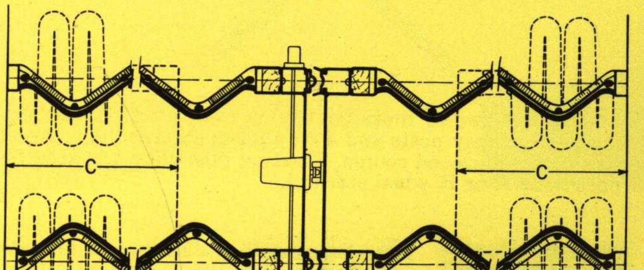
SINGLE PARTITION



C = 2½″ per foot of opening width plus 3¼″*

Note compactness of profile and stack. The Dual Sound-Retardant Foldoor Partition is also available with a rolling post to allow opening from either end and stacking against either wall. Lead post and jamb assemblies are used in place of fixed jamb posts. Stack space with a rolling post measures 2½″ per foot of opening width plus 6⅝″.

PAIR OF PARTITIONS

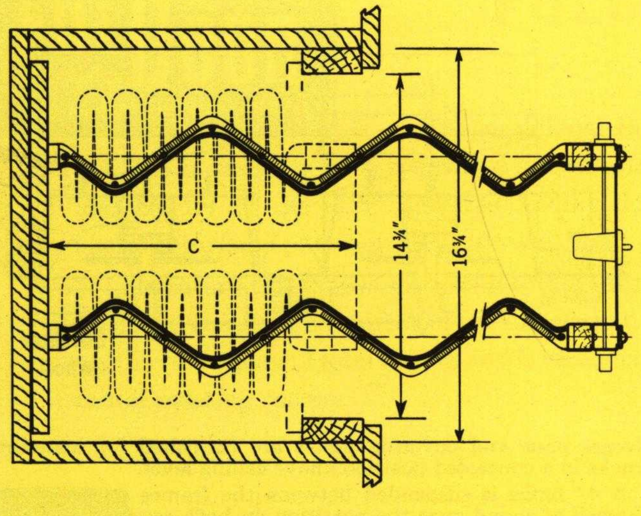


C = 2½″ per foot of half opening width plus 3¼″*

This arrangement allows access to the center of the enclosed area and divides the stacking space into two stacks.

*On partitions 14′ and higher add 1⅛″ for reinforced jamb.

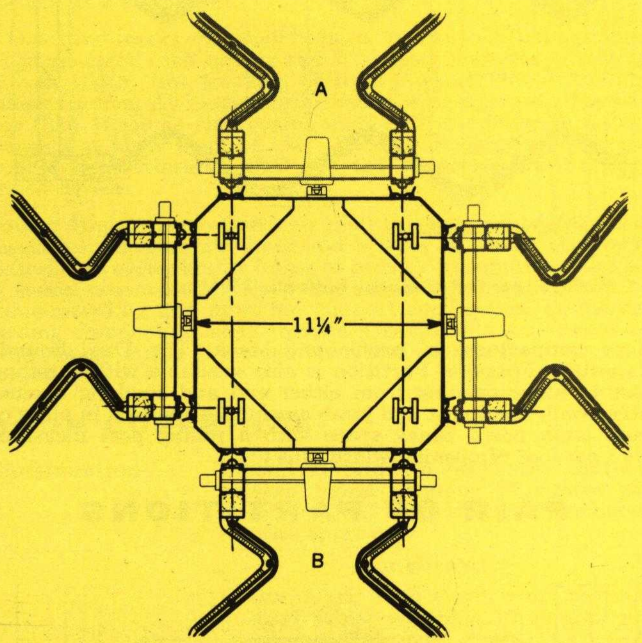
SLIDING JAMB IN POCKET



C=2½" per foot of opening width plus 4". On partitions 14' and higher add 1⅛" for reinforced jamb.

When partition is to stack in wall pocket the fixed jambs are attached to a sliding jamb board which is covered to match the partition.

SPECIAL FLOATING POSTS



For use where two or more partitions meet to divide an area, 2-way posts, 3-way posts and 4-way posts are available. Access is easy to the enclosed rooms. Floating post shown is attached to partitions A or B when stacked.

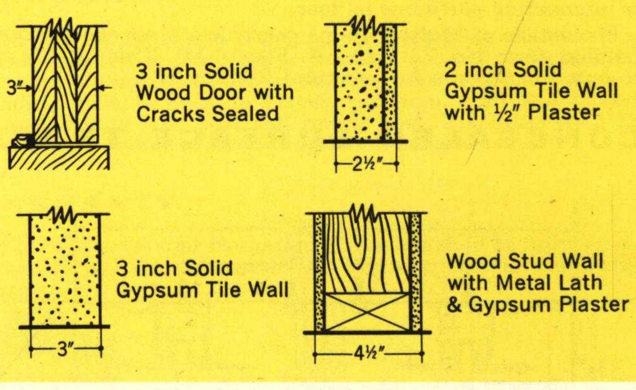
Pivot switch is available for stacking Dual Sound-Retardant FOLDOOR Partitions along wall, and for other right angle switching applications. A partition used with the pivot switch must have a rolling post.

ELECTRICAL OPERATOR

For large partitions or for convenience, an electrical motor-driven operator is available. Smooth, positive operation is assured with aircraft-quality cable mechanism. Self-contained drive unit can be conveniently positioned for servicing.

SOUND RETARDING VALUES

The Dual Sound-Retardant FOLDOOR with bottom sweep strips and sound baffle at header is equivalent in sound reduction to the following types of construction materials:



3"
3 inch Solid Wood Door with Cracks Sealed
2 inch Solid Gypsum Tile Wall with ½" Plaster
2½"
3 inch Solid Gypsum Tile Wall
3"
Wood Stud Wall with Metal Lath & Gypsum Plaster

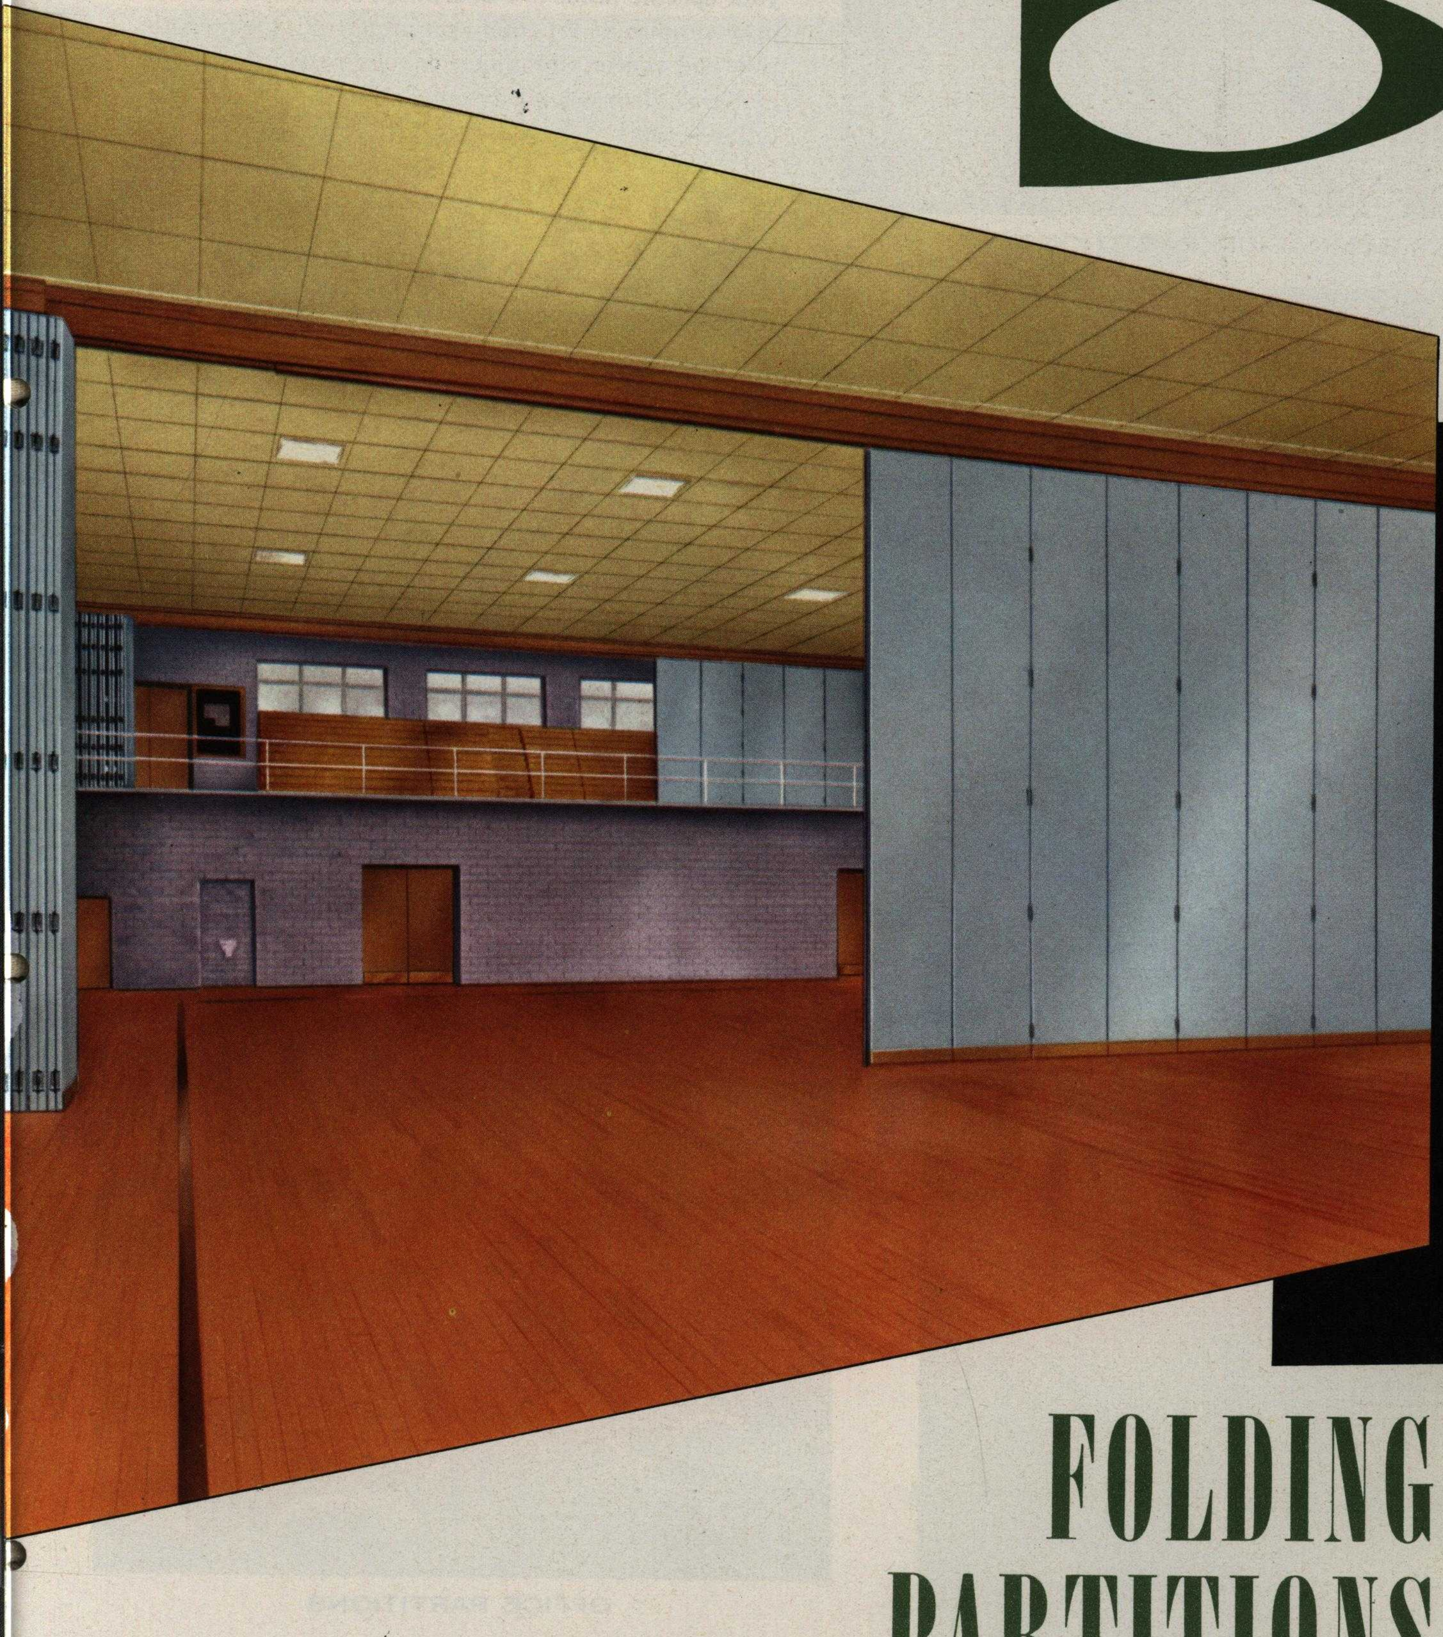
Brunswick



FOLDING PARTITIONS

GYMNASIUM PARTITIONS

PARTITIONS TO SERVE EVERY NEED

Whether you want to turn one gymnasium into three; divide classroom space, cafeterias or multi-purpose rooms or solve that "special problem" . . . there is a Brunswick audio-visual partition custom designed to your specific needs . . . Brunswick Partitions are not mass produced! Whether you prefer roll duck, exotic plywood veneer, aluminum or *color-vinyl* facing material, Brunswick's five models offer you a full selection.

FIVE TYPES TO CHOOSE FROM

Fully automatic electric partitions provide the ultimate in operational ease and flexibility. A turn of a key closes the partition to form a wall dividing the gymnasium into two completely separate facilities. For exhibition use it opens to provide a single large gymnasium.

And for smaller areas such as classrooms, banquet halls, multi-purpose rooms etc., Brunswick offers a full range of mechanical and manually operated partitions. These units—the 200, 300, 400 and 500 series models—all offer unique solutions to specific partitioning problems.

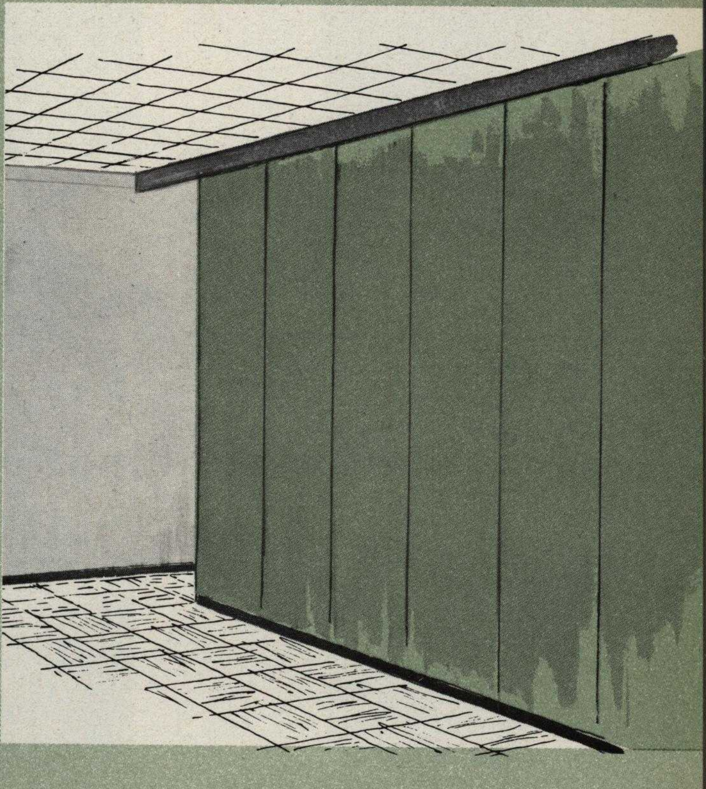
Brunswick INTRODUCES COLOR-VINYL

QUALITY DESIGNED FOLDING PARTITIONS

CREATE THE ENVIRONMENT FOR LEARNING WITH Brunswick VINYL-FACED PARTITIONS...NOW AVAILABLE IN NEW "COLORS FOR LEARNING"



EDUCATORS . . ARCHITECTS . . PSYCHOLOGISTS . .

KNOW COLOR IS IMPORTANT IN TODAY'S SCHOOLS

Proper color—properly used—is an acknowledged vital factor in creating a good learning environment. The proper color of gymnasium and multipurpose folding partitions is an integrating factor upon the whole environment—ties together the various colors of materials.

Children are naturally colorful. They respond to a bright, cheerful environment. They like the unrestricted qualities of the colors of nature brought indoors. They react to the moods created by proper color planned activity, conference and study areas. Brunswick *color-vinyl* partitions offer you all of these important color environment advantages—and more! Under the facing you will find the same exacting standards of quality design and construction that have made Brunswick the choice for more than a quarter of a century.

SERIES 100

OPERATION:

A. Operation shall be automatic electric with folding and extending of partition controlled by a hold type key control switch. An electric operator of proper H.P. shall provide motivating force for operation of folding partition. The operating mechanism shall include the cable drive, electric gear head motor, magnetic switches, limit switches and all necessary equipment to operate a partition of this type.

B. There shall be 1" operating clearance between the partition and the floor during operation. The final extending movement shall automatically seal this space against the transmission of sound by lowering and compressing a continuous sponge rubber seal against the floor. The final extending movement shall automatically lock the partition in position without the use of bolts or keepers.

C. The partition shall be center suspended from four (4) wheel needle bearing trolleys operating on an I-Beam track. Each trolley shall have a capacity of not less than three tons. Floor track will not be permitted.

SERIES 300

SUBSTITUTE FOLLOWING PARAGRAPH FOR "A" AT LEFT

Operation shall be mechanical with folding and extending of partition controlled by means of a hand crank. The operating mechanism shall include the cable drive, gear reduction box, removable hand crank and all necessary equipment to operate a partition of this type.

OPERATION: **SERIES 200**

A. Operation shall be manually controlled with all doors folding to a single jamb hinged together. Partition shall extend and fold in a continuous operation.

B. There shall be a ¾" operating clearance between partition and floor during operation. The final extending movement shall automatically seal this space against the transmission of sound by lowering and compressing a continuous sponge rubber seal against the floor. The final extending movement shall automatically lock the partition in position.

C. Partition shall be center suspended from ball bearing trolleys operating on an I-Beam track. Floor track will not be permitted.

OPERATION:

A. Operation to be manual with door sections hinged together and operated in pairs.

B. Partition shall be edge hung and suspended on ball bearing trolleys operating on a 3" I-Beam track. Bottom of doors shall be guided by roller pins operating in steel guide track neatly inlaid in floor.

C. There shall be a ½" operating clearance between bottom of partition and floor track. This space shall be sealed with a self-balancing rubber floor seal against the transmission of light and sound.

SERIES 400

SUBSTITUTE FOLLOWING PARAGRAPH FOR "B" ABOVE:

B. Partition shall be edge hung with weight carried on bottom rollers operating in steel track neatly inlaid in floor. The top of the doors shall be guided by rollers operating in box type overhead guide track.

FOLDING PARTITION SPECIFICATIONS

1. GENERAL SCOPE:

A. Folding Partition shown in Architect's plans and specifications shall be as manufactured by The Brunswick-Balke-Collender Company, Kalamazoo, Michigan, or equal as approved by the Architect.

B. Folding Partitions shall be delivered and installed by manufacturer or his duly authorized Agent. Manufacturer shall furnish folding partition complete with hardware, tracks, jambs, and track enclosure material required. The entire installation shall be guaranteed against faulty materials, workmanship and operation for a period of one (1) year from date of installation.

2. WORK BY OTHERS:

A. Supporting steel shall be drilled or punched by others in accordance with template furnished by door manufacturer. Hanger rods will be furnished by door manufacturer and installed by general contractor. All field painting or finish by others. (ADD FOR ELECTRIC OPERATION ONLY) All conduits, outlets, rough boxes, wiring and necessary electrical work by Electrical Contractor.

3. OPERATION:

Insert proper operation specifications from page 7, 9, or 11.

4. DOOR CONSTRUCTION:

Insert proper door specifications from door specifications below.

ALUMINUM FACING:

Partition door panels shall be Brunswick AeroCore Type *______ of nominal *______ thickness. Panels to have wood stile and rail frame with resin impregnated honeycomb core over which will be glued ¼″ thick, full density hardboard backing panels. Facing to be .025 rolled aluminum. Vertical edges of door panels furnished with continuous metal astragals with hinges jig welded thereto.
*Type 10 @ 1¾″ Thick—Type 20 @ 2¼″ Thick—Type 30 @ 3″ Thick

FABRIC FACING:

Partition door panels shall be Brunswick AeroCore Type *______ of nominal *______ thickness. Panels to have wood stile and rail frame with resin impregnated honeycomb core over which will be glued ¼″ thick, full density hardboard backing panels. Facing to be **__________. Vertical edges of door panels furnished with continuous metal astragals with hinges jig welded thereto.
*Type 11 @ 1¾″ Thick—Type 21 @ 2¼″ Thick—Type 31 @ 3″ Thick
**Roll Duck sized one coat at Factory—Brunswick Color Vinyl Plastic

PLYWOOD FACING:

Partition door panels shall be Brunswick AeroCore Type *______ of nominal *______ thickness. Panels to have wood stile and rail frame with resin impregnated honeycomb core over which will be glued ¼″ thick plywood panels. Surface veneer to be (Please specify cut, grade and species of veneer).
*Type 12 @ 1¾″ Thick—Type 22 @ 2¼″ Thick—Type 32 @ 3″ Thick.

OPTIONAL EQUIPMENT:

1. Chalkboard and/or corkboard shall be installed where indicated in Architect's details, complete with metal moulding. Recessed chalk pockets shall be provided to complement chalkboard.
2. The lower portion of the door shall be provided with ____________ Wainscot to a height of ________. (Wainscot of pressed wood, plywood, cork or linoleum provided on specification.)
3. Pass door, seven feet high from floor and ten inches less in width than regular door section, shall be provided complete with 3 butts, latching device, flush cups and threshold. (Master keyed cylinder lock shall be provided by others.) Location of pass door to be determined by Architect.
4. Recess pocket(s) shall be enclosed by manually operated doors of same construction as partition door sections. Doors shall enclose pocket(s) when partition is in both open and closed positions.

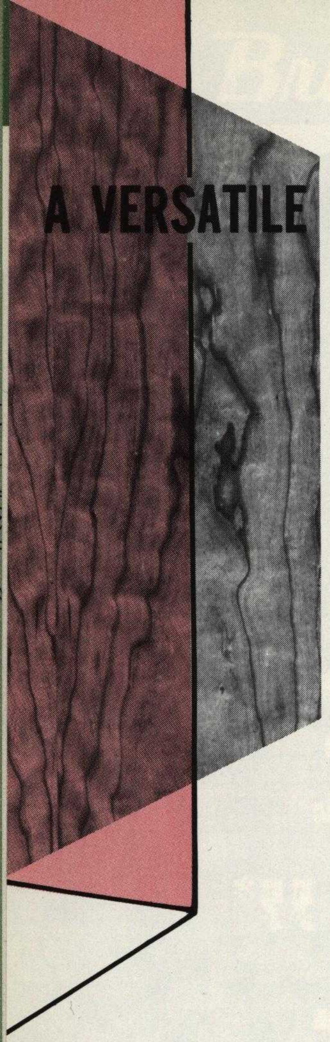
"SLIDE WALL"*

A VERSATILE SYSTEM OF SPACE UTILIZATION

NATIONAL FOLDING WALL CORP.

42 WEST 13 STREET, NEW YORK CITY 11, N.Y. PHONE CHELSEA 2-1252

*Patent Pending



A VERSATILE SYSTEM OF SPACE UTILIZATION "SLIDE WALL"

The National "Slide Wall" folding wall is specifically engineered and designed for maximum versatility, sound retardance and ease of operation. All units are easily and quickly operated by hand without mechanical assistance. A foolproof guidance system assures trouble-free operation at all times. Since the floor bears the entire weight of each unit, expensive, overhead suspension arrangements are reduced to a minimum.

The National "Slide Wall" unit is considered by many to be the finest folding wall now obtainable, not only because of its simple operation and advanced mechanical design but also because it is manufactured of the finest materials available, using the most modern methods and equipment.

FEATURES

- **Easily operated without mechanical assistance**
- **No skilled operator required**
- **No visible hardware**
- **Flush joints affording a continuous smooth plane**
- **A rigid wall comparable in most respects to a fixed building wall**
- **Any size, in any material and any design**
- **Stores away from view in a minimum of space**
- **Unlimited flexibility**
- **High degree of sound retardance**
- **All panels held securely at the four corners**
- **Trouble-free — no maintenance cost**

TYPICAL ARRANGEMENTS

There are an unlimited number of combinations to satisfy practically all dividing and storage requirements.

1. Components stacked parallel to track in storage closet. Pass door optional.
2. Components stacked perpendicular to track in storage closet. Units can be stacked against wall when space limitations do not allow for storage closet.
3. Typical arrangements for meeting rooms, class rooms, etc. Method of stacking optional.
4. Curved partition layout showing both perpendicular and parallel methods of stacking.
5. Components stacked perpendicularly on both sides of track where depth of closet is limited.

SPECIFICATIONS

The sliding components shall be flush type, thickness to be (state thickness 1¾, 2″, etc.). Cores to be of chestnut, poplar, basswood or white pine and of solid slab construction (or frame construction with sound insulating material between faces). Faces to be of highest quality veneer. Veneer to be (state specie). All to be glued together with highest quality waterproof glue. All rough openings to be prepared by general contractor. Each panel unit to be equipped with two anti-friction ball bearing wheels, with permanently sealed-in lubricant. Two top guides to be used on each unit and must slide free in a cold-rolled steel track. Top guides to be self-adjusting so as to compensate for misalignment of floor or ceiling. No hooks, lugs, frogs or other tripping mechanism permitted.

Panel units must be securely locked in the track at all four corners when stacked and when on track across the opening. All units to roll on a cold-rolled steel track with a groove not more than ¼″ wide and must be set flush with the floor. Track to have a black oxidized finish to resist rusting. The last unit to be equipped with a springed stile to compress all units tightly. The folding walls when fully extended must be absolutely rigid without the use of hinges, bolts, or guide strips.

All work performed under this section is to be guaranteed as to material and operation.

The work under this item of the contract includes the furnishing of all labor, material and hardware necessary for a complete installation of the "Slide Wall" as indicated on the drawings.

UNLIMITED PANEL VARIATIONS

National's skilled craftsmen have years of experience in fabricating fine architectural woodwork and are capable of executing the most exacting requirements. Unlimited panel designs can be obtained. A few examples are shown at the right.

NATIONAL FOLDING WALL CORP.

AN OUTSTANDING INSTALLATION

A Leading Hotel selected National's "Slide Wall." The almost limitless combinations available permit maximum use of the ballroom and adjoining meeting rooms. The ballroom area is equipped with double sets of slide walls. This arrangement achieves one of the highest degrees of sound retardance ever obtained in a movable wall.

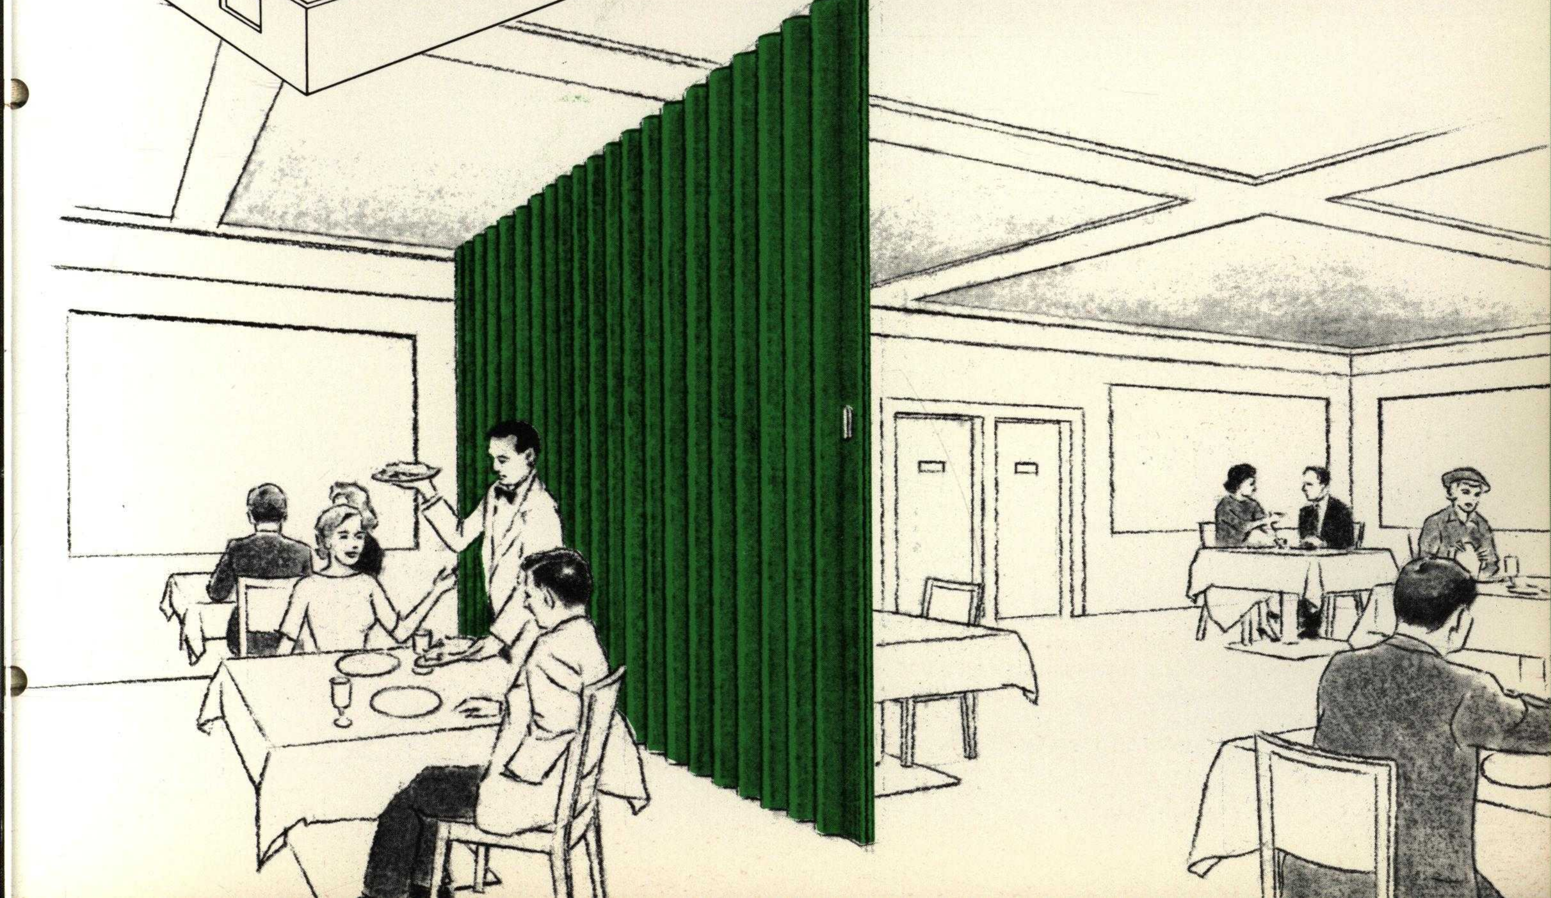
modernfold's
soundmaster
folding partitions



modernfold introduces a new age in sound retardant folding partitions

MODERNFOLD's new "Soundmaster" line of folding partitions has created new standards of performance for folding partitions. Available in two different models—the "80" and "120"—MODERNFOLD now makes it possible to combine space flexibility and sound control.

In addition to the conventional single partition application, the use of two "Soundmaster" partitions, side by side, makes it possible to achieve even greater sound insulating results—thus making the folding partition a truly practical solution to the more critical sound control problems.

Sound Testing Standards—All the data in the following tables were obtained by Richard Hamme of Geiger & Hamme Laboratories, Ann Arbor, Michigan. Mr. Hamme is a consultant in acoustics, and served on ASTM Committee E-6 on Methods of Testing Building Constructions (Committee that established test procedure E90-55).

The results of these tests (Ave. 1) show the average transmission loss values of the "Soundmaster 80" and the "Soundmaster 120"—both singly and in pairs—at all frequency levels.

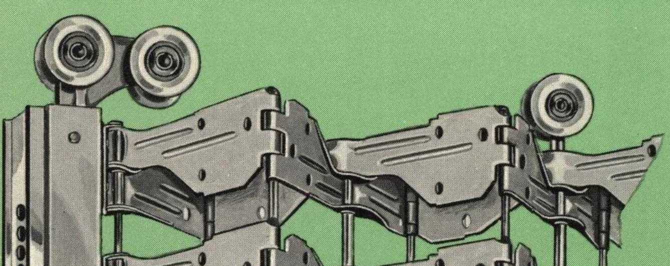
For comparison purposes only, the tests (Ave. 2) show the average transmission loss values for the more limited frequency range per folding door industry standards.

SOUND TRANSMISSION LOSS TESTS • GEIGER & HAMME LABORATORIES

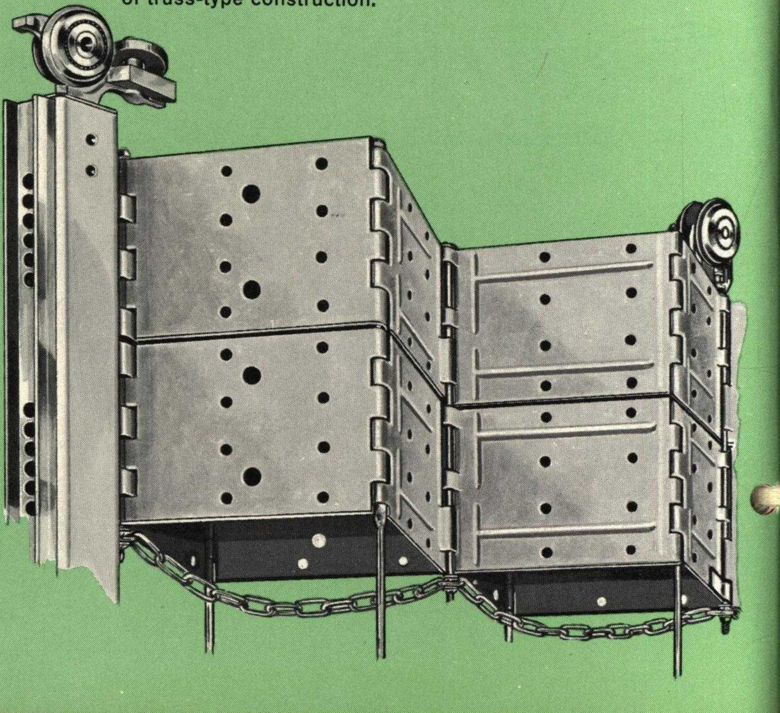
TRANSMISSION LOSS (db.) AT FREQUENCY (C.P.S.)

DOOR DESCRIPTION	125	177	250	354	500	707	1000	2000	4000	Ave. 1	Ave. 2
G & H Test #NC-18T "Soundmaster No. 80"	16	25	22	27	28	32	33	40	47	29.9	34.5
G & H Test #NC-16T "Soundmaster No. 120"	14	23	25	33	33	36	31	43	49	31.9	37.5
G & H Test #NC-17T Two (2) "Soundmaster No. 80"—12" O.C.	24	33	32	39	40	46	46	53	53	40.5	46.2
G & H Test #NC-19T Two (2) "Soundmaster No. 120"—15" O.C.	24	29	33	49	42	49	46	54	54	42.2	49.0

AVE. 1. Average of nine (9) test frequencies (125-4000 cps) per A.S.T.M. E90-55.
AVE. 2. Average of six (6) test frequencies (354-4000 cps) per Folding Door Industry Standards.



◀ "Soundmaster 80" partitions over 8′0" high are equipped with two rows of hinges at top —spaced one inch apart, and *welded* in place —to provide the extra strength and rigidity of truss-type construction.



"Soundmaster 120" partitions over 15′0" high are equipped with two rows of four inch high plates—*welded* in place—to provide unequalled rigidity and strength for a full eight inches at the top. ▶

modernfold's soundmaster partitions

construction features

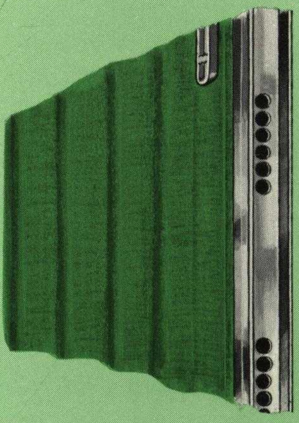
"Soundmaster" partitions are engineered specifically to reduce sound in two important ways: first, they provide mass through a specially developed and carefully manufactured chip board panel understructure. These chip board panels are .175 inch thick, joined by tough hinge material, and then vinyl coated for fire resistance—they are used on *both* sides of every "Soundmaster" partition.

Second, every "Soundmaster" partition is designed to seal every possible opening through which sound might pass. Sweep strips—which are rubberized fabric strips—are installed on the top and bottom edges of the partition, on both sides, to completely seal the clearance space required for proper operation. And "Soundmaster's" exclusive air release lead post seals completely within the wrap-around jamb moulding, where a deep layer of plastic foam assures positive contact along every inch of its length.

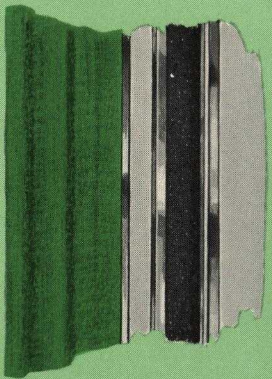
The result of this engineering is "Soundmaster"—a handsome product that appears to be identical to any other MODERNFOLD partition, yet provides the maximum amount of sound reduction available in a folding partition, and meets the most rigid New York City and Boston fire codes.*

*1. New York City Board of Standards and Appeals Cal No. 294-40-SR—Rules for Flameproof material. 2. Boston Fire Department—Terms and conditions promulgated by the head of the Fire Department governing the use of Decorative Materials in Public Buildings, Places of Assembly and in Stores. Fire Prevention Division Document No. 5.

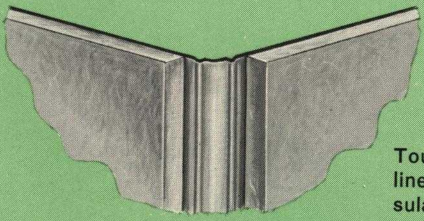
Exclusive, heavy duty closing latch operates through pendant pulls—assures snug seal between partition and wall moulding. Operation of closing latch is independent of lock supplied for security purposes.



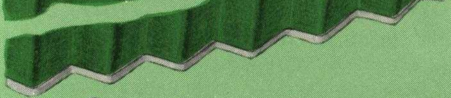
Air release outlets prevent entrapment of air when partitions are stacked.



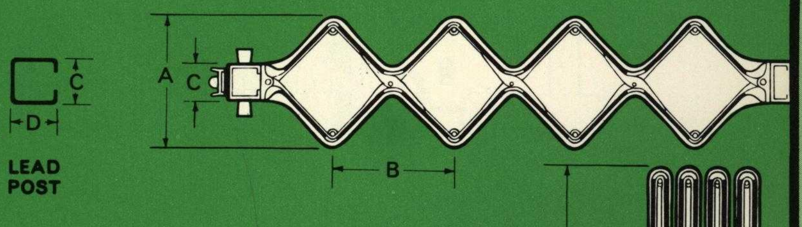
Extruded aluminum channels seal off all crevices at the lead post with lining of plastic foam.

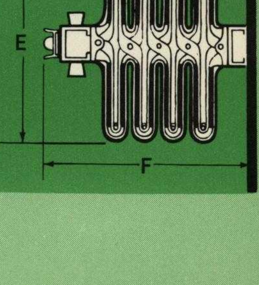


Tough, vinyl coated, chip board liner, on both sides of partition, insulates against sound.



Sweep strips, top and bottom, close all crevices around the partition.





Dimensions

	A	B	C	D	E	F
"Soundmaster 80"	6¼"	6½"	1¼"	1¼"	8⅞"	2⅛" per ft. of width plus 2¼" (average)
"Soundmaster 120"	7⅝"	9½"	1½"	1¾"	12⅝"	1½" per ft. of width plus 2¾" (average)

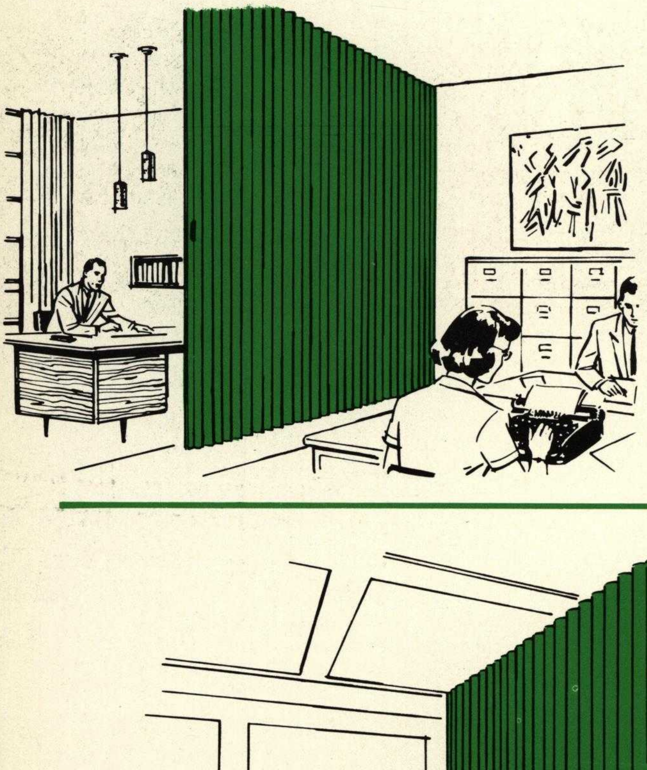
Acoustic Criteria for Specific Applications

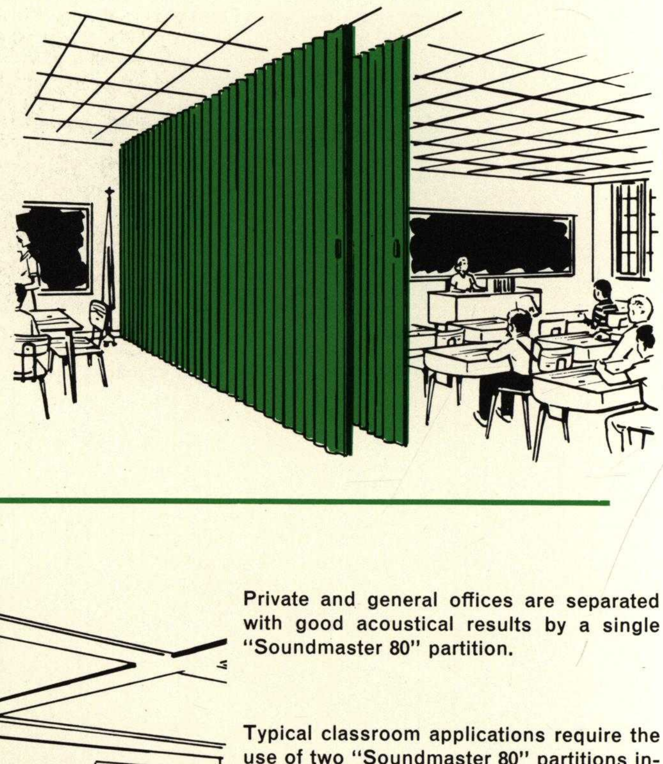
The highly complex nature of sound problems rules out the possibility of setting down any positive, inflexible regulations regarding its control. Such factors as background noise, unpleasant sounds, type of activity, etc. all play an important role in the overall picture.

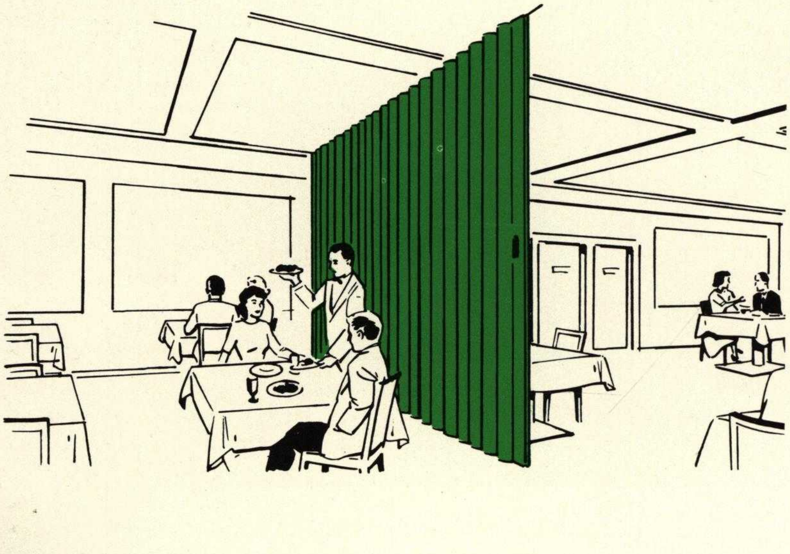
Nevertheless, a set of required transmission loss level curves has been established by Bolt, Beranek and Newman. This acoustic criteria has been tabulated for some of the more common situations, and along with each, the corresponding "Soundmaster" installation.

The following illustrations show three typical sound control situations, and the recommended "Soundmaster" solution.

For a detailed analysis of these—or any other specific installations—contact your MODERNFOLD distributor.







Private and general offices are separated with good acoustical results by a single "Soundmaster 80" partition.

Typical classroom applications require the use of two "Soundmaster 80" partitions installed parallel on 12" centers to achieve good acoustical performance.

A single "Soundmaster 120" provides good acoustical results in typical dining rooms, where private parties are often held while the public is being served in adjoining areas.

RICHARDS-WILCOX

FoldeR-Way® SOUND INSULATING and SOUND RETARDING

PARTITIONS

for gymnasiums • auditoriums • school and church classrooms • hotels • motor inns • motels • dining rooms • meeting halls • etc.

... a real answer to some of the problems of today's high construction costs! R-W FoldeR-Way partitions shave costs from the beginning—by permitting versatile and extensive use of every available foot of floor area in planning. In schools, churches, hotels, restaurants—for gymnasiums, auditoriums, classrooms, stages, swimming pools—FoldeR-Way partitions provide space-saving, profitable dividers for wide-open areas, selectively barring passage of sound, light and traffic.

Backed by seventy-five years of practical manufacturing experience, Richards-Wilcox offers a **complete** line of folding partitions—an answer to every problem. Outstanding installations in all parts of the country attest the popularity and practicality of FoldeR-Way partitions, automatically and manually operated. They can be furnished in all types and combinations of wood, vinyls, metals, or duck coverings to meet the most exacting decorating specifications.

Let your factory-trained R-W engineer survey your problem and recommend the right FoldeR-Way partition for the task. Contact the nearest Richards-Wilcox branch office, listed on back cover.

design

Competent Richards-Wilcox engineers are ready to survey your folding partition problems and recommend the FoldeR-Way partition to produce the desired result. Years of research engineering and manufacturing experience go into the design of each R-W folding partition.

production

Extensive modern plant facilities and equipment, coupled with painstaking quality control, enable Richards-Wilcox to produce a complete line of unexcelled folding partitions for every purse and purpose. Materials for each component of every partition are carefully selected for maximum performance and minimum upkeep. Their assembly assures a partition of lasting satisfaction.

R-W guarantee

Upon completion of the installation of any R-W FoldeR-Way partition, the Richards-Wilcox Manufacturing Company will furnish its standard written guarantee.

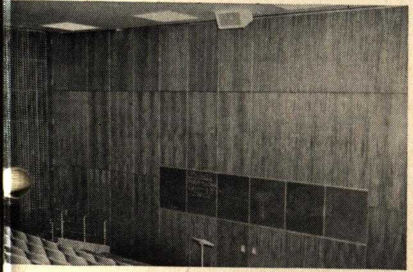
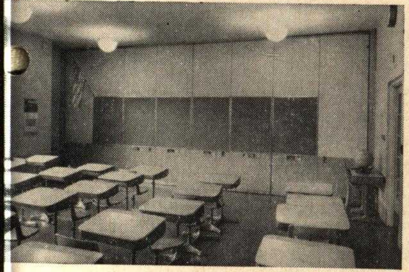
The first folding aluminum gym partition anywhere. Deluxe automatic, R-W No. 200 panels



Deluxe automatic
Specially veneered No. 368CC Panel with chalkboard.

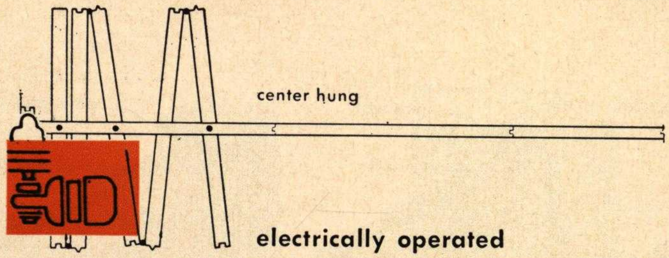
No. 135 top supported center hung. No. 368 panels. Special application.



No. 237 top supported edge hung installation. No. 368 panels with chalkboard.

Four way partition. No. 535 operation, floor supported, No. 368B panels.

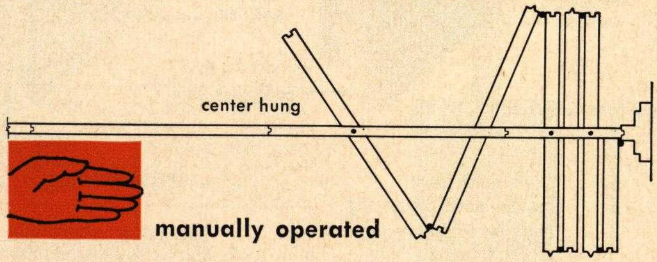
types of operation



electrically operated

fully automatic • top hung • height as required

Folding, unfolding, locking, unlocking, and sound-retarding accomplished by simply turning the switch key. Opened partition positively locks to floor without bolts, keepers, guides or tracks at floor. Positive roller chain drive. No opening is too wide or high for this automatic equipment. R-W Deluxe Automatic No. 405-888.

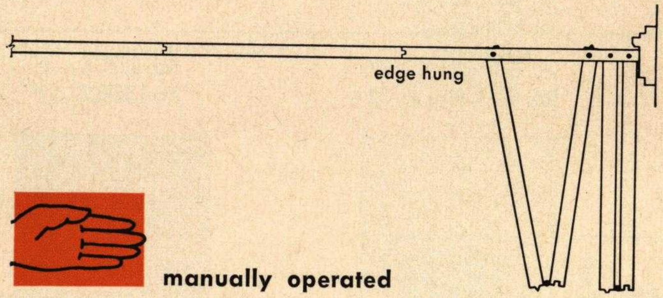


manually operated

all panels hinged together

top hung (at panel centers) • height as required

Recommended for all sizes and types of openings whenever manual operation is preferred and adequate overhead support is provided. Doesn't require floor track or guides. Floating floor seal available. Flush throw bolts provided. R-W No. 135.



manually operated

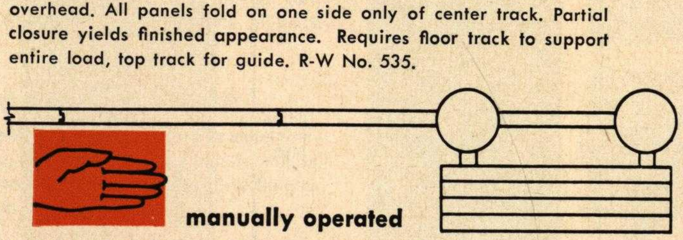
panels hinged in pairs

top hung (at panel edges) • heights up to 10'-0"

Recommended for all widths of openings where adequate overhead support is provided. Panels fold on one side only of the center track—ideal for proscenium arch installations. Requires floor track for guide purposes only. Pair operation permits partial closures with finished appearance. R-W No. 237.

floor bearing (at panel edges) • height as required

For use when load must be supported at floor rather than from overhead. All panels fold on one side only of center track. Partial closure yields finished appearance. Requires floor track to support entire load, top track for guide. R-W No. 535.



manually operated

individual top hung (at panel edges) • height as required

Recommended for installations that require the ultimate in flexibility and sound control. This modular system permits use of individual panels in any location. Panels require adequate means for supporting the load from overhead. Track, hangers and brackets can be completely concealed above the ceiling, no floor track or guides are required. R-W No. 442.

hardware—No. 888 adjustable hangers and No. 888 lock-joint enclosed track (illustrated) guarantee satisfactory operation for the life of the building. Track is rigidly fixed to supporting truss by direct attachment through the use of steel brackets and ⅝″ threaded drop rods. Fully automatic floor seals are self-adjusting to uneven floors. Positive non-sag roller chain drive operates over ball bearing sprockets. Equipment also includes all necessary automatic folding and straightening devices.

You turn the switch key—R-W does the rest.

PARTITIONS

manually operated

R-W No. 135 top-hung partition • height as required

Operating equipment includes four-wheel ball bearing adjustable hangers, lock joint enclosed track, steel supporting brackets, flush pulls, flush bolts, hinges and all operating devices for jamb and pocket doors. Hangers are located at each alternate full width door. Hardware correctly scaled to weight and size of doors.

R-W No. 237 top-hung partition • to 10′ high

Operating equipment includes adjustable two-wheel ball bearing hangers, self-adjusting floor guides, R-W lock-joint enclosed track, steel supporting brackets, flush pulls, flush bolts, and either butt or invisible hinges. Hangers are located at outside corner of each panel pair.

R-W No. 535 floor bearing partition • height as required

Operating equipment includes steel top and bottom tracks, adjustable bottom rollers, top guides, pivots, spring expansion units, safety folding-locking mechanism, and either butt or invisible hinges. Each pair of doors is carried on two bottom rollers.

R-W No. 442 individual top hung partition • height as required

Operating equipment includes R-W No. 2035 or No. 888 enclosed track, steel supporting brackets, ball bearing hangers with anchor bolt attachment, flush pulls, directional positioner units and seals. Each door is carried on two hangers.

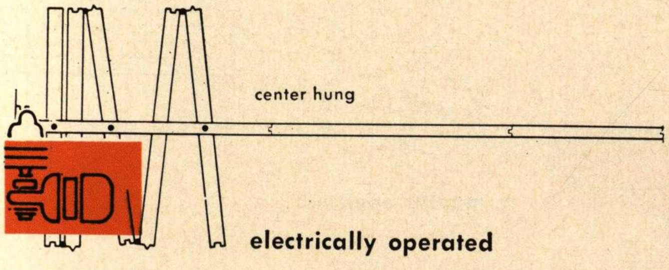
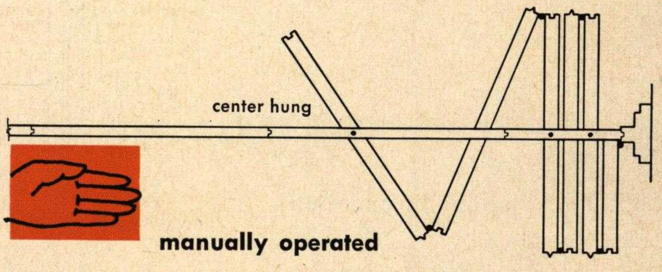
architectural specifications





R-W DeLuxe Fully Automatic—top hung

general—Sound-retarding folding partitions shown on plans shall be R-W DeLuxe Automatic Electric "FoldeR-Way" type as manufactured, installed and guaranteed by the Richards-Wilcox Company, Aurora, Illinois.

operation—A single electric operating mechanism located at top of opening at side jamb shall provide automatic folding and unfolding, locking and unlocking of all partition doors with complete electrical control of all operations from the key switch located as shown on plan. Operation shall provide a one inch minimum operating clearance between the bottom of the partition and floor during opening and closing cycle, but the final closing movement shall automatically cause the entire partition to seal this space against the transmission of sound by compressing the heavy continuous moulded rubber seal and also lock all doors in fully closed position without the use of floor bolts, keepers, levers or other manually operated devices.

operating equipment—The operating equipment shall be complete with motor, speed reducer, friction clutch, relays, limit switches, key control switch and emergency release mechanism. Supporting track shall be R-W No. 888 lock-joint enclosed type with ⅝″ cold rolled steel bar runways. Track shall be rigidly fixed to the supporting structure by direct attachment through the use of steel brackets and ⅝″ threaded drop rods. The partition shall be operated on No. 888 heavy duty four-wheel, ball-bearing hangers with 3″ diameter wheels. Installation shall also include all necessary automatic folding and straightening devices. All operating hardware shall be concealed.

panel construction—Partition doors shall be sound-retarding No. ...... (as detailed on page 4). All vertical edges shall be finished with continuous metal hinge strips insulated with vinyl.

trim—Finished head and side trim shall be considered a part of the partition installation.

other equipment (*optional*)—Pocket doors, passage doors, corkboards, chalkboards.

installation and guarantee—Upon their completion of the installation, the Richards-Wilcox Manufacturing Company shall furnish their written guarantee covering satisfactory workmanship, materials, installation, and operation.

work by others—All rough bucks, outlets, conduits, wiring, necessary electrical work and connections to operator and switches at the site, filling, staining, painting, and punching of truss to receive track brackets shall be by others in accordance with R-W standard details approved by the architect.

R-W No. 135—top hung

general—Sound-retarding folding partitions shown on plans shall be R-W No. 135 Manually Operated "FoldeR-Way" type as manufactured by the Richards-Wilcox Manufacturing Company, Aurora, Illinois.

operation—All panels folding toward a single jamb shall be hinged together and shall operate as a unit. Alternate panels shall be top-supported at center by a ball bearing hanger operating in overhead concealed lock-joint track. The partition shall be locked in its closed position by flush bolts operating in keepers installed flush with the finished floor. This operation shall not require the use of floor tracks or floor guides.

operating equipment—The operating equipment shall be R-W 135 .... (−1, −2, −3: see table page 8) with steel lock-joint track and necessary four wheel ball bearing hangers with concealed anchor bolt attachment, steel brackets, pulls, bolts, hinges and floor seals. Exposed hardware shall be finished .... (specify U. S. Standard finish number.)

panel construction—Partition doors shall be No.9 wood veneered solid core construction (see page 8) or sound retarding No............... (see details page 4). All vertical edges shall be finished with continuous metal hinge strips insulated with vinyl.

other equipment (*optional*)—Pocket doors, passage door, corkboards (one or both sides), chalkboards (one or both sides), floor seals (No. 135 full floating Sound-retarding Floor Seals recommended for all No. 135 partitions using sound-retarding panels).

installation—The partitions consisting of all operating hardware doors and trim as specified, shall be furnished and installed complete by Richards-Wilcox Manufacturing Company.

guarantee—Upon their completion of the installation, the Richards-Wilcox Manufacturing Company shall furnish its written guarantee covering satisfactory workmanship, materials, installation, and operation.

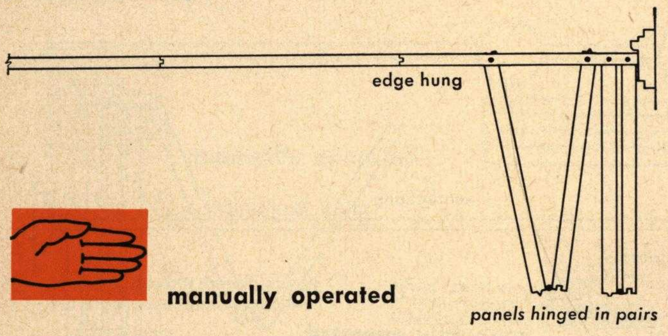
work by others—All rough bucks, track supports, filling, staining and painting shall be by others in accordance with R-W standard details approved by the architect.

. . . if your problem isn't answered in this catalog . . .

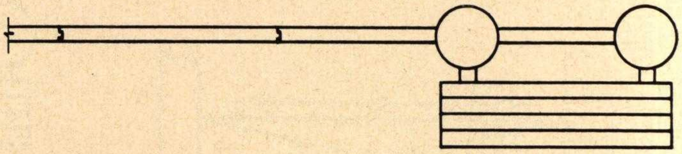
Many folding partition problems do not lend themselves to solution by the standard arrangements covered in this catalog. But there is an ideal R-W "FoldeR-Way" partition for every problem involving the effective division of space, traffic and sound. R-W Folding Partitions may be designed and "custom" constructed of economical standard component parts to meet almost any conceivable situation.

The Richards-Wilcox Manufacturing Company maintains a staff of partition Engineers backed by years of experience in the field. At your request they will make an engineering survey of your building plans or present facilities and submit a report graphically illustrating how R-W Folding Partitions will meet your need. Request your survey today. There is no charge or obligation for this R-W Service.

architectural specifications



manually operated



manually operated

R-W No. 237—top hung

heights up to 10′-0″ high

R-W No. 535—floor bearing

height as required

general—Sound-retarding pair-operated partitions as shown on plans shall be R-W No. .... (specify No. 237 if top hung or No. 535 if floor bearing) manually operated "FoldeR-Way" type as manufactured by Richards-Wilcox Manufacturing Company, Aurora, Illinois.

operation—Partition operation shall provide for subdivision into a series of independently operated units, each single unit to consist of two equal width edge-supported panels hinged together. Each pair shall be equipped with folding-locking mechanism which shall hold panels rigidly in their closed position.

operating equipment—The operating equipment shall be R-W No. .... (specify No. 237 if top hung—for doors up to 10′ high—or No. 535 if floor bearing—height as required). Equipment shall include top and bottom tracks, brackets, hangers, guides, pivots, spring expansion units, safety folding locking mechanism, butt (or invisible) hinges and all other operating equipment required for satisfactory operation.

panel construction—Partition doors shall be No. 9 wood veneered solid core construction (see page 8) or sound retarding No............ (see details page 4). All vertical edges shall be finished with continuous metal hinge strips insulated with vinyl.

other equipment (*optional*)—Pocket doors, passage doors, corkboards (one or both sides), chalkboards (one or both sides).

installation—The partitions consisting of all operating hardware, doors and trim as specified, shall be furnished and installed complete by Richards-Wilcox Manufacturing Company.

guarantee—Upon their completion of the installation, the Richards-Wilcox Manufacturing Company shall furnish their written guarantee covering satisfactory workmanship, materials, installation and operation.

work by others—All rough bucks, track supports (as needed), filling, staining and painting shall be by others in accordance with R-W standard details approved by the architect.

R-W No. 442—Individual top hung height as required.

general—Sound-retarding movable walls shown on plans shall be R-W manually operated "Door-Wall" type as manufactured by the Richards-Wilcox Manufacturing Company, Aurora, Illinois.

operation—All panels to be individually operated. Panels shall be supported at the top by ball bearing hangers of the proper size. The panels will be manually moved in or out of storage as required. Panels will be locked and stabilized in position by No. 442 Floor Seal Mechanisms. No hinges, floor guides or hazardous and unsightly floor tracks will be used.

operating equipment—The operating equipment shall be R-W No. 442-2035—R-W No. 442-888 (specify one as required) steel track and necessary four wheel ball bearing hangers with concealed anchor bolt attachment, steel brackets, pulls, bolts and floor seals. Exposed hardware shall be finished . . . (specify U.S. Standard Finish number).

panel construction—The panels shall be of . . . (specify type desired as shown on page 4). NOTE: As this type of operation usually involves usage in critical sound areas the panels can be designed and constructed to offer any degree of sound control as may be required after all conditions have been determined.

other equipment (*optional*)—Pocket doors, passage door, corkboards (one or both sides), and chalk-boards (one or both sides).

installation—The panels consisting of all operating hardware optional equipment and trim as specified, shall be furnished and installed complete by the Richards-Wilcox Manufacturing Company and shall be fully guaranteed as to workmanship, materials, installation and operation.

guarantee—Upon their completion of the installation, the Richards-Wilcox Manufacturing Company shall furnish its standard written guarantee.

work by others—All rough bucks, track supports, filling, staining and painting shall be by others in accordance with R-W standard details approved by the architect.

In the interest of progress and improvement the specifications in this catalog may be changed without notice.

TORJESEN AUTOMATIC ELECTRIC PARTITIONS

Specifications

1. Folding partition as shown on the plan shall be TORJESEN Wall-A-Way fully automatic, electrically operated, as manufactured by TORJESEN INC., 209 25th Street, Brooklyn 32, N. Y.

2. Operation shall be automatic, electric folding and unfolding of the entire partition, with complete electrical control from the key switch located at a convenient point. There shall be a 1 inch clearance between the bottom of the partition and the floor while the partition is in motion, but automatic floor seals shall drop and effectively grip the floor when the partition is in the closed position.

3. The operating mechanism shall consist of a 3/4 H.P., 3-phase, 60 cycle, 208 volt gearhead motor (see data sheet page to determine when 1 H.P. motor is required), limit switches, key control switch, drive mechanism, reversing motor starter, electro-magnetic slip clutch with control box and all necessary appurtenances for satisfactory and safe operation. The electro-magnetic clutch coupling shall automatically disengage the drive mechanism when power is shut off or fails ENABLING THE PARTITION TO BE OPERATED MANUALLY WITHOUT THE NECESSITY OF MANUALLY DISENGAGING THE CLUTCH LOCATED IN THE CEILING. The clutch control shall have a torque control setting so that clutch will slip when undue resistance occurs against moving partition. Key control switch shall require constant pressure while partition is in motion.

4. The partition shall be top hung by means of a 5" aluminum "I" Beam track and 4 wheel roller bearing adjustable hangers. The trolley shall be so designed for ease of servicing. The track with its framing and supporting members shall be securely fastened to the structural steel with 5/8" threaded rods. Floor track will not be permitted.

5. The partition sections shall be type...................

6. The overhead supporting structure shall be punched by others in accordance with a spacing template provided by the partition manufacturer. 5/8" hanger rods will be furnihsed by this manufacturer, but are to be installed by others. All rough bucks, staining, painting, conduit, rough boxes, wiring and power outlets by others.

7. The partition is to be installed by the manufacturer.

8. The manufacturer shall guarantee the materials and workmanship for a period of one year.

TORJESEN MANUALLY OPERATED FOLDING PARTITIONS

Specifications: Top Hung—Center Pivot

1. The Folding Partition as shown on the plans shall be TORJESEN "WALL-A-WAY," manually operated, as manufactured, installed and guaranteed by TORJESEN, INC., 209 25th STREET, BROOKLYN 32, NEW YORK.

2. The principle of operation shall provide that all doors shall be hinged together to enable them to operate as a unit. The partition shall be locked in its closed position by means of floor bolts. The space between the bottom of the doors and the floor shall be effectively sealed by means of floating floor seals.

3. The partition shall be top hung by means of trough tracks, ————, and 4-wheel ball bearing adjustable trolleys, ————. No floor track of any kind will be permitted.

4. The partition sections shall be type......................

5. The overhead supporting structure shall be punched by others in accordance with a spacing template provided by the partition manufacturer. Hanger rods will be furnished by this manufacturer, but are to be installed by others. All rough bucks, staining and painting by others.

6. The manufacturer shall guarantee the materials and workmanship for a period of one year.

Specifications: Bottom Bearing—Pair Operated

1. The Folding Partition as shown on the plans shall be TORJESEN "Wall-A-Way," manually operated, as manufactured, installed and guaranteed by TORJESEN, INC., 209 25th STREET, BROOKLYN 32, NEW YORK.

2. The principle of operation shall provide that the partition shall consist of a series of individually operated sections, each section consisting of two equal width doors hinged together. The partition shall be locked in its closed position by means of floor bolts. The space between the bottom of the doors and the floor shall be effectively sealed by means of floating floor seals.

3. Each door shall be supported by means of #T102 ball bearing bottom roller. This roller shall ride in #T1 floor track. The track shall be supported by means of a wood sleeper to be furnished and installed by others. The door shall be guided at the top by means of T11 and T005 trolleys.

4. The partition sections shall be type................

5. The overhead supporting structure shall be punched by others in accordance with a spacing template provided by the partition manufacturer. Hanger rods will be furnished by this manufacturer, but are to be installed by others. All rough bucks, staining and painting by others.

6. The manufacturer shall guarantee the materials and workmanship for a period of one year.

SPECIFICATIONS

1. SCOPE OF WORK

Furnish and install Wayne Electric Folding Partition(s) as shown on the plans and described below. The partition manufacturer shall furnish and install all material including track, trolleys, panels, power unit, limit and key switches, drive chain, jambs and hardware.

2. WORK BY OTHERS

The overhead supporting structure shall be punched by others in accordance with a template provided by the partition manufacturer. The partition manufacturer will furnish ½″ hanger rods for installation by others. All rough bucks, staining, painting (other than prime coat), conduit, rough boxes, wiring, disconnect switches and final electrical hook-up are by others.

3. OPERATION

The entire partition operation shall be automatic with the single motor controlled by a spring-loaded key switch. The final extending movement shall cause the partition to seal automatically the 1″ space between itself and the floor.

4. OPERATING COMPONENTS

The operating mechanism shall consist of roller chain drive; an integrally mounted 208/or 220/or 440 Volt, 3 ph., 60 cyc. electric motor, magnetic brake and permanently lubricated speed reducing unit; multiple disc clutch; magnetic reversing starter; limit switches and all necessary equipment to assure the fully automatic operation of the partition. The clutch shall be capable of being disengaged, in the event of power failure, so that the partition may be moved manually. Alternate panels shall be suspended from 4 wheel ball bearing trolleys. Trolleys shall operate on a 4″ I-beam track.

5. PANEL CONSTRUCTION

Partition panels shall have a nominal three inch thickness. They shall be built-up of two layers of ⅜″ fir plywood over fir stiles and rails.

(Optional) The panels shall be covered with____________________.
(Canvas Duck, Vinyl Plastic, or Aluminum Sheet)

(Optional) A wainscot shall be provided of____________________.
(Linoleum, Hardboard, Birch Veneer, Oak Veneer, or Formica)

(Optional) The panel core shall be filled with____________________.
(Fiberglas, Spun-Felt, Honeycomb, or Softboard)

Vertical edges of panels shall be provided with continuous rolled steel hinge strips (astragals) with a molded rubber seal between panels. Hinges shall be 4″x⅛″ steel butts welded to the hinge strips.

6. FINISH

All exposed canvas duck shall receive one shop coat of sizing. All exposed wood and hardboard shall receive one shop coat of wood undercoater unless the final finish is to be natural. All exposed steel shall receive one shop coat of aluminum oil base paint. All overhead track, trolleys and supporting steel shall receive one shop coat of zinc chromate base paint. All exposed hardware shall be dull brass.

7. INSTALLATION

Installation of the partition shall be performed in a skillful, workmanlike manner to insure correct operation of all its components. This work shall be under the direction of a qualified installation superintendent trained by the manufacturer.

8. GUARANTEE

The manufacturer shall guarantee that all work performed under these specifications shall be free from defects in material and workmanship for a period of one year from completion of installation.

PLEASE NOTE—Wayne Iron Works pursues a continuing program of design and product improvement for better Partition Engineering. When such improvements occur, or, when conditions exist over which we have no control, Wayne Iron Works reserves the right to supply partitions considered to be standard at the time of shipment.

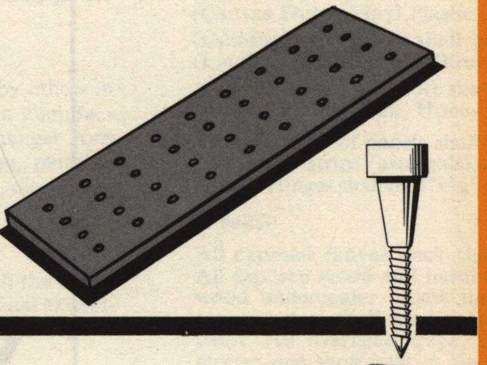
lath, blocks, panels, linings

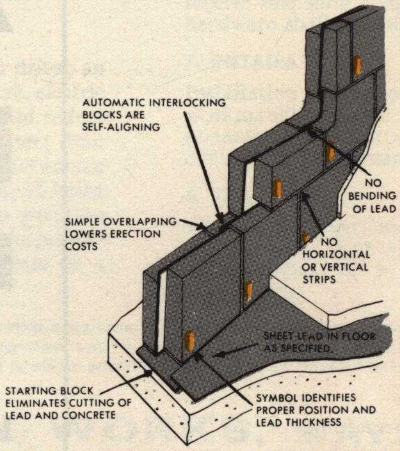
LEAD INSULATED LATH

Easy-to-erect Ameray lead insulated lath is available in all required lead thicknesses. The specified lead lining and plasterboard are permanently bonded by hydraulic pressure . . . Ameray lead lath is a perfect base for plaster. Specially designed Ameray lead-headed nails are supplied for the installation of the lath.



LEAD CORE BLOCKS

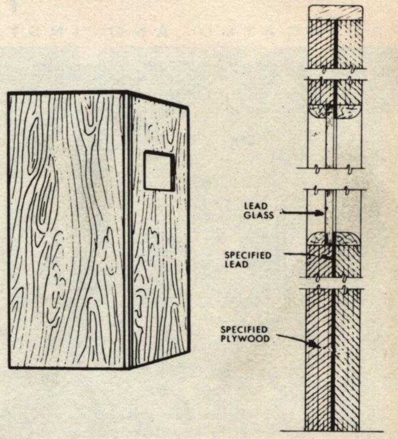
Supplied ready-to-use, Ameray lead core partition blocks offer complete protection and easy erection because of their exclusive **tapered*** design. This unique shape eliminates the necessity of bending the lead or inserting lead strips and **automatically** affords a plumb, true wall. These blocks are made of a quality cinder concrete with an unpierced lead core of the required lead thickness.



AUTOMATIC INTERLOCKING BLOCKS ARE SELF-ALIGNING
NO BENDING OF LEAD
SIMPLE OVERLAPPING LOWERS ERECTION COSTS
NO HORIZONTAL OR VERTICAL STRIPS
SHEET LEAD IN FLOOR AS SPECIFIED.
STARTING BLOCK ELIMINATES CUTTING OF LEAD AND CONCRETE
SYMBOL IDENTIFIES PROPER POSITION AND LEAD THICKNESS

LEAD INSULATED PANELS — CONTROL SCREENS

Both paint and stain grade veneered plywoods are hydraulically bonded to lead sheets of required thickness to form Ameray's lead insulated panels. Delivered cut-to-fit to meet job conditions, Ameray's lead insulated control screens with lead-glass vision panels and hardware, are custom-built to individual specifications.



LEAD GLASS
SPECIFIED LEAD
SPECIFIED PLYWOOD

LEAD LINING FOR FLOOR AND CEILING SLAB

When an installation requires the shielding of spaces above and below the X-Ray room, Ameray sheet lead is the economical answer because it is sized-to-suit job conditions. Lead lined floor and ceiling slab structures are economical in many specific applications. See Ameray A.I.A. File.

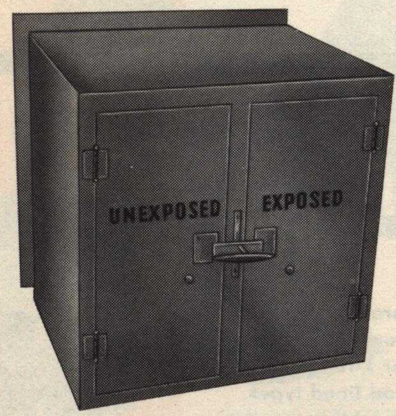
LEAD CORE DOOR

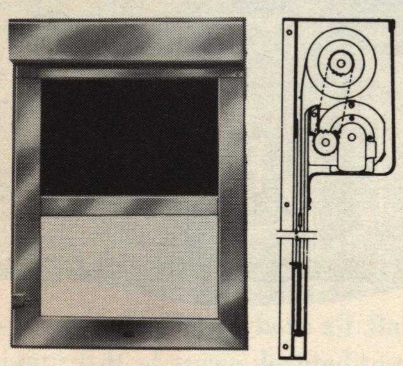
Any door size, lead core thickness and facing material, to meet specification, is available. Flush-type doors can be furnished with Ameray vision panels and ventilating louvers. Lead lined door bucks and light proof door seals are fully detailed in our A.I.A. Catalog. Complete components including electric operator and hardware can be supplied for sliding doors.



LEAD LINED FILM TRANSFER CABINETS

Fully lead lined with unique interlocking door hardware . . . prevents passage of X-rays or light through the cabinet, while also protecting film from accidental exposure by X-rays.

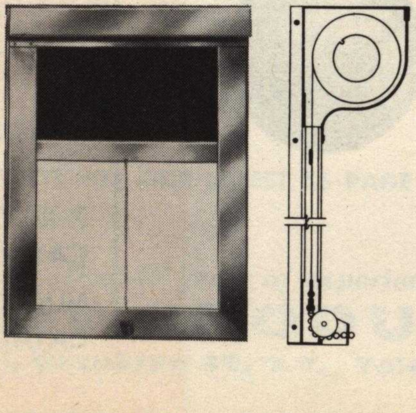
The ideal unit for passage of loaded cassettes between darkroom and X-ray room.



ELECTRICALLY OPERATED LIGHT PROOF SHADES

Ameray electrical light proof shades are installed with individual or remote control for single units or ganged remote control for banks of units.

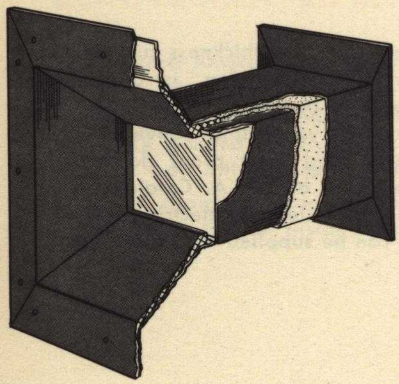
The extruded aluminum frame requires no maintenance and beautifies every installation.



MANUALLY OPERATED LIGHT PROOF SHADES

Easy-to-work pull chain operation. A unique chain lock provides positive shade locking and also allows positioning at any point. Both manual and electrical units are shipped factory-assembled for ease of installation.

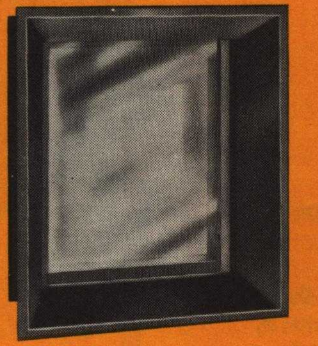
COBALT 60 LEAD GLASS AND ZINC BROMIDE WINDOWS



Custom-engineered Ameray windows afford perfect viewing with absolute safety. For large openings Ameray zinc bromide windows are recommended.

Each window — lead glass or zinc bromide — is designed **specially** to meet your individual requirements . . . top quality materials and craftsmanship are a further guarantee of dependable shielding performance.

CONTROL WINDOWS



Ameray X-Ray protective windows feature: an attractive aluminum frame with concealed lead lining or cast lead frame upon request; special Ameray lead glass; unique X-Ray protective voice passage for easy communication; available in standard sizes or as specified.

LOUVERS

Ameray louvers provide maximum air ventilation while giving light proof and/or X-ray protective service. Lead lined types offer the same shielding as the wall or door in which they are installed.

Both X-ray protective and light-proof types have a clean, modern appearance; sizes for all applications.

FUME HOODS

Ameray fume hoods are designed with a structural steel frame and stainless steel exterior-interior which conceal the unit's complete lead lining. Individually developed to fit **exact** job specifications, they offer increased gamma ray protection and facilitate the handling of all types of radioactive materials.

A.I.A. File No. 37-E

AN INTERNATIONAL NAME IN X-RAY AND RADIATION PROTECTION

Numerous diversified installations throughout the United States and in many foreign countries testify to the quality of Ameray craftsmanship.

No installation is too complex . . . no unit too specialized . . . to be tackled by Ameray's skilled engineering production team.

Send us details of your X-ray protective or nuclear shielding application for a thorough competent evaluation and recommendation at no cost or obligation.

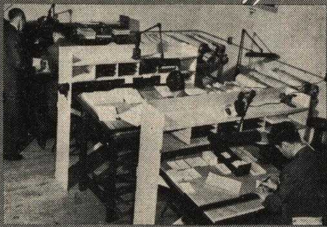
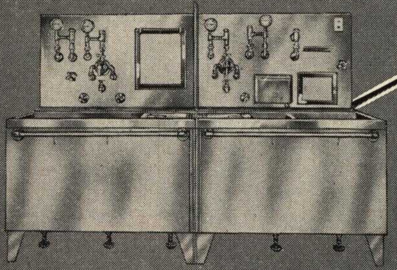
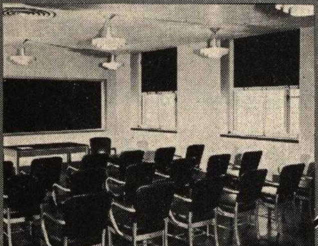
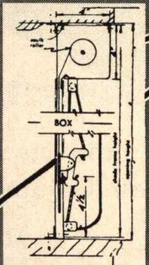
CUSTOM-BUILT EQUIPMENT is designed to meet particular needs in this rapidly growing, ever changing field. Our latest fifty-six page catalog, including photographs and details of the equipment manufactured, is available without charge, and will be mailed promptly on request. This comprehensive book is invaluable in planning the darkroom. It describes equipment for processing x-ray films, as well as refrigeration units, temperature controls, film filing apparatus, lightproof shades, radiation protection, industrial x-ray equipment, radioisotope laboratories, etc.





TANKS, such as thousands of Bar-Ray stainless steel units now in use throughout the world, are illustrated in this catalog. We welcome the opportunity to assist in the planning of the department, to advise on efficient layout and "*made-to-order*" equipment at "*standard*" prices.





LIGHTPROOF window shades, drapes, lightproof door seals, are made to meet individual job conditions, and are designed for minimum maintenance costs and maximum efficiency.

EXPLOSION-PROOF illuminators, water coolers, lead lined doors, special radiation protective screens and safes, manufactured here, are shown in the Bar-Ray catalog.

RADIATION PROTECTION is a field in which Bar-Ray has pioneered since 1930. In the intervening years we have developed and produced products for every phase of radiation protection. These range from lead headed nails, lead insulated cinder blocks, operator's control frame windows, to wood and steel doors lined with lead up to two and one-half inches thick. We supplied protective material for the first atomic blast in New Mexico, the first hospital radioisotope laboratory ever built, the isotope laboratory apparatus installed at Brookhaven National laboratory, and elsewhere.

INDUSTRIAL firms are using x-ray and radioisotopes in ever increasing numbers. Whether x-ray installation for the health and safety department, or radioisotopes as a non-destructive testing tool, Bar-Ray protective products are essentials.

RADIOISOTOPES are employed in medical research, therapy and industry. The new Bar-Ray catalog illustrates and describes much of the special equipment we have produced, including Cobalt^{60} Irradiators, Isotope Conveyor Systems, Stainless Steel and Lead Lined Fume Hoods, Storage Rooms, Heavy lead castings, etc. In this highly specialized field, the wealth of experience we have accumulated in meeting unusual problems may be of help to you.

We invite you to write or telephone us for any information, specifications, details or quotations you may require. There is no charge or obligation attached. We consider this service as good public relations, and one of our contributions to the advancement of this ever growing industry.

GENERAL LEAD CONSTRUCTION CORPORATION
engineering • fabrication • installation

GENERAL LEAD CONSTRUCTION CORPORATION

Specialists in Radiation Protective Equipment

engineering, fabrication, installation

The primary requisite of complete lead protection against radiation, is a guarantee of responsibility.

Where materials are made by one responsible manufacturer and installed by one or more subcontractors on the job, the responsibility for complete radiation protection frequently rests with a third party, the general contractor, who must police the manufacture, handling and installation To eliminate split responsibility, it should be specified that manufacturer will assume complete responsibility for lead protecton, not only of the manufactured items, but also of the installation of them.

The manufacturer can do this either using his own lead mechanics to install his lead protective materials, or at least to provide an experienced supervisor for the few days usually required to install this material.

General Lead Construction Corp.

offers a threefold service to the construction industry:

1. Engineering and Design for the architect.
2. Fabrication of lead protective materials for the General Contracor.
3. Physical installation of lead protective materials, either by:
    a. our own skilled lead mechanics and masons, or by:
    b. providing an experienced supervisor during installation of lead protective materials.

lead core partition blocks

scales: ¼"=1'-0" and 1½"=1'-0"

Where first class building construction of partitions is required, as well as Lead Protection, Lead Core cinder blocks should be specified.

Blocks are 12"x12"x4" thick of cinder concrete cast with a single piece of unpierced sheet lead through the center. Blocks have a cinder aggregate composition and sheet lead core has sufficient anchors to guarantee a testing compression strength of not less than 300 lbs. per square inch on edge after 28 days.

Thickness of sheet lead core to be determined by voltage of x-ray machine. Sheet Lead Core shall be exposed on all four bearing sides not less than 1½ inches to permit necessary lapping of lead with adjoining blocks, door bucks or windows.

Where building construction requires, blocks may be fabricated of 6" thickness, or of other varied thickness, as required.

Cinder slab on either side of sheet lead core, may be removed to permit plumbers pipes or electricians conduit to pass, without damage to lead.

SOLID LEAD FRAME
LEAD GLASS

ELEVATION

VERTICAL SECTION

ELEVATION

Frames are made of solid lead, in one piece, with glass mouldings of lead.

For voice transmission, a special periscope type opening is built into the frame at bottom to allow voice transmission and still give necessary lead protection. If specified, this voice opening, can also be built into top of frame.

Frame is splayed on all four sides to give wide range of vision.

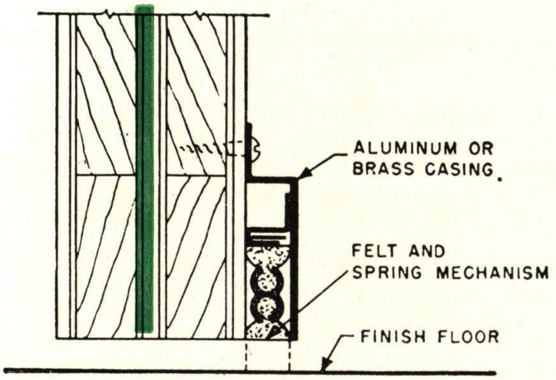
Lead glass size is usually 12" wide by 16" high, and frame is set 5' 2" from finished floor to center line of glass.

Lead glass is manufactured in standard 1/4" thickness, which is approximately the equivalent of 1/16" sheet lead protection.

lightproofing

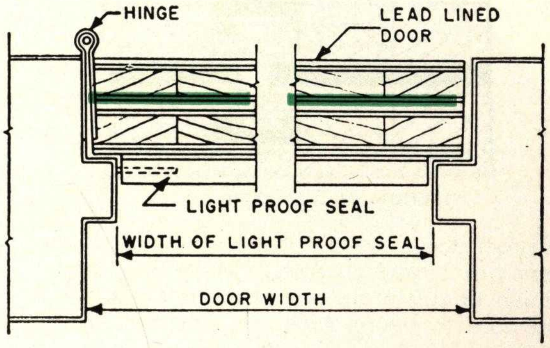
shades and doors

scale: 3" = 1'-0"



ALUMINUM OR BRASS CASING
FELT AND SPRING MECHANISM
FINISH FLOOR

VERTICAL SECTION



HINGE
LEAD LINED DOOR
LIGHT PROOF SEAL
WIDTH OF LIGHT PROOF SEAL
DOOR WIDTH

HORIZONTAL SECTION

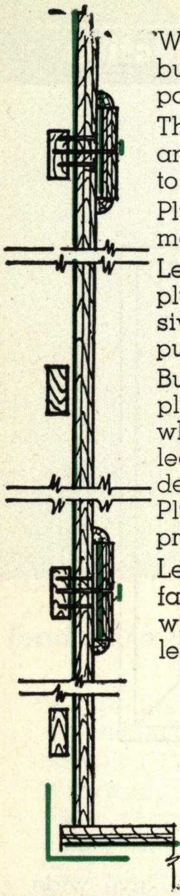
It is frequently desirable that lightproofing of doors and windows be considered a part of the radiation protection.

Lightproof window shades may be manually, mechanically or electrically operated.

Frames are of furniture steel with baked enamel finish. Frame is constructed so that parts may be removed and replaced. Cloth is lightproof, crack proof, fade proof, odorless.

Door openings to be lightproofed with heavy felt, metal bound. Bottoms may have automatic operation, if desired.

lead lined plywood panels



Where partitions require lead protection but not plastering, lead lined plywood panels should be specified.

These panels are tailor-made units of lead and plywood in sizes geometrically suited to particular wall areas.

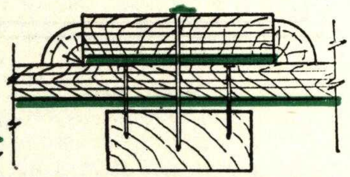
Plywood can be any finish required to match other finishes.

Lead sheets are in one piece fastened to plywood with special plastic base adhesive, guaranteed not to dry out, set up or pull loose.

Butt joints are protected by lead lined plywood joint strips, usually 1¾″ wide, which span joints providing the necessary lead protection and giving a finished wall design which has eye appeal.

Plywood may be stained or painted as preferred.

Lead lined plywood panels are usually fastened to wood studs or furring with wire nails. Joint strips are fastened with lead head nails.



lead lath

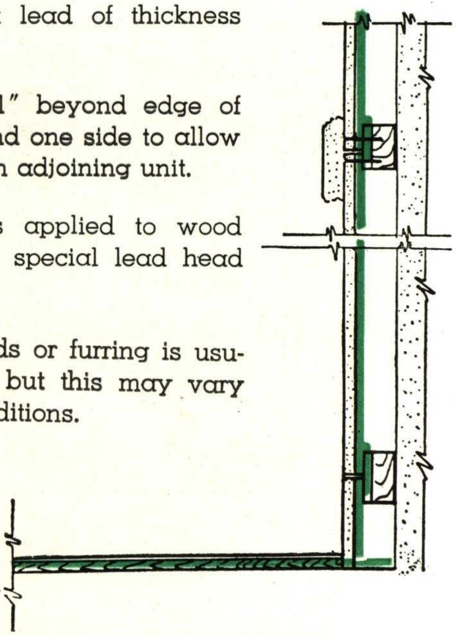
Where partitions require lead protection, plus a surface of plaster finish, lead plaster board lath should be specified.

Lead plasterboard lath is manufactured in standard commercial sizes, usually 16″x48″, of ⅜″ thick plasterboard, backed with unpierced sheet lead of thickness required.

Sheet lead projects 1″ beyond edge of plasterboard at top and one side to allow overlapping of lead on adjoining unit.

Lead plasterboard is applied to wood studs or furring with special lead head nails.

Spacing of wood studs or furring is usually 16″ on centers, but this may vary under particular conditions.



lead insulated plasterboard

Where first class building code construction of partitions is not required or for remodeling of existing rooms to permit use of x-ray equipment with adequate lead protection, and still have plaster wall surfaces, lead insulated plasterboard should be specified.

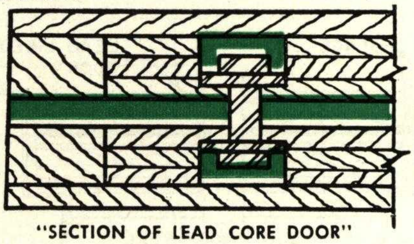
Plasterboard is made up in standard commercial sizes, usually 16″ x 48″, of ⅜″ thick plasterboard or other standard commercial unit, backed with unpierced sheel lead of thickness specified.

Lead projects 1″ beyond edge of plasterboard at top and one side to allow overlapping of lead on adjoining lead plasterboard.

Sheet lead is fastened to plasterboard with a special plastic base adhesive, guaranteed not to dry out, set up or pull loose.

Lead insulated plasterboard is applied to wood studding or furring with special lead head nails. Spacing of studs or furring is usually 16″ on centers, but this may vary under particular conditions.

lead core doors



"SECTION OF LEAD CORE DOOR"

Radiation proof doors are usually specified as flush type. Doors are manufactured in any size, thickness or finish to suit architects specifications, with sheet lead core to be of thickness commensurate with radiation.

Where vision is required, doors may have radiation protective lead glass panels installed during manufacture.

Where ventilation is required, doors may have radiation protective lead louvres built in.

Lead core shall be in one single piece and full size of door.

Door is constructed of two wood cores, preferably plywood at least ¾″ thick, with sheet lead core in between and fastened together with steel bolts, countersunk in cores. Poured lead covers bolt heads and nuts to guarantee complete lead protection.

Hardware may be installed on job if adequate care is taken to maintain protection by competently lining lock and hinge recesses.

Where voice control, as well as vision is required, this is accomplished by installing two lights of lead glass, offset and overlapping.

Door frames, whether metal bucks or wood must be lined with sheet lead, taking care that lead overlaps between door and frame.

GENERAL LEAD CONSTRUCTION CORPORATION

NELCO

X-RAY PROTECTION

NEW ENGLAND LEAD BURNING CO., INC. • SAN LEANDRO, CALIF.

Contractors in Lead

NELCO

X-RAY PROTECTION

Manufacturers and Installers since 1935, New England Lead Burning Co., Inc., has been furnishing and installing lead protection in hospitals, clinics, and medical schools throughout the country, and with our five factories and offices strategically located, we are prepared to handle any job.

FLOOR LAPS:

Three practical methods for installation of sheet lead on floors: butt and burnt joint, lead strips recessed in slab, and a lap seam.

DOORS:

"NELCO" lead core doors, either with poured lead fasteners or bolts.

WINDOWS:

"NELCO" extruded lead window with or without voice passage, and the split lead glass type for doors or narrow partitions.

GUARANTEE AND SPECIFICATIONS:

All X-Ray protection material and equipment as manufactured and installed by New England Lead Burning Company, Inc., is guaranteed to conform to the United States Department of Commerce, National Bureau of Standards.

We have given specifications of construction with our illustrated details in the following pages. If further information is desired, contact our nearest location.

Telephone: DAvis 5-2201

Ray Proof Corporation

Superior materials resulting from "know-how", skill, and high standards in manufacturing.

Over 30 years experience in manufacturing of x-ray protective and light proofing materials.

The Ray Proof Corporation maintains a staff of trained engineers to assist and solve your problems.

details and specifications

The importance of obtaining correctly engineered details and specifications cannot be too strongly emphasized for this work.

The responsibility for obtaining results so desirable in X-Ray Protection depends entirely on the knowledge and experience of experts.

When planning for these results, be sure to obtain this insurance by specifying RAY PROOF CORPORATION.

You are obligated in no way when you request this service directly from us or our nearest branch representative. X-Ray Protection and Lightproofing is our only business and the biggest part of it is service for your interests.

catalog and design data

Ray Proof Corporation's new enlarged edition of award Winning X-Ray Manual is now available to architects upon request.
Address your requests to Department E-4.

Ray Proof products

- It is impossible for us to present all Ray Proof Corporation's products and materials in this publication.
- We design and manufacture materials and equipment to meet every possible requirement from x-ray radiation sources.
- The addition of new products and methods keeps pace with the latest scientific developments.

Ray Proof partition blocks

Ideal partition material for new construction, simple erection, will take normal wall finishes. Blocks are manufactured 4″ thick with lead up to 8.0mm thick. For heavier lead 6″ thick blocks are used.

Floor and ceiling protection

A variety of materials are available for this purpose, depending upon the type of construction and the weight of lead required. Sheet lead placed on slabs is the most common method for protecting floors. Ceilings may be protected by placing sheet lead on slab above X-Ray Room, or Ray Proof lead insulated lath may be applied to underside of ceiling construction. Ray Proof lath suspension systems are available for lead lining suspended ceilings.

8. **STEEL LIGHT PROOF LOUVER** See plate No. 35.
9. **LIGHT PROOF DOOR SEAL** See plate No. 31.
10. **LIGHT PROOF SHADE** See plates No. 41, 42 & 44.

PLATES REFERED TO ABOVE WILL BE FOUND IN RAY PROOF CORPORATION CATALOG No. 53.

NOTES

Above layout shows the use of Ray Proof materials in a typical X-Ray room. These material requirements vary for each installation. For properly determining the true factors for X-Ray protection a full knowledge is necessary of existing or proposed construction as follows—

1—Type of construction of floors and ceilings—existing or proposed.
2—Type of construction of walls—if existing.
3—Occupancy of spaces above, below and adjacent to the proposed X-Ray installation.
4—Distance from floor to ceiling.
5—Geographical location of X-Ray installation with respect to walls of X-Ray room.
6—The KVP (peak kilo volts) and MA (milliampere) of equipment selected for installation.

Consult the RAY PROOF CORPORATION engineering dep't. for recommendations.

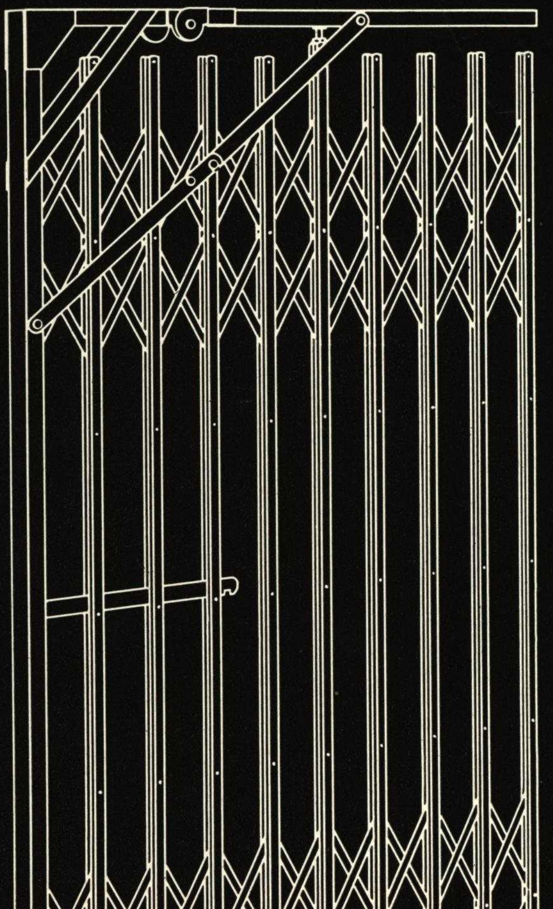
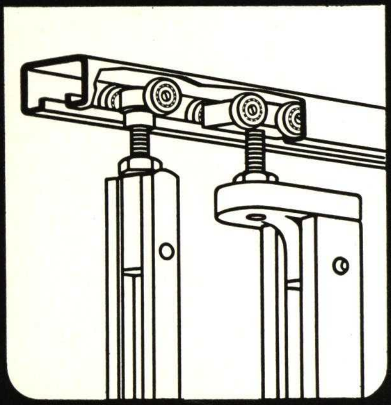
folding gates

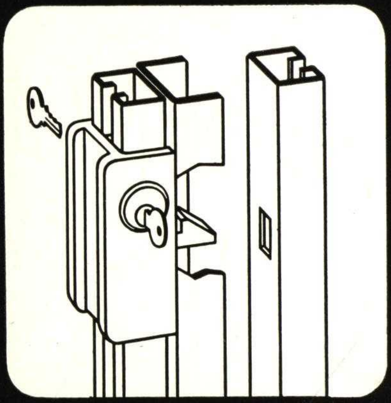
Acorn Wire and Iron Works, Inc.
New York—Chicago—Los Angeles

construction





Adjustable ball bearing trucks in box type tracks for smooth operation—(4 wheel trucks on end bar—2 wheel trucks on intermediate).



Cylinder locks mortised into gate end bar. Keyed both sides. Yale mortise cylinders, or master-keyed to building system.

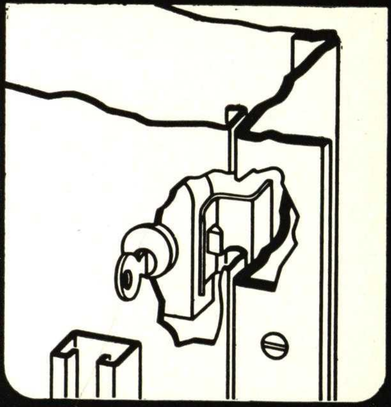
Machined roller bearings in all vertical channels assure ease of operation, proportionate spacing of lattice bars.

Copyright 1958 Acorn Wire and Iron Works, Inc.

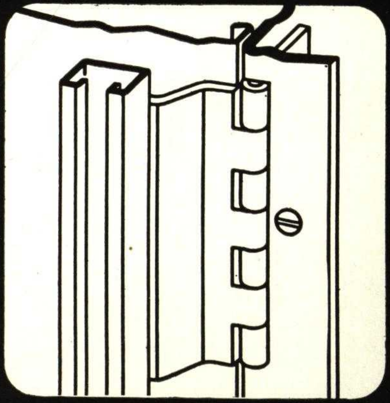
folding gates

Acorn folding gates are designed for use as traffic control units in school corridors, institutions and commercial buildings. They are used as control units for driveways, loading platforms, and permit doors to be opened for ventilation without loss of security. Compact, easy to operate, they can be adapted to fit most conditions.

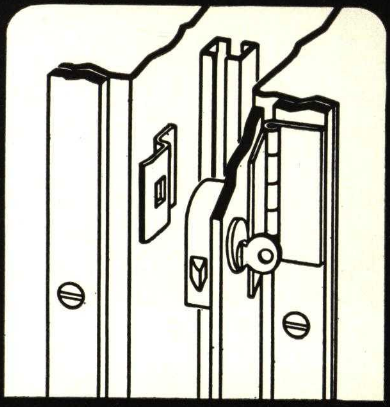
advantages
- strength
- security
- simplicity



$^3/_{16}$″ cold rolled Z bar frame at sides and top of shallow cabinets for adequate strength. C section door edges prevent distortion.



8″ seven knuckle gate hinge, $^3/_{16}$″ leaf, $^7/_{16}$″ pin, mortised into Z bar frame. Offset hinge permits cabinet door to close with gate in either position.



$^3/_{16}$″ thick cold rolled facia strip and door on deep type cabinets for adequate strength and better finished appearance.

a

surface mounted folding gates

Bostwick, 5700 series, Lazy Tong, 5600 series, for use where recessed features are not required.

b

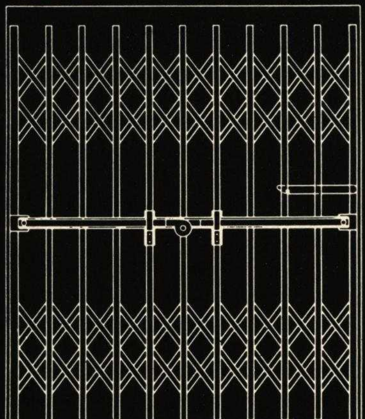
recessed folding gates

Bostwick, 5700 series, gates complete with flush, recessed wall cabinets and lock bars.

a¹—Bostwick

no. 5750S, single, 12′ maximum width

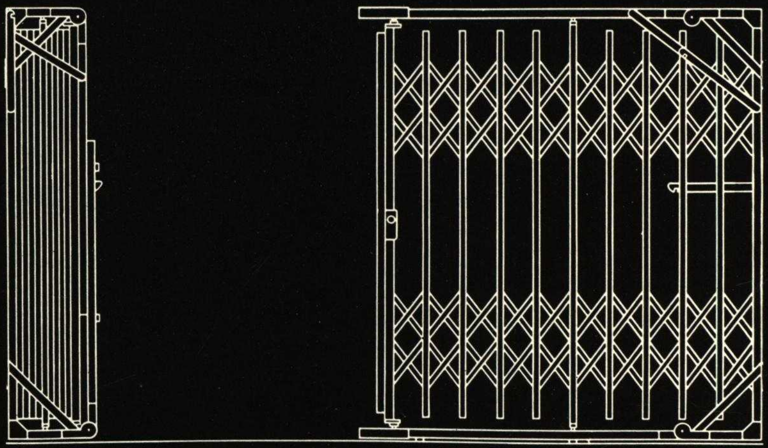
Jack-knife brace on gates over 4′ wide. Folding bottom track over 8′ wide. Hasp or cylinder lock.



no. 5743D, double, 15′ maximum width

no. 5743S, single, 14′ maximum width

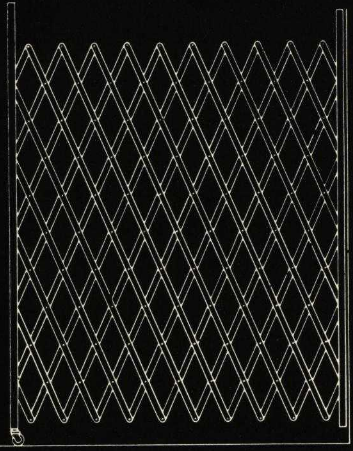
Hinged top and bottom tracks. Hasp or cylinder lock. Maximum height 7′-6″



a²—Lazy Tong

no. 5654, single, 8′ maximum width

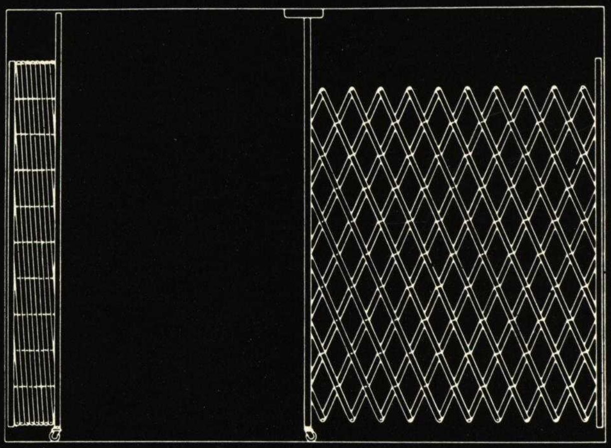
Gate hinged or fixed at side. May be used with hasp for padlock or cylinder lock.



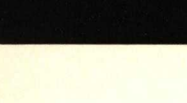
no. 5641, double, 16′ maximum width

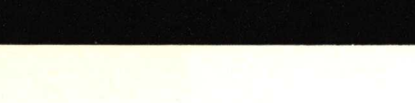
Gates hinged or fixed at sides. Center bar extends opening height.

Fixed top brace, locking floor bolt. Equipped with hasp for padlock or cylinder lock.



typical plans for gate placement



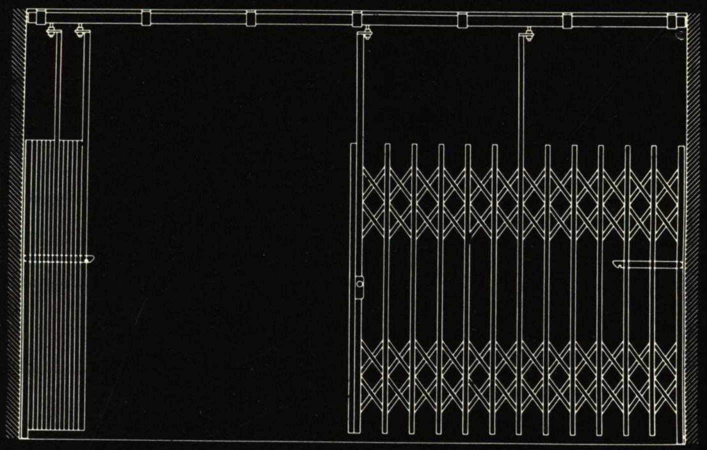


◀ **plan 2A** Gates placed in the opening stack fixed in line or flat against wall.

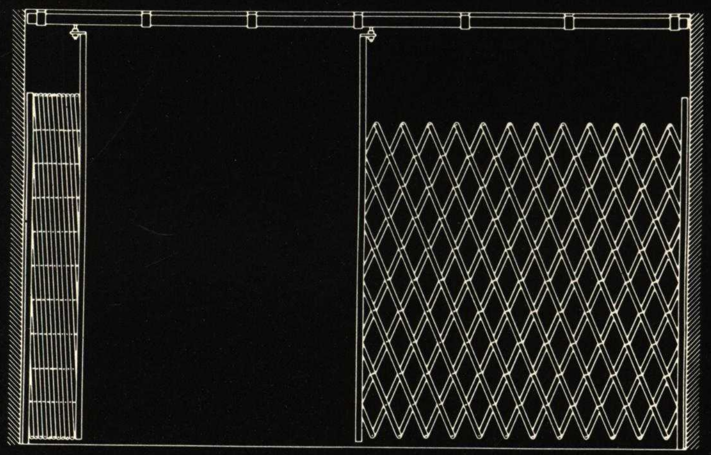
Gates placed on face of wall, stack clear of opening.

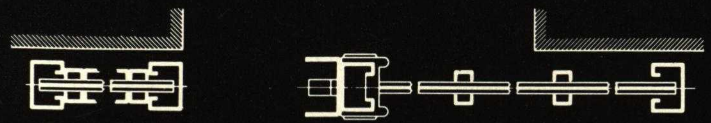
plan 2B ▶

no. 5748D, double, 30′ maximum width
no. 5748S, single, 15′ maximum width
Fixed overhead track. Floor bolts or folding bottom track. Hasp or cylinder lock.



no. 5649, sectional, unlimited width
Permanent overhead track. Gates in sections with padlocking floor bolts. Gates may stack flat against wall or clear of opening.





surface mounted folding gates

Bostwick, 5700 series; Lazy Tong, 5600 series, for use where recessed features are not required.

specifications:

a^{1}—Bostwick

no. 5750—Gate to be no. 5750, as manufactured by Acorn Wire and Iron Works, Inc.
Constructed of ¾″ channels spaced vertically not over 6″ o.c. Lattice bars ⅝″ x $\frac{3}{16}$″. Fully enclosed end bars. All moving parts fitted with rollers. All cold rolled material. Hasp for padlock or cylinder lock.

no. 5743—Gate to be no. 5743, as manufactured by Acorn Wire and Iron Works, Inc.
Constructed of ¾″ channels spaced vertically not over 6″ o.c. Lattice bars ⅝″ x $\frac{3}{16}$″. Fully enclosed end bars. All moving parts fitted with rollers. All cold rolled material. Hasp for padlock or cylinder lock.

no. 5748—Gate to be no. 5748, as manufactured by Acorn Wire and Iron Works, Inc.
Constructed of ¾″ channels spaced vertically not over 6″ o.c. Lattice bars ⅝″ x $\frac{3}{16}$″. Fully enclosed end bars. All moving parts fitted with rollers. All cold rolled material. Hasp for padlock or cylinder lock.

a^{2}—Lazy Tong

note: Gate drops 1½″ per foot in height when extended.

no. 5654—Gate to be no. 5654, as manufactured by Acorn Wire and Iron Works, Inc.
Constructed of ¾″ channels riveted back to back not over 6″ o.c. Fully enclosed end bars to receive rollers. All cold rolled material. Hasp for padlock or cylinder lock.

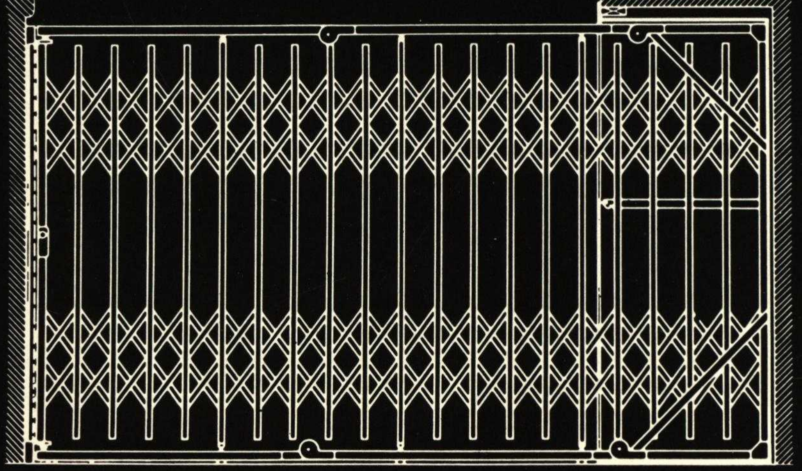
no. 5641—Gate to be no. 5641, as manufactured by Acorn Wire and Iron Works, Inc.
Constructed of ¾″ channels riveted back to back not over 6″ o.c. Fully enclosed end bars to receive rollers. All cold rolled material. Hasp for padlock or cylinder lock.

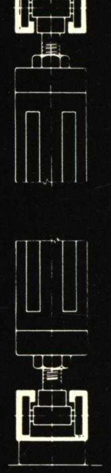
no. 5649—Gate to be no. 5649, as manufactured by Acorn Wire and Iron Works, Inc.
Constructed of ¾″ channels riveted back to back not over 6″ o.c. Fully enclosed end bars to receive rollers. All cold rolled material. Hasp for padlock or cylinder lock.

deep cabinet—12′ maximum corridor width

no. 5762S

Single type folding gate. 7′6″ recommended maximum height. Hinged top and bottom tracks. Roller bearing construction throughout. All cold rolled material for better appearance. Cylinder locks on gate and cabinet keyed regular or master-keyed to building system.





shallow cabinet—14′ maximum corridor width

no. 5761S

Single type folding gate. 7′6″ recommended maximum height. Hinged top and bottom tracks. Roller bearing construction throughout. All cold rolled material for better appearance. Cabinet door can be closed and locked when gate is in use. Cylinder locks on gate and cabinet keyed regular or master-keyed to building system.

- hinged bottom track

specifications:

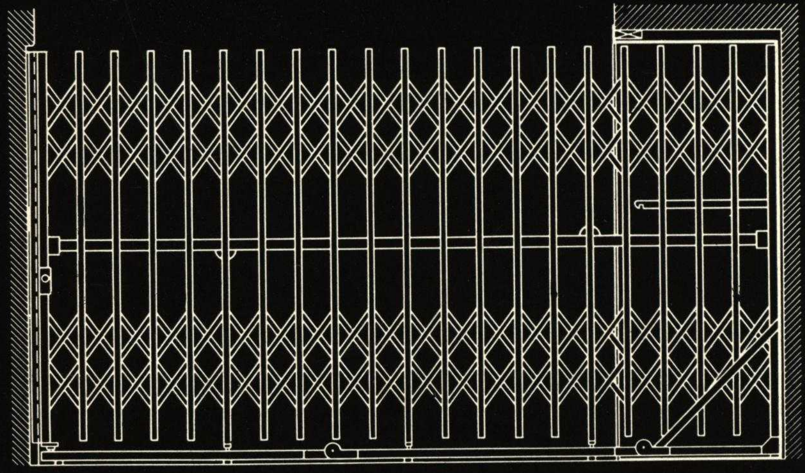
no. 5762D—Gate to be no. 5762D as manufactured by Acorn Wire and Iron Works, Inc. ______Vertical members to be two ¾″ x ⅜″ cold rolled channels spaced not over 6″ o.c. Lattice bars ⅝″ x $\frac{3}{16}$″ cold rolled flat steel. Vertical end bars to be cold rolled box type sections to receive roller bearings and cylinder lock. All moving parts to be fitted with rollers. Hinged top and bottom tracks to have gusset braces in all corners, automatic hold up arms for top tracks, rubber floor rests for bottom tracks. Gate to have self locking tie back arms. Cabinets constructed of 12 gauge formed sheet steel with $\frac{3}{16}$″ thick cold rolled facia strips and doors. Gate and cabinet locks to have Yale 1$\frac{5}{32}$″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to building system. Gate and cabinets to have standard factory finish, color as selected.

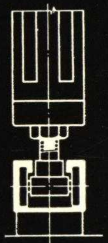
no. 5761D—Gate to be no. 5761D as manufactured by Acorn Wire and Iron Works, Inc. ______Vertical members to be two ¾″ x ⅜″ cold rolled channels spaced not over 6″ o.c. Lattice bars ⅝″ x $\frac{3}{16}$″ cold rolled flat steel. Vertical end bars to be cold rolled box type sections to receive roller bearings and cylinder lock. All moving parts to be fitted with rollers. Hinged top and bottom tracks to have gusset braces in all corners, automatic hold up arms for top tracks, rubber floor rests for bottom tracks. Gate to have self locking tie back arms. Cabinets constructed of $\frac{3}{16}$″ cold rolled Z bar frames, with 16 gauge steel backs. Flush 16 gauge doors have formed C edges. Gate to have special hinges permitting cabinet doors to close and lock when gate is in both stacked and extended position. Gate and cabinet locks to have Yale 1$\frac{5}{32}$″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to building system. Gate and cabinets to have standard factory finish, color as selected.

deep cabinet—12′ maximum corridor width

no. 5764S

Single type folding gate, 7′6″ recommended maximum height. Channel jack-knife brace with malleable iron hinges. Hinged bottom track, except on corridors under 8′ wide. Roller bearing construction throughout. All cold rolled material for better appearance. Cylinder locks on gate and cabinet keyed regular or master-keyed to building system.



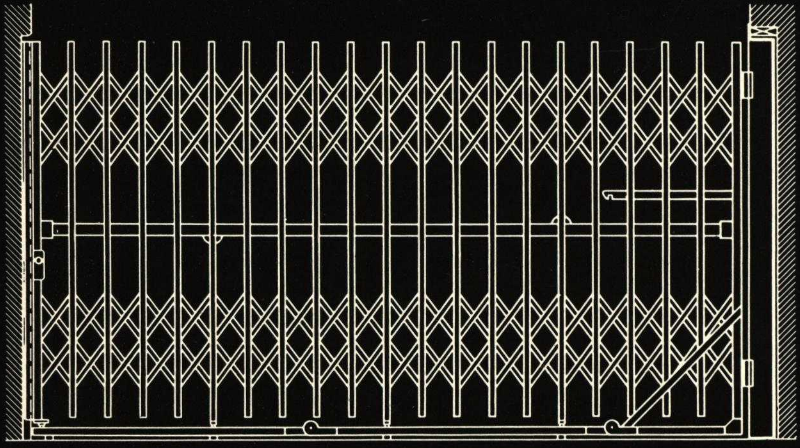


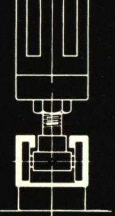
note: Rigid only when fully extended. Operator must guide gate in vertical position while opening or closing

shallow cabinet—12′ maximum corridor width

no. 5763S

Single type folding gate, 7′-6″ recommended maximum height. Channel jack-knife brace with malleable iron hinges. Hinged bottom track, except on corridors under 10′ wide. Roller bearing construction throughout. Cabinet door can be closed and locked when gate is in use. All cold rolled material for better appearance. Cylinder locks on gate and cabinet keyed regular or master-keyed to building system.





note: Rigid only when fully extended. Operator must guide gate in vertical position while opening or closing

specifications:

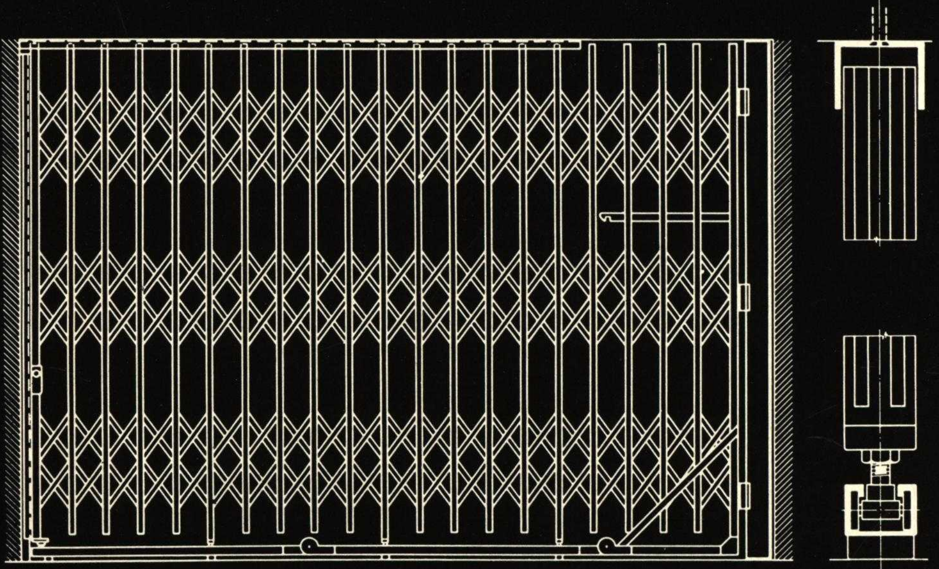
no. 5764S— Gate to be no. 5764S as manufactured by Acorn Wire and Iron Works, Inc. ——Vertical members to be two ¾″ x ⅜″ cold rolled channels spaced not over 6″ o.c. Lattice bars ⅝″ x 3/16″ cold rolled flat steel. Vertical end bars to be cold rolled box type sections to receive roller bearings and cylinder lock. All moving parts to be fitted with rollers. Jack-knife brace to be 2¼″ x 1″ cold rolled channel. Bottom track to have gusset braces and rubber floor rests. No track for corridors under 8′ wide. Gate to be fitted with self locking tie back arm. Cabinet constructed of 12 gauge formed sheet steel with 3/16″ thick cold rolled facia strips and door. Gate and cabinet locks to have Yale 1 5/32″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to building system. Gate and cabinet to have standard factory finish, color as selected.

no. 5763S— Gate to be no. 5763S as manufactured by Acorn Wire and Iron Works, Inc. ——Vertical members to be two ¾″ x ⅜″ cold rolled channels spaced not over 6″ o.c. Lattice bars ⅝″ x 3/16″ cold rolled flat steel. Vertical end bars to be cold rolled box type sections to receive roller bearings and cylinder lock. All moving parts to be fitted with rollers. Jack-knife brace to be 2¼″ x 1″ cold rolled channel. Bottom track to have gusset braces and rubber floor rests. No track for corridors under 10′ wide. Gate to be fitted with self locking tie back arm. Cabinet constructed of 3/16″ cold rolled Z bar frame with 16 gauge steel back. Flush 16 gauge door to have formed C edges. Gate to have special hinges permitting cabinet door to close and lock when gate is in both stacked and extended position. Gate and cabinet locks to have Yale 1 5/32″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to building system. Gate and cabinet to have standard factory finish, color as selected.

shallow cabinet—12′ maximum corridor width

no. 5766S

Single type folding gate, full opening height. Over 8′ high, 3 row lattice. Hinged bottom track, permanent overhead guide channel notched at side to permit gate to hinge into cabinet. All roller bearing construction. Cabinet door can be closed and locked when gate is in use. All cold rolled material. Cylinder locks on gate and cabinet keyed regular or master-keyed to building system.



deep cabinet—14′ maximum corridor width

no. 5765S

Single type folding gate, full opening height. Over 8′ high, 3 row lattice. Hinged bottom track, permanent top track recessed into ceiling. Roller bearing construction for easy operation. All cold rolled material for better appearance. Cylinder locks on gate and cabinet keyed regular or master-keyed to building system.

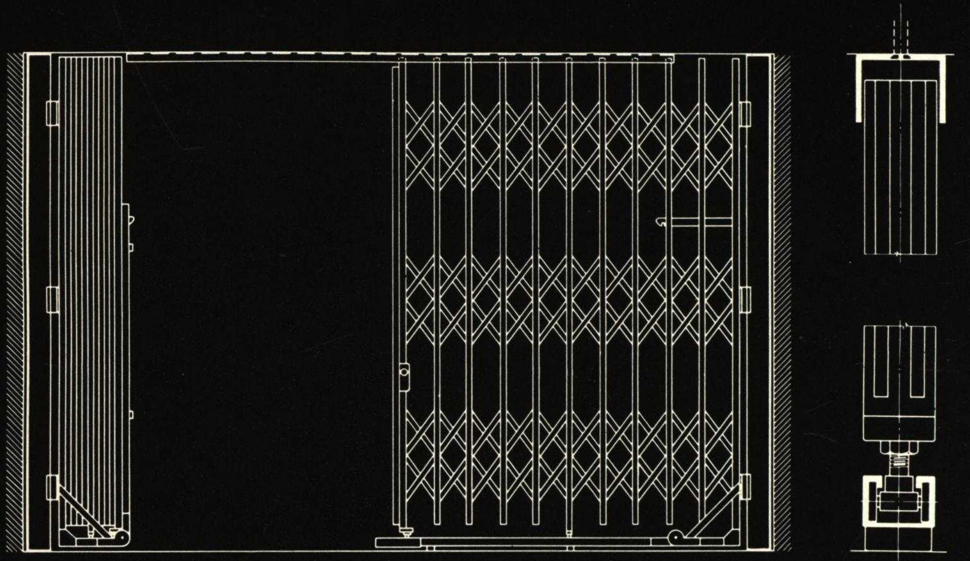
no. 5766S—Gate to be no. 5766S as manufactured by Acorn Wire and Iron Works, Inc. ______Vertical members to be two ¾″ x ⅜″ cold rolled channels spaced not over 6″ o.c. Lattice bars ⅝″ x 3⁄16″ cold rolled flat steel. Vertical end bars to be cold rolled box type sections to receive roller bearings and cylinder lock. All moving parts to be fitted with rollers. Top guide to be 2⅜″ x 2¼″ channel. Bottom track to have gusset braces and rubber floor rests. Gate to be fitted with self locking tie back arm. Cabinet constructed of 3⁄16″ cold rolled Z bar frame with 16 gauge steel back. Flush 16 gauge door to have formed C edges. Gate to have special hinges permitting cabinet door to close and lock when gate is in both stacked and extended position. Gate and cabinet locks to have Yale 1 5⁄32″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to building system. Gate and cabinet to have standard factory finish, color as selected.

no. 5765S—Gate to be no. 5765S as manufactured by Acorn Wire and Iron Works, Inc. ______Vertical members to be two ¾″ x ⅜″ cold rolled channels spaced not over 6″ o.c. Lattice bars ⅝″ x 3⁄16″ cold rolled flat steel. Vertical end bars to be cold rolled box type sections to receive roller bearings and cylinder lock. All moving parts to be fitted with rollers. Top track to be 14 gauge box type section to receive roller bearing hangers. Bottom track to have gusset braces and rubber floor rests. Gate to be fitted with self locking tie back arm. Cabinet constructed of 12 gauge formed sheet steel with 3⁄16″ thick cold rolled facia strips and door. Gate and cabinet locks to have Yale 1 5⁄32″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to building system. Gate and cabinet to have standard factory finish, color as selected.

shallow cabinet—20' maximum corridor width

no. 5766D

Double type folding gate, full opening height. Over 8' high, 3 row lattice. Hinged bottom tracks, permanent overhead guide channel notched at ends to permit gates to hinge into cabinets. All roller bearing construction. Cabinet doors can be closed and locked when gate is in use. All cold rolled material. Cylinder locks on gate and cabinets keyed regular or master-keyed to building system.



deep cabinet—24' maximum corridor width

no. 5765D

Double type folding gate, full opening height. Over 8' high, 3 row lattice. Hinged bottom tracks, permanent top track recessed into ceiling. Roller bearing construction for easy operation. All cold rolled material for better appearance. Cylinder locks on gate and cabinets keyed regular or master-keyed to building system.

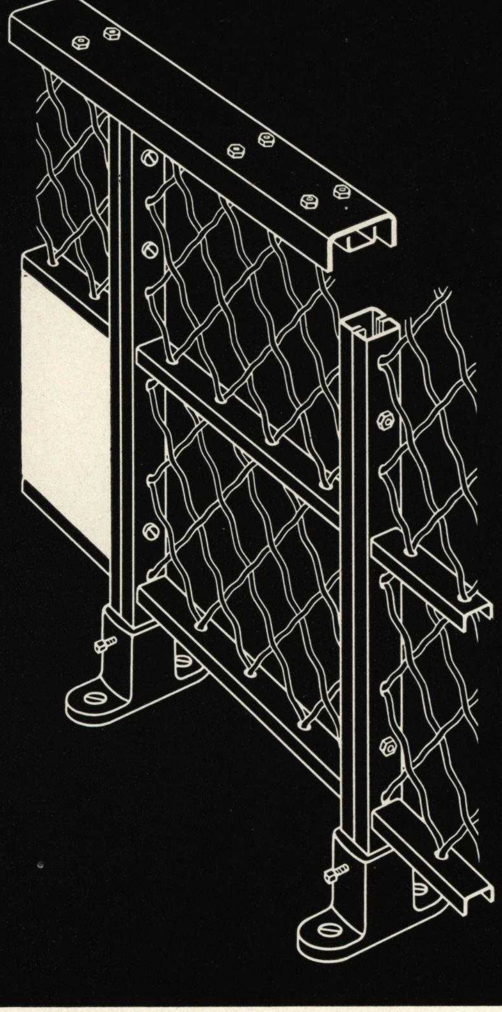
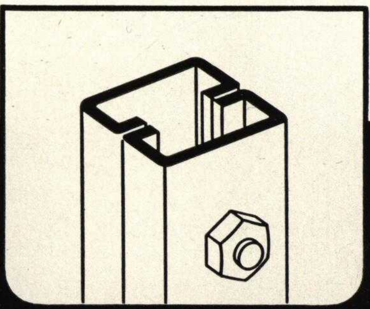
wire mesh partitions

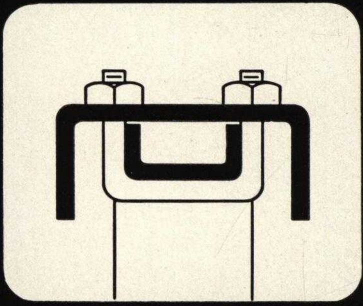
Acorn Wire and Iron Works, Inc.
New York—Chicago—Los Angeles

construction

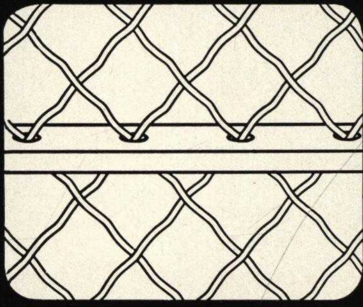




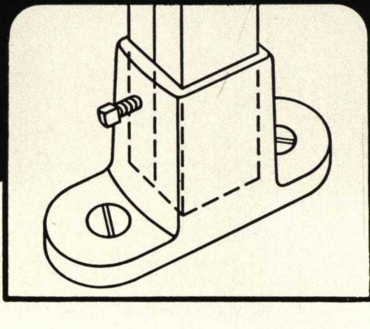
Formed "turned-in-toe" channel uprights prevent telescoping, assure permanent alignment.



Capping channel 'U' bolted to panels simplifies installation and re-arrangement.



Woven in center channel provides better appearance, additional rigidity.



Adjustable cast iron floor sockets permit level installation, secure anchorage.

Copyright 1958 Acorn Wire and Iron Works, Inc.

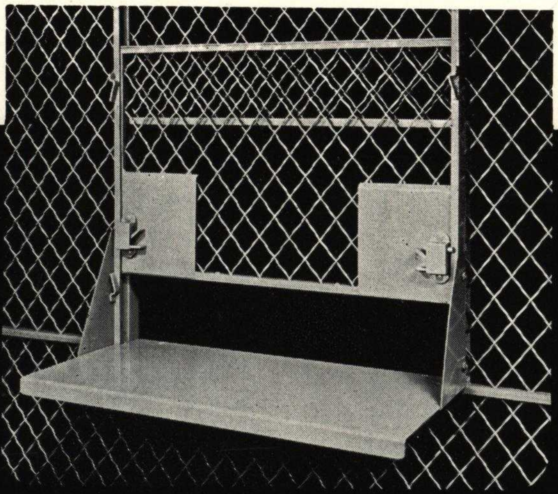
wire mesh partitions

Acorn partitions are made up of a series of standardized units. Panels, doors, service windows and corners can be arranged in any combination, giving maximum flexibility in layout. Standardization permits expansion at any time with no loss of component parts.

advantages
- strength
- security
- simplicity

types:

no. 130A	All wire type for normal industrial use. 7′, 8′, 9′ and 10′ standard heights.	a
no. 139A	Sheet base type. Additional strength, better appearance. 7′, 8′, 9′, 10′ standard heights.	b
no. 130AL	All wire type using vertical flat bar posts. 11′ to 20′ standard heights.	c
no. 139AL	Sheet base type using vertical flat bar posts. 11′ to 20′ standard heights.	
no. 135	All wire type for extra heavy industrial use. 7′ to 20′ heights.	d
how to order		back cover



Slide-up service windows for use in any location. Standard size 24″ wide by 15″ high, special sizes to order. Windows lock in opened and closed positions with spring catches. Shelf is 12 gauge steel, 12″ deep x 25″ wide (optional)

Door locks are pick-proof bronze mortise type operated by key outside, recessed knob inside. Can be keyed alike, different or master-keyed. Cylinder locks are standard equipment on all doors unless otherwise specified.

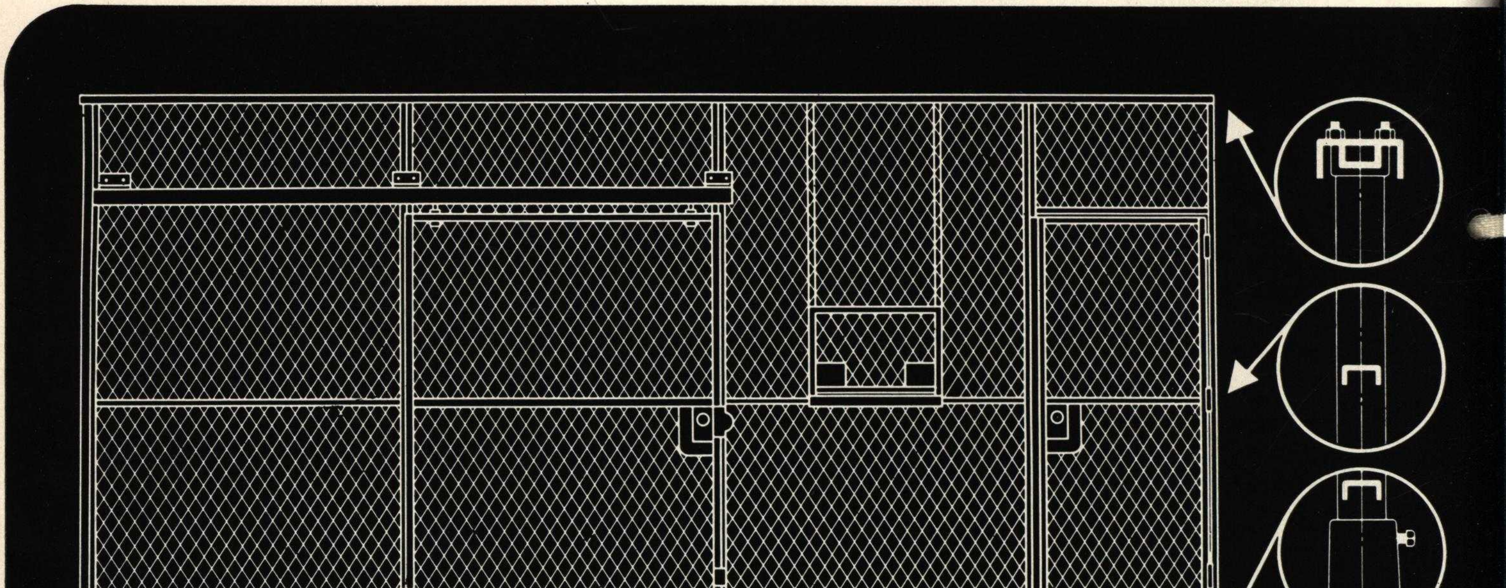
typical grouping of no. 130A sections



standard panel
sliding door sect.
service window panel
hinged door sect.

7′—10′ wire mesh partitions

all wire type—no. 130A

Basic all wire type for normal industrial use. 7′, 8′, 9′ and 10′ standard heights.

components—nominal sizes

standard panels:

Stock sizes—5′ wide, 7′, 8′, 9′ and 10′ high. Special heights up to 10′ made to order.

sliding door sections:

Stock sizes—3′, 4′, 5′ and 6′ wide. 7′ headroom except 6′-6″ in 7′ high partition. Special sizes to order.

service window panels:

Stock sizes—24″ x 15″ standard service window (see page 3) in standard 5′ panels. Special windows and panels to order.

hinged door sections:

Stock sizes—2′-6″, 3′ and 3′-6″ wide. 7′ headroom except 6′-6″ in 7′ high partition. Special sizes to order.

filler panels:

Stock sizes—none. Special width panel to fill out runs or where standard 5′ wide panels cannot be used.

corners and intersections:

Stock sizes—1¼″ angle for 90° corner, any height. Clips for three or four way 90° intersection, any height. 1$\frac{5}{16}$″ O.D. pipe post for other than 90° corner.

All panels and door sections are interchangeable standardized units which can be arranged in any desired combination.

specifications

Partitions to be no. 130A as manufactured by Acorn Wire and Iron Works, Inc. ——All wire type constructed of 10 gauge steel wire woven into 1½″ diamond mesh, securely clinched to frames——Vertical frames to be 1¼″ x ⅝″ cold rolled 'C' section channels with ¼″ bolt holes 12″ o.c.——Horizontal frames 1″ x ½″ cold rolled channels ——All joints mortised and tenoned——Center reinforcing bar 1″ x ½″ cold rolled channel tenoned to side frames. All wires passed through center bar——Top capping bar 2¼″ x 1″ cold rolled channel with ¼″ 'U' bolts 2′4″ o.c. ——Corner posts 1¼″ x 1¼″ angles with ¼″ bolt holes to match partition——Cast iron floor sockets 2½″ high with set screw adjustment——Sliding door frames 1½″ x ¾″ channel with 1½″ x ⅛″ flat bar cover all around. Each door to have two 4 wheel roller bearing hangers, box track, and bottom guide channel——Hinged door frames 1¼″ x ½″ channel with 1¼″ x ⅛″ flat bar cover three sides, 1⅜″ x ¾″ x ⅛″ angle riveted to lock side. Each door to have 1½ pairs butt hinges riveted to both door and transom bar——All doors to have substantial bronze mortise type cylinder locks operated by key outside, recessed knob inside ——All bolts, hardware, and accessories for complete installation to be included—— Field bracing furnished by erector——Finish, one standard shop coat (factory green), (machinery gray), or (black) enamel.

7′—20′ wire mesh partitions

all wire type—no. 135

Heavy duty all wire type for extra heavy industrial use.
7′——20′ heights in 12″ increments.

components—nominal sizes

standard panels:

Stock sizes—5′ wide, 7′——20′ heights in 12″ increments. Special heights made to order.

sliding door sections:

Stock sizes—3′, 4′, 5′ and 6′ wide. 7′ headroom except 6′-6″ in 7′ high partition. Special sizes to order.

service window panels:

Stock sizes—24″ x 15″ standard service window (see page 3) in standard 5′ panels. Special windows and panels to order.

hinged door sections:

Stock sizes—2′-6″, 3′ and 3′-6″ wide. 7′ headroom except 6′-6″ in 7′ high partition. Special sizes to order.

filler panels:

Stock sizes—none. Special width panel to fill out runs or where standard 5′ wide panels cannot be used.

corners and intersections:

Stock sizes—1¾″ angle for 90° corner, any height. Clips for three or four way 90° intersection, any height. 2⅜″ O.D. pipe post for other than 90° corner.

flat bar posts:

Stock sizes—5/16″ x 2½″ for partitions 7′——12′ high
5/16″ x 3″ for partitions 12′——16′ high
5/16″ x 3½″ for partitions 16′——20′ high

All panels and door sections are interchangeable standardized units which can be arranged in any desired combination.

specifications

Partitions to be no. 135 as manufactured by Acorn Wire and Iron Works, Inc. ——All wire heavy duty type constructed of 6 gauge steel wire woven into 2″ diamond mesh securely clinched into 1½″ x ¾″ channel frames——Vertical frames to have ⅜″ bolt holes 18″ o.c.——All joints mortised and tenoned ——Center reinforcing bar 1½″ x ¾″ channel tenoned to side frames——All wires passed through center bar——Flat bar posts to be (5/16″ x 2½″) (5/16″ x 3″) (5/16″ x 3½″) (as detailed) with ⅜″ bolt holes to match partition ——Top capping bar 3″ x 4.1 lb. channel with 5/16″ 'U' bolts 2′4″ o.c. Corner posts 1¾″ x 1¾″ angle with ⅜″ bolt holes to match partition——Cast iron floor sockets 2½″ high with set screw adjustment——Sliding door frames 1½″ x ¾″ channel with 1½″ x ⅛″ flat bar cover all around. Each door to have two 4 wheel roller bearing hangers, box track, and bottom guide channel——Hinged door frames 1½″ x ¾″ channel with 1½″ x ⅛″ flat bar cover three sides, 1⅝″ x ⅞″ x ⅛″ angle riveted to lock side. Each door to have 1½ pairs heavy butt hinges riveted to both door and transom bar ——All doors to have substantial bronze mortise type cylinder locks operated by key outside, recessed knob inside——All bolts, hardware, and accessories for complete installation to be included——Field bracing furnished by erector ——Finish, one standard shop coat (factory green), (machinery gray), or (black) enamel.

how to order

When the partition layout is planned around standardized units, the following information should be listed:

1. Type of partition (130A, 139A, 130AL, 139AL, 135).
2. Height of partition.
3. Number of standard panels.
4. Number and width of filler panels.
5. Number and width of door sections.
   - [a] Specify whether doors are hinged or sliding.
   - [b] Whether right or left hand doors are required. **note:** Right hand door has lock on right hand side when facing door from key side.
   - [c] If hinged, whether to swing in or out.
   - [d] If sliding, whether inside or outside.
   - [e] Whether locks are to be keyed alike, different, or master-keyed.
6. Number of corner posts.
7. Kind of floor and wall.
8. Color of paint.

Where special conditions prevail details should be furnished giving necessary information.

BELLIS WIRE WORK, INC.
BROOKLYN 6, NEW YORK

history . . .

Bellis Wire Works, incorporated in the state of New York, was organized over fifty years ago. Our corporation has dedicated itself to the fabrication of woven wire mesh products, folding gates, and all specialties pertaining to the Metal Trades Industries in all of its branches.

With the erection and completion of three new buildings, Bellis Wire Works, Inc., now feels that it has the most modern and best equipped plant to serve its customers.

Our Engineering Department is ready at all times to render its services to architects, engineers, public utility and building superintendents, or anyone having problems involving this industry.

wire sizes

approx. fraction of inch	No. and size of wire		decimals of inch	square and flat wire
	No			
¼	3		.2437	1/16″ square
7/32	4		.2253	⅛″ square
13/64	5		.2070	3/16″ square
3/16	6		.1920	¼″ square
11/64	7		.1770	⅛″ x 1/16″ flat
5/32	8		.1620	¼″ x 1/16″ flat
5/32	9		.1483	¼″ x ⅛″ flat
9/64	10		.1350	⅜″ x 1/16″ flat
⅛	11		.1205	
7/64	12		.1055	
3/32	13		.0915	
5/64	14		.0800	

all sizes are A.S. & W. or W. & M. wire gauge

selector guide to woven products

Uses		Wire and Mesh	Frame	Remarks
Radiator screens and grilles		⅝-in. mesh No. 14 wire Square or diamond	5/16-in. round ½- or ⅝-in. channel ¾-in. angle	Can be supplied in copper, brass or bronze also
Air intake screens Bird screens Church windows		¾-in. mesh No. 14 wire Square or diamond	5/16-in. round or ¾-in. channel 1 -in. angle	Should be galvanized after fabrication or made of bronze
Basement window guards Shelves and Trays Skylight screens Pipe railing screens		1-in mesh No. 12 wire Square or diamond	⅜-in. round or 1 -in. channel 1 -in. angle	Diamond mesh for strength Round frame for exterior
Radiator and Vent Grilles		1¼-in. mesh No. 11 wire Square or diamond	⅜-in. round or 1 -in. channel	Can be supplied in brass or bronze
Heavy duty partitions, as for tool cribs, elevator shafts, stock rooms		1¼-in. mesh No. 8 wire Diamond	1¼-in. channel	Ideal for factory use where trucking is done
Switchboards Transformers Elevator shafts Fire escapes Cashier cages Office partitions Corridors and Runways Stair enclosures Locker rooms Departmental divisions Basement storerooms Gymnasium window guards Elevator car tops and safety gates	Radiator guards Porch grilles Racks Stockrooms Toolrooms Lockers	1½-in. mesh No. 10 wire 1¾-in. mesh No. 9 wire Diamond 2-in. mesh No. 8 wire	1 -in. channel ⅞-in. channel ¾-in. channel Note—Where additional stiffeners are required—flat bars, tees or angles may be applied between panels	1½-in. diamond mesh No. 10 gauge wire in 1-in. channel frames is standard construction and is especially recommended for economy, strength and appearance
Door and window guards		1½-in. mesh No. 10 wire	⅜-in. round 1 -in. channel	Usual specification for insurance protection
Wire roof signs Fencing gratings		2¼-in. mesh No. 7 wire 2½-in. mesh No. 6 wire Diamond	7/16-in. round frames 1½-in. channel	Should be galvanized after fabrication

All items may also be furnished in aluminum and stainless steel, monel metal, bronze-brass, etc.

window guards

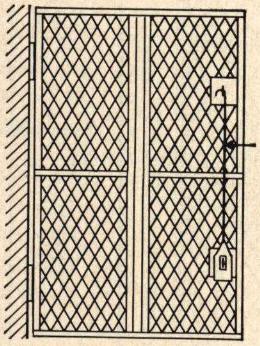
gymnasium window guards — interior •

Can be used individually or in series for any size bay.

No. 20 and No. 21 have 3" wide slot for pole operation of sash.

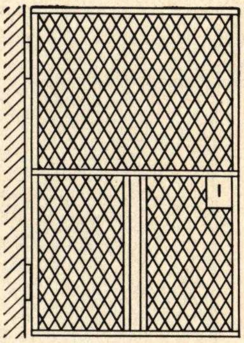
Alternate—Bellis self-locking drop latches.

No. 20

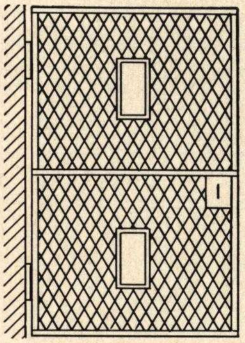


½" round lock bar—hook at top—padlock or S hook with chain at bottom.

No. 21



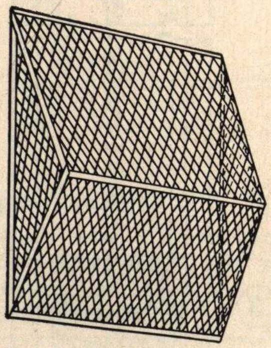
No. 22



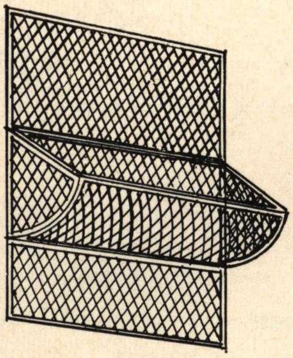
No. 22 has slots for sash operating arms.

guards for pivoted and projecting sash — exterior • Fixed, or hinged and locked.

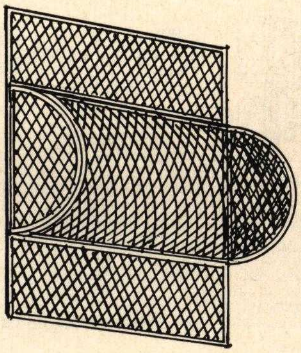
No. 23



No. 24

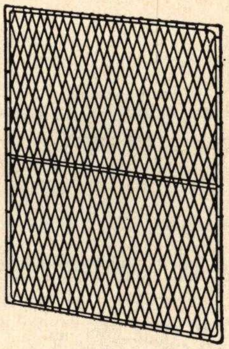


No. 25



No. 23-24 and 25 can be used individually or in series for any size bay.

No. 26



Fixed guards for fire towers and air shafts.

specifications

No. 10 wire, 1½" diamond mesh, 1" x ½" channel frames, angle and tee supports, if necessary. Hinged and padlocked. Guards over 10' high should be made in two sections.

Recommended that exterior guards be hot dipped glavanized after fabrication.

■ specifications

No. 6 wire, 2″ diamond mesh, 1½ x ¾″ channel frames. Flat bar posts of size to suit height of partition. Top rail ¼″ x 3″ flat bar. Corner post—1¾″ x 1¾″ angle. Finish—one shop coat of paint.

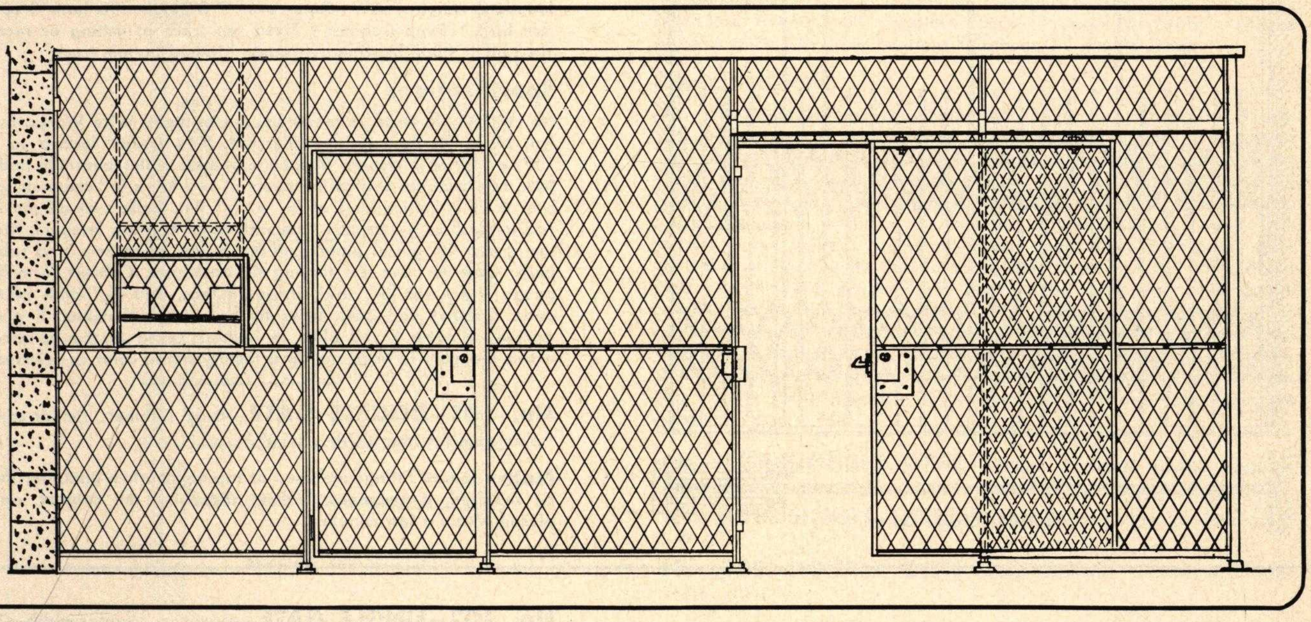
■ alternate posts

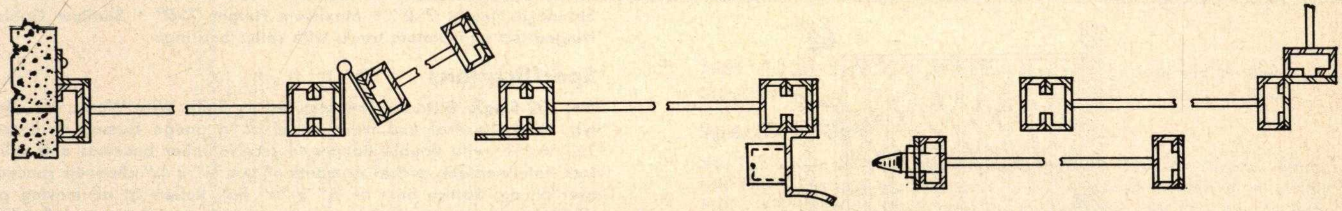
Can be angles, tees or pipe of size commensurate with variation in height.

standard partition

for ordinary use

No. 42—All wire.
No. 43—Bottom panels 16 ga. sheet steel 4'-0" high, flanged all around.





specifications

No. 10 wire, 1½" diamond mesh, 1¼" x ⅝" "C" section for verticals and 1" x ½" channels for horizontals. Stiffeners at center consisting of two ¾" channels riveted or bolted together.

Partitions over 10'-0" high to have flat bar posts as specified under intermediate posts. Top rail—2⅜" x 1" channel with ¼" bolts not over 24" o.c. Finish—one (1) shop coat of paint.

hinged doors

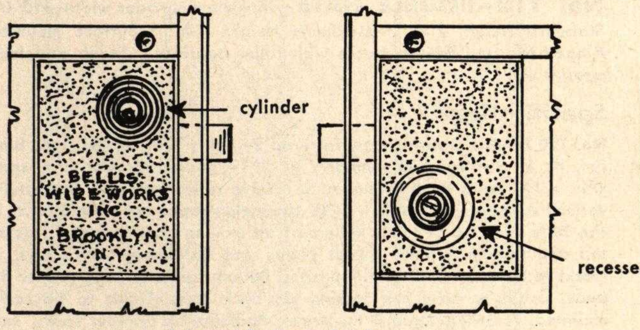
1¼" or 1½" x ⅛" flat bar capping on top, bottom and hinged side. 1⅜" x ¾" or 1⅝" x ⅞" x ⅛" angle strike bar riveted to door at lock side. 1½ pairs of heavy steel butt hinges on each door. Bronze mortise type lock with cylinder on outside and recessed knob on inside.

service windows

Slide up in channel guides. Popular size 24" x 16". Special sizes can be furnished as conditions may require. Spring catches keep window locked in open or closed position. Steel shelf of #12 gauge 24" wide by 12" deep flanged on all sides and supported by substantial brackets.

sliding doors

1¼" or 1½" x ⅛" flat bar capping all around. Box type track-two (2) 4 wheel roller bearing hangers on each door—channel guide at bottom. Bronze mortise type lock with cylinder on outside and recessed knob on inside.
Lock nosing recessed for plate on door to prevent tampering with lock bolt.



hinged door lock

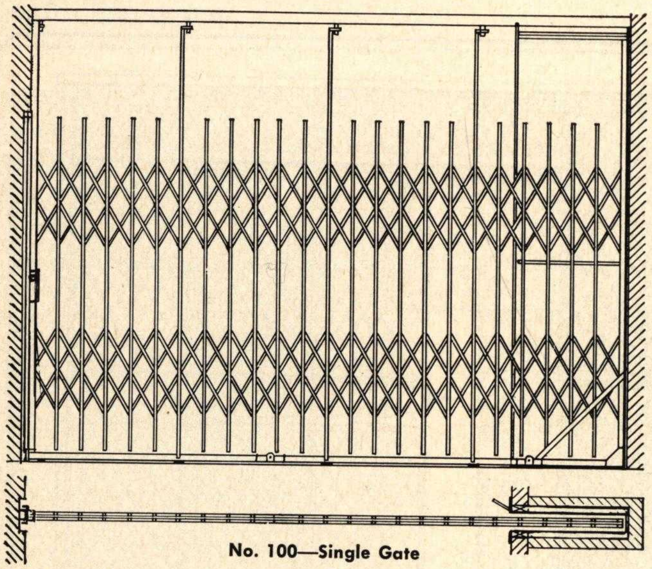
sliding door lock

locks—Bronze mortise type—sizes 3-9/16" x 6¼" x 1" thick with standard 1-5/32" diameter 5 pin tumbler cylinder on outside and recessed knob on inside. Keyed different, alike or master keyed. These locks can be furnished with cylinders on both sides for maximum security.



No. 100—Single Gate

No. 100—SINGLE GATE—Maximum corridor width—14′-0″

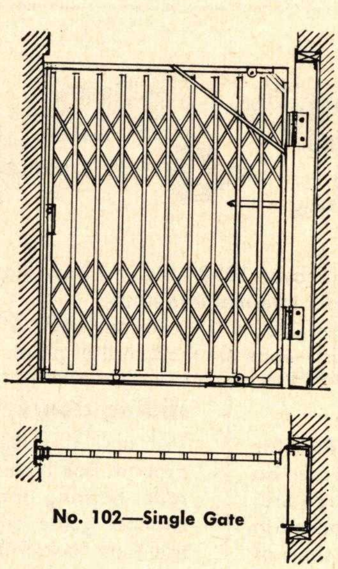
Standard Height 7′-0″ • Gates over 9′-0″ high • To have 3 rows of lattice bars • Deep Cabinet • Fixed top track at ceiling or recessed into the ceiling • Ball bearing carriages • Hinged bottom track

Specifications

No. 100 Single Gate as manufactured by Bellis Wire Works, Inc., Brooklyn, N. Y. Vertical end members of #14 gauge formed to a section 1¾″ x 1⅜″ with double flanges to receive roller bearings and cylinder lock. Intermediate vertical members of two ¾″ x ⅜″ channels spaced not over 6″ o.c. Lattice bars of ⅝″ x $\frac{3}{16}$″ flat. Rollers at all moving parts. Top track #14 gauge box type with roller bearing hangers. Hinged bottom track with gusset plates and flat braces at corners, and rubber floor pads. Gate to have self locking tie back arm. Cabinet formed of #12 gauge steel, with $\frac{3}{16}$″ thick strips on face, and $\frac{3}{16}$″ thick plate hinged door. Cabinet and gate locks to have $1\frac{5}{32}$″ diameter 5 pin tumbler mortise cylinders keyed alike, or master keyed to the building system. Entire assembly to have standard factory finish, color as selected.

No. 101—DOUBLE GATE—Deep Cabinets, similar construction • Maximum corridor width—24′-0″

Note—special fittings are used at top and bottom enabling the gate to be removed, if necessary, without disturbing the cabinet, and be replaced within a few minutes.



No. 102—Single Gate

No. 102—SINGLE GATE—Maximum corridor width—14′-0″

Standard Height 7′-0″ • Maximum Height 7′-6″ • Shallow Cabinet • Hinged top and bottom tracks with roller bearings

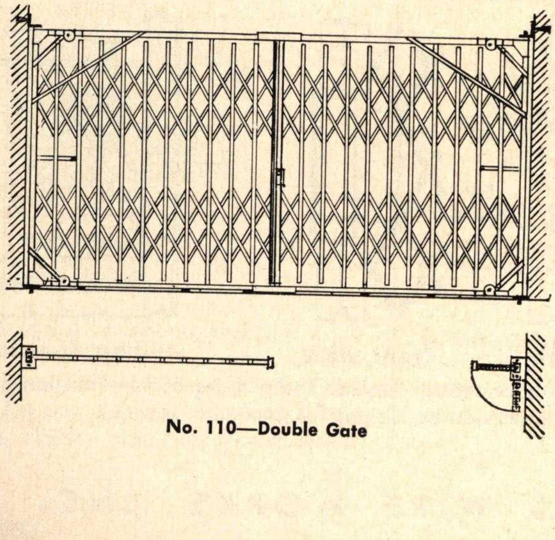
Specifications

No. 102 Single Gate as manufactured by Bellis Wire Works, Inc., Brooklyn, N. Y. Vertical end members of #14 gauge formed to a section 1¾″ x 1⅜″ with double flanges to receive roller bearings and cylinder lock. Intermediate vertical members of two ¾″ x ⅜″ channels spaced not over 6″ o.c. Lattice bars of ⅝″ x $\frac{3}{16}$″ flat. Rollers at all moving parts. Hinged tracks at top and bottom to have gusset plates and flat braces at corners. Top track to have automatic hold up arm. Bottom track to have rubber floor pads. Gate to have self locking tie back arm. Cabinet formed of $\frac{3}{16}$″ thick Z bar frame, with #16 gauge back. Door to be flush type #16 gauge double flanged all around. Gate to be hung on offset hinges so as to permit the cabinet door to close and lock when gate is in both open and closed position. Cabinet and gate locks to have $1\frac{5}{32}$″ diameter 5 pin tumbler mortise cylinders keyed alike, or master keyed to the building system. Entire assembly to have standard factory finish, color as selected.

No. 103—DOUBLE GATE—Shallow Cabinets, similar construction • Max. corridor width—16′-0″

No. 104—SINGLE GATE—Deep Cabinet • Maximum corridor width—12′-0″

No. 105—DOUBLE GATE-Deep Cabinets • Max. corridor width—12′-0″



No. 110—Double Gate

No. 110—DOUBLE GATE—Maximum corridor width—15′-0″

Standard Height 7′-0″ • Maximum Height 7′-6″ • Surface mounted • Hinged top and bottom tracks with roller bearings • Swing and locked against walls

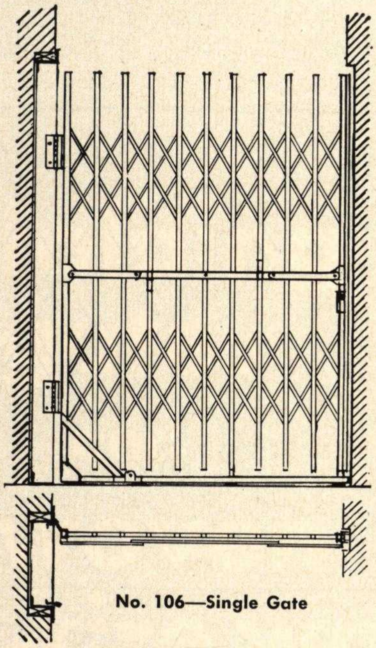
Specifications

No. 110 Double Gate as manufactured by Bellis Wire Works, Inc., Brooklyn, N. Y. Vertical end members of #14 gauge formed to a section 1¾″ x 1⅜″ with double flanges to receive roller bearings. Intermediate vertical members of two ¾″ x ⅜″ channels spaced not over 6″ o.c. Lattice bars of ⅝″ x $\frac{3}{16}$″ flat. Rollers at all moving parts. Hinged tracks at top and bottom to have gusset plates and flat braces at corners. Top tracks to have automatic holdup arms. Bottom tracks to have rubber floor pads. Gates to have self locking tie back arms. Gates to be surface mounted, to swing against the walls. Padlocks or cylinder locks. Entire assembly to have standard factory finish, color as selected.

No. 111—SINGLE GATE, similar construction • Maximum corridor width 14′-0″

FOLDING GATES

BOSTWICK TYPE



No. 106—Single Gate

No. 106—SINGLE GATE—Maximum corridor width—8′-0″
Standard Height 7′-0″ • Shallow Cabinet • Jack-knife brace • Hinged bottom track with roller bearings • Ornamental pickets at top

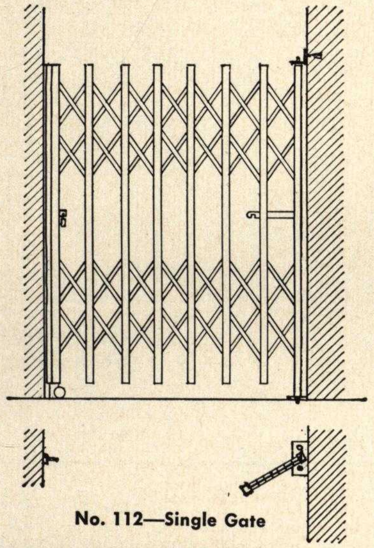
Specifications

No. 106 Single Gate as manufactured by Bellis Wire Works, Inc., Brooklyn, N. Y. Vertical end members of #14 gauge formed to a section 1¾″ x 1⅜″ with double flanges to receive roller bearings and cylinder lock. Intermediate vertical members of two ¾″ x ⅜″ channels spaced not over 6″ o.c. Lattice bars of ⅝″ x 3/16″ flat. Rollers at all moving parts. Jack-knife brace of 2″ x 1″ channel. Hinged track at bottom with gusset plates and flat braces at corner, and rubber floor pads. Gate to have self locking tie back arm. Cabinet formed of 3/16″ thick Z bar frame, with #16 gauge back. Door to be flush type #16 gauge double flanged all around. Gate to be hung on offset hinges so as to permit the cabinet door to close and lock when gate is in both open and closed position. Cabinet and gate locks to have 1 5/32″ diameter 5 pin tumbler mortise cylinders keyed alike, or master-keyed to the building system. Entire assembly to have standard factory finish, color as selected.

No. 107—DOUBLE GATE—Shallow Cabinets, similar construction • Max. corridor width—10′-0″

No. 108—SINGLE GATE—Deep Cabinet • Max. corridor width —7′-0″

No. 109—DOUBLE GATE—Deep Cabinets • Maximum corridor width—10′-0″



No. 112—Single Gate

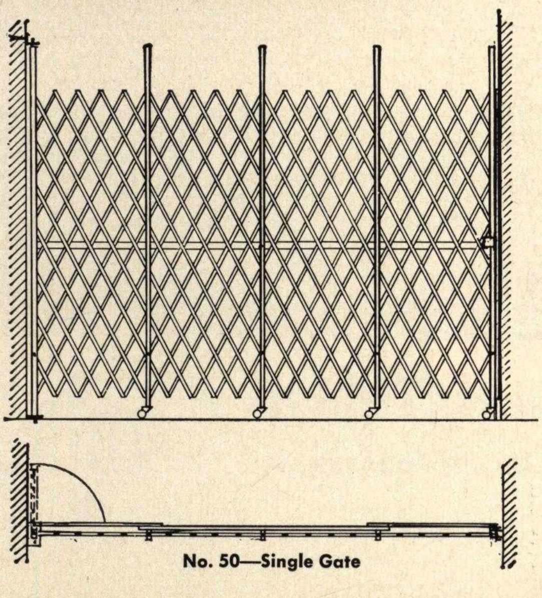
No. 112—SINGLE GATE—Maximum corridor width—6′-0″
Standard Height 7′-0″ • Surface Mounted • Swivel casters at floor.

Specifications

No. 112 Single Gate as manufactured by Bellis Wire Works, Inc., Brooklyn, N. Y. Vertical and members of #14 gauge formed to a section 1¾″ x 1⅜″ with double flanges to receive roller bearings. Intermediate vertical members of two ¾″ x ⅜″ channels not over 6″ o.c. Lattice bars of ⅝″ x 3/16″ flat. Rollers at all moving parts. Gate to have self-locking tie back arm. Swivel casters at floor. Gate to be surface mounted to swing against the wall, padlocks or cylinder locks. Entire assembly to have standard factory finish, color as selected.

Gates over 4′-0″ wide to have jack knife brace.

LAZY TONG TYPE



No. 50—Single Gate

No. 50—SINGLE GATE—Maximum corridor width—8′-0″
Standard Height 7′-0″ • Surface Mounted • Jack-knife brace • Swivel casters at floor. Note: Body of gate drops 1½″ per foot in height when extended

Specifications

No. 50 Single Gate as manufactured by Bellis Wire Works, Inc., Brooklyn, N. Y. Vertical end members of #14 gauge formed to a section 1¾″ x 1⅜″ with double flanges to receive roller bearings. Body of gate constructed of ¾″ x ⅜″ channels riveted back to back not over 6″ on centers. Jack-knife brace of 2″ x 1″ channel. Swivel casters at floor. Hasp and padlock. Entire assembly to have factory finish. Color as selected.

No. 51—DOUBLE—Maximum width—30′-0″. Surface mounted. Permanent overhead track verticals extend full height with ball bearing carriages at top and cane bolts at floor. Hasp and pad lock.

Gates secured on face of wall stacked clear of opening, or secured in the opening and swing against the walls.

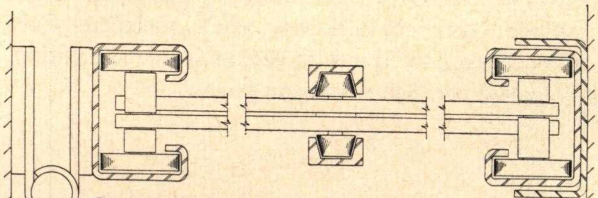
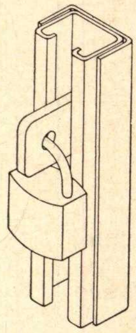
standard equipment

gates

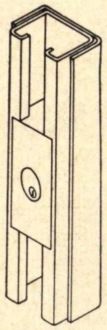
1. Hinges allow cabinet door to close with gates in either position, when so specified.
2. "C" shape tracks enclosing rollers prevent lifting of gate.
3. All roller bearings precision turned, mounted on steel axles and electro-galvanized to insure long life and ease of operation.
4. Lock completely enclosed by end track. One cylinder only is required as it is accessible from both sides of gate. Masterkeyed when specified.
5. Where folding top track is specified, extra large gussets and folding track brace are furnished.
6. With folding bottom track, extra large gussets and rubber floor rests are furnished.
7. The structural shape channel section used in body of Kentucky Folding Gates provide approximately 40% more protective steel than lighter cold rolled sections.
8. Automatic holdback is provided to hold gate in stacked position.



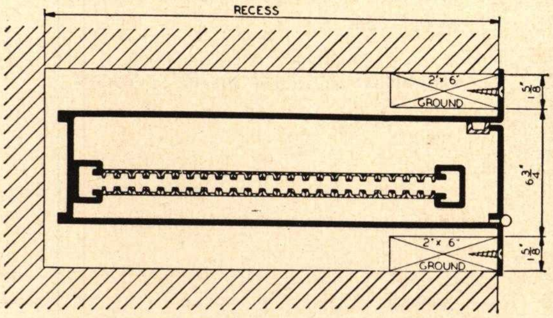
Cross section of gate showing details of roller bearing construction.



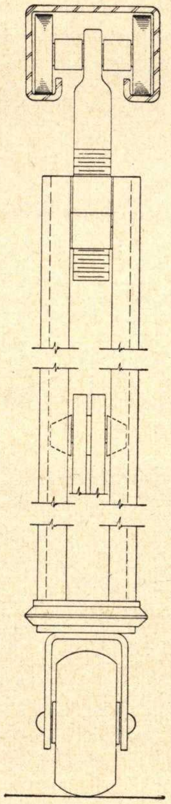
Detail of padlock fitting.



Standard Inbuilt Lock—Cylinder type bronze lock masterkeyed when required.



TYPE D wood—installation



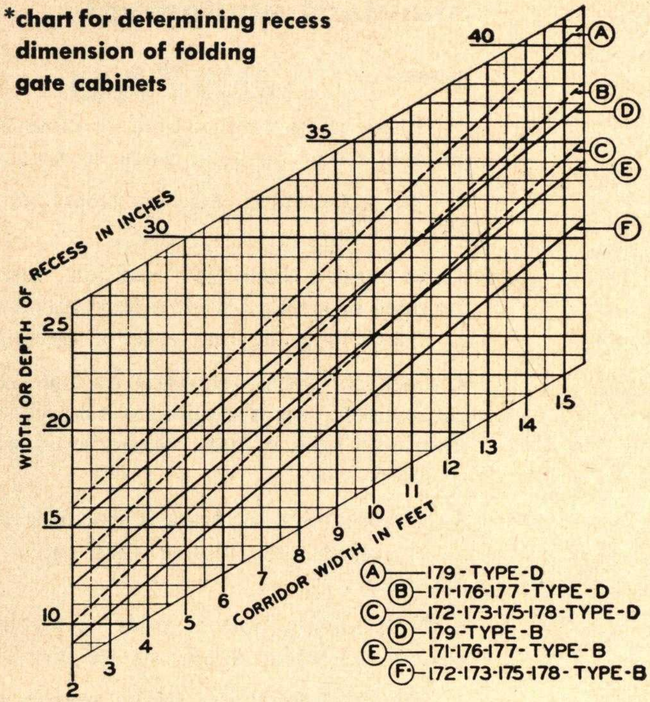
Cross section of gate showing roller bearing, adjustable hanger, and floor caster.

cabinets

1. Rigid one piece construction.
2. Doors are flanged on all sides with additional stiffness, when necessary.
3. Uniform appearance of deep and shallow cabinets obtained by use of same frontal design.
4 Hinges on cabinet doors are mortised in. Only knuckles are exposed.
5. Locks are masterkeyed with gates when specified.

dimension chart

***chart for determining recess dimension of folding gate cabinets**



To find measurements of recess for gate cabinets: Select gate number and cabinet type from schedule at bottom of chart. Locate proper line, A, B, C, etc., and follow until corridor width is reached. Recess dimensions may be read at left of chart. For double gate, use one-half of corridor width.

Add 4″ for new type hinge

specifications

gates

Gates shall be as manufactured by Kentucky Metal Products Company and consist of ¾″x⅜″ channel uprights, securely riveted, and spaced not over 6″ centers. Scissors bars shall be ⅝″x³⁄₁₆″ flats with bevel roller bearings at movable points and brass spacers at all pivots. Vertical end tracks and top or bottom tracks to be hollow metal sections. Roller bearings fixed to scissors or uprights. Jacknife brace to be used when called for. Casters at floor to be hard rubber ball bearing swivel type. Continuous #12 gauge channel guide at wall. Cylinder locks or hasp for padlock as specified. Cylinder locks to be built into end members. Can be masterkeyed as called for. Gate and cabinets to have standard factory finish unless otherwise specified.

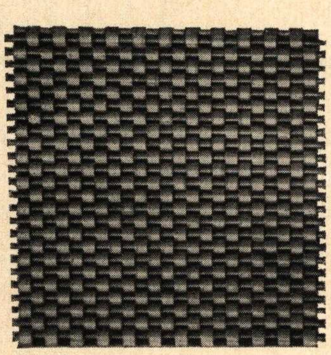
Any gate may be furnished with pickets across the top when so ordered.

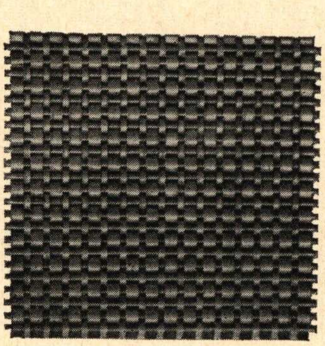
Other styles and special gates may be made to architects' specifications.

cabinets

Cabinets to be constructed of steel strongly reinforced as indicated. Doors to have three 3″ tight pin hinges and cylinder lock masterkeyed when specified. Cabinet door arranged to close with gate in extended position, when so called for. See details on page 2.

DECORATIVE METAL GRILLES





Combination of Stainless Steel and Bronze wires have been effectively used as decorative walls and ceilings in passenger elevators, lobbies of buildings, store fixture work, etc.

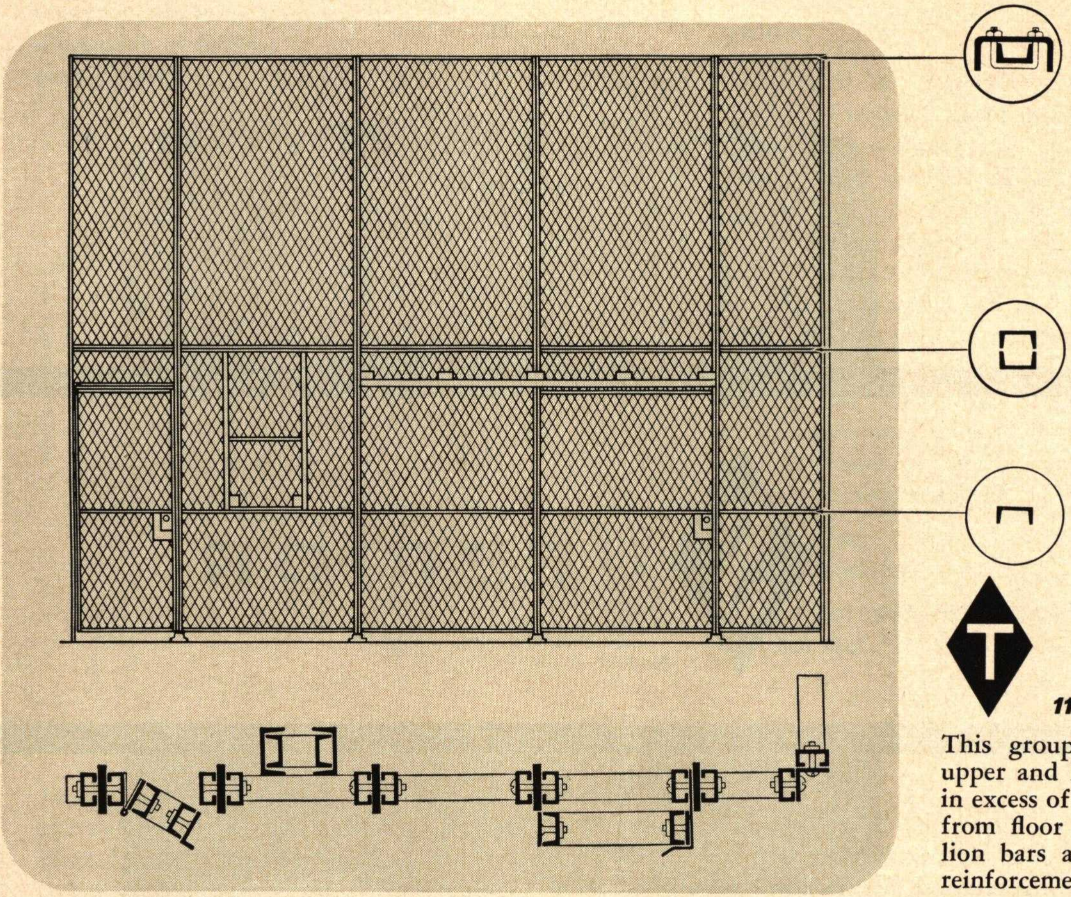
SUPERIOR WIRE & IRON PRODUCTS, Inc.

TALL PARTITIONS

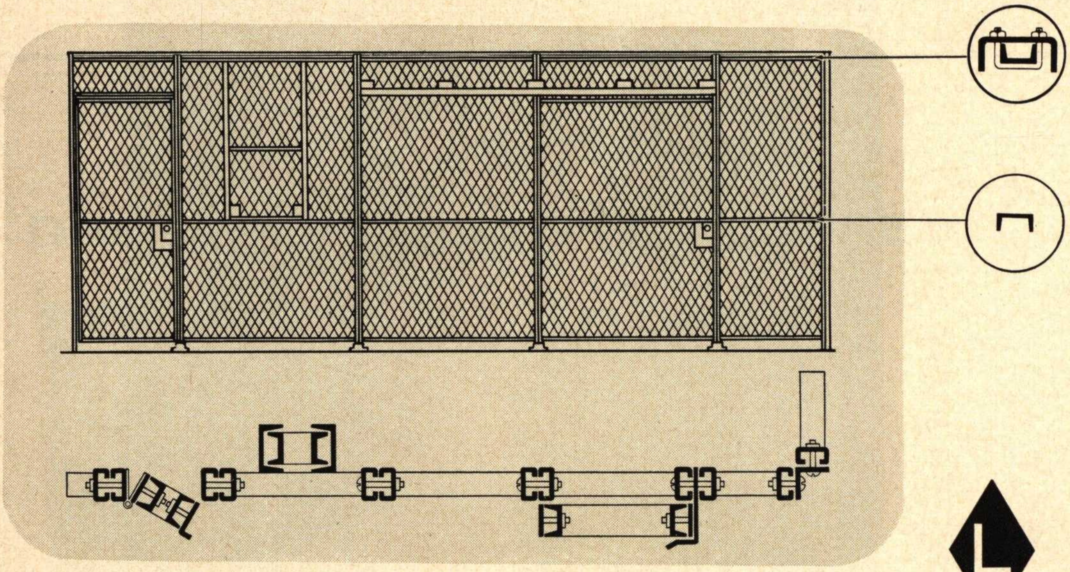


T

11′-0″ TO 20′-0″

This group covers partitions with upper and lower panels for heights in excess of 11′-0″ usually extending from floor to overhead. Flat mullion bars are installed for vertical reinforcement between panels.

LOW PARTITIONS



hinged door section

(right hand illus.) available widths — 2′-6″, 3′-0″, 3′-6″ and 4′-0″ (larger widths are not recommended); height is 7′-0″ (6′-6″ in 7′-0″ high partition); special sizes to order.

service window

vertical sliding with stainless steel spring catches; standard size 24″ x 18″; can be installed in standard panels, hinged or sliding doors; steel shelf 24″ x 12″ (optional).

standard panels

available heights — 7′-0″ to 20′-0″ in increments of 1′-0″; width is 5′-0″.

sliding door section

(right hand illus.) available widths— 3′-0″, 3′-6″, 4′-0″ and 5′-0″; height is 7′-0″ (6′-6″ in 7′0″ high partition); special sizes to order.

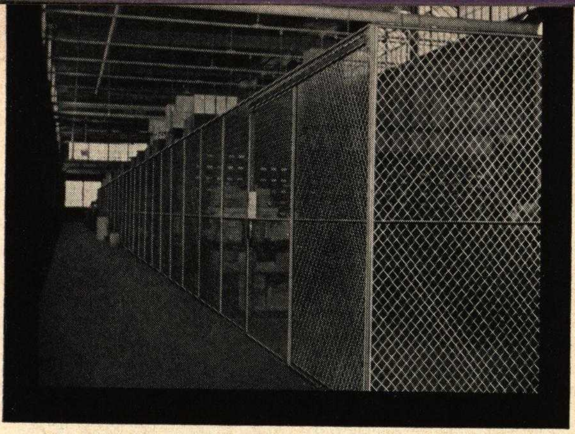
filler panels

filler panels less than 5′-0″ wide, where required, are furnished to order.

L

7′-0″ TO 10′-0″

This group covers single panel partitions ranging in height from 7′-0″ to 10′-0″. Floor and/or ceiling bracing can be installed for added reinforcement where required.



Superior wire mesh partitions provide a definite contribution to modern industry's production and organization programs. Since all sections are interchangeable, change of partitions and their relocation are easily made. The passage of light and the circulation of air is not interrupted and maximum efficiency of sprinkler systems is assured. Their sturdy, rigid construction and neat appearance, make these partitions valuable assets to any building.

Type 35C Standard

Superior standard wire mesh partitions are recommended for stock and tool room enclosures, electrical equipment enclosures, warehouse partitioning, department segregation, and similar applications where maximum strength and flexibility are desired.

Type 45 Heavy Duty

Superior heavy duty wire mesh partitions are recommended for areas requiring maximum security. This rugged partition is often required in perimeter areas exposed to the operation of material handling vehicles.

Sheet Base

Standard wire mesh partition with 16 gauge steel sheet incorporated in lower 3′-6″ of panel may be used with either type (35C or 45). Edges are formed and bolted to panel frame.

Design Service

Our experienced engineers are available to you, without obligation, with assistance in layouts and specifications for the installation of Superior wire mesh partitions, collapsible gates and window guards. Write or telephone our main office, RAdcliffe 3-3456.

SPECIFICATIONS

Type No. 35-C — size group "L"

a) Wire mesh partition shall be Superior Wire & Iron Products, Inc. type No. 35-C, size group L.

b) 10 gauge (.135) steel wire, 1½″ diamond mesh with wire securely clinched to framing.

c) Wire shall be woven through a horizontal 1″ x ½″ x ⅛″ channel bar at 3′-6″ from bottom of partition.

d) Vertical frames 1¼″ x ⅝″ "C" type, cold rolled channel. Horizontal frames 1″ x ½″ x ⅛″ channel mortised and tenoned at intersections.

e) Top capping bar 2¼″ x 1″ cold rolled channel with ¼″ "U" bolts approximately 14″ O.C.

f) Corner post 1¼″ x 1¼″ x ⅛″ angle.

g) Cast iron floor shoes 2½″ high with set screw adjustment.

h) Door frames 1¼″ x ½″ x ⅛″ channel with 1¼″ x ⅛″ cover plate on four sides.

i) Sliding doors to have: two, 4-wheel ball-bearing trucks hung in enclosed box track; continuous 12 gauge door strike with keeper; box channel guide.

j) Hinged doors to have: 1½ pair fast pin butts; continuous 12 gauge strike bar.

k) 3″ sweep space under all panels and doors.

l) Bronze cylinder mortise type locks with cylinders individually keyed, keyed alike, and/or master keyed to building system. All locks to have recessed knob on inside.

m) All hardware necessary for proper installation to be furnished.

n) Finish: 1 shop coat steel grey gloss enamel (or specify other color if desired).

Type No. 35-C — size group "T"

"b" thru "n" same as for size group L, plus the following:

o) Mullion bars between all panels to be 5/16″ x 2″ flat.

Type No. 45 — size group "L"

a) Wire mesh partition shall be Superior Wire & Iron Products, Inc. type No. 45, size group L.

b) 6 gauge (.192) steel wire, woven into 2″ diamond mesh, with wire securely clinched to framing.

c) Wire shall be woven through a horizontal 1½″ x ¾″ x ⅛″ channel bar at 3′-6″ from bottom of partition.

d) Frames 1½″ x ¾″ x ⅛″ channel mortised and tenoned at intersection.

e) Top capping bar, 2″ x 1″ x ⅛″ channel.

f) Corner post 1½″ x 1½″ x 3/16″ angle.

g) Cast iron floor shoes 2½″ high with set screw adjustment.

h) Door frames 1½″ x ¾″ x ⅛″ channel with 1½″ x ⅛″ cover plate on four sides.

i) Sliding doors to have: two, 4-wheel ball-bearing trucks hung in enclosed box track; continuous 12 gauge door strike with keeper; box channel guide.

j) Hinged doors to have: 1½ pair fast pin butts; continuous 12 gauge strike bar.

k) 3″ sweep space under all panels and doors.

l) Bronze cylinder mortise type locks with cylinders individually keyed, keyed alike, and/or master keyed to building system.
All locks to have recessed knob on inside.

m) All hardware necessary for proper installation to be furnished.

n) *Finish:* 1 shop coat dipped steel grey gloss enamel (or specify other color if desired).

Type No. 45 — size group "T"

"b" thru "n" same as for size group L, plus the following:

o) Mullion bars between all panels to be 5/16″ x 2½″ flat.

Sheet Base

Specifications for either 35C (L or T) or 45(L or T) remain the same, plus the following:

p) 16 gauge steel sheet formed and bolted in lower 3′-6″ portion of panel.

extruded aluminum collapsible corridor gates bostwick type

Superior extruded aluminum corridor gates, while functional as an integral part of modern school planning in controlling pedestrian traffic, are also an asset by reason of their attractive appearance, sturdy construction and ease of operation.

ADVANTAGES

- *EASE OF OPERATION*
  As strong as steel with one-third the weight
- *NYLON SELF-LUBRICATING ROLLERS*
- *LOW MAINTENANCE*
- *LASTING APPEARANCE*
- *FINISH*
  Choice of Alumilite or lacquer
- *EASY TO INSTALL*
  No permanent ceiling tracks necessary

SPECIFICATIONS

a) Extruded aluminum corridor gates shall be Superior Wire & Iron Products, Inc. Series No. 200-AL, Model No.———.

b) Vertical bars ¾" x ⅜" x ⅛" extruded aluminum channels spaced 6" on center, shears or lattice bars ⅝" x 3⁄16" extruded aluminum flat stock with 1⁄64" radius on four sides.

c) Fully enclosed extruded aluminum end bars, 1⅞" x 1⅝" No. 12 gauge.

d) Alloy and temper shall be 6063-T6.

e) Automatic self-locking tie backs.

f) Chrome plated brass washers throughout gate construction.

g) Shears suspended in vertical channels with free-floating self-lubricating nylon rollers.

h) Extruded aluminum top and bottom folding track, fully enclosed type 1⅞" x 1⅝", No. 12 gauge.

i) Self-locking hold-up arm for top track.

j) Aluminum gussets No. 14 gauge, welded to all corners of gates.

k) Ball bearing rollers with nylon races in tracks spaced every 3'-6" or less.

l) Rubber rests for bottom track.

m) Gate lock to be self-locking type with aluminum case and heavy bronze tongue.

n) Cylinders both sides of gate.

Finish: Choice of Three

a) Satin with two coats clear acrylic lacquer

b) Alumilited aluminum

c) Alumilited gold

Add to above, applicable cabinet specifications—if used.

Model S Cabinet

Flush type cabinets to be 16 gauge (.065) sheet steel. 3" x 4½" x 3⁄16" cold rolled zee frames. Formed 16 gauge sheet steel door with continuous hinges. Gates shall have continuous hinges, two 1'-0" sections per gate, to enable cabinet door to remain in locked position when gate is extended. Bronze cylinder lock on cabinet keyed same as gate.

Finish: Color as selected to match corridor walls.

Model D Cabinet

Flush type cabinets to be 12 gauge (.109) sheet steel. 3" x 2" x 3⁄16" cold rolled angle frames. Formed 12 gauge (.109) sheet door with continuous hinges. Bronze cylinder lock on cabinet keyed same as gate.

Finish: Color as selected to match corridor walls.

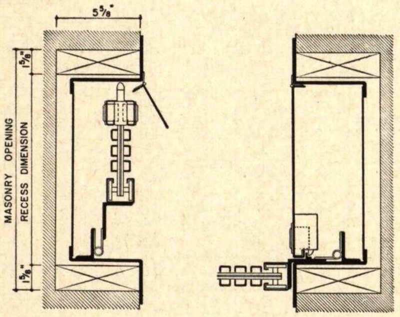
CYLINDER LOCKS

SHALLOW RECESS



DEEP RECESS

Superior collapsible gates are available in many types and sizes to meet all requirements in regulating the flow of vehicular and pedestrian traffic, and in preventing unauthorized entry or exit. Their principal uses are in modern school corridors, across driveways, in tunnels and across thoroughfares.

SPECIFICATIONS

General

- *a)* Collapsible gates shall be Superior Wire & Iron Products, Inc. Series No. ________, Model No. ________.
- *b)* Vertical bars ¾″ x ⅜″ cold rolled channels spaced 6″ on center, shears or lattice bars ⅝″ x 3/16″ cold rolled stock.
- *c)* Fully enclosed cold rolled end bars 1⅞″ x 1⅝″, No. 14 gauge (.083).
- *d)* Automatic self-locking tie backs.
- *e)* Brass washers throughout gate construction.
- *f)* Shears suspended in vertical channels with free-floating rollers.
- *g)* Gate lock to be of self-locking type with heavy bronze tongue and cylinders on both sides of gate.
- *h)* Cylinders (any make) keyed alike and/or master keyed to the building system for both cabinets and gates.
- *i)* Finish: Factory finish steel grey gloss enamel (or specify other color if desired).

Add to above, portions below which pertain to selection.

Series 200—all models

- *j)* Top and bottom folding track fully enclosed type 1⅞″ x 1⅝″, 14 gauge (.083).
- *k)* Steel gussets 16 gauge (.065) welded to all corners of gates.
- *l)* Ball bearing rollers in tracks spaced every 3′-6″ or less.
- *m)* Rubber rests for bottom track.
- *n)* Hold-up brace for top rack.

Series 300—shallow cabinet or surface mounted.

- *j)* Permanent top guide to be 1⅞″ x 1⅝″ x No. 14 gauge (.083) fully enclosed type, coped out at one end to allow gate to hinge.
- *k)* Guide to be exposed on ceiling surface.
- *l)* Guide pins at top of gate to engage ceiling guide.
- *m)* Folding bottom track to be 1⅞″ x 1⅝″ x No. 14 gauge (.083) fully enclosed type.
- *n)* Four-wheel ball bearing trucks spaced approximately 3′-6″ O.C.
- *o)* Rubber rests at bottom of track.

Series 300—deep cabinet or face mounted

- *j)* Permanent overhead track to be 1⅞″ x 1⅝″ x No. 14 gauge (.083) box track.
- *k)* Track to be recessed into ceiling, or exposed on surface—specify choice.
- *l)* Necessary track hangers shall be included.
- *m)* Four-wheel ball bearing trucks spaced approximately 3′-″ O.C.
- *n)* Bottom folding guide fully enclosed type, 1⅞″ x 1⅝″ x No. 14 gauge (.083).

Add to above, applicable cabinet specifications—if used.

Model S Cabinet

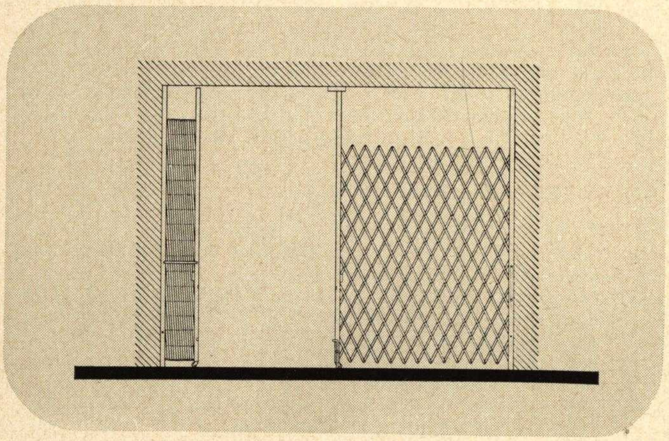
Flush type cabinets to be 16 gauge (.065) sheet steel. 3″ x 4½″ x 3/16″ cold rolled zee frames. Formed 16 gauge sheet steel door with continuous hinges. Gates shall have continuous hinges, two 1′-0″ sections per gate, to enable cabinet door to remain in locked position when gate is extended. Bronze cylinder lock on cabinet keyed same as gate.

Model D Cabinet

Flush type cabinets to be 12 gauge (.109) sheet steel. 3″ x 2″ x 3/16″ cold rolled angle frames. Formed 12 gauge (.109) sheet steel door with continuous hinges. Bronze cylinder lock on cabinet keyed same as gate.

INDUSTRIAL GATES

lazy-tong type



Series 400—normal height 6′-0″ to 8′-0″
For all types of openings such as shipping and receiving docks, entrances and exits, passage ways and halls.

Series 500—normal height 8′-0″ to 12′-0″
For all types of openings as suggested for Series 400. The overhead track assures smoother operation and its use is recommended where the ceiling is too high to warrant the use of free-standing gates.

Opening Widths

Single (model 401)—6′-0″ max
Pair (model 402)—12′-0″ max
Single (model 501)—6′-0″ max
Pair (model 502)—any width opening may be used.

SPECIFICATIONS

general

- *a)* Collapsible gates shall be Superior Wire & Iron Products, Inc. series No. 400 or 500 (specify).
- *b)* Diamond lattice work to be ¾″ x ⅜″ x ⅛″ channel riveted 6″ on center.
- *c)* Fully enclosed end bars 1⅞″ x 1⅝″ 14 gauge (.083) with return bends of 5/16″ and ¼″ respectively.
- *d)* Gate to have free floating rollers suspended in end bars.
- *e)* Pivot type tie-backs welded to end bars.
- *f)* Brass washers throughout gate construction.
- *g)* Gates to be arranged for padlocking or complete with built-in cylinder locks (specify).
- *h)* Finish: one shop coat dipped steel grey gloss enamel (or specify other color if desired).

Add to above, portions below which pertain to selection.

series no. 400

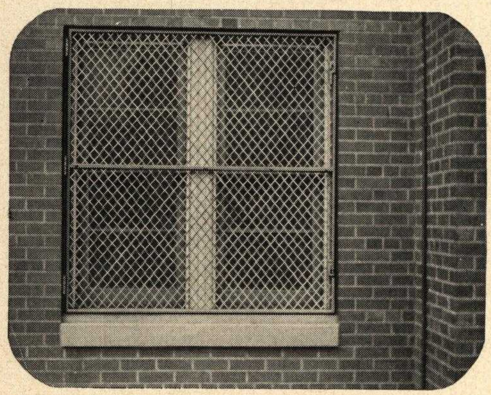
- *i)* Gate to have 2½″ x 1½″ x 3/16″ continuous angle hinge bar with 1½ pair fast pin butts.
- *j)* Single type gate to have 2½″ x 1½″ x 3/16″ continuous angle lock bar.
- *k)* Pairs of gates to have "H" type brackets at overhead to receive end bars.
- *l)* ⅝″ round shove bolts for locking at floor.
- *m)* 2½″ steel replaceable casters welded to bottom of end bar to aid in carrying load.

series no. 500

- *i)* Overhead track to be R-W No. 31 with 4-wheel ball bearing trucks secured to top of end bars.
- *j)* ⅝″ round shove bolts for locking at floor.

WINDOW GUARDS

two construction types



MODELS

700 C: (stationary type)
700 R: (stationary type)
800 C: (removable type)
800 R: (exterior hinging)
900 C: (hinged type)
900 R: (interior hinging)

type C: Constructed of channel frame which affords maximum strength for large windows, removable panels, gymnasium guards, and institutional detention ward applications.

type R: Constructed of round rod frame. Its most usual applications are for factories, stores, and homes. This window guard can be fabricated at a lower cost to the owner, and maximum protection against burglary or glass breakage is still assured.

SPECIFICATIONS

type C:

- *a)* Wire mesh window guards shall be Superior Wire & Iron Products, Inc. Type C, model No. 700C, 800C or 900C (specify).
- *b)* Constructed of 9 W. & M. gauge (.148) steel wire crimped and woven into 1½″ diamond mesh.
- *c)* Wire shall be let into channel frames and securely clinched.
- *d)* Frames, 1″ x ½″ x ⅛″ channel mortised and tenoned at intersections.
- *e)* All hardware necessary for proper installation to be furnished.
- *f)* Finish: one shop coat dipped steel grey gloss enamel.

type R:

- *a)* Wire mesh window guards shall be Superior Wire & Iron Products type R, model no. 700R, 800R or 900R (specify.)
- *b)* Constructed of 9 W. & M. gauge (.148) steel wire crimped and woven into 1½″ diamond mesh.
- *c)* Wires shall be machine clinched around frame.
- *d)* Frames, ⅜″ round rod.
- *e)* All hardware necessary for proper installation to be furnished.
- *f)* Finish: one shop coat dipped steel grey gloss enamel.

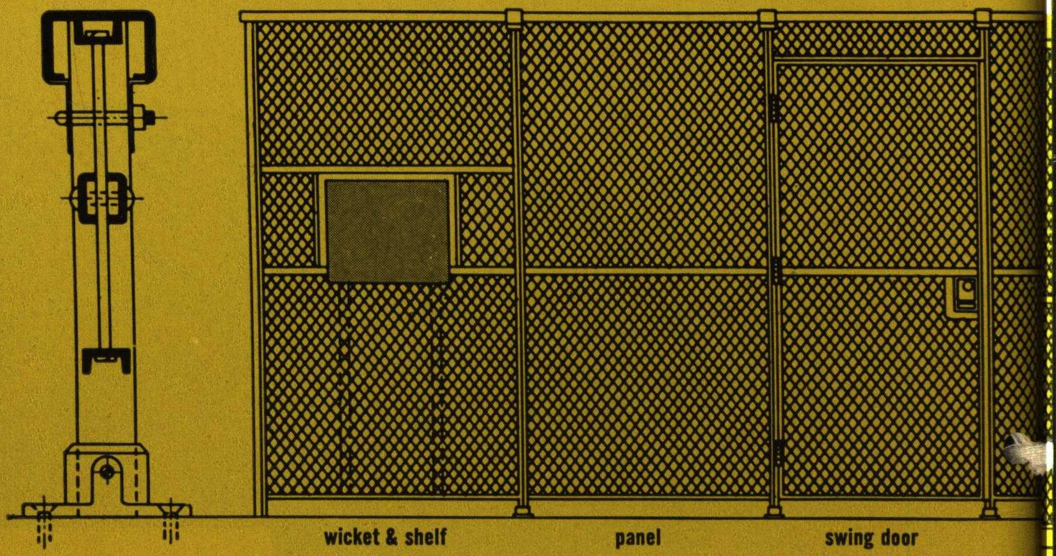
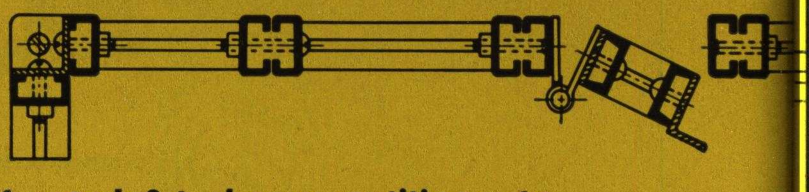
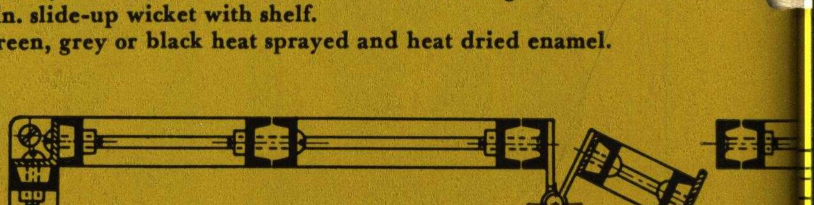
PARTITIONS • steel, aluminum or bronze





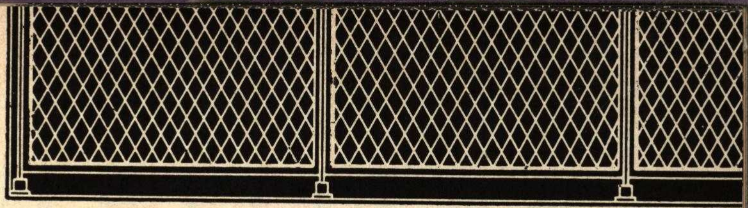
No. 150 PARTITION *for stock & tool room partitions, etc.*

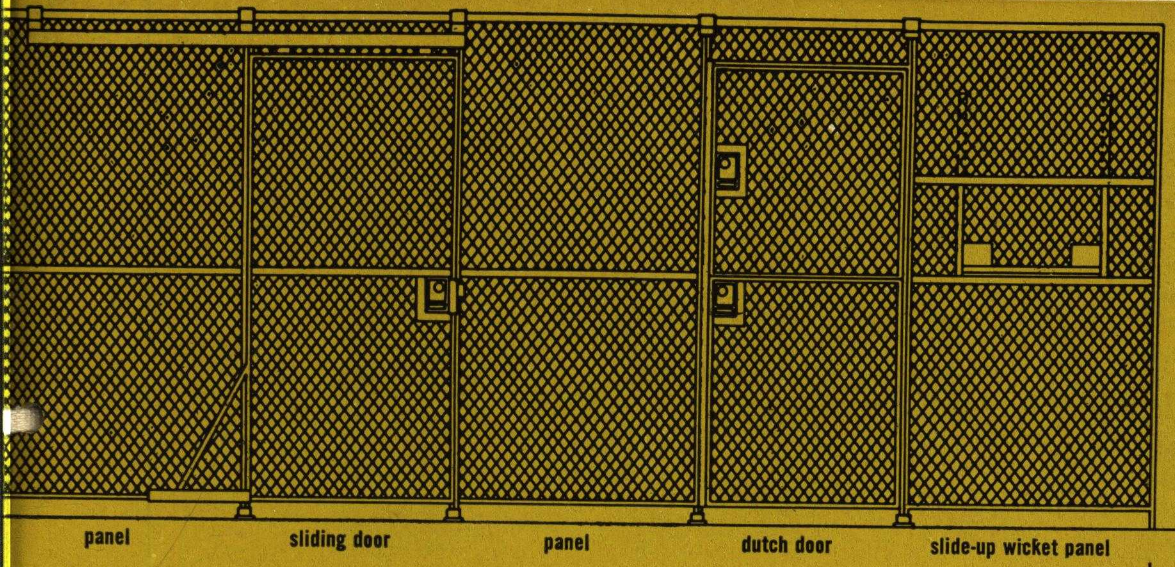
stock panels	5 ft. wide by 8, 10 or 12 ft. high; all panels have 3 in. legs.
filler panels	made to required widths; all panels are interchangeable.
swing doors	3 and 4 ft. widths by 7 ft. high in stock; doors to be banded, with three 3½ in. hinges and No. 100W bronze cylinder lock.
sliding doors	3, 4 and 5 ft. widths by 7 ft. high in stock; 1½x½ in. channel frame, banded, with No. 158 ball-bearing hangers and No. 111W bronze cylinder lock.
dutch doors	3 ft. by 7 ft., banded; with shelf; each half with 2 hinges and 100W lock.
wicket & shelf	24x15 in. slide-up wicket with shelf.
finish	olive green, grey or black heat sprayed and heat dried enamel.

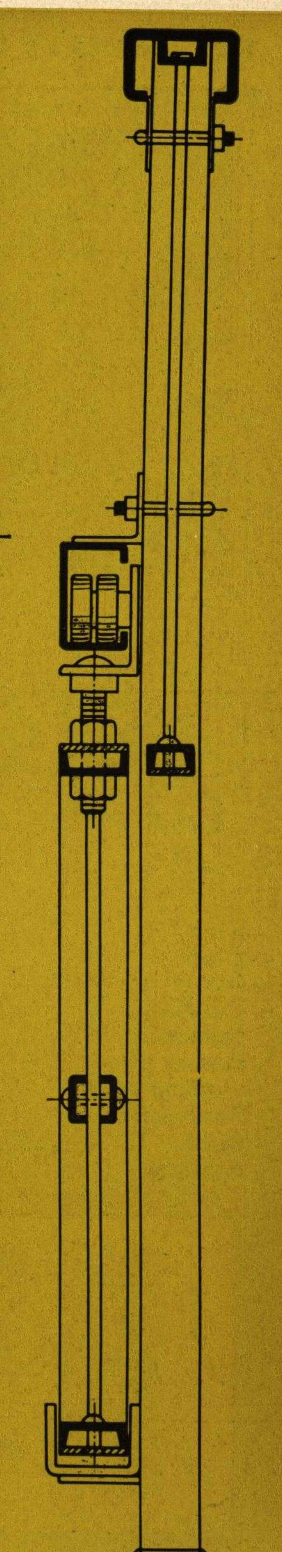


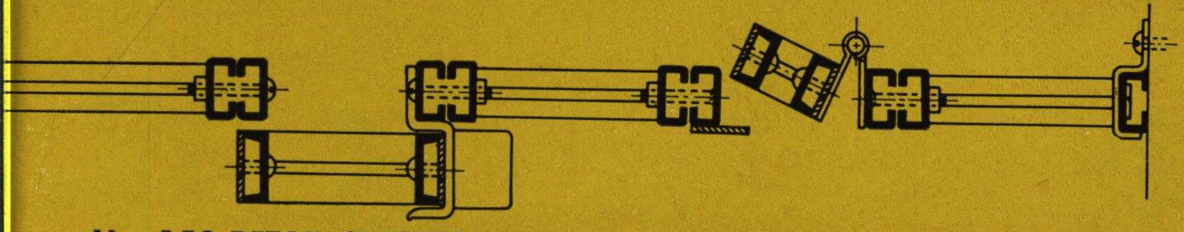
No. 210 PARTITION *the most economical partition*

stock panels	5 ft. by 7 ft. in stock; panel height includes 3 in. legs.
filler panels	made to required widths; all panels are interchangeable.
swing doors	3 and 4 ft. widths by 6 ft. 6 in. high in stock; banded, with three 3½ in. hinges and No. 100W bronze cylinder lock.
sliding doors	3, 4 and 5 ft. wide by 6 ft. 6 in. high, in 1½x½ in. channel framing, banded; No. 158 ball-bearing hangers; No. 111W bronze cylinder lock.
dutch doors	3 ft. by 6 ft. 6 in.; banded; each half with two hinges and 100W lock.
wicket & shelf	24x15 in. slide-up wicket with shelf.
finish	olive green, grey or black heat sprayed and heat dried enamel.



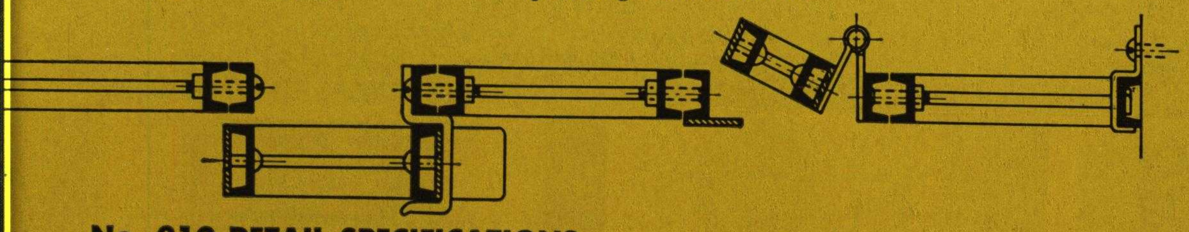






No. 150 DETAIL SPECIFICATIONS

wire	**No. 10 W&M gauge**	triple crimped, Machine Woven and press rolled.
mesh	**1½ in. diamond**	wires clinched into frame and ends welded 24 in. o.c.
vert. frame	**1¼x⅝ in.**	cold rolled C channel.
horiz. frame	**1x½ channel**	tenoned and welded at corners.
ctr. reinf.	**1x⅜ dbl. channel**	riveted thru mesh at 3 ft. 6 in. from floor, welded to frame.
top rail	**2¼x1⁵⁄₁₆ in.**	cold rolled C channel with E-Z clamps for installation.
corner post	**1¼x1¼ in. angle**	with holes both sides to fit panels.
floor shoes	**1¼ in. square**	cast shoes, with set screw for leveling.
bracing	**none**	bracing is not included.



No. 210 DETAIL SPECIFICATIONS

wire	**No. 10 W&M gauge**	triple crimped, Machine Woven and press rolled.
mesh	**2 in. diamond**	wires clinched into frames and ends welded 24 in. o.c.
frame	**1x½x⅛ channel**	rolled steel, tenoned and riveted at corners.
ctr. reinf.	**1x⅜x⅛ channel**	double channel riveted through mesh 3 ft. 6 in. from floor.
top rail	**2¼x1⁵⁄₁₆ in.**	cold rolled C channel with E-Z clamps for installation.
cornerpost	**1x1x⅛ angle**	with holes both sides to fit panels.
floor shoes	**1 in. square**	cast shoes, with set screws for leveling.

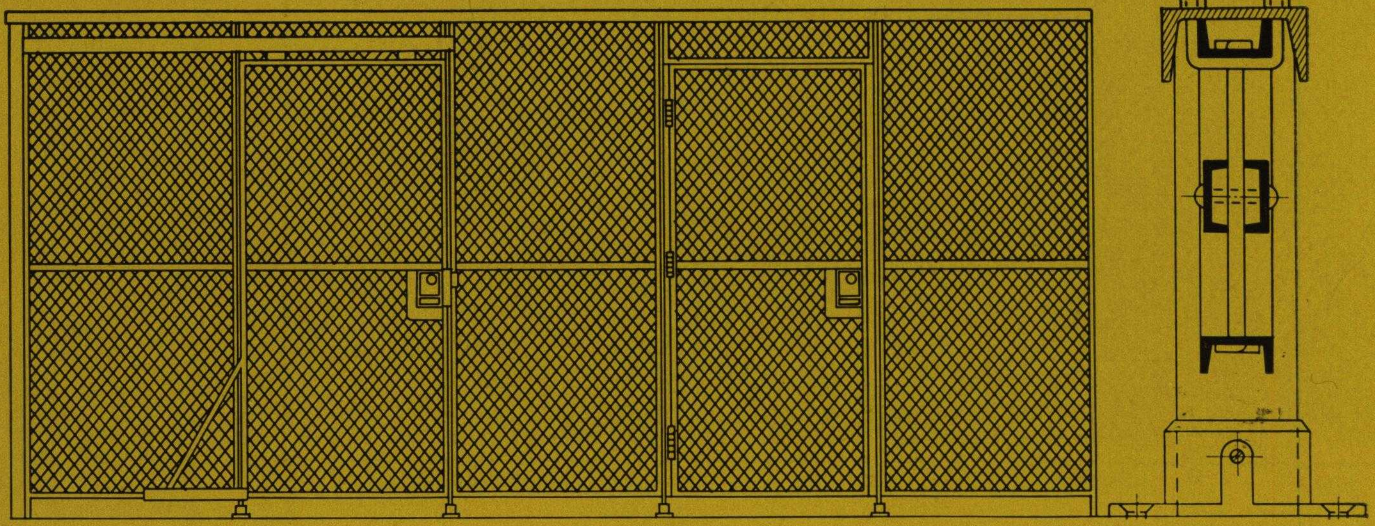
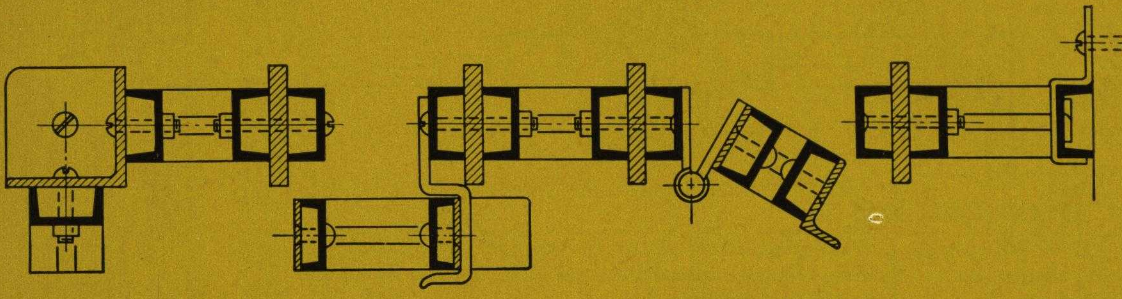
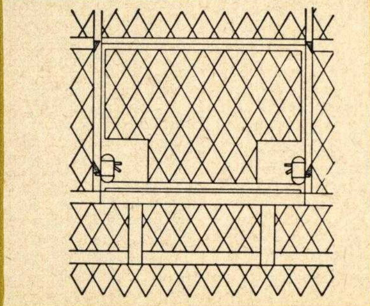
PARTITIONS • steel, aluminum or bronze

No. 206 HEAVY DUTY PARTITION *for industrial, restricted and institutional use*

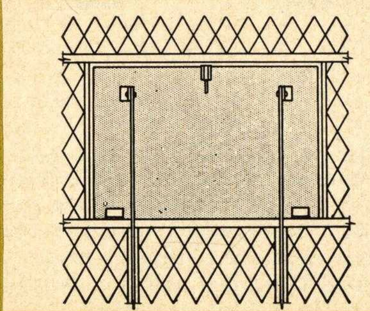




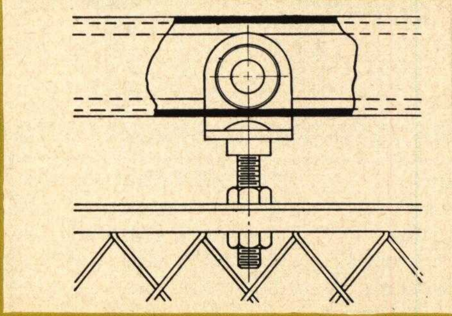
wire	**No. 6 W&M gauge**	triple crimped, Machine Woven and press rolled.
mesh	**2 in. diamond**	wires clinched in frames and ends welded 24 in. o.c.
frame	**1½x¾x⅛ channel**	tenoned and welded at corners.
ctr. reinf.	**1½x½x⅛ channel**	double channels riveted through mesh 3 ft. 6 in. from floor.
top rail	**3 in. 4.1# channel**	heavy channel for rigidity, bolted to panels.
corner post	**2½x2½ in. angle**	with holes both sides to fit panels.
vertical bars	**2½x⅜ in. bar**	between all panels for stiffness.
floor shoes	**2½ x ⅜ in.**	cast shoes, with set screw for leveling.
finish		olive green, grey or black heat sprayed, heat dried enamel.
bracing	**none**	bracing is not included.



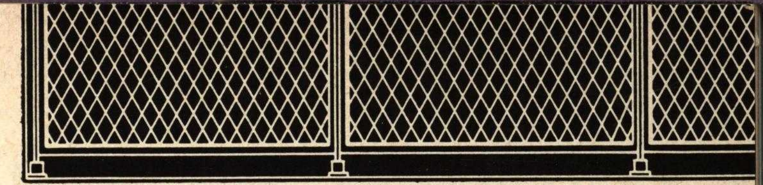
Slide-up wicket with spring catches.



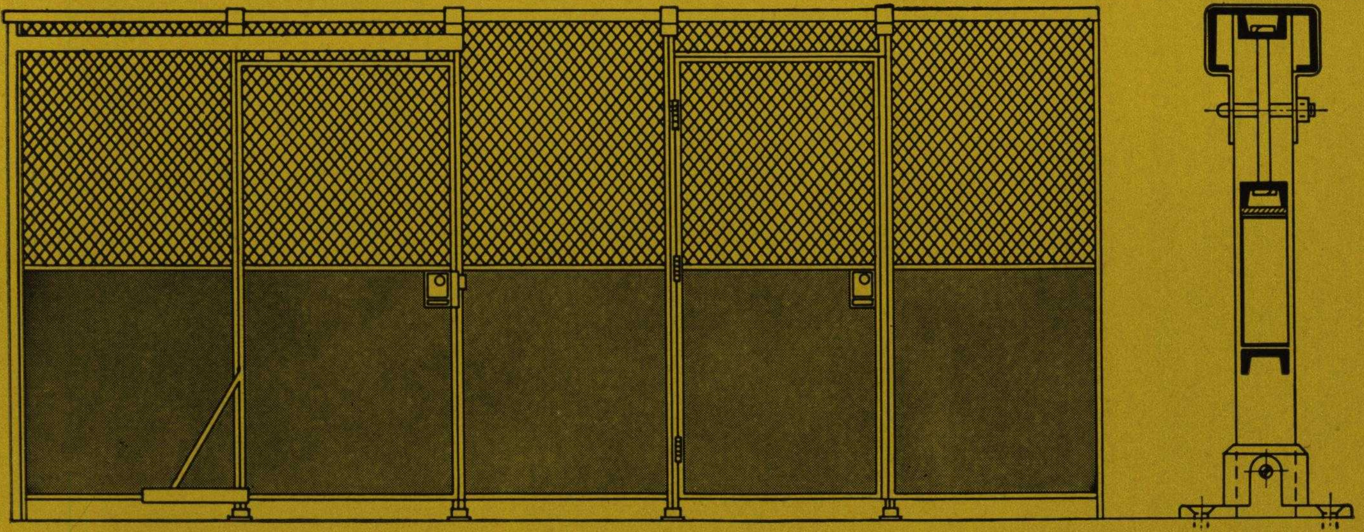
Combination wicket & shelf with spring catch.

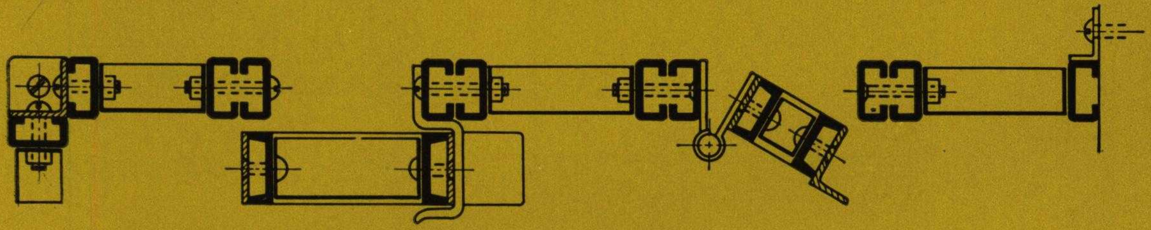


No. 158 standard ball-bearing hanger for all sliding doors.

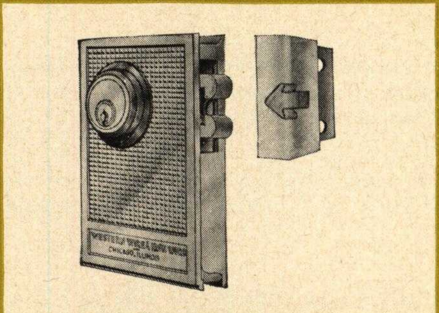


WIRE MESH PARTITIONS WITH SHEET METAL BASE

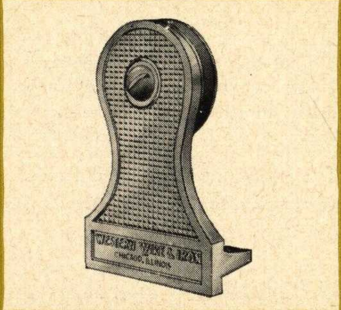




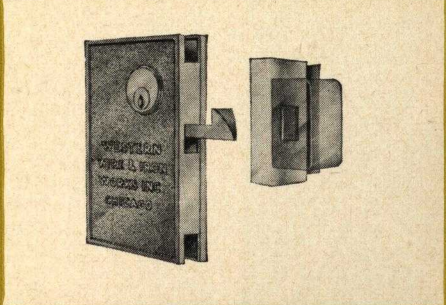
sheet metal base	No. 150, 210 or 206 partitions can be made with steel base. Add letter W to number.
panels	No. 16 gauge steel in lower section, to 3 ft. 6 in. above floor line. welded into framing channel on all sides.
doors	made to follow specifications of partition number ordered, with steel base.
mesh, frame, etc.	all follow specifications of partition number ordered.
PARTITIONS TO CEILING	any partition offered herein can be furnished to extend from floor to ceiling, or to any arbitrary height desired. details and finish are as shown in specifications for partition style ordered.



No. 106B Bankers Approved Sliding Door Lock—our make—All bronze. A superior lock with double latches. **No. 100B** matching lock is for swing door.

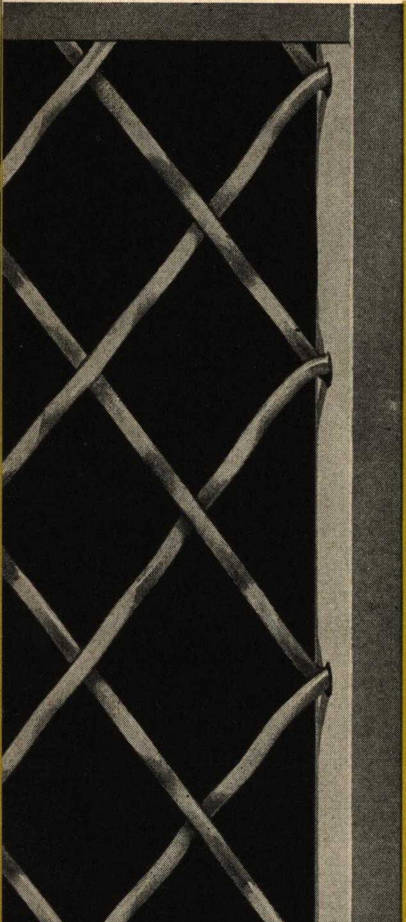


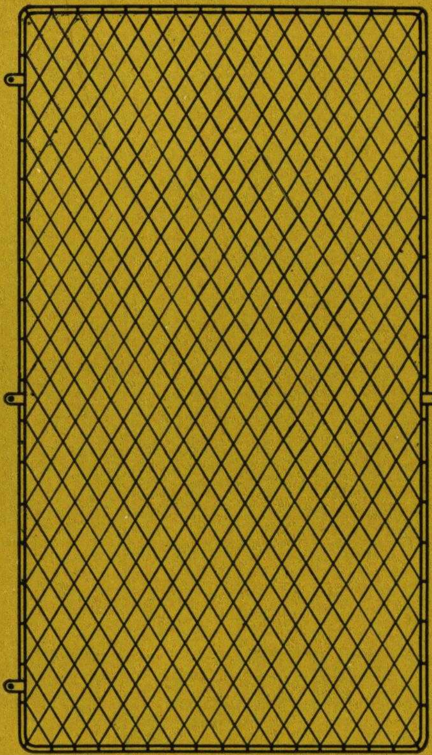
No. 110 Spee-D ball-bearing hanger.

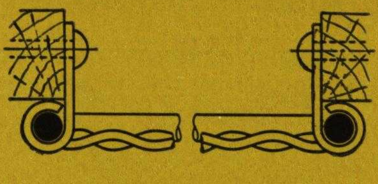


No. 111W All bronze Standard single latch lock. A very good lock at less cost. Well guarded. **No. 100W** matching lock is for swing door.

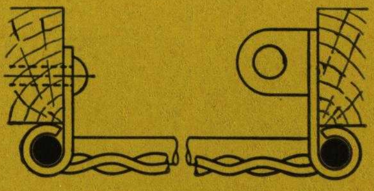
WINDOW GUARDS • steel, aluminum or bronze



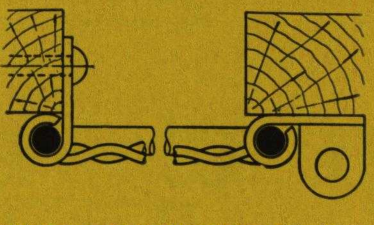




NO. 50-A STATIONARY



NO. 50-B LOCKING INSIDE



NO. 50-C LOCKING OUTSIDE

NO. 50 ROUND FRAME WINDOW GUARDS

Guards for prevention of glass breakage or easy entry are usually made of 1½ in. diamond mesh, No. 10 W&M gauge wire, clinched to ⅜ in. round rod frame.

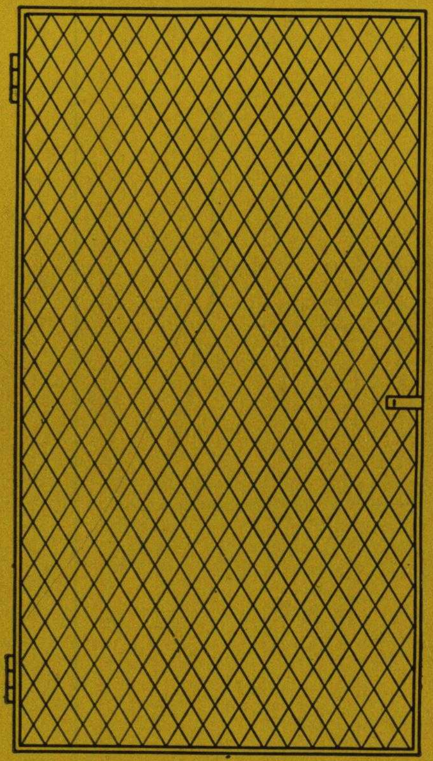
The round rod frame is generally used for outside installation as the round rod does not hold rain or moisture.

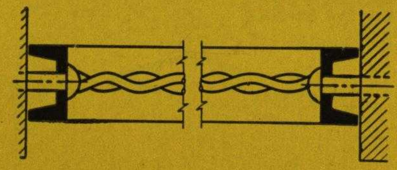
Other sizes of mesh and wire can be made to suit requirements. Mesh can be furnished from ¾ in. diamond to 3 in. diamond, and No. 14 W&M gauge wire to No. 6 W&M gauge wire.

No. 10 W&M gauge wire is standard for windows of dwellings, factories, etc., and No. 6 is required for institutions, hospitals and detention areas. Guards 5 ft. high and over are made with horizontal ⅜ in. round rod stiffener welded to frame at ends.

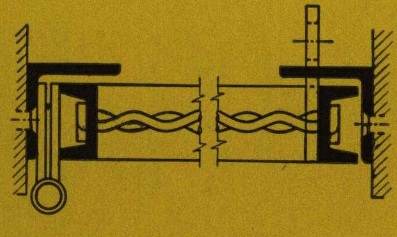
No. 50-A Stationary guards are furnished with hinge clips on frame to provide for fastening with screws or bolts. Clips can be turned to allow fastening on inside or outside of opening.

No. 50-B or 50-C Hinged guards are provided with hinge clips on one side and hinge hasp for padlock on other side, arranged to lock outside or inside. Can be made with 3-point locking bar on large guards.

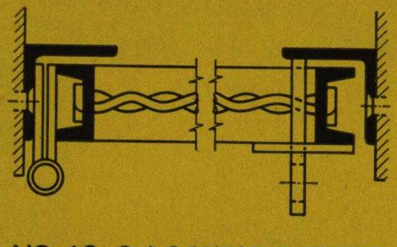




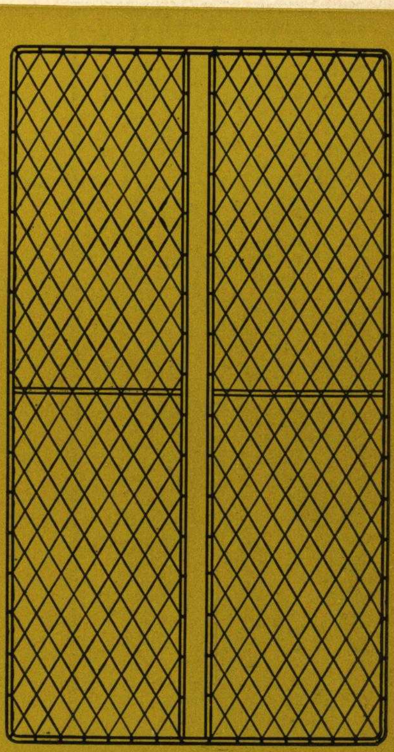
NO. 40-A STATIONARY



NO. 40-B LOCKING INSIDE



NO. 40-C LOCKING OUTSIDE



Gymnasium Window Guard

NO. 40 CHANNEL FRAME WINDOW GUARDS

Window guards are also made with channel framing, for inside or outside installation.

Standard specification is 1½ in. diamond mesh, No. 10 W&M gauge wire, clinched into 1x½x⅛ in. channel frame.

Other sizes of mesh and wire can be made to suit requirements. Guards can be made from ¾ in. diamond mesh to 3 in. diamond mesh, and No. 14 W&M gauge wire to No. 6 W&M gauge wire, with framing to suit.

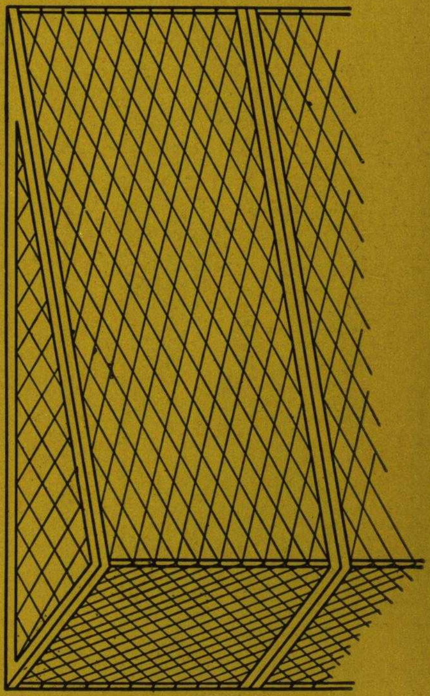
No. 40-A stationary guards have holes in framing to provide for fastening with screws or bolts.

No. 40-B or 40-C hinged guards are made with channel hinge bar, or with angle hinge and strike bars with hinges on one side and hasp on opposite side for padlocking. Can be made to lock either on outside or inside.

Guards 5 ft. high and over are made with double channel horizontal stiffeners riveted through mesh and with ends welded to frame.

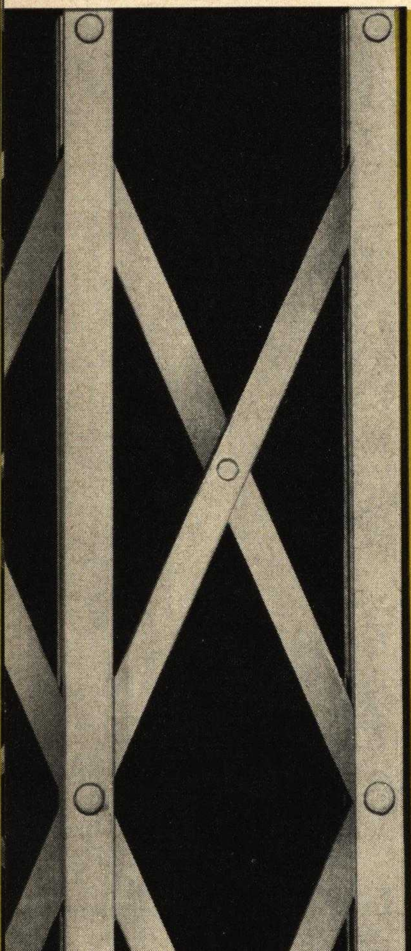
Gymnasium guards, shown at upper right, are made with vertical slot at center to allow use of window pole to raise or lower sash. Made with round frame or channel frame as required.

Steel sash window guards, at lower right, are made with angle and round rod framing, and built out to allow hinged section of window to swing open. Guards are hinged at top with locking device at bottom.

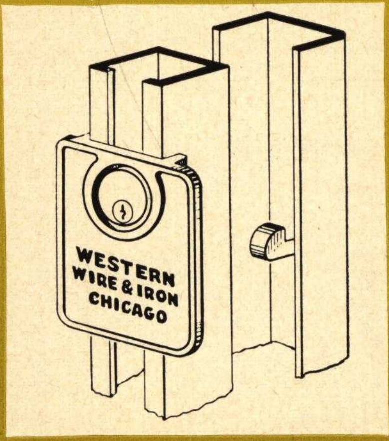


Steel Sash Window Guard

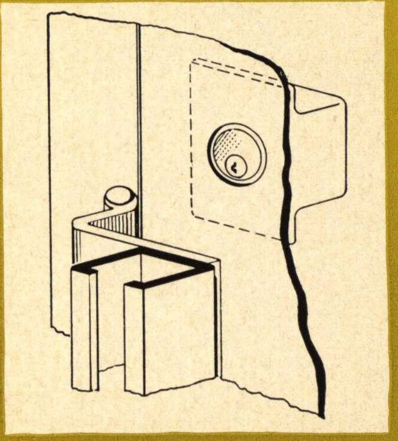
FOLDING GATES • steel, aluminum or bronze



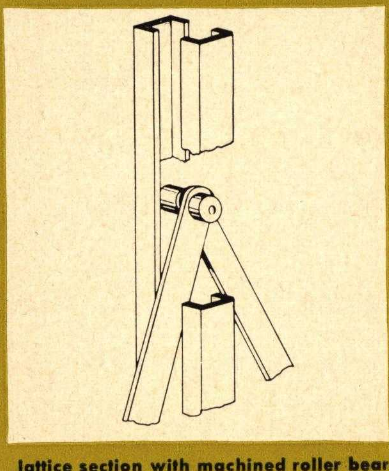
GATE DETAILS



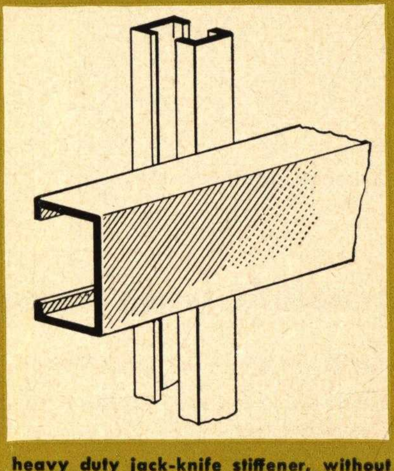
all-bronze Gate lock with pull handles—cylinder accessible from both sides



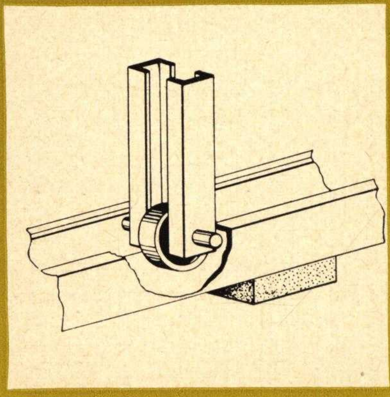
heavy duty offset hinge for Type S cabinet



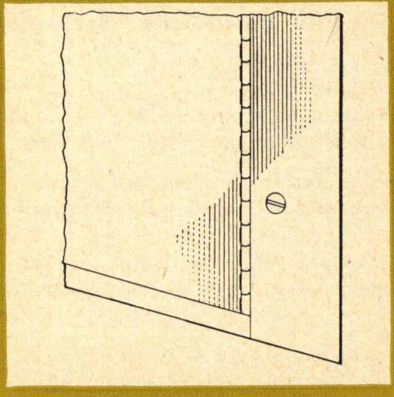
lattice section with machined roller bearings and brass washers to minimize friction



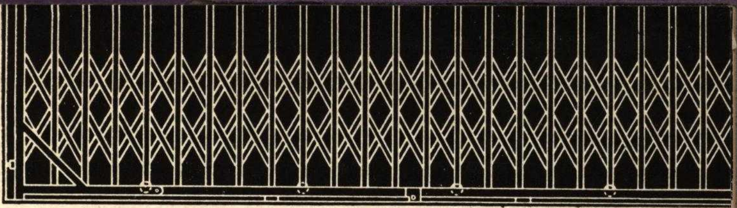
heavy duty jack-knife stiffener, without sharp edges



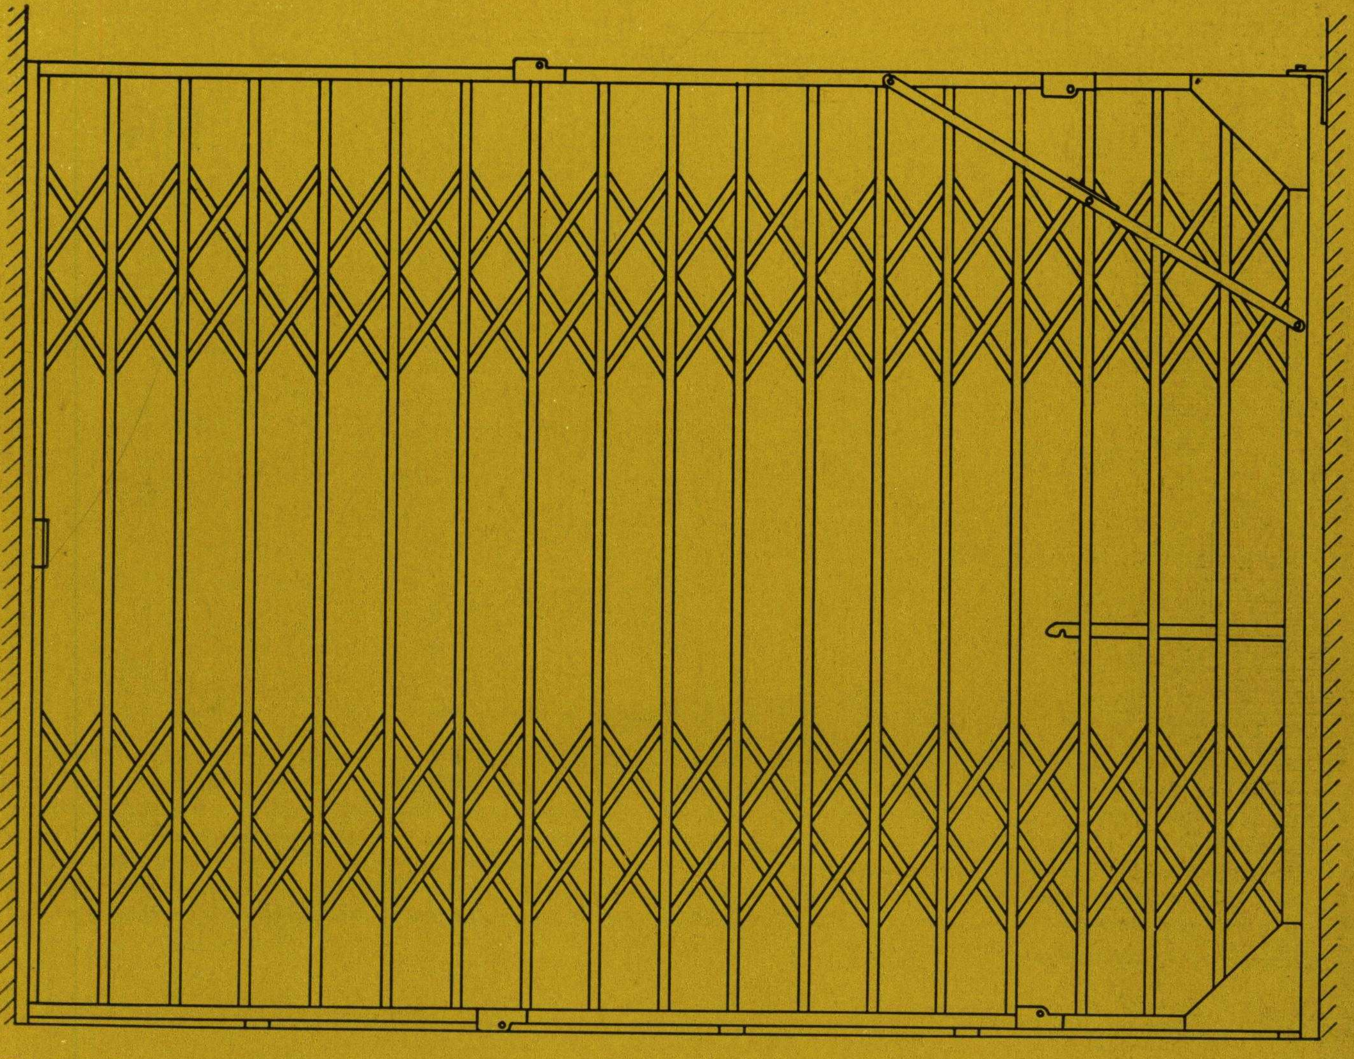
ball-bearing rollers in tracks; gate cannot be disengaged from tracks



cabinet hinge is continuous concealed type, giving attractive beaded appearance



No. 810 SINGLE GATE



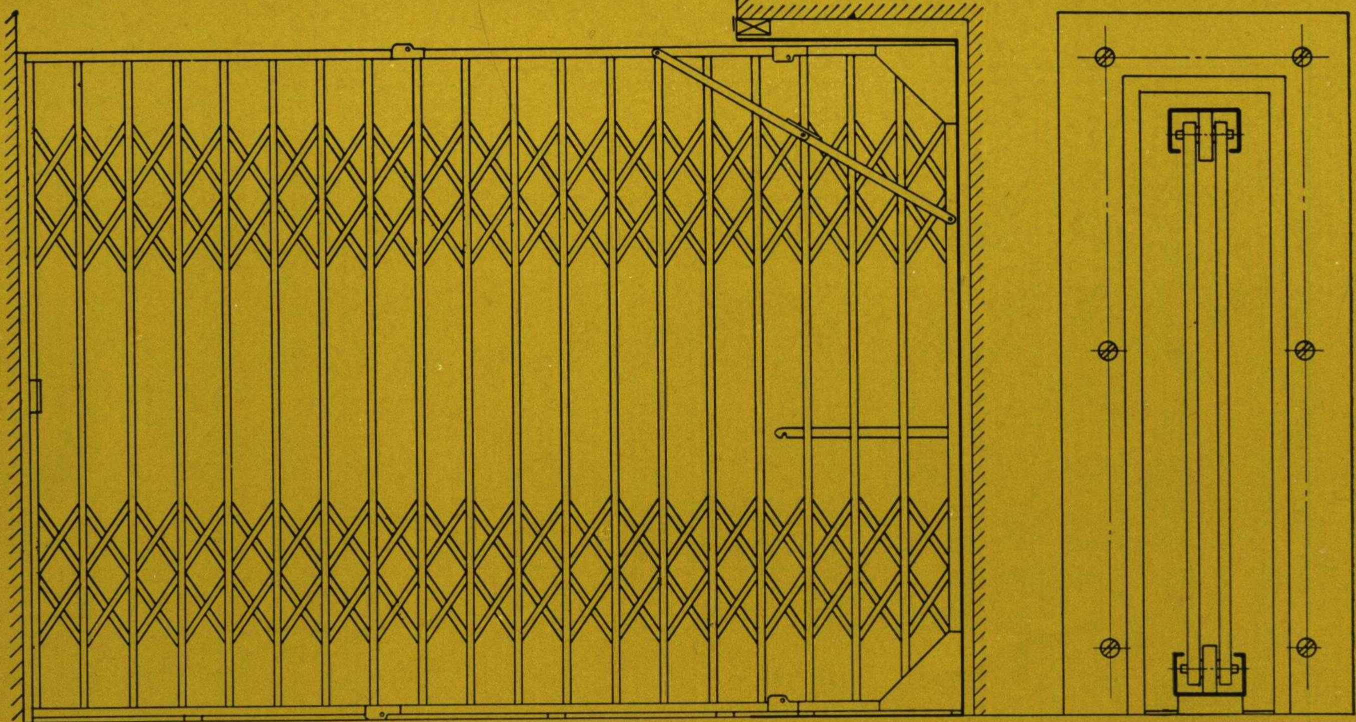
The No. 810 Gate is particularly used in school corridors and similar locations where a rigid installation is desired; and which is effected by both top and bottom folding tracks.

vertical bars	double ¾x⅜x⅛ cold rolled channels on 6 in. maximum centers; *ends of all channels extend into both top and bottom tracks for maximum rigidity.*
lattices	³⁄₁₆x⅝ in. flat bars with machined rollers to engage in vertical channels and large machined roller bearings to operate in end bars, brass washers throughout.
end bars	1⅝ in. square cold rolled C section to receive roller bearings of lattices and all-bronze cylinder lock, pivot mounted to lock against wall with cylinder lock.
tracks	cold formed C sections for top and bottom tracks with gusset plates; automatic hold-up arm on top track, non-marring rubber floor blocks and ball-bearing rollers at bottom track.
locks	our built-in all-bronze cylinder lock takes standard or masterkeyed cylinder; locking action takes place inside case thus preventing picking. cabinet lock is all-bronze, with cast case, and takes standard or Mk cylinders.
finish	standard heat sprayed and heat dried finish coat of beige, grey or olive green enamel.

recommended height: 5 ft. minimum to 7 ft. 6 in. maximum.
recommended width: single 12 ft. Use pairs for wider openings to 16 ft. (specify as No. 810-P)

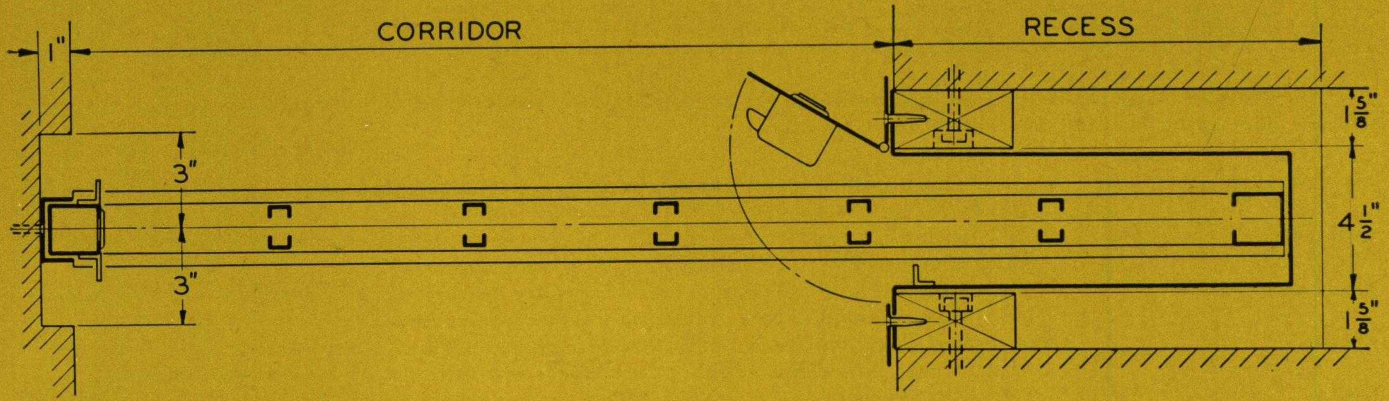
FOLDING GATES • steel, aluminum or bronze

No. 812 FOLDING GATE AND DEEP CABINET



specifications—gate to be No. 812 folding gate as manufactured by Western Wire & Iron Works Inc. of Chicago, Ill.—constructed of double 3/4 in. vertical cold rolled channels on 6 in. maximum centers, all extending into top and bottom folding C section tracks—tracks to have gussets—top track to have automatic hold-up arm—bottom track to have non-marring rubber floor blocks—lattices to be 3/16x5/8 in. flat bars with machined rollers and brass washers—cabinet to be deep type, made of No. 14 gauge steel all welded—door to be No. 11 gauge plate—continuous concealed type hinge—trim 1/8x2 in. flat bar—keeper recessed (face mounted if specified)—locks for gate and cabinet to be WW&IW all-bronze cylinder locks to take standard or masterkeyed cylinders—finish to be standard heat sprayed and heat dried enamel in olive green, grey or beige.

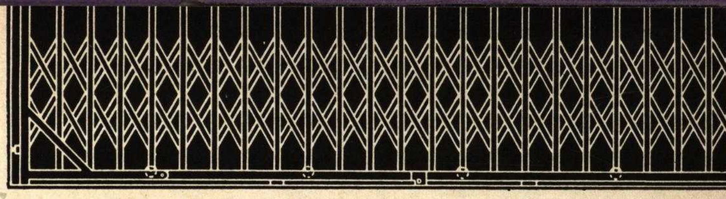
For recess sizes see table below.



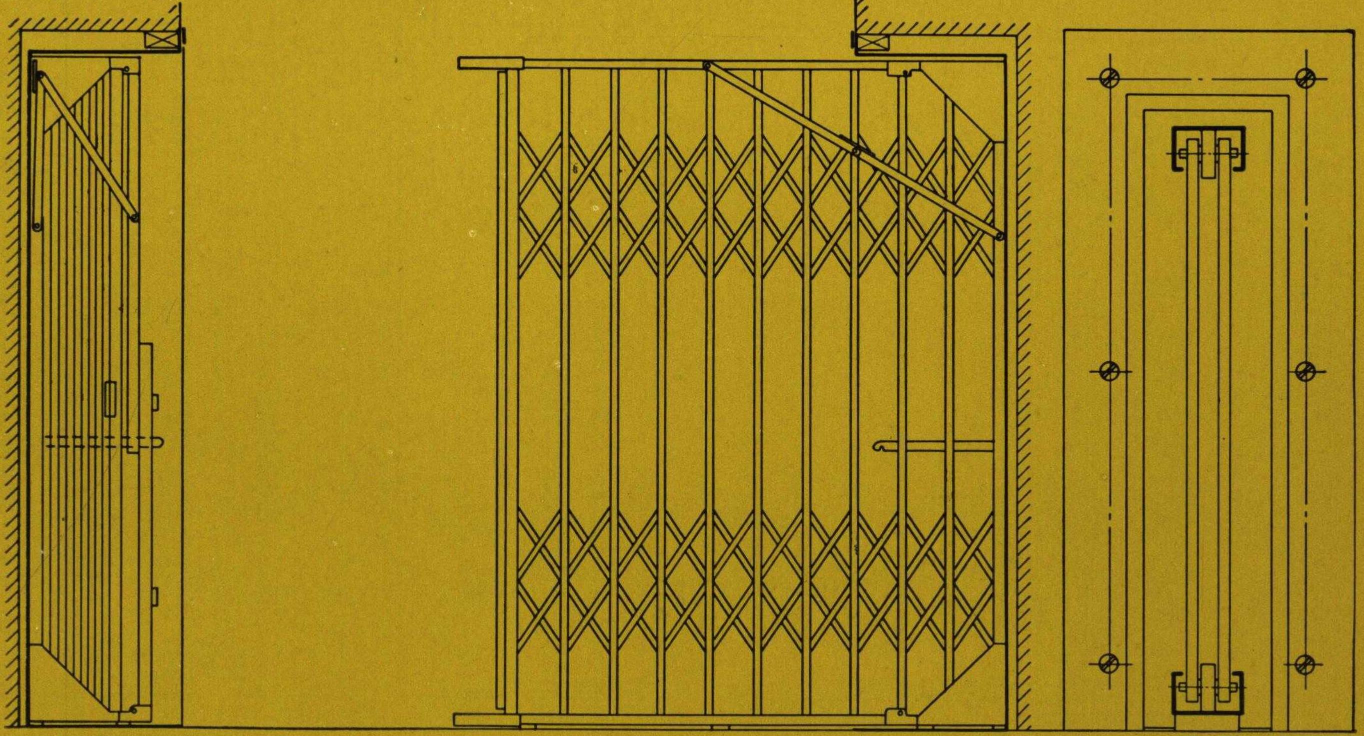
Corridor—Feet	4'0	5'0	6'0	7'0	8'0	9'0	10'0	11'0	12'0
Recess—Ft. In.	1'7	1'8	1'11	2'0	2'4	2'7	2'9	2'11	3'0

recess height—gate height plus 1 in.

recommended gate height: 5 ft. minimum to 7 ft. 6 in. maximum.



No. 812-P FOLDING GATES AND DEEP CABINETS *in pairs*



specifications—pair of gates to be No. 812-P as manufactured by Western Wire & Iron Works Inc. of Chicago, Ill.—constructed of double 3/4 in. vertical cold rolled channels on 6 in. maximum centers, all extending into top and bottom folding C section tracks—tracks to have gussets—top tracks to have automatic hold-up arms—bottom tracks to have non-marring rubber floor blocks—lattices to be 3/16x5/8 in. flat bars with machined rollers and brass washers—cabinets to be deep type, made of No. 14 gauge steel all welded—door to be No. 11 gauge plate—continuous concealed type hinges—trim 1/8x2 in. flat bar—locks for gates and cabinets to be WW&IW all-bronze cylinder locks to take standard or masterkeyed cylinders—finish to be standard heat sprayed and heat dried enamel in olive green, grey or beige.

For recess sizes see table below.

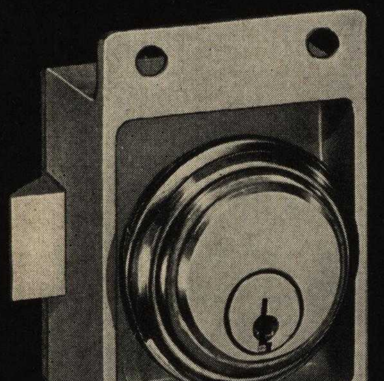
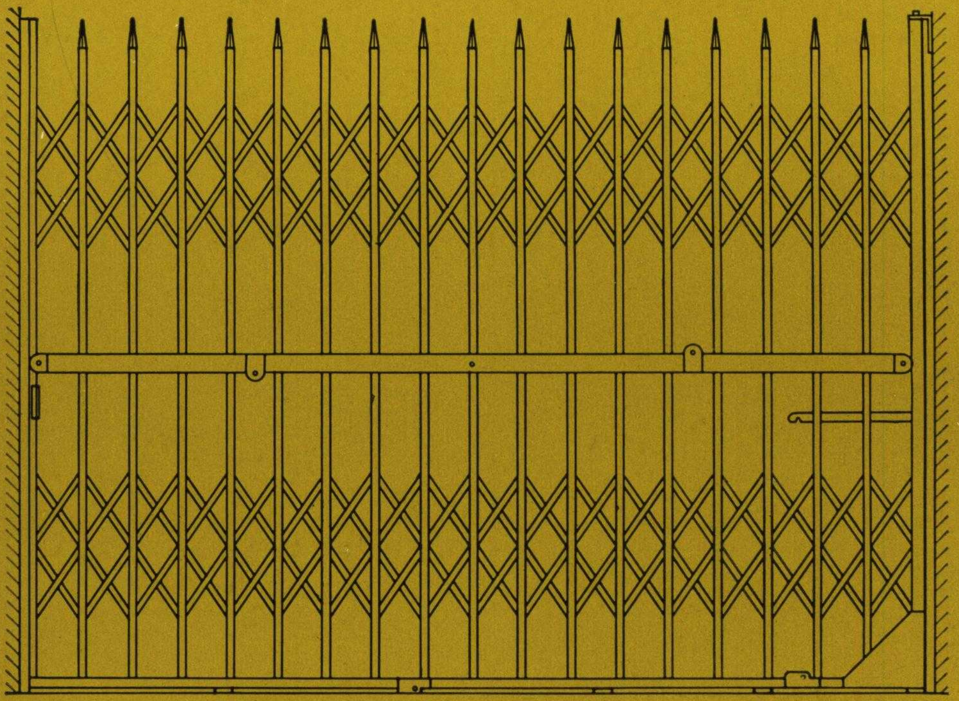
bronze cylinder lock
for folding gates



bronze cylinder lock
for cabinets

No. 820 FOLDING GATE

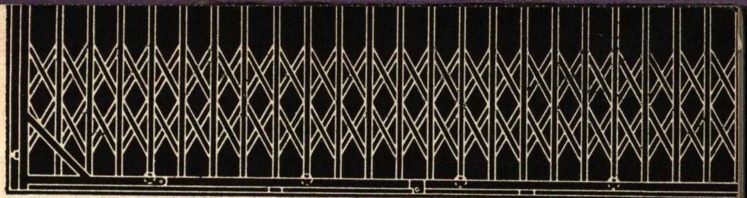


vertical bars	double ¾x⅜x⅛ in. cold rolled channels 6 in. maximum centers; *ends of all channels extend into bottom track providing maximum rigidity.*
pickets	cast aluminum alloy pickets of good design to improve appearance.
lattices	³⁄₁₆x⅝ in. flat bar with machined rollers to engage in vertical channels, and large machined roller bearings to operate in end bars. brass washers throughout.
end bars	1⅝ in. square cold rolled C section to receive roller bearings of lattices, and our all-bronze cylinder lock. pivot mounted to lock against wall with cylinder lock.
track	cold formed C section with self-locking tie bar and non-marring rubber floor blocks.
jack-knife	heavy duty jack-knife of cold rolled C section, which improves appearance and avoids sharp edges of angle or channel bar. opens and closes automatically with gate, allowing one man operation. specify jack-knife on gates over 5 ft. wide.
lock	our own built-in all bronze cylinder lock takes standard or masterkeyed cylinders; locking action takes place inside case thus avoiding picking. cabinet lock is all-bronze, with cast case, and takes standard or masterkeyed cylinders.
finish	standard heat sprayed and heat dried, finish coat of olive green, grey or beige enamel.

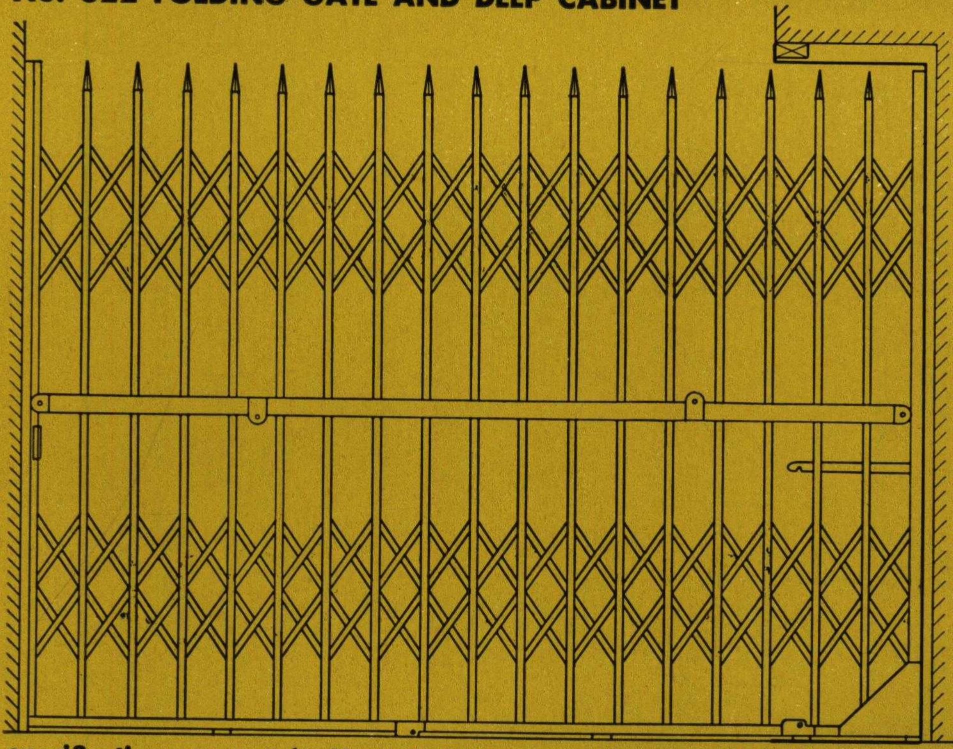
recommended height: 5 ft. minimum to 8 ft. has two rows lattices, over 8 ft. has three rows.

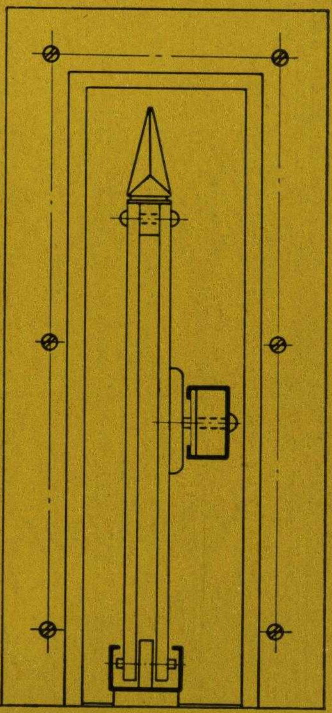
recommended width: 12 ft. maximum; not made in pairs.

No. 820-N gate: is same as No. 820 above without pickets.



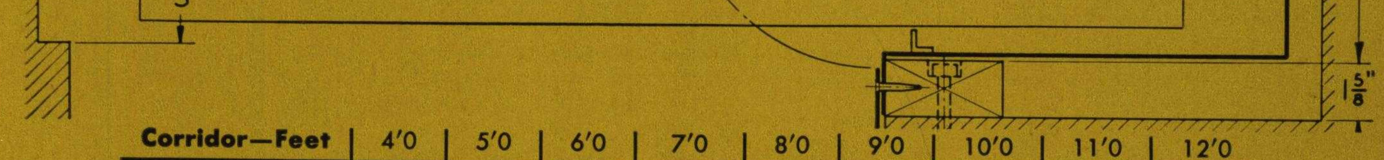
No. 822 FOLDING GATE AND DEEP CABINET





specifications—gate to be No. 822 folding gate as manufactured by Western Wire & Iron Works Inc. of Chicago, Ill.—constructed of $\frac{3}{4}$ in. double vertical cold rolled channels on 6 in. maximum centers, all extending into bottom fold-up C section track—track to have gussets and non-marring rubber floor blocks—lattices to be $\frac{3}{16}$x$\frac{5}{8}$ in. flat bars with machined roller bearings and brass washers—heavy duty jack-knife of cold rolled C section—cabinet to be deep type made of No. 14 gauge steel all welded—door to be No. 11 gauge plate—continuous concealed type hinge—trim $\frac{1}{8}$x2 in. flat bar—keeper recessed (face mounted if specified)—locks for gate and cabinet to be WW&IW all-bronze cylinder locks to take standard or masterkeyed cylinders—finish to be standard heat sprayed & heat dried enamel in olive green, grey or beige.

For recess sizes see table below.



Corridor—Feet	4'0	5'0	6'0	7'0	8'0	9'0	10'0	11'0	12'0
Recess—Ft. In.	1'4	1'7	1'9	1'11	2'1	2'3	2'6	2'8	2'9

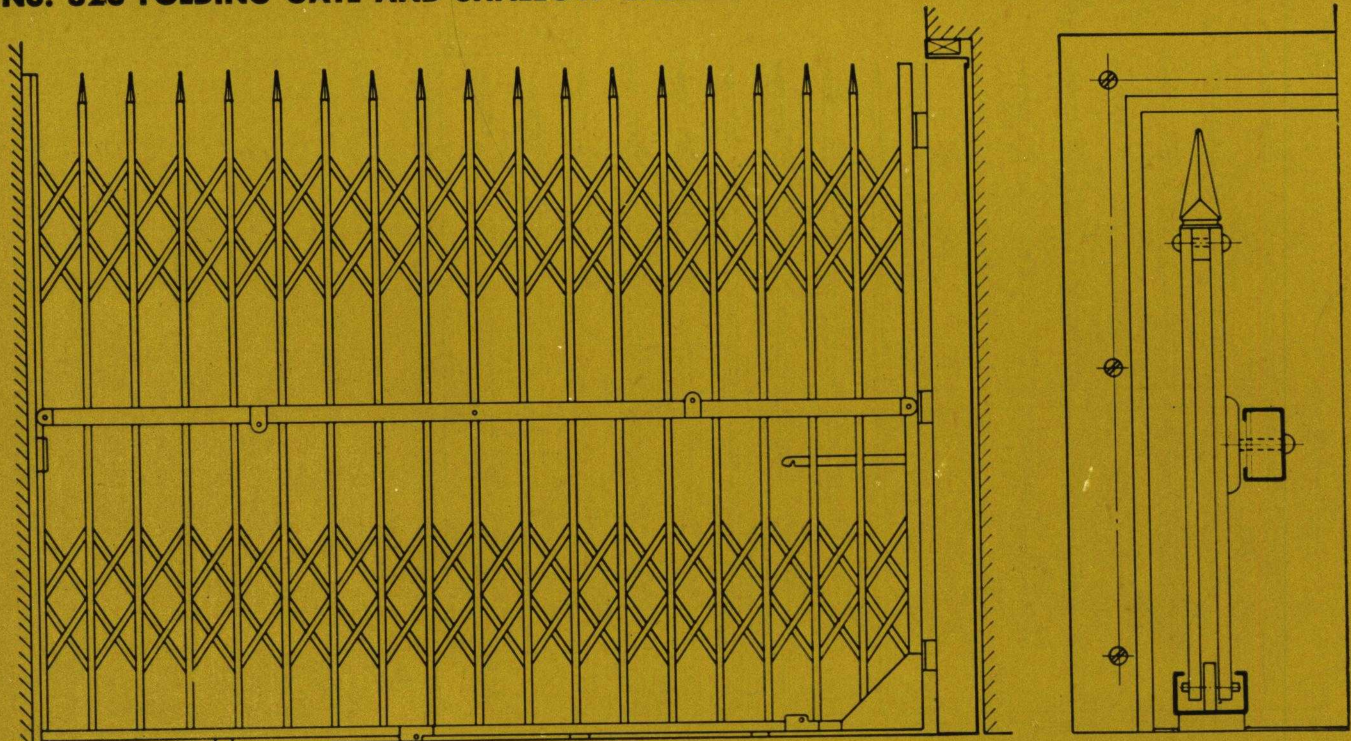
recess height—gate height plus 1 in.

recommended height: 5 ft. minimum to 8 ft. has two rows lattices, over 8 ft. has three rows.

No. 822-N gate: is the same as No. 822 above without pickets.

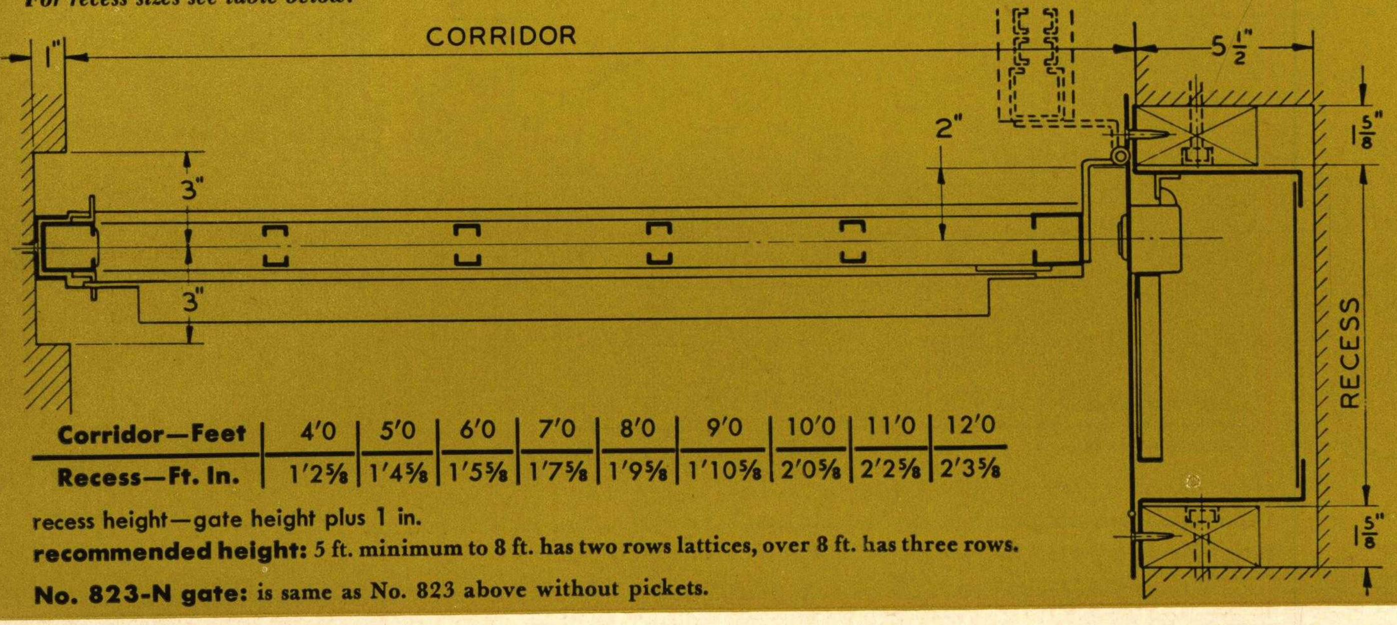
FOLDING GATES • steel, aluminum or bronze

No. 823 FOLDING GATE AND SHALLOW CABINET



specifications—gate to be No. 823 as manufactured by Western Wire & Iron Works Inc. of Chicago, Ill.—constructed of double ¾ in. vertical cold rolled channels on 6 in. maximum centers, all extending into bottom fold-up C section track—track to have gussets and non-marring rubber floor blocks—lattices to be 3/16x⅝ in. flat bars with machined roller bearings and brass washers—heavy duty jack-knife of cold rolled C section—cabinet to be shallow type made of 5/32 in. steel plate Z sections with No. 16 gauge back, all welded—door to be ⅛ in. steel plate reinforced with ¾x¾x⅛ in. angle frame—continuous concealed type hinge—trim ⅛x2 in. flat bar—gate hung on heavy duty hinges allowing cabinet door to close when gate is in extended or collapsed position.—locks to be WW&IW all-bronze to take standard or Mk cylinders—finish to be standard heat sprayed and heat dried olive green, grey or beige enamel.

For recess sizes see table below.

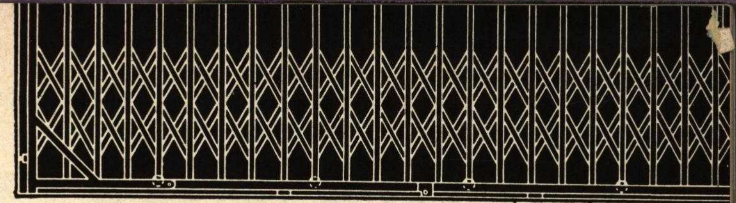


Corridor—Feet	4'0	5'0	6'0	7'0	8'0	9'0	10'0	11'0	12'0
Recess—Ft. In.	1'2⅝	1'4⅝	1'5⅝	1'7⅝	1'9⅝	1'10⅝	2'0⅝	2'2⅝	2'3⅝

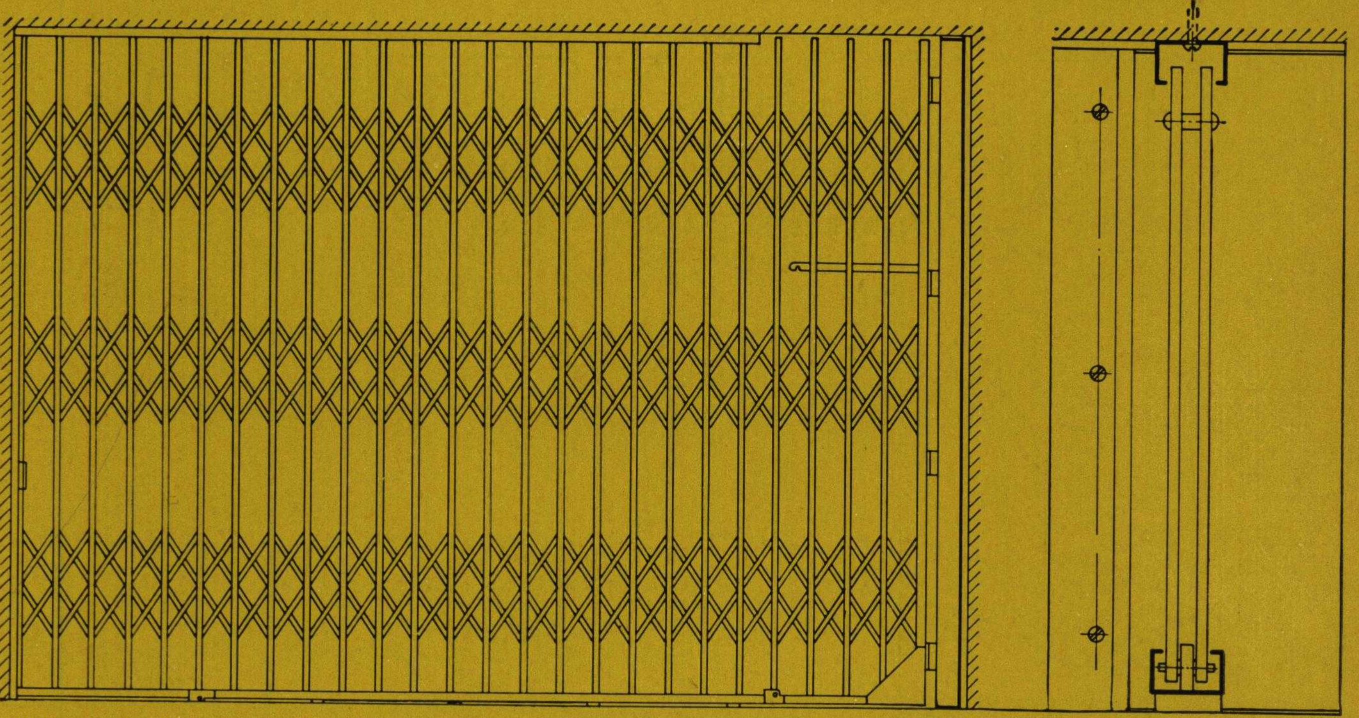
recess height—gate height plus 1 in.

recommended height: 5 ft. minimum to 8 ft. has two rows lattices, over 8 ft. has three rows.

No. 823-N gate: is same as No. 823 above without pickets.



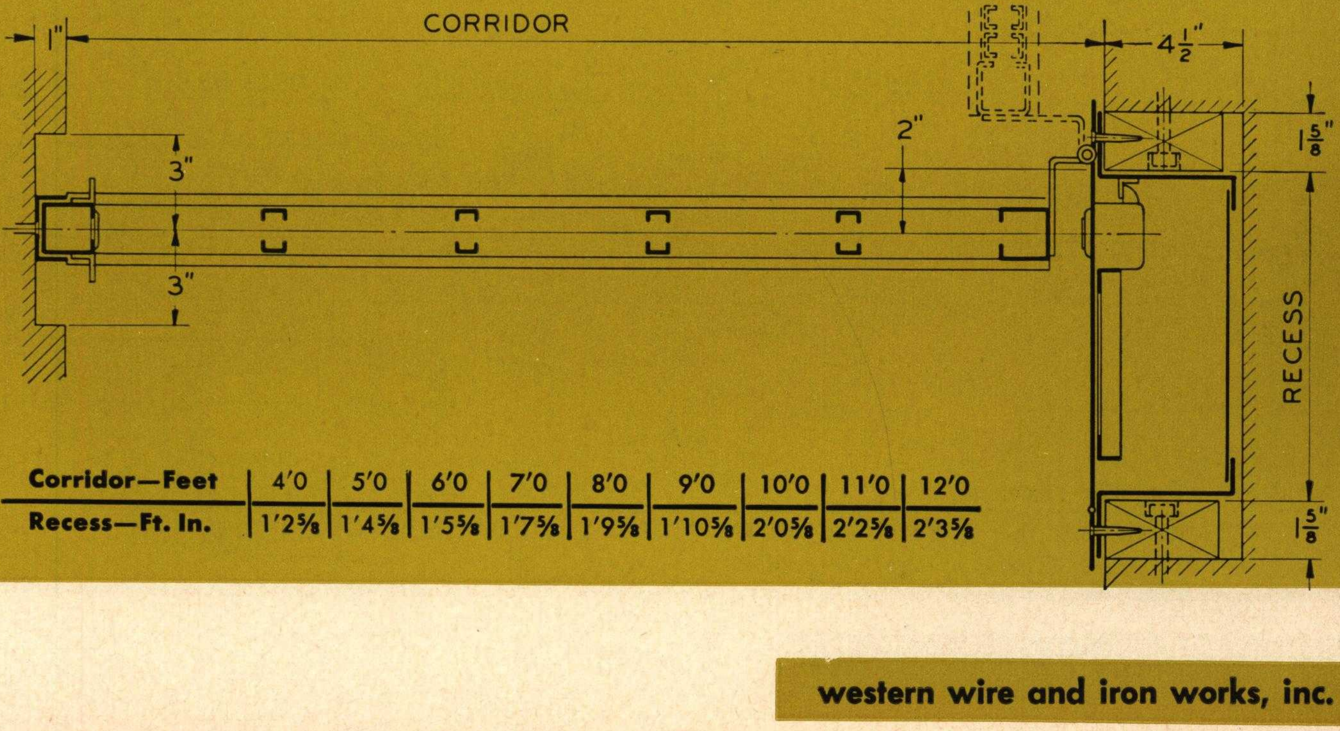
No. 843 FOLDING GATE AND SHALLOW CABINET *with channel ceiling guide*



This gate should be used where floor to ceiling protection is required—gate made with two rows of lattices up to 8 ft. high, and three rows of lattices over 8 ft. in height—recommended maximum height is 10 ft.

specifications—gate to be No. 843 folding gate as manufactured by Western Wire & Iron Works Inc. of Chicago, Ill.—constructed of double ¾ in. vertical cold rolled channels on 6 in. maximum centers, all extending into C section bottom fold-up track and into channel ceiling guide—bottom track to have gussets and non-marring rubber floor blocks—lattices to be $3/16$x⅝ in. flat bars with machined rollers and brass washers—cabinet to be shallow type made of $5/32$ in. steel plate reinforced with ¾x¾x⅛ in. angle frame—continuous concealed type hinge—trim bar ⅛x2 in. flat bar—gate hung on heavy duty hinges allowing cabinet door to close when gate is in extended or collapsed position.—locks to be WW&IW all-bronze to take standard or Mk cylinders—finish to be standard heat sprayed and heat dried olive green, grey or beige enamel.

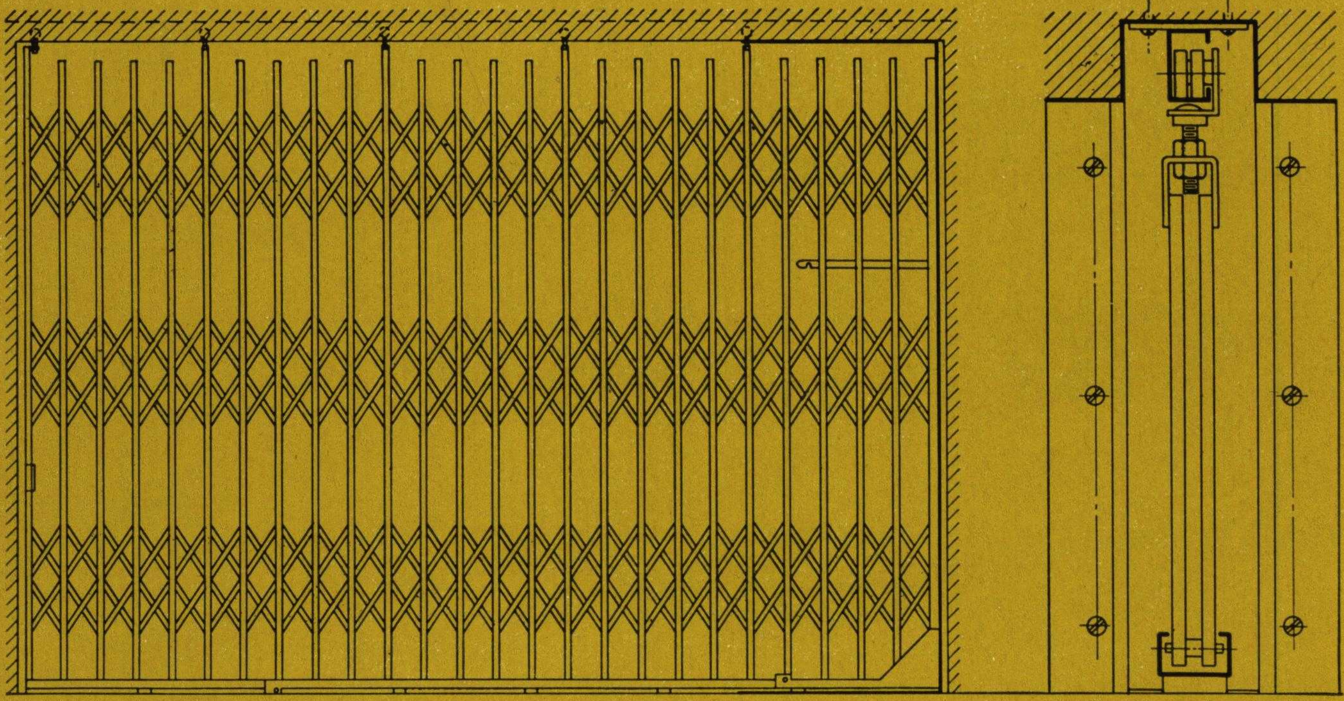
For recess sizes see table below.



Corridor—Feet	4'0	5'0	6'0	7'0	8'0	9'0	10'0	11'0	12'0
Recess—Ft. In.	1'2⅝	1'4⅝	1'5⅝	1'7⅝	1'9⅝	1'10⅝	2'0⅝	2'2⅝	2'3⅝

FOLDING GATES • steel, aluminum or bronze

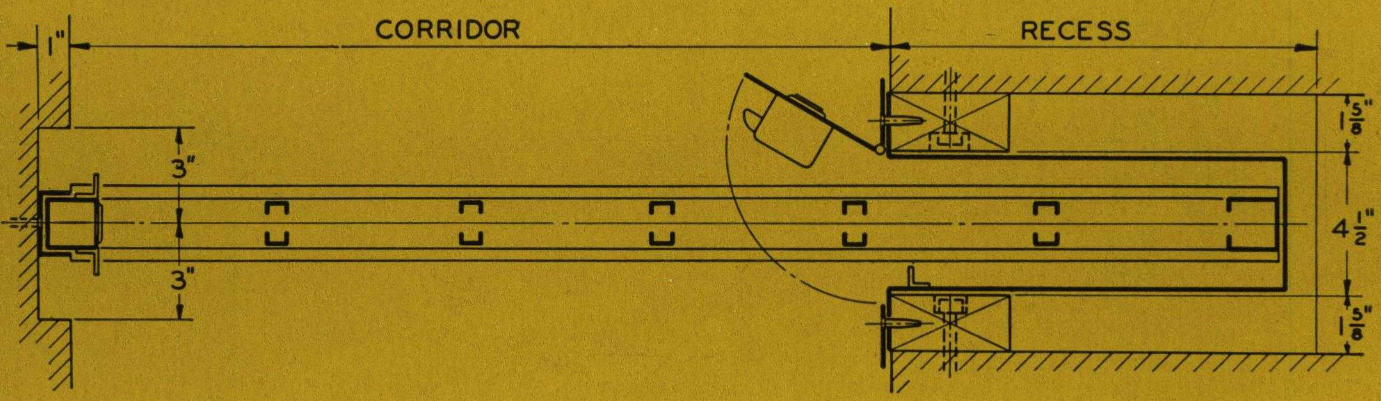
No. 852 FOLDING GATE AND DEEP CABINET *with overhead track*



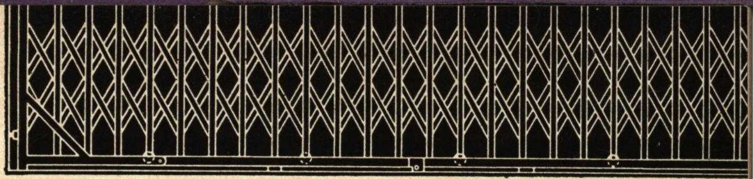
This installation is recommended where floor to ceiling protection is desired, combined with the advantages and appearance of a permanent built-in top track.—gate is made with two rows of lattices up to 8 ft. in height, and three rows when over 8 ft. high.—recommended max. height 12 ft.

specifications—gate to be No. 852 as manufactured by Western Wire & Iron Works Inc. of Chicago, Ill.—constructed of double ¾ in. vertical cold rolled channels, all extending into bottom folding C section track—track to have gussets—top track to be heavy duty C section with removable section for insertion of gate—gate hung from top track on ball-bearing hangers at every fifth vertical channel (approx. 2 ft. 6 in. o.c.)—lattices 3/16x⅝ in. flat bars with machined rollers and brass washers—cabinet to be deep type, made of No. 14 ga. steel all welded—door to be No. 11 ga. plate with continuous type hinge and ⅛x2 in. flat bar trim—locks to be WW&IW all-bronze to take standard or Mk cylinders—finish standard heat sprayed and heat dried enamel in olive green, grey or beige.

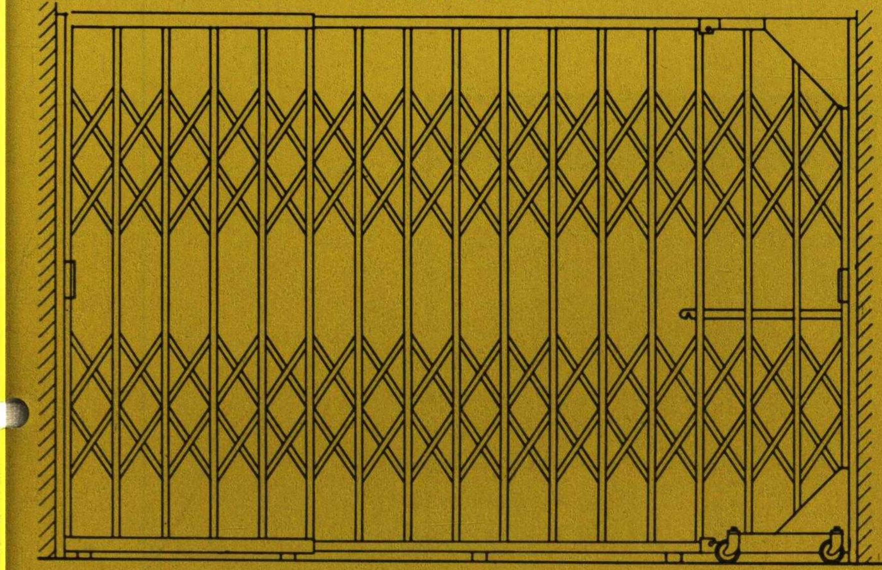
For recess sizes see table below.

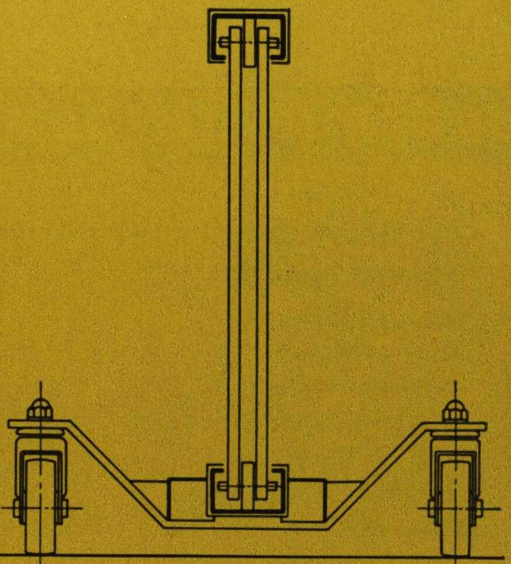


Corridor—Feet	4'0	5'0	6'0	7'0	8'0	9'0	10'0	11'0	12'0
Recess—Ft. In.	1'4	1'7	1'9	1'11	2'1	2'3	2'6	2'8	2'9



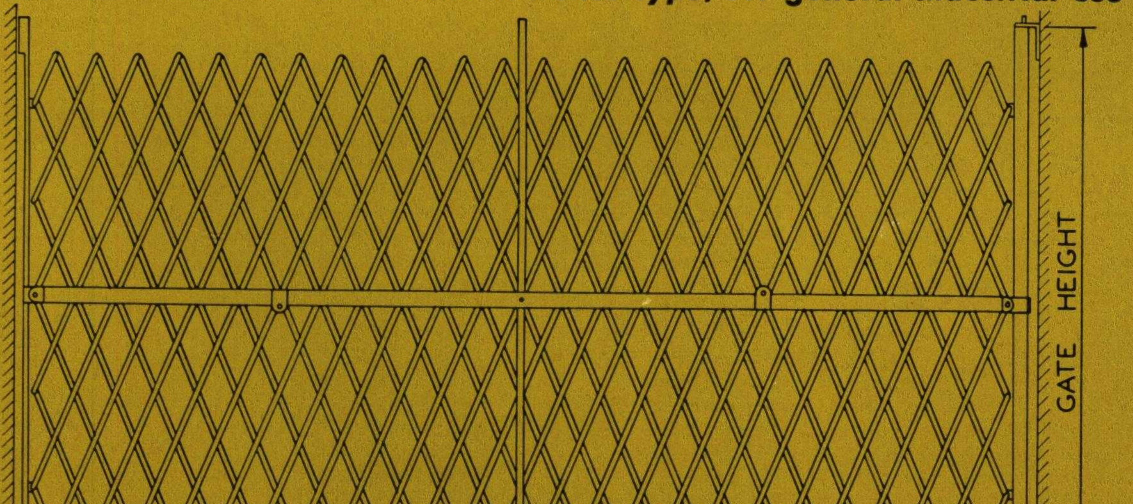
No. 860 FOLDING GATE *portable*

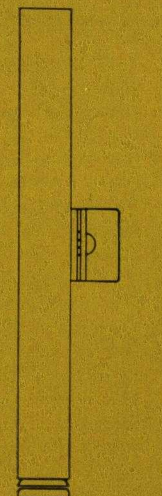




This gate is made to specifications of No. 810 and mounted on a sturdy carriage with large ball-bearing casters. Easily rolled to various locations or to storage. Has 3 ft. adjustment for width. Fitted with two cylinder locks (can be master-keyed) which lock into a keeper on each wall, and with vertical channels sliding inside of top and bottom tracks makes the most secure and rigid installation. Gate cannot be rocked or pushed out of line when locked in place. No braces required. No loose locks or fastenings to be lost or misplaced. Maximum height 7 ft. 6 in., or 6 ft. 6 in. if to be stored in closet.

No. 830 FOLDING GATE *diamond lattice type, for general industrial use*





lattice	made of ¾x⅜x⅛ in. cold rolled channel riveted back to back with ¼ in. rivets approx 6 in. on centers—brass washers used throughout.
end bars	1⅝ in. cold rolled C section to take double machined rollers of lattice section. pivot mounted to allow gate to be swung against wall when collapsed.
jack-knife	heavy C section on gates 6 ft. wide and over—ball-bearing swivel caster on lead bar.
lock	furnished with padlock arrangement unless cylinder lock is specified.
tie bar	for holding gate in collapsed position.
finish	heat sprayed and heat dried standard coat of olive green, grey or beige enamel.

ORDERING INFORMATION

for price inquiry, or purchase order . . .
please specify:

Number of Gates	One or more
Style of Gate	Specify No. Shown
Height of Gate	Over-all height of gate desired
Width of Corridor	Corridor width from wall to wall
Lock on Gate	Cylinder Lock or Padlock arrangement
Material	Steel, Aluminum or Bronze
Color of Paint	Beige, Olive Green or Grey
With Overhead Tracks or Channel Guide	Give ceiling height

window guards

use of window guards

Woven wire is the standard of protection for gymnasium windows and lends itself readily to any style of window construction. Woven wire window guards have proven their ability to protect stores, churches, schools, homes and factories against thievery and breakage of glass and fire embers over a period of many years. When properly constructed they will last the life of the building. Illustrations on these pages present applications to a variety of conditions. Note ease of applications to steel sash windows with pivoted ventilators. (see illustrations at right)

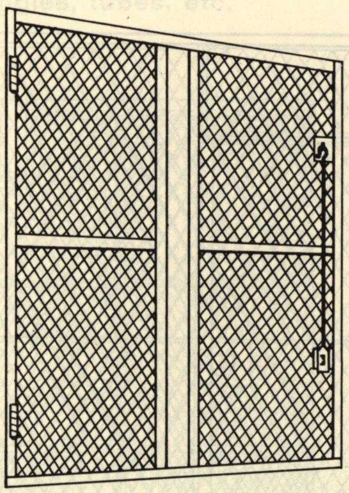
advantages

Woven wire window guards are always made to fit the exact openings of windows and there is no waste of material as webs are not cut from stock sheets, but are woven up for each individual guard. Mesh openings can be decreased to suit special conditions as for bird screens for church windows. Thickness of wire can be increased where added protection is required as for exterior windows adjacent to school playgrounds.

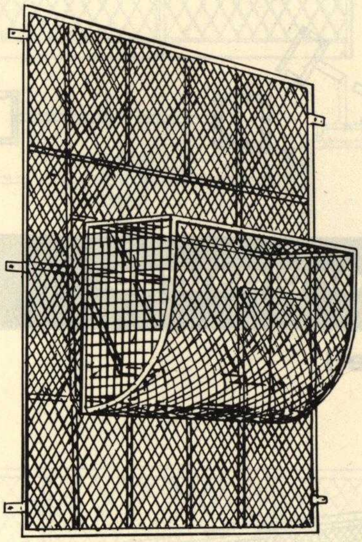
recommendations regarding the finishing of window guards

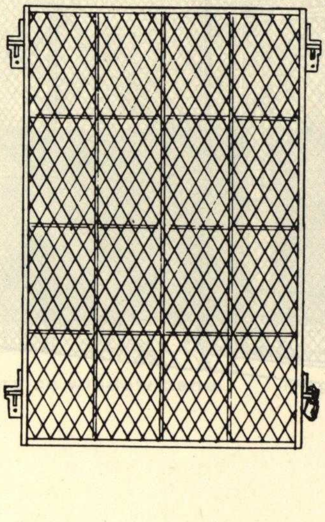
All exterior guards should be hot galvanized after fabrication or painted one prime and two finish coats of all-weather paint.

interior



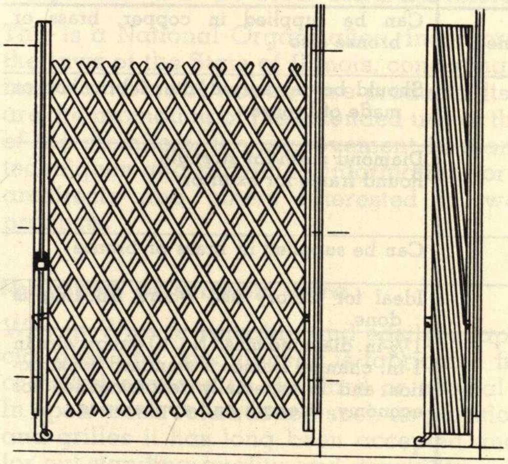
exterior





folding gates

lazy tong type



extended collapsed

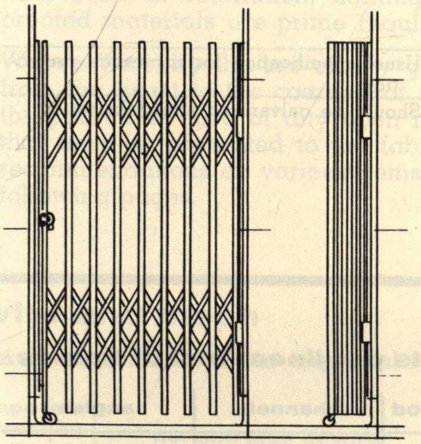
Diamond lattice folding gates are constructed of single channels riveted back to back and arranged in diamond pattern. Channels may be ¾" x ⅜" x ⅛" approximately 6" on centers.

The over all height becomes less as the gates are extended; approximately 1½" to each foot of width. The pivot point is usually placed near the bottom to maintain a more constant distance to the floor.

Vertical members may be provided on wide gates with casters on floor or track and hangers above.

Locks for lattice type folding gates are usually lugs with padlocks. Installation of gates may be such as to allow them to collapse and swing against the wall or to disappear into pockets in the same manner as vertical bar types.

bostwick type



extended collapsed

Vertical bar folding gates are constructed of pairs of vertical channels with two or more rows of lattice bars. Channels may be ¾" x ⅜" x ⅛", approximately 6" on centers, with ⅝" x ⅛" lattice bars, and with separators at pivot points.

Overhead tracks and hangers should be supplied for gates in wide corridors or wherever they extend more than eight or ten feet. Floor tracks or bottom stiffening tracks may be used where gates are of sufficient relative height to allow tracks to fold into position.

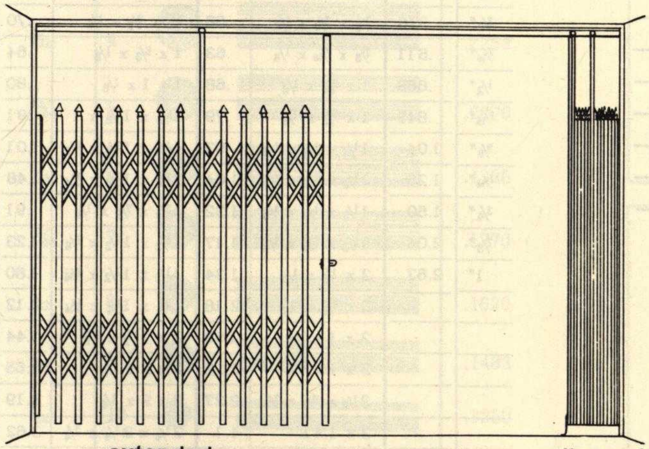
Casters are usually required for gates over three or four feet wide, unless overhead tracks are used.

Installation of gates may be such as to allow them to collapse and swing against the wall or disappear into pockets with or without hinged panels or doors. The larger gates, particularly those with fixed overhead tracks, may fold into concealed wall pockets, the tracks extending to the back of the pocket. The pocket should have a metal lining to protect the gate mechanism.

Hasps, padlocks, or built-in cylinder locks for vertical bar type gates may be used to lock the gates in the extended or folded positions.

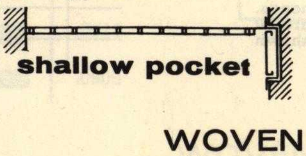
Metal of folding or collapsible gates, usually steel, painted, may also be bronze, aluminum or stainless steel.

wall pocket type



extended collapsed

deep pocket



shallow pocket

Shallow or deep wall pocket cabinets where wall conditions permit. Deep pocket cabinets may be used allowing full un-obstructed use of corridor, with Folding Gates pulling out, or collapsing into cabinets on straight line. Door to cabinet mounted on recessed or piano hinges, with cabinet or cylinder locks.

Where other wall conditions permit, shallow pocket cabinets may be used, also allowing full un-obstructed use of corridors with Folding Gates hinged to swing out and across corridor opening, or collapsed to fold into pocket of cabinet. Door to cabinet mounted on off-set hinges, and provided with cylinder locks.

Cabinets constructed with heavy cold rolled steel plates, all welded frames of angles with necessary fittings.

Used principally in Schools, Institutions and areas where security and wall to wall conditions do not permit exposed Folding Gates on wall surfaces.

selector guide to woven wire products

uses	wire and mesh	frame	remarks
Radiator screens and grilles	⅝-in. mesh No. 14 wire Square or diamond	5/16-in. round ½- or ⅝-in. channel ¾-in. angle	Can be supplied in copper, brass or bronze also

objectives of the association

This is a National Organization, incorporated under the laws of the State of Illinois, consisting of leading manufacturers of woven wire products. Its objectives are the promotion of the extended use of the products of the members, the improvement in manufacturing techniques and providing information for the use of architects and others interested in woven wire products.

features of woven wire

Woven Wire is versatile and easily adapted to special uses and conditions. It is fabricated from drawn or rolled sections in standard or special materials. In open mesh construction such as partitions, guards and grilles it has long been accepted and specified for out-standing quality and durability.

Woven Wire in its above form and construction, being mostly portable, is unexcelled where conditions such as ventilation, lighting, vision and fire-proofed materials are prime requisites.

Woven Wire, by the use of any gauge wire woven from the finest to the coarsest of meshes can meet the particular need of any open mesh requirement that may be presented to the fabricator. Data and recommendations on various items are given on the following pages.

advantages of woven wire

ventilation—Largest percentage of open area.

lighting—More light due to better diffusion.

cleaning—All smooth surface; easily kept clean.

vision—Easier to look through from any position.

fire—No obstruction to hose stream.

heating—Maximum circulation of air.

sound—No interference.

painting—Easily repainted; no sharp edges.

strength—All wires double crimped and securely interwoven and clinched on drawn metal frames. (See illustrations below.)

cost—Lowest cost because of economy in manufacture as mesh is woven up for each job, thus eliminating the usual waste resulting when mesh is cut from limited sizes of stock sheets.

diversity of wire sizes and meshes—To meet any requirement in open mesh construction.

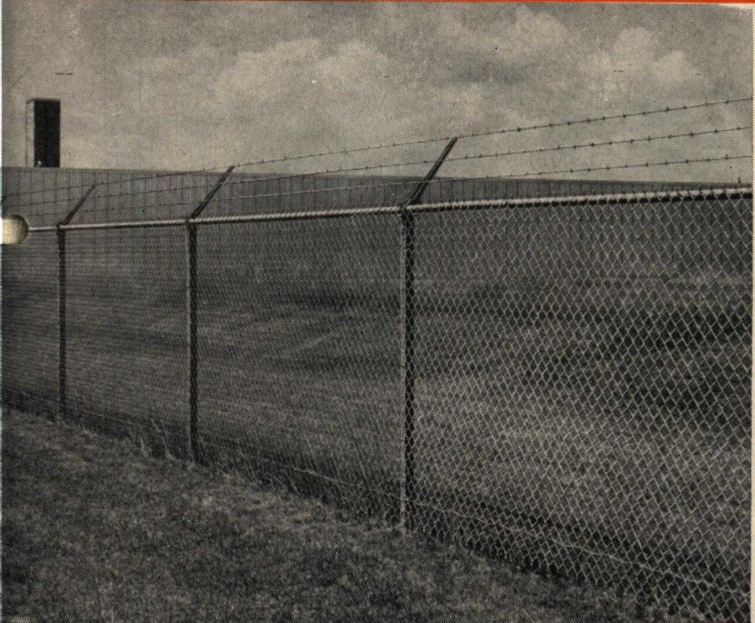
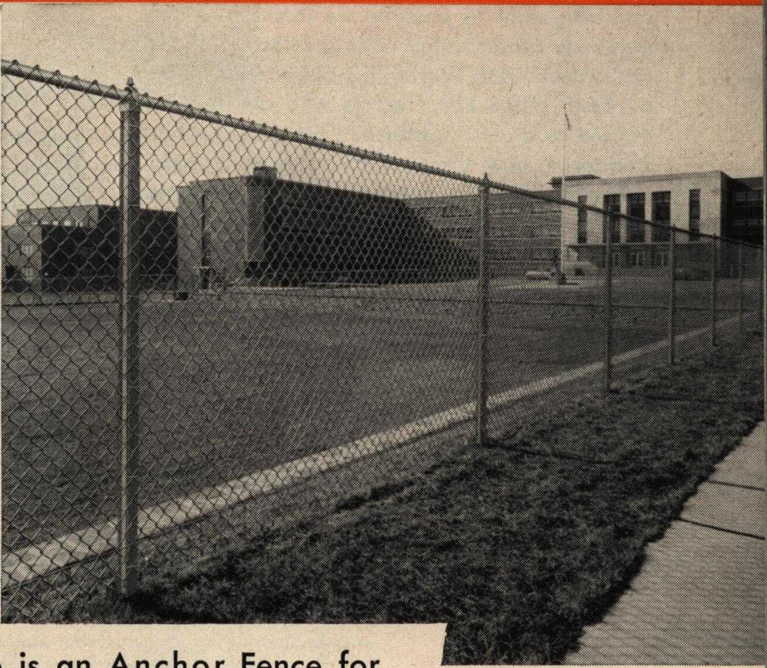
ANCHOR FENCES

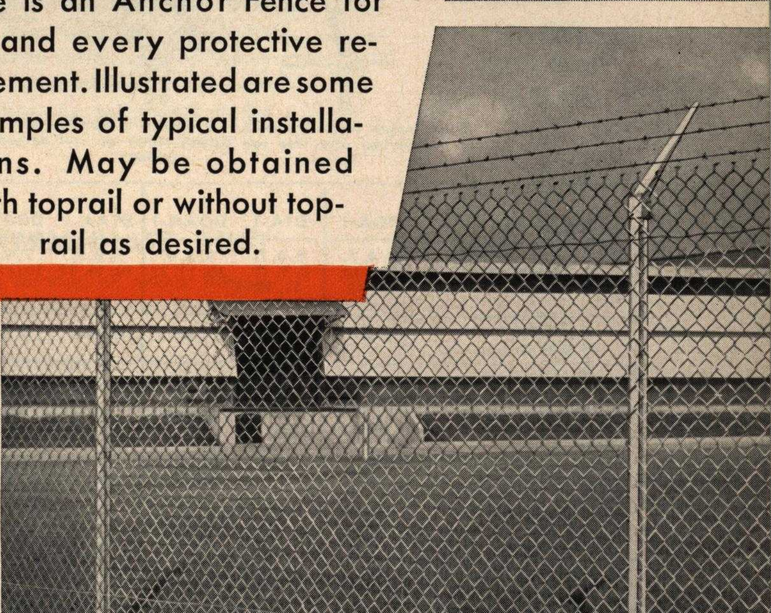
PROTECTIVE • ATTRACTIVE

ANCHOR CHAIN LINK FENCE





There is an Anchor Fence for any and every protective requirement. Illustrated are some examples of typical installations. May be obtained with toprail or without toprail as desired.



ANCHOR FENCE DIVISION

Anchor Post Products, Inc.

BALTIMORE 24, MD.

ANCHOR FENCE SALES AND ERECTING SERVICE IS NATION-WIDE

During the years that have passed since its establishment in 1892, the record of Anchor Post Products, Inc., has been one of continued growth. Starting with a modest factory in Brooklyn, N. Y., it now has modern plants in Baltimore, Md., Houston, Texas, and Whittier, Cal.

In order to serve our customers as promptly and efficiently as possible we maintain a nation-wide organization of branch sales offices and warehouses. (Partial list appears on Page 4.) Each office has erectors who are factory trained to erect a customer's fence to Anchor standards and thereby insure a well-done, economical job. In addition, our experienced sales force is fully equipped and trained to render valuable aid in the selection of the right type fence to fit protective requirements . . . and, have the backing of a home office staff of engineers, who are able to solve any fencing problem no matter how complicated.

This service is available to you at no charge or obligation. Try Anchor on your next fencing job . . . and get the right fence for your protective requirement.

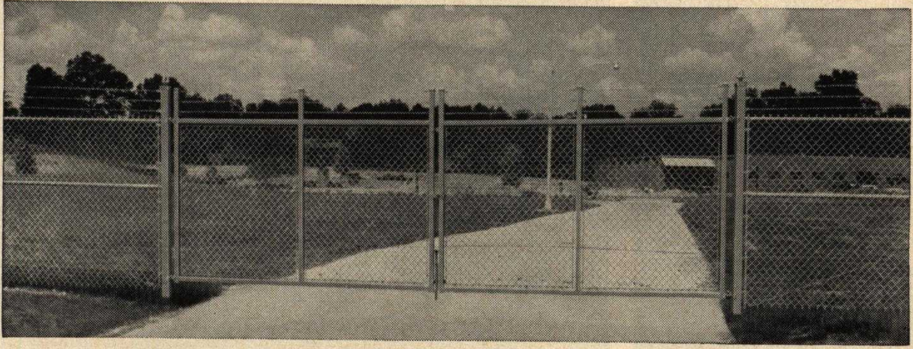
FEATURES OF ANCHOR CHAIN LINK FENCES • • • • •

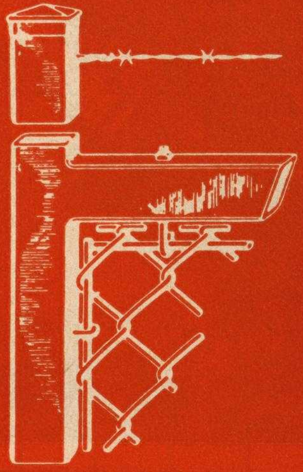
AN ANCHOR-WELD SQUARE FRAME WIRE GATE



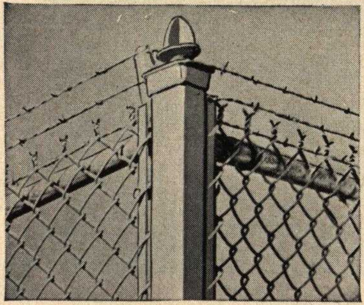
Anchor Gates, Types SD-1 and SDA-1, are made in both single and double types in standard sizes. Horizontal and vertical members of 2-inch rounded square steel tubing, inseparably butt-welded at the corners, insure unequalled beauty and strength, and provide rigidity and freedom from sagging. When maximum protection is required, and when the fence itself has barbed wire topping, the vertical gate members are extended one foot and three strands of four-point barbed wire stretched between them.

The gate frames are filled with chain link fabric to match the fence. Round steel tension rods securely hold the fabric to the frame and keep it permanently taut. Fabric can be replaced if necessary.

Because of the design of our hinges, an Anchor gate can be swung through an arc of 180°. These hinges are reversible and although they are usually set to swing the gates inward, they can be assembled to permit swinging the gates in the opposite direction.

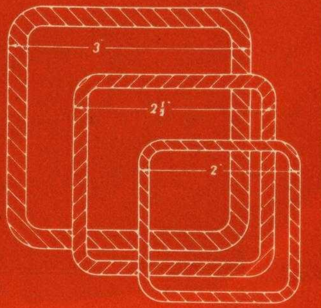


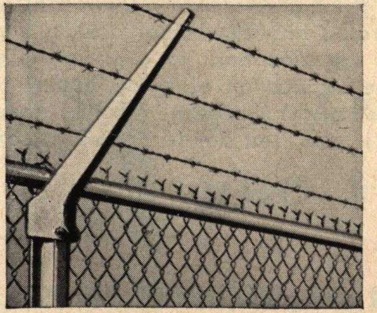
Detail of welded gate corner showing method of fastening fabric and barbed wire to frame.



THE SQUARE TERMINAL POST

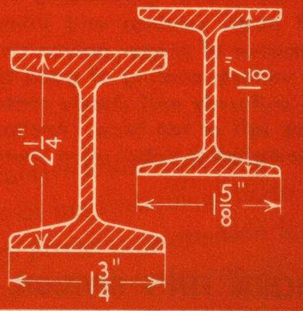
The advantages of the square post are obvious. First, it is stronger than a round post of comparable size and weight. Second, the fence fabric is fastened to the post by means of special adjustable clamps and tension strips which cannot be detached from the outside. Third, the absence of fabric-holding bands makes climbing practically impossible. Fourth, square terminal posts are much better looking, thus improving the appearance of the fence as a whole.

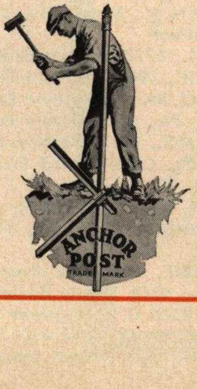




THE H-BEAM INTERMEDIATE POST

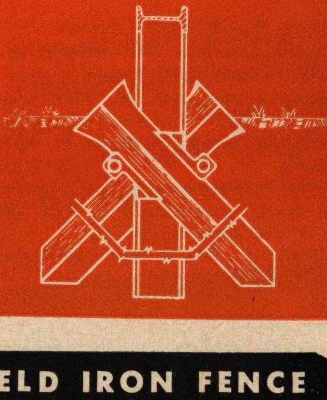
Weight for weight and size for size, an Anchor H-Beam post is much stronger than pipe or other post sections. It is made of rolled high-carbon steel and galvanized by the hot-dip spelter method, and eliminates possible corrosion at the ground line because it is self-draining. Specifying H-Beam line posts will mean much to the fence purchaser because of its longer life.





THE "DRIVE-ANCHOR"

Two galvanized clamps are fastened to post at a point which will place them just below ground surface when driven to required depth. Galvanized angle-shaped anchors of high-carbon steel are driven diagonally, and at right angles to fence, through the clamps into the ground. The advantages are: (1) front and back bracing, (2) three-foot foundation, (3) eliminates post hole digging and concrete mixing.

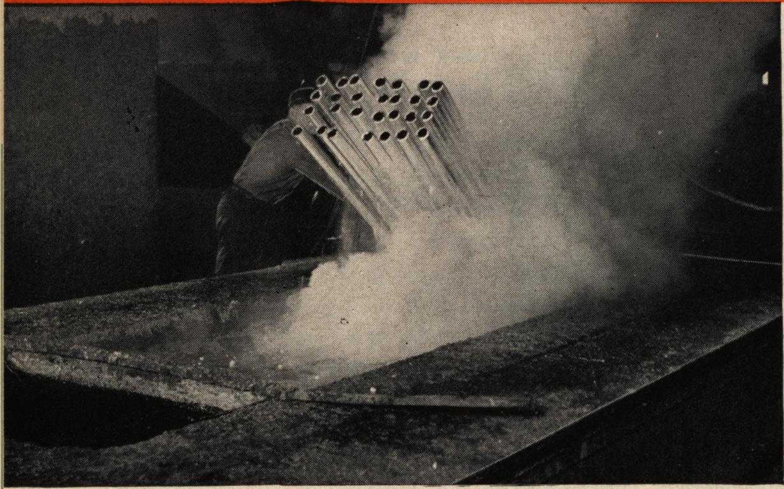


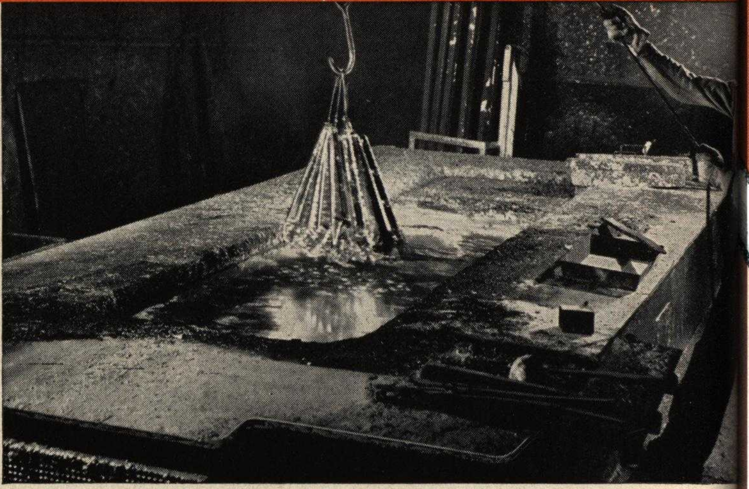
ANCHOR-WELD IRON FENCE

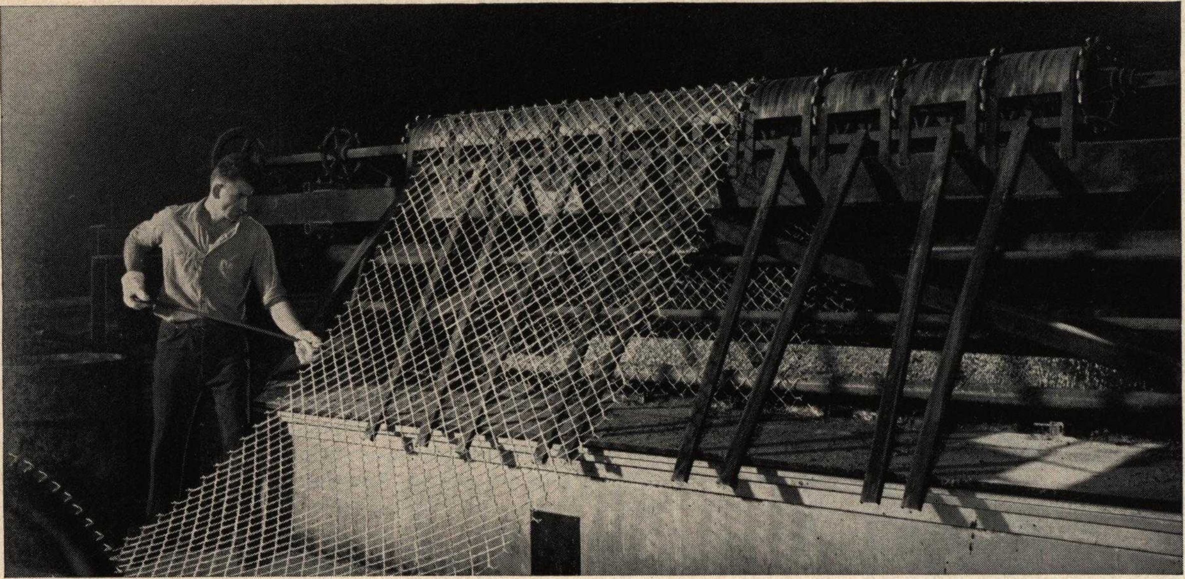
ANCHOR'S EXCLUSIVE METHOD OF

GALVANIZING AFTER FABRICATION

ELECTRICALLY FIRED—ELECTRONICALLY CONTROLLED







Continuous galvanizing of fence fabric and galvanizing of posts, castings and stampings demands precise maintenance of proper galvanizing kettle temperature to assure a uniform coating of good quality. Unless this temperature is uniformly and closely controlled, the coating is apt to be too soft or too hard. Anchor's exclusive method of galvanizing after fabrication overcomes this common problem. Operating electrically fired, electronically controlled, galvanizing kettles (illustrated above), Anchor actually regulates temperatures of the zinc bath to give very slight variances. Permits the application of a top quality uniform coating of zinc to our product. Another reason why an Anchor Fence is your best buy for long life, better service.

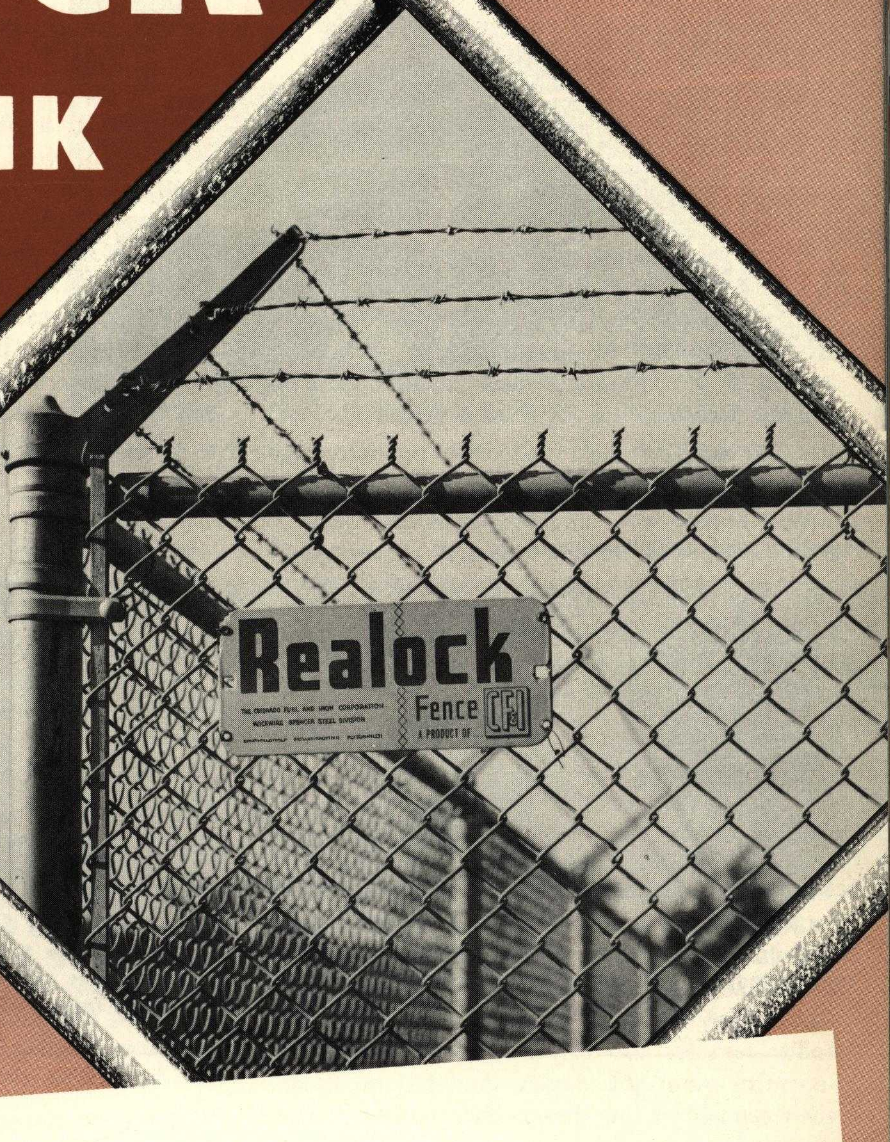
REALOCK
CHAIN LINK FENCE



FOR ARCHITECTS WHO SPECIFY

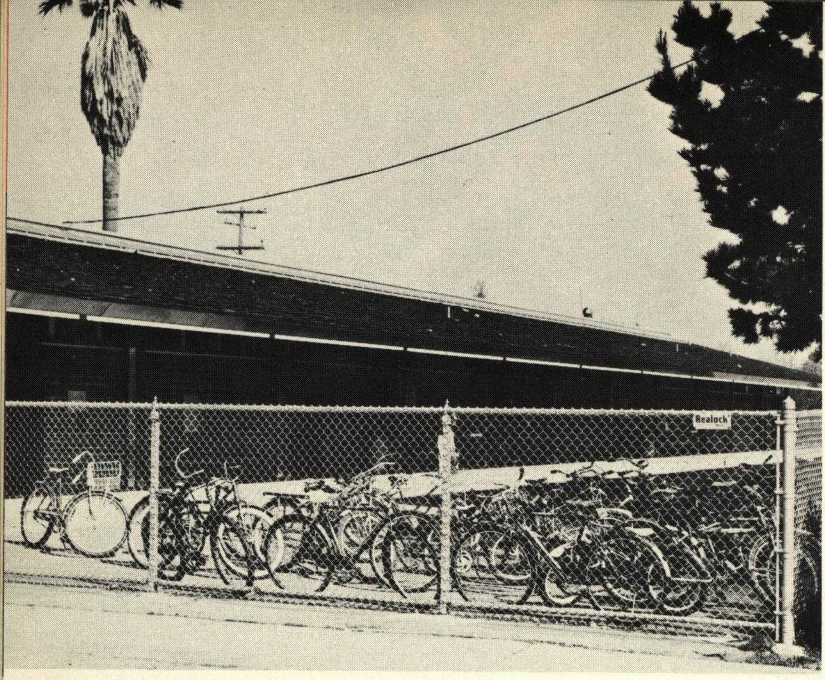
Durability and Appearance

When jobs call for strong, attractive fence—for industrial properties, municipalities or institutions, private dwellings or other areas where property protection is needed—you can be sure of lasting quality by specifying Realock Fence.

The sturdy steel fabric is heavily galvanized *after* weaving for long-lasting resistance to weather and other corrosive elements. What's more, Realock's attractive, symmetrical construction blends with any background, adding beauty to the area it protects.

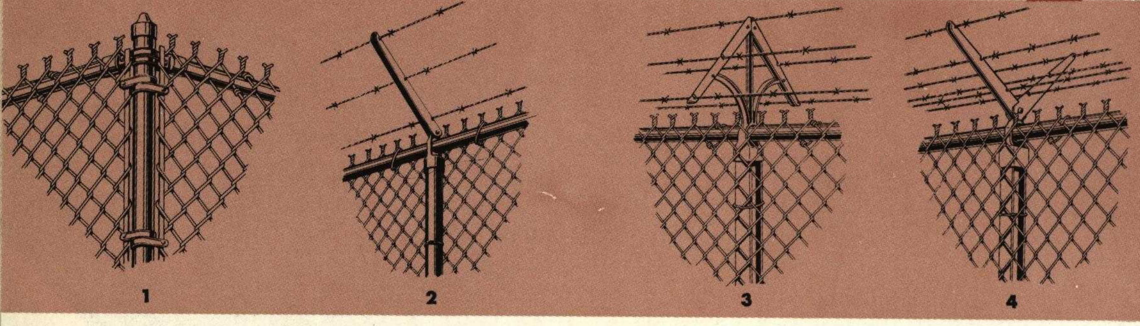
REA

A one-time i



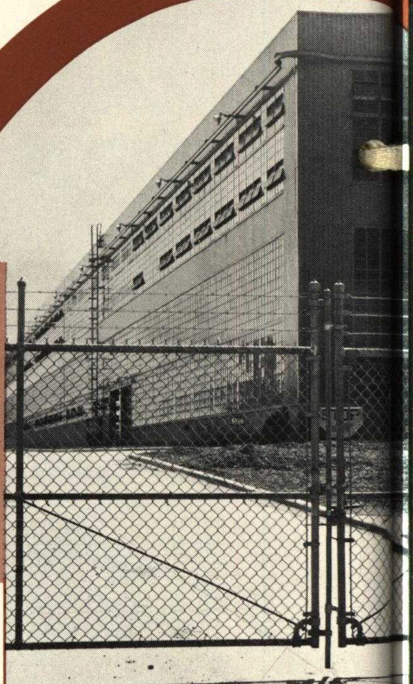
Types 320 and 320H (light construction) standard heights 3′ to 6′ inclusive.

Types 420 and 420H (heavy construction) heights up to and including 12′—without barbed wire, ideal for residences, schools, parks and for some industrial and institutional use.

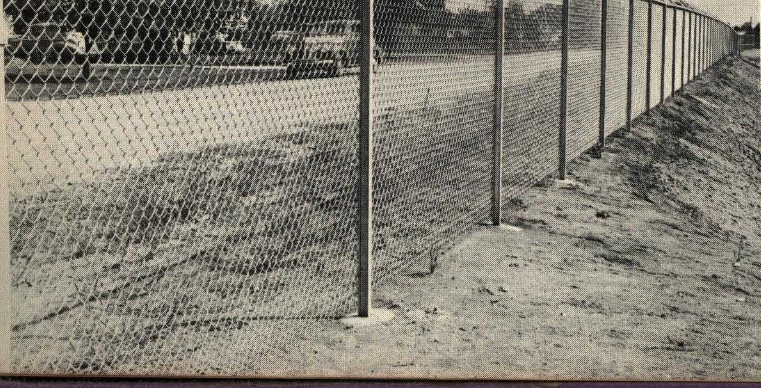


(1) 420 without barbed wire topping; (2) 423 with 3 strand construction; (3) 425 with 5 strand construction; (4) 426 with 6 strand construction.

Types 425 and 426 with 5 or 6 strands of barbed wire, will assure the ultimate in protection from both sides of the fence. For complete specifications refer to back cover page.



Realock Gates—either slide or swing type; same height as fence. Openings from 2 to 75 feet wide. Gates are constructed of full weight tubular steel, and filled with fabric matching that of the fence.

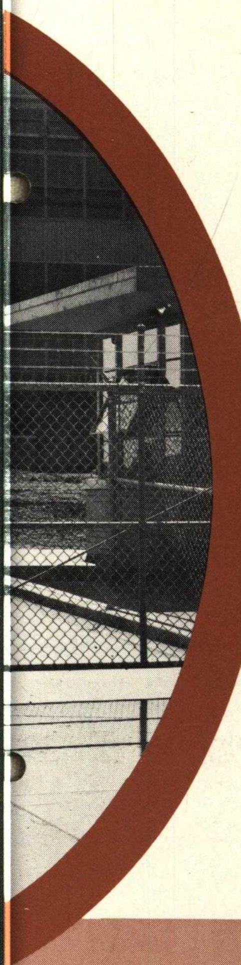


Types 323 and 323H (light construction) standard heights 6′ and 7′.

Types 423 and 423H (heavy construction) standard heights up to and including 13′—3 strands of barbed wire—provides effective protection for industrial, institutional and utility properties, and any other locations where limited access is desirable.

LOCK FENCE

estment...for long-term protection



Realock Chain Link Fence offers positive protection for any area where limited access is important. It is the only fence with all essential fittings accessible only from the inside, making destruction of the tough Realock Fabric necessary to gain forcible entry. Its mere existence discourages illegal entrance attempts. Arson, theft, vandalism and trespassing are virtually eliminated. You can be sure that any area protected by a rugged Realock Fence has maximum security and privacy.

But a Realock Fence not only gives security—it can reduce the costs of conventional protection. Fewer watchmen are needed and patrol requirements are reduced to a minimum. Maintenance costs are practically non-existent—Realock's fabric, fittings and posts are weather-resistant. A Realock Fence requires minimum maintenance; it withstands the severest storms; and it cannot rot or decay. Realock Fence is built for a lifetime of service.

* * * * *

STEEL FABRIC. Realock Fabric is woven from top-quality steel wire, and is thoroughly galvanized *after* weaving by the hot-dip process, which insures a heavy, uniform coating over its entire surface.

SELVAGE. For heights up to and including 4', the standard selvage is barbed one edge and knuckled one edge. For heights 5' and higher, both edges barbed. Specials can be furnished with both ends knuckled or a combination of both.

POSTS, FITTINGS AND GATES. Terminal posts are constructed of full weight tubular steel, or "H" and "I" structural sections. Line posts are H-beam sections or full weight tubular posts. Gate frames are full weight round or square tubular steel. Top rails are tubular pipe or I-beam of equal weight. Gates, complete with hinges, locking device and stops, are furnished in widths and heights to suit your needs. All gates, posts and fittings are heavily galvanized.

BARBED TOPS. Barbed wire construction on top of fence offers greatest protection. Barbed wire top finish comes in 3, 5 or 6 strands, supported on arms above the fabric.

ALUMINUM AVAILABLE. Realock Fence is also available in aluminum. The aluminum fabric, fittings and posts cannot corrode—they are maintenance-free. Realock Aluminum Chain Link Fence is especially desirable in areas where climatic conditions or corrosive airborne industrial wastes make for excessive maintenance costs.

Each Realock Fence is furnished as a specially engineered, custom-built installation that assures maximum protection with a minimum of maintenance. Realock engineers are always ready to work with you in planning enclosures best suited to your needs. Consult your classified directory or contact our nearest office (listed on the back cover) for more information. A representative will call to discuss your requirements . . . without obligation, of course.

General Specifications

QUALITY OF MATERIALS: All steel including fabric, pipe, H-section posts, and fittings to be first quality, full weight "Hot Dip" Galvanized. All weights and dimensions are nominal.

FABRIC GALVANIZED AFTER WEAVING: 9 or 6 ga. wire woven into a 2″ Chain-Link mesh "Hot Dip" Galvanized after Fabrication. Zinc coating by weight to be not less than 1.2 oz. per sq. ft. Wire used in fabric will be "KONIK" Steel, containing Copper, Nickel and Chromium for greater tensile strength and rust resistance, and the tensile strength shall be, at least, 85,000 lbs. per sq. in. unit tensile stress. The top and bottom selvages of the fabric will be barbed.

LINE POSTS: "H" section, weight 4.3 lbs. per ft., or 2½″ O.D. tubular pipe, weight 3.65 lbs. per ft. Spaced not more than 10′ apart on centers, and set not less than 36″ in concrete footings.

TOP RAIL: Tubular steel pipe 1⅝″ O.D. Weight 2.28 lbs. per ft. provided with 7″ long inside and outside expansion sleeve couplings.

ALUMINUM FABRIC TIES: 6 ga. round. 6 furnished to each 10′ of rail, and one to each foot of line post height.

TENSION WIRE: 6 ga., high carbon, coiled spring wire shall be used with no rail construction at top of fabric.

TERMINAL POSTS: Tubular steel pipe to extend 36″ in concrete footings. End, Corner, and Pull Posts 3″ O.D. weight 5.79 lbs. per ft. List of minimum gate post sizes for various width swinging gates follow:

MINIMUM GATE POST SIZES		GATE WIDTH	
size	lbs. per ft.	single	double
3″ O.D.	5.79	6′ and under	12′ and under
4″ O.D.	9.11	Over 6′ to 13′	Over 12′ to 26′
6⅝″ O.D.	18.97	Over 13′ to 18′	Over 26′ to 36′
6⅝″ O.D.	28.57	Over 18′	Over 36′

Gate Posts for Slide Gates: Up to and including 30′ wide to be 4″ O.D. Slide Gates wider than 30′ to be double 4″ O.D. posts.

BRACE ASSEMBLY: All End and Gate Posts braced horizontally with 1⅝″ O.D. tubular steel pipe and adjustable truss rod. Corner Posts furnished with 2 complete brace assemblies. With no top rail construction additional diagonal brace assemblies furnished.

TENSION BANDS: Beveled edge type, slotted to receive special lock pin, ELIMINATING BOLTS AND NUTS. One for each ft. of fabric height.

WELDED GATE CONSTRUCTION: Frames 2″ O.D. tubular pipe, weight 2.72 lbs. per ft. Corners electrically welded. Fabric filler same as fence. Malleable iron pivot, or offset pin type hinge fitting.

CHAIN LINK FENCE

TO LAST LONGER

Construction

10 STYLES TO CHOOSE FROM—Add Following Detail Specifications for the Style Selected

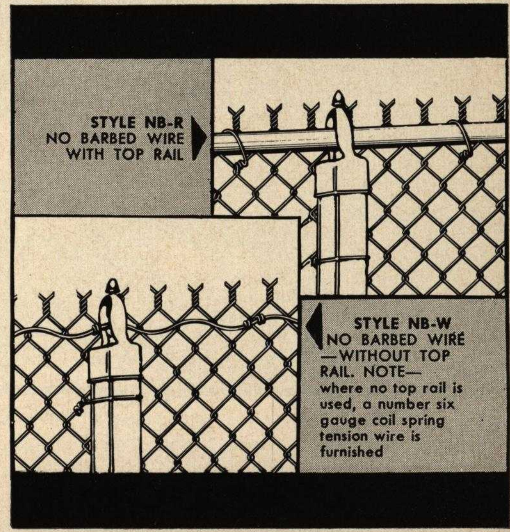
Style NB-R no barbed wire

HEIGHTS: Built 5′ high and higher. Fabric full height of fence.

LINE POST TOPS: Heavy malleable iron to fit over post. Provides for either top rail or tension wire.

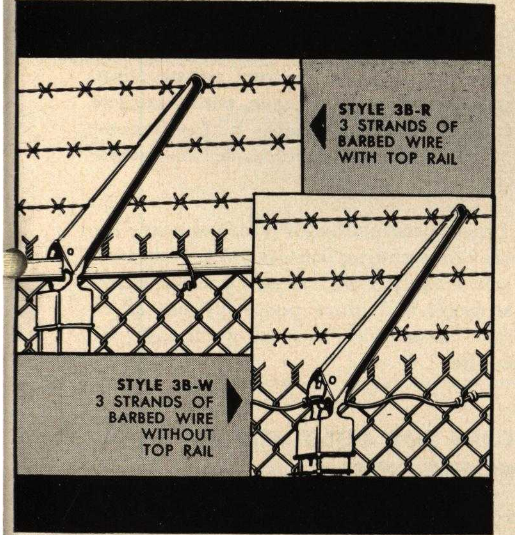
TERMINAL POST TOPS: End, Corner, and Gate Posts fitted with heavy malleable iron tops of bullet type construction.

TENNIS COURT style is built in standard heights of 8′, 10′ and 12′. Specifications are exactly the same as NB-R, above. Gate frames are 1⅝″ O.D. pipe. Top and bottom selvages of fabric are knuckled. Tennis Court style, 12′ in height, furnished with middle rail as well as top rail.



STYLE NB-R
NO BARBED WIRE
WITH TOP RAIL

STYLE NB-W
NO BARBED WIRE
—WITHOUT TOP RAIL. NOTE—
where no top rail is used, a number six gauge coil spring tension wire is furnished



STYLE 3B-R
3 STRANDS OF
BARBED WIRE
WITH TOP RAIL

STYLE 3B-W
3 STRANDS OF
BARBED WIRE
WITHOUT
TOP RAIL

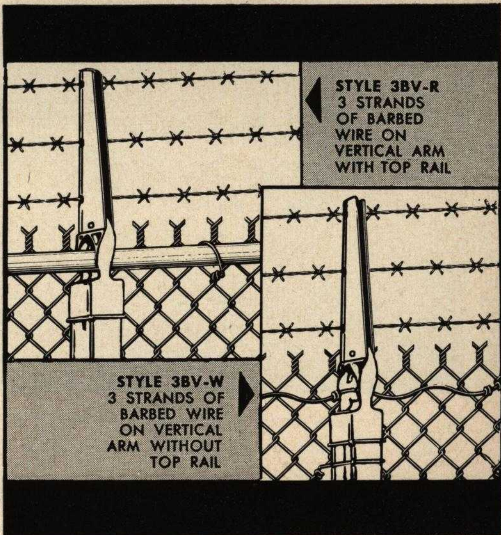
Style 3B-R 3 strands barbed wire

HEIGHTS: Built 5′ high and higher. Fabric is 1 ft. less than overall height of fence.

LINE POST ARMS: 45 degree angle, or vertical arm of 12 ga. pressed steel riveted to malleable base, carrying three strands of barbed wire. *Barbed wire attached to arm in angle slot, being automatically locked in place by tension.*

BARBED WIRE: 3 strands, 4 point pattern, composed of 2—12½ ga. wires twisted with large barbs spaced 3″ apart, *hot-dip galvanized after fabrication.*

TERMINAL POST ARMS AND TOPS: End and Corner Posts fitted with heavy malleable iron arms to carry barbed wire. Gate Posts fitted with heavy malleable iron tops of bullet type construction.



STYLE 3BV-R
3 STRANDS
OF BARBED
WIRE ON
VERTICAL ARM
WITH TOP RAIL

STYLE 3BV-W

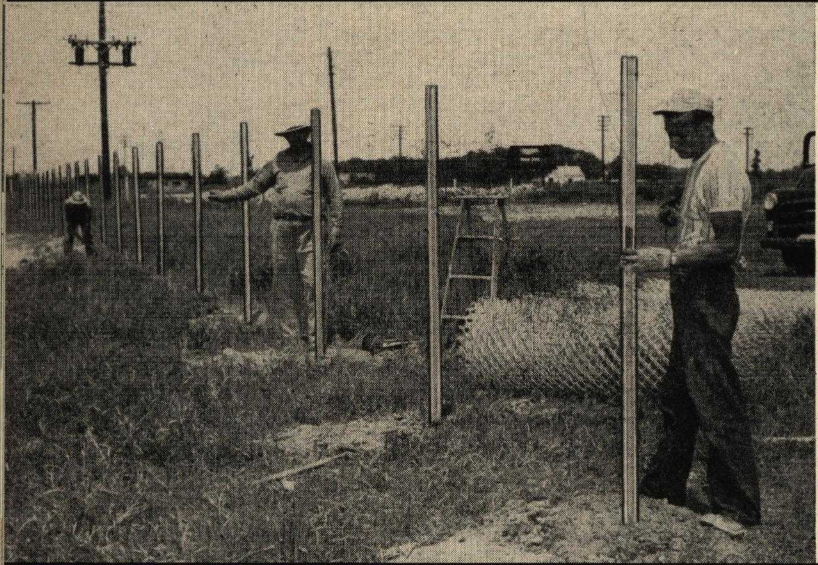
CONTINENTAL® CHAIN LINK FENCE

ENGINEERING AND CONSTRUCTION SERVICE



CAREFUL PLANNING ON EVERY JOB TO FIT INDIVIDUAL NEEDS WITH UTMOST ECONOMY

The actual construction of a fence is an important part of fence quality and fence user satisfaction. Continental Chain Link Fence installations are carefully supervised from start to finish by qualified engineers with years of experience in making Continental Fence installations for some of the largest and best known organizations in the country. Every installation is "tailor made" to your needs, and to give you the very best value for your investment. A list of users located in your area is available on request.

LEFT—Erecting line posts for a Continental installation. Continental H-Section line posts are 15 percent heavier for greater strength and durability. Each post is set in a permanent concrete footing.

CONTINENTAL CONSTRUCTION CREWS TRAINED TO BE THE BEST IN THE COUNTRY

Skilled crews of experienced men are available for every Continental Chain Link Fence installation. When customer furnishes labor, Continental will supply competent foremen and supervision to insure correct construction. Thousands of installations have been made, with complete satisfaction to users—proof of the quality of Continental Fence materials and the skill with which each Continental Fence is constructed.

LEFT—Assembling brace construction for terminal post. One of Continental's many outstanding features is the improved design in braces and trusses. Continental's end, gate and corner posts are stronger and more positively braced to withstand shocks and abuses and to stand up longer, for more years of fence life.

SALES OFFICES OR DISTRIBUTORS FOR CONTINENTAL® FENCE ARE LOCATED IN MOST PRINCIPAL CITIES

If a Continental representative is not located in your city, write to Kokomo direct, for information on the cost of fence for your property, without cost or obligation. Be sure to ask for a copy of the latest edition of PLANNED PROTECTION a valuable manual on Chain Link Fence that will help visualize your fence needs and requirements.

PLANNED PROTECTION
CONTINENTAL chain link FENCE

PLANNED PROTECTION shows 25 ways in which Continental Chain Link Fence can be used profitably for protection, safety, extra storage or traffic and personnel control. It is profusely illustrated with the various styles and types of fence from which to choose, and lists a few of the thousands of satisfied users of Continental Chain Link Fence.

CONTINENTAL

STEEL CORPORATION · KOKOMO, INDIANA

PRODUCERS of Manufacturer's Wire in many sizes, tempers and finishes, including Galvanized, KOKOTE, BRYTITE, Flame-Sealed, Coppered, Tinned, Annealed, Liquor Finished, Bright, and special shaped wire. Also Welded Wire Reinforcing Fabric, Nails, Continental Chain Link Fence and other products.

Cyclone Fence

superior protection . . .

for ▸ plants
▸ people
▸ property

There are many good reasons why Cyclone Fence is the world's most widely used property protection fence. It is manufactured in such a variety of heights and styles that it is suitable for use almost everywhere fence is required. Cyclone Chain Link Fence, when equipped with top strands of barbed wire, keeps thieves and vandals outside of important industrial plants and vital municipal properties. When installed around schools, Cyclone Fence protects children from wanderlust, from tramps and vicious dogs. At parks and playgrounds, Cyclone Fence establishes boundary lines, controls admissions and regulates opening and closing hours.

Cyclone Fence is a wise investment. It gives you full value for your dollar. Nothing but brand-new, top-quality material is used throughout. Posts and top rails are heavy and rigid. Gates won't drag. The chain link fabric is woven from heavy steel wire and galvanized *after* weaving for greatest resistance to rust and corrosion. For more information on Cyclone Fence, get in touch with our nearest sales office—listed on page 4—and write for our free Cyclone literature and Composite Specifications Folder.

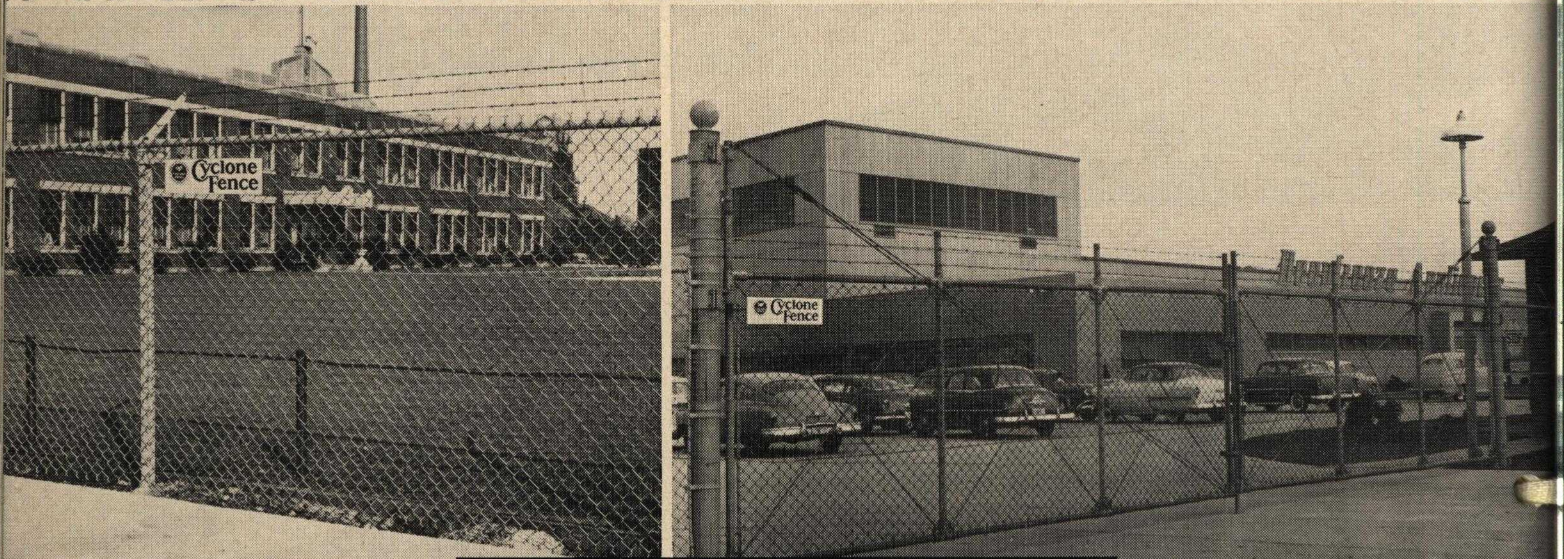
USS

USS Cyclone Fence



CYCLONE INVINCIBLE CHAIN LINK FENCE

Standard height, 7 ft. Built in heights up to and including 12 ft. In all heights, Chain Link fabric is 1 ft. less than complete height of fence.

FABRIC—"Galv-After" Chain Link steel wire, heavily zinc-coated (or hot-galvanized) by hot-dip process after weaving. No. 9 or No. 6 gauge wire woven in a 2-in. mesh. Top and bottom selvages have twisted and barbed finish. Barbing is done by cutting wire on a bias, thus creating sharp points.

POSTS—Line posts—H-column (2″ x 2¼″); weight 4.1 lbs. per lin. ft.; carbon content .35%.

END, CORNER, ANGLE AND PULL POSTS—3-in. outside diameter, standard full-weight tubular steel. Weight 5.79 lb. per lin. ft.

SWING GATE POSTS—3-in. outside diameter; weight 5.79 lb. per lin. ft. for single-swing gates up to and including 6-ft. opening and for double-swing gates up to and including 12-ft. opening.

4-in. outside diameter; weight 9.1 lb. per lin. ft. for single-swing gates wider than 6-ft. opening and up to and including 13-ft. opening; also for double-swing gates wider than 12-ft. opening and up to and including 26-ft. opening.

6⅝-in. outside diameter; weight 18.97 lb. per lin. ft. for single-swing gates wider than 13-ft. opening up to and including 18-ft. opening; also for double-swing gates wider than 26-ft. opening and up to and including 36-ft. opening.

8⅝-in. outside diameter; weight 25 lbs. per lin. ft. for single-swing gates wider than 18-ft. opening and for double-swing gates wider than 36-ft. opening.

SLIDE GATE POSTS—4-in. outside diameter; weight 9.1 lb. per lin. ft. Single- or double-post construction depending on overhead clearance and size of opening.

POST SPACING—Posts are spaced in line of fence not farther apart than 10-ft. centers.

POST SETTING—All posts are set 36 in. in concrete base of proper size and shape to furnish sufficient foundation.

EXTENSION ARMS—Hot-dip galvanized. All intermediate posts fitted with Cyclone Invincible extension arms of pressed steel. End and corner posts are fitted with heavy malleable iron or pressed steel arms. Each arm carries 3 barbed wires securely fastened. Topmost barbed wire is 12 in. above the fabric and 12 in. in or out from the fence line at an angle of 45°.

TOP RAIL—Hot-dip galvanized. Tubular; 1⅝-in. outside diameter; weight 2.27 lb. per lin. ft. or high carbon 1½ in. x 1$\frac{5}{16}$ in. H-column; weight 2.27 lb. per lin. ft. Provided with expansion rail coupling when required. Top rail passes through base of extension arm and forms a continuous brace from end to end of each stretch of fence. Top rail is securely fastened to end, gate and corner posts by suitable pressed steel connections.

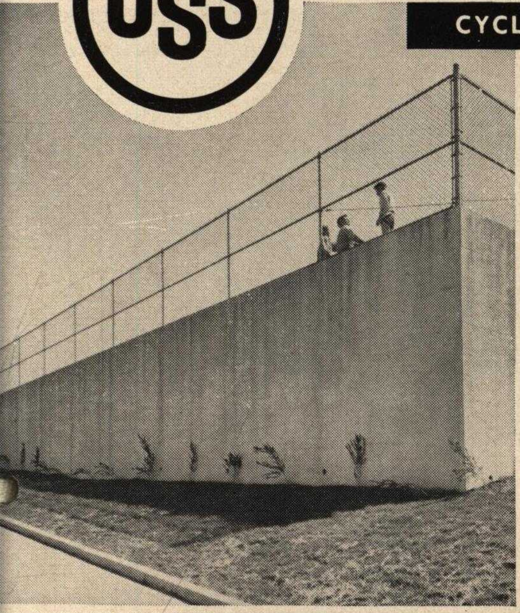
BRACES—Hot-dip galvanized. Horizontal braces furnished only for end, gate and corner posts when fence is 6 ft. or over in height. Brace material same as top rail. Braces spaced midway between top rail and ground and extend to first line post. Braces securely fastened to posts by pressed steel connections, then trussed from the line post back to end, gate or corner posts.

FITTINGS—Hot-dip galvanized. All fittings are malleable cast iron or pressed steel.

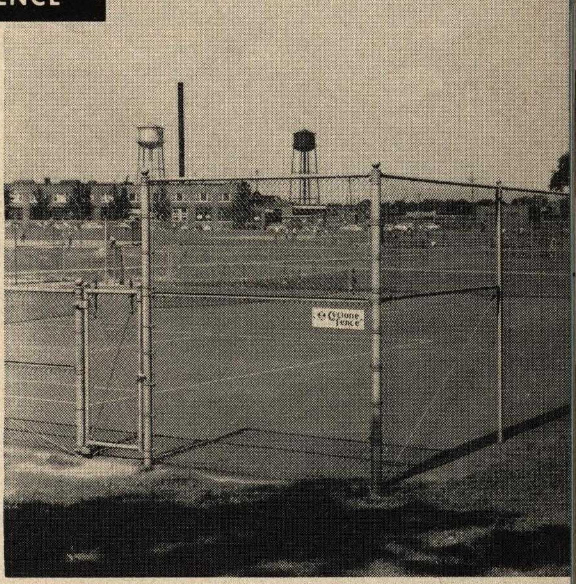
BARBED WIRE—3 lines of 4-point pattern, each composed of two strands of No. 12½ gauge wire, galvanized after weaving.

FABRIC BANDS—Fasten fabric to line posts at 14-in. intervals. Fabric attached by tie wires to top rail at 24-in. intervals.

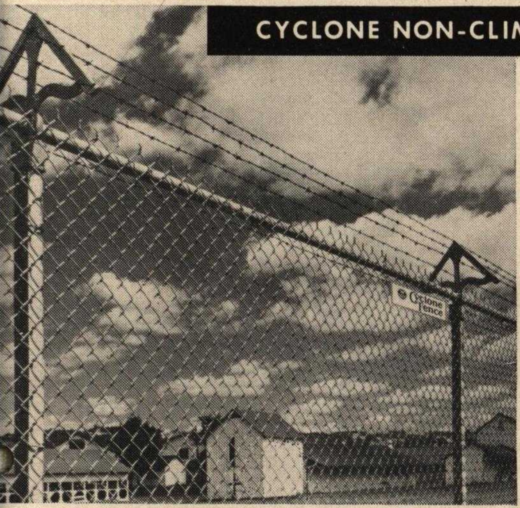
CYCLONE SAFEGUARD CHAIN LINK FENCE



Illustrated here. Standard heights, 3 ft. to 12 ft. Chain Link Fabric is full height of fence. Same general construction as Cyclone Invincible Fence, except top finish, which has no barbed wire. On heights 4 ft. and lower, one edge of fabric has twisted and barbed finish, the other has knuckled finish. Line posts for fence 4 ft. or lower are set 24 in. in concrete base. In fence 5 ft. high and over, all posts are set 36 in. in concrete base. When fence 6 ft. and over in height is installed without top rail, H-column posts have sheared tops.



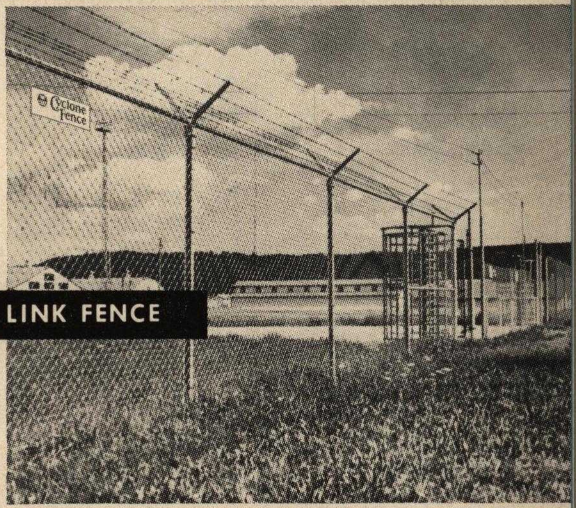
CYCLONE NON-CLIMBABLE CHAIN LINK FENCE



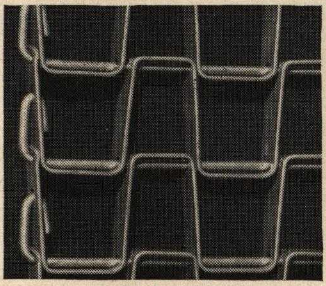
Cyclone Non-Climbable Fence is illustrated here. General specifications are identical with those of Invincible except that Non-Climbable extension arms are "A"-shaped and carry 5 strands of barbed wire. Topmost strand is 12 in. above fabric.

CYCLONE VICTORY CHAIN LINK FENCE

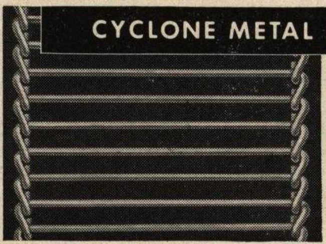
Cyclone Victory Fence's general specifications are identical with those of Invincible Fence except that the Victory extension arms are "V"-shaped and carry 6 strands of barbed wire.



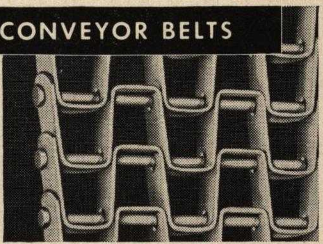
CYCLONE METAL CONVEYOR BELTS



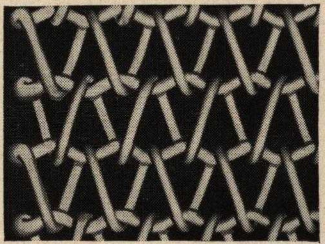
FLAT WIRE
1″ x 1″ mesh—Clinched Selvage



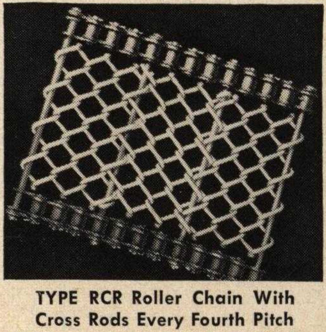
FLEX-GRID BELT



NEW "CONVEY-ALL"
FLAT WIRE BELT
Approximately $1/2$″ square opening



EQUALIZED SPIRAL WEAVE
Mesh designation: 36—24—24



TYPE RCR Roller Chain With Cross Rods Every Fourth Pitch

Cyclone Metal Conveyor Belts save labor, increase production and reduce costs tremendously. They are ideal for a surprisingly wide variety of processes and products. They provide an efficient, economical means of continuous parts and product processing and conveying.

Because Cyclone metal belts are relatively unaffected by heat, steam, water, changes of temperature or any of the usual causes of conveyor belt trouble, they are often ideal for use where rubber, canvas or leather belts might be impractical. Cyclone Metal Conveyor Belts are regularly furnished in various specifications of carbon and USS Stainless Steels.

CYCLONE SPIRAL WOVEN conveyor belts can be woven from many metals or alloys in various opening sizes and wire gauges.

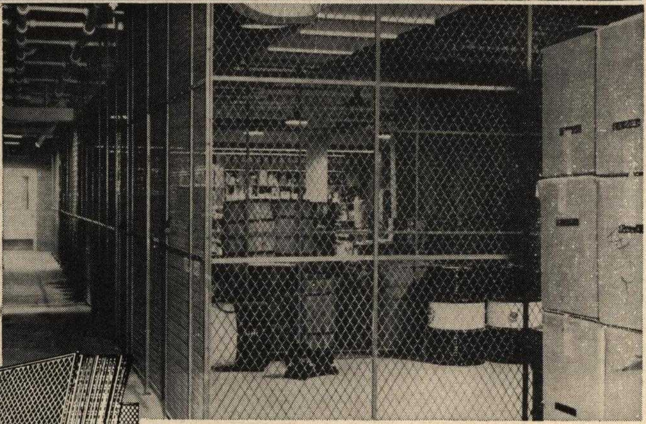
CYCLONE FLAT WIRE belts come in two opening sizes—1″ x 1″ and 1½″ x 1″. Formed from ⅜″ x .046″ cold-rolled strip steel with 12-gauge spindle wires.

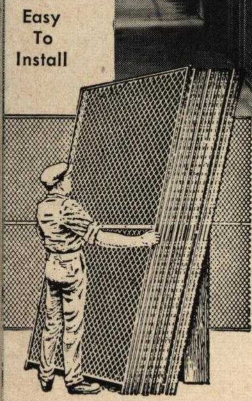
CYCLONE "CONVEY-ALL" FLAT WIRE belt comes in opening size of approximately ½″ square.

CYCLONE FLEX-GRID belt is ideal for continuous processing of baked goods and confections. Size of wire, 9 gauge; pitch, ½″; clear opening, .352″.

USS Cyclone Fence

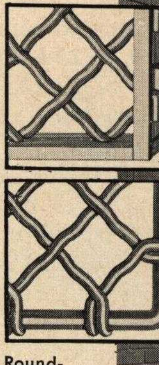
CYCLONE WIRE MESH PARTITIONS

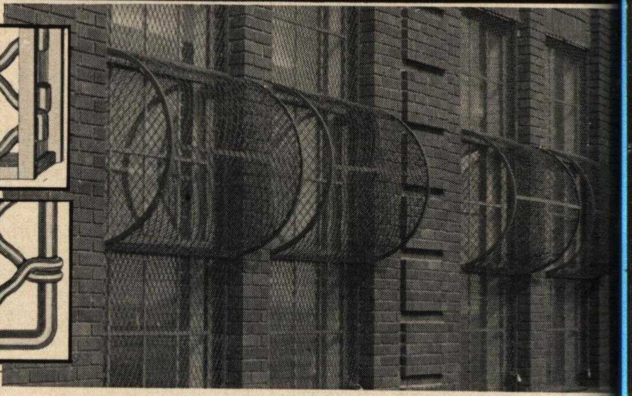




Standard width of panel sections is 5 ft. Standard height, 8 ft. Standard door sections are 4 ft. wide by 7 ft. high with transom panel overhead. Service window is 2 ft. wide by 1 ft. 6 in. high. Panel and door frames are 1″ x ½″ x ⅛″ channel. Partition has ¼″ x 1″ flat cover bar at top with clips for fastening. Fabric is No. 10 gauge crimped steel wire, 1½″ diamond mesh. Standard finish—one shop coat of black paint.

CYCLONE WINDOW AND SKYLIGHT GUARDS





Cyclone window guards are made in two styles: ⅜″ round rod frames for lighter and smaller-sized guards; 1″ channel frames for heavier and larger-sized guards. For special conditions, even heavier channel or angle iron frames can be furnished. Standard guards have No. 10 gauge crimped wire, woven in a 1½″ diamond mesh. Special guards, such as the split type, "V"-shaped guards or basket guards, can be furnished; and size of wire and mesh can be varied to suit special condition. We also manufacture wire mesh guards for skylights, doors, machinery, etc.

COMPLETE RESPONSIBILITY NATIONWIDE FENCING SERVICE

ENGINEERING COUNSEL—Cyclone engineers will make a complete study of your fence requirements and submit recommendations, layouts, and estimates of cost.

DIAGRAMS, PRICES, ETC.—When writing for information, prices, etc., send simple diagram of proposed fencing. Give measurements of each stretch and total measurements. State whether single- or double-swing or sliding gates are wanted and give size of openings.

CYCLONE ERECTION CREWS—There are many erection crews constantly at work installing Cyclone Fence. However, if you prefer to have your own workmen install the fence, a Cyclone erection superintendent will be furnished at nominal charge to direct them.

Only UNITED STATES STEEL Corporation manufactures Cyclone Fence. Accept no substitute.

Cyclone Fence is one of the family of well-known steel products that bears the USS mark. This symbol represents the highest quality and the finest metallurgical service. It is further assurance that the Cyclone Fence you buy will give you long service and full value for your money.

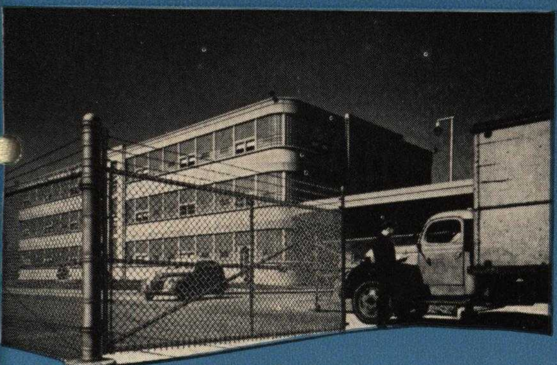
What Makes a PAGE chain link FENCE the RIGHT FENCE for YOU

ACCO

PAGE FENCE is a product of
Page Steel & Wire Division,
American Chain & Cable Co., Inc.,
Bridgeport, Connecticut



Page Fence with Double Swing Gate

● PAGE Chain Link FENCE is the modern day product which followed the woven wire fence fabric originated by J. Wallace Page in 1883. It has a long and proud history of product progress and quality control that assures long, dependable property protection. Your PAGE FENCE can be comprised of a choice of units to best meet your individual needs or preferences. It will be expertly erected by a nearby Page Fence Association member firm which is technically trained, long experienced and thoroughly reliable. This firm knows regional conditions affecting fence and can render expert service. On pages which follow are facts about choices you can make when deciding on *the right Page Fence for you.*

Page Fence with Overhead Slide Gate

America's First Wire Fence
—Since 1883

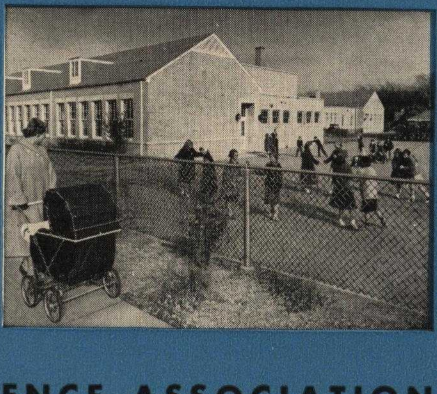
Page Fence with Double Cantilever Gate



PAGE FENCE ASSOCIATION

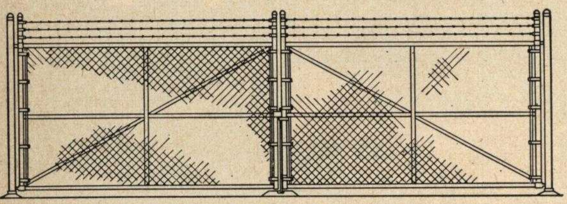
How many styles of PAGE Heavy Industrial Fence are available?

Choose from 8 Basic Styles, as below . . .

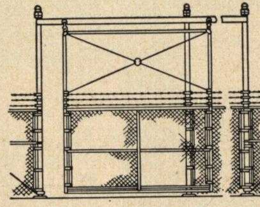
NOTE: Standard Heights, Heavy Construction Fence, are 5′, 6′, 7′, 8′, 9′, 10′, 11′, 12′
Standard Mesh Size, All Styles, 2 Inches
Standard Wire Gauges, All Styles, No. 9 or No. 6

FENCE STYLES	LINE POSTS	END AND CORNER POSTS	TOP RAIL OR TOP WIRE	BARBED WIRE
 **STYLE OTR**	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	1⅝″ OD Galv. Std. Pipe—2.27# per ft.	None
STYLE OW	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	7 Ga. H. C. Aluminized Coiled Steel Wire	None
 **STYLE 3TR**	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	1⅝″ OD Galv. Std. Pipe—2.27# per ft.	3 Strands
STYLE 3W	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	7 Ga. Aluminized Coiled Steel Wire	3 Strands
 **STYLE 3TRV**	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	1⅝″ OD Galv. Std. Pipe—2.27# per ft.	3 Strands
STYLE 3WV	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	7 Ga. H.C. Aluminized Coiled Steel Wire	3 Strands
 **STYLE 6TR**	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	1⅝″ OD Galv. Std. Pipe—2.27# per ft.	6 Strands
STYLE 6W	2½″ OD Galv. Std. Pipe—3.65# per ft. or 2¼″ x 1⅞″ Galv. H-Beam—4.1# per ft.	3″ OD Galv. Std. Pipe—5.79# per ft.	7 Ga. H. C. Aluminized Coiled Steel Wire	6 Strands

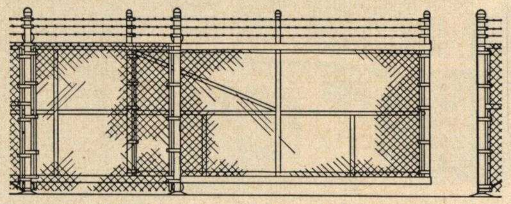
SWING, SLIDE and CANTILEVER GATES



Double Swing Gate



Overhead Slide Gate



Single Cantilever Gate

SWING GATE FRAMES ● 2″ OD Standard pipe wt. 2.72 lb. per ft. with internal bracing of 1⅝″ OD standard pipe wt. 2.27 lb. per ft.—welded at all joints to provide rigid watertight construction.

OVERHEAD SLIDING GATE FRAMES ● Shall be same general construction as swing gates but shall have suitable extensions for attaching trolleys and bracing.

CANTILEVER GATE FRAMES ● Top and bottom members shall be 2½″ OD galvanized standard weight pipe for leaf lengths to 16′0″ and extra heavy galvanized pipe for leaf lengths over 16′0″ to 28′0″ inclusive. These members shall be the roller members of the frame. Internal bracing shall be 2″ OD and 1⅝″ OD galvanized standard pipe. Rollers shall be galvanized malleable iron equipped with high quality roller bearings for easy operation.

GATE FILLERS ● Frames shall be filled with same specifications of fabric as is used in line of fence.

HINGES ● Offset type allowing gates to swing back 180° parallel with line of fence and shall be made of malleable iron and forgings.

DOUBLE LATCH ● Shall be drop bar gravity type, securely bolted to gate frame, and engage a heavy malleable iron gate stop anchored in concrete footing.

SINGLE LATCH ● Shall be malleable iron gravity type which will automatically engage pin attached to gate frame. All latches readily locked with padlock.

GATE KEEPER ● Gate frame to be equipped with keeper which automatically engages gate frame when swung open.

What other important advantages are offered by PAGE?

A wide variety to meet your individual needs or preferences

Choose from 4 Fabric Materials

PAGE CHAIN LINK FABRIC • is now woven in a choice of four distinctly different fabric materials. Each of these possesses characteristics which meet individual preferences, or make it more suitable to meet certain climatic or service conditions. All have a semi-flat weave which provides a natural bearing surface at each bend in the wire. All can be stretched securely without distortion. These fabric materials are:

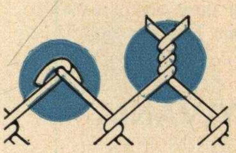
ALUMINIZED STEEL • After years of research and testing, PAGE developed and patented a process for bonding a coating of commercially pure aluminum to steel wire by a molten process. It provides longer corrosion resistance than zinc coating, yet its cost is comparable with fence having a shorter life expectancy.

GALVANIZED STEEL • PAGE fabric of this class is woven of time-proved open-hearth steel wire and hot-dip galvanized after weaving. Weight of zinc coating per sq. ft. of uncoated wire surface 1.20 oz., conforming with A.S.T.M. Specification A392-55T and Federal Specification RR-F-191A, to assure reliable quality and dependable service.

STAINLESS STEEL • This special chrome-nickel type of fence fabric is immune to practically all corrosive elements and is particularly advantageous near salt water and in areas where the air is laden with industrial smoke, sulphur or other factory emissions. Its use means protection that lasts a lifetime.

ALL-ALUMINUM • This is another material in the non-corrosive class. It will not rust, nor will it discolor materially under unfavorable conditions. Because of the PAGE method of semi-flat weaving it has exceptional strength. It will not corrode; is maintenance free and long lasting.

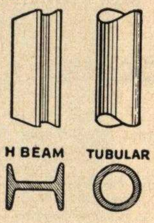
Choose Barbed or Knuckled Fabric Edges



When used for industrial enclosures, PAGE fabric is generally furnished with both selvages barbed, but it can be supplied with one or both edges knuckled if so specified. For residential enclosures it is customary to use fabric having one edge barbed and the other knuckled.

Choose Tubular or H-Beam Line Posts

PAGE provides a choice of two types of line posts. First, the popular, standard Tubular Post of 2½" OD hot galvanized steel. The other is the H-Beam Post, formed of high carbon steel to 2¼" x 1⅞" dimensions and heavily galvanized. Both styles are spaced approximately 10' on centers and are deep set in bell-shaped concrete footings crowned at top to shed water.



Choose Top Rail or Tension Wire

Because it adds structural strength and fabric protection, the use of 1⅝" galvanized pipe top rail is preferred with styles **OTR**, **3TR** and **6TR**. The fence retains its attractive appearance and maintenance costs are saved. When first cost *must* be kept at a minimum, No. 7 gauge Aluminized coiled steel tension wire in lieu of top rail may be used with styles **OW**, **3W**, and **6W**.

Choose Single or Double Extension Arms

Three styles of supporting arms for barbed wire fence topping are available. *(See illustrations, opposite page.)* These are vertical and angle arms for three strands and "V" arms for six strands. Angle arms can be set either inside or outside at 45°. Extensions for three barbed wire strands (angle style) have malleable iron bases and arms of pressed steel, hot galvanized after fabrication, or solid aluminum sand castings. All other styles with malleable iron bases and arms of pressed steel, hot galvanized after fabrication.

Choose from 6 Gate Styles

PAGE supplies single or double styles of Swinging, Overhead Sliding and Cantilever Gates to match the type and height of the fence and dependably perform the specific entry and egress services required. All are expertly designed, made of carbon steel pipe, rigidly braced and welded at all joints to prevent sagging and withstand rigorous usage.

Now a New, Better Barbed Wire

For fences to be topped by extension arms, the new PAGE corrosion-resisting barbed wire is available. Each strand consists of two No. 12 gauge twisted Aluminized steel line wires with No. 14 gauge Aluminum 4-pt. barbs spaced not more than four inches apart.

Sturdy End, Corner and Gate Posts

END AND CORNER POSTS • Standard hot galvanized steel pipe 3" OD weighing 5.79 lbs. per ft., for setting in bell-shaped concrete footings crowned to shed water.

SWING GATE POSTS • Same as end posts but in following sizes —

Pipe Size OD	Wt. per Ft.	Gate Opening Single, inclusive	Gate Opening Double, inclusive
3"	5.79 lbs.	To 6'	Up to 12'
4"	9.11 lbs.	Over 6' to 13'	Over 12' to 26'
6⅝"	18.97 lbs.	Over 13' to 18'	Over 26' to 36'
8⅝"	25.00 lbs.	Over 18' to 32'	Over 36' to 64'

CANTILEVER GATE POSTS • 3" OD standard pipe wt. 5.79 lb. per ft. for leaves to 16' inc. and 4" OD wt. 9.11 lb. per ft. for leaves over 16' to 28' inc.

OVERHEAD SLIDING GATE POSTS • 4" OD standard pipe wt. 9.11 lb. per ft. for single and double gates up to and including 36' opening. Size of posts above this opening will depend on size of opening.

Quality Fittings for All Purposes

END, CORNER AND GATE POST TOPS • Hot galvanized malleable iron or aluminum sand castings, drive fitting outside of post to exclude moisture.

BRACE AND TENSION BANDS • Unclimbable beveled edge type with ⅜" diameter square shouldered aluminum carriage bolts, non-removable from outside fence.

BRACING • All terminal posts to be braced by means of 1⅝" OD horizontal compression member wt. 2.27 lb. per ft., securely attached to terminal and first line posts with malleable iron or sand cast aluminum fittings and beveled edge bands; truss braced from first line post to bottom of terminal with ⅜" rod and take-up. Corner posts to be braced in each direction.

TENSION BARS • For attaching fabric to terminal posts. Shall be 3/16" x ¾" high carbon steel attached to terminal post by means of beveled edge bands.

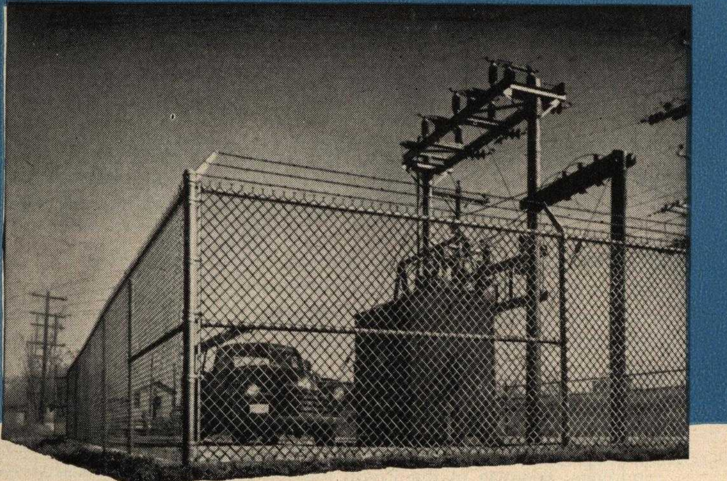
MISCELLANEOUS FITTINGS • All fittings entering into the fence necessary to make a complete installation will be malleable iron, pressed steel, sand casted aluminum or forgings. All ferrous material to be thoroughly galvanized by the hot dip method.

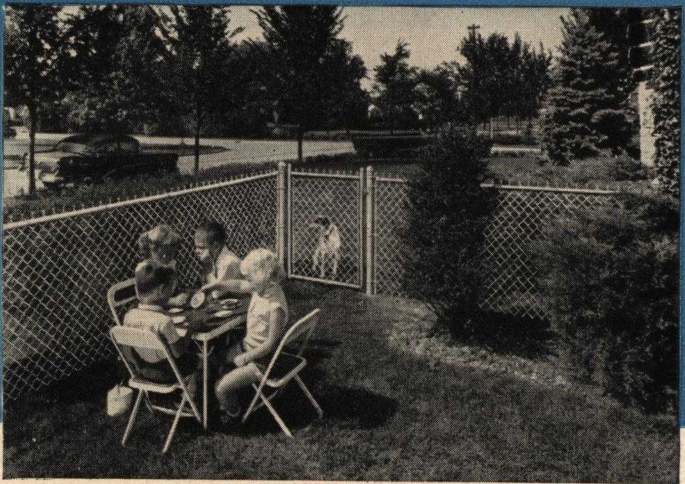
**PAGE FENCE FOR
RESIDENTIAL OR SPECIAL USES**

When planning a fence to safeguard an industrial or institutional property, think also of protective fence for your home or for a tennis court, baseball backstop, swimming pool, animal run or other special use. PAGE FENCE ASSOCIATION urges you to send for specific information relating to your needed enclosure. Address us at Headquarters, Monessen, Penna.

PAGE FENCE Nation-Wide Erection Service

It's Unique, Expert, Localized





• In more than 100 districts throughout the nation there are local, responsible members of PAGE FENCE ASSOCIATION—the largest fence engineering, erecting and servicing organization. These PAGE experts own their own plants and equipment, have had long experience; operate crews of trained workmen. Each firm is permanently located and has lasting interest in every job it handles. It is conveniently located for quick service of any kind.

These capable engineers will survey property grades, take measurements, study vicinity conditions, furnish cost estimates. Or they will prepare estimates on receipt of sketch showing measurements for each stretch and total over-all measurements, and style of gates wanted. They will take complete charge of all work, or if you prefer to do the erecting they will provide supervision and tools. For name of Association Member nearest you, check the list below.

now! new creative horizons for interiors ...beautiful, versatile **FiliGrille**

Here's the new *heavy,* ¾" thick, ornamental grillework. Made from a quality modern material—polystyrene—to fit modern design. It's the exclusive FiliGrille, offering new beauty, new versatility, new practicality for today's decorative requirements.

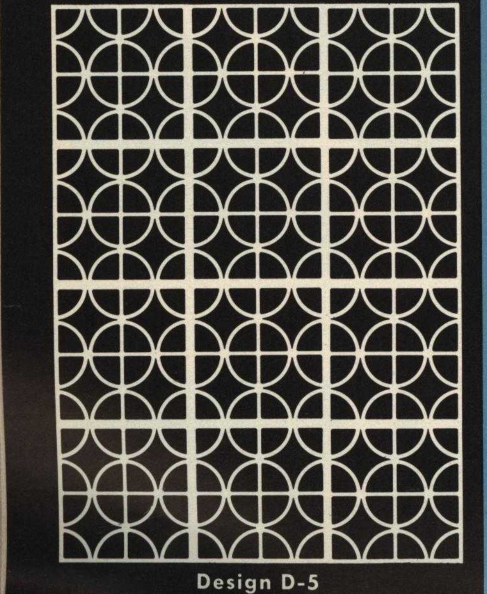
Custom built panels and framed assemblies are furnished to fit almost any need—space dividers, screens, wall plaques, drop ceilings, entryways, railings, bank partitions, organ grilles, and many other uses.

FiliGrille—a new creative design medium—is extremely versatile and easy to apply in new or existing buildings.

Openwork blocks of low-static polystyrene; 8" x 8" x ¾" with tongue and groove edges, are chemically welded together and assembled within a variety of satin finished, anodized aluminum framing systems to fit the application. FiliGrille also is furnished for trimming out in wood to match paneling or decor.

FiliGrille engineering provides rapid and economical erection.

Exterior FiliGrille is available for factory approved applications.



Design D-5

BLOCK DESIGNS

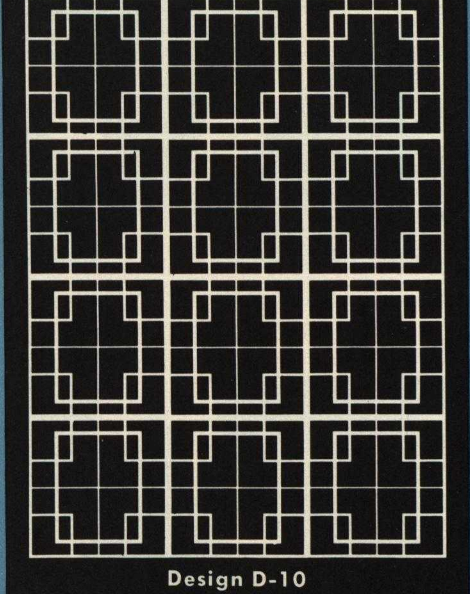
These two FiliGrille block designs are available at present. Other designs are in the process of development.

Design D-10 may be positioned to make a vertical or horizontal pattern.

Your individual block design can be reproduced as a special FiliGrille pattern. Information is available upon request.

COLOR

FiliGrille standard white is ideally suited to most color schemes. If desired, it can be factory painted with your specified color, or with manufacturer's aluminum, gold-brass or copper. Special finished framing and binding are available to match the metallic FiliGrille finishes.



Design D-10

FiliGrille BOUND PANELS

Custom made FiliGrille bound panels are edged with aluminum binding for use as wall plaques, as floating screens mounted between aluminum posts, or as screens installed in customer's wood framing. By adding panels, an installation can be extended to decorate any reasonable size area.

Maximum size for a single panel is 48″ x 48″, 6 blocks by 6 blocks, which can be doubled to 48″ x 96″ with the insertion of an aluminum stiffener. Whenever the long dimension excedes 48″, the bound panel is made from two sections separated by an aluminum stiffener.

When a specified panel dimension does not conform to the 8″ block module, blocks are factory cut to fit.

Screen supporting-posts are furnished with adjustable top and bottom mountings. All fasteners are concealed.

Panels without binding are available for use with customer's framing. Diagonal and curved cuts to fit contoured frames can be made on unbound panels only. Templates must be furnished. Size limitations of unbound panels conform to the specifications for panels used in Framed Assemblies.

FRAMED ASSEMBLY

FiliGrille FRAMED ASSEMBLIES

Custom made FiliGrille panels without binding are framed in assemblies for use as area dividers and screens, extending from floor to ceiling, or open at floor and ceiling.

Variations of these frames are possible. FiliGrille assemblies can be factory fabricated using panels of wood or other materials in combination with FiliGrille panels.

Any size assembly can be supplied that conforms with the following requirements. Maximum dimensions of each FiliGrille panel in an assembly is 48″ x 48″, 6 blocks either direction. Maximum width between vertical posts is 48″.

To achieve the height desired, panels can be stacked one above the other with aluminum stiffeners or horizontal rails inserted between panels. When a specified dimension does not conform to the 8″ module, blocks are factory cut to fit.

FiliGrille panels can be removed after installation without dismantling the frame. Base rail and post mounting assemblies permit adjustment to minor variations between ceiling and floor. All fasteners are concealed.

specifications

GENERAL

FiliGrille ornamental grillework as shown on plans shall be manufactured by Holcomb & Hoke Mfg. Co., Indianapolis, Indiana; and shall be installed by an authorized representative of that Company.

FiliGrille assemblies shall be factory fabricated of basic unit blocks 3/4″ x 8″ x 8″, chemically welded into panels and bound or framed as shown on plans. Unit blocks shall be provided with tongue and groove edges to insure maximum joint strength.

BLOCK MATERIAL

Unit Blocks: 100% virgin, low-static Polystyrene.

Color: —*select one*—

(a) Manufacturer's standard white.

—*or*—

(b) Painted with alkyd resin enamel, color________, No. ________, made by ________.

—*or*—

(c) Painted with manufacturer's special metallic butyrate ________ finish. *Select one:* Aluminum, Gold-Brass or Copper.

BINDING

Binding shall be of clear anodized satin finish aluminum 5/8″ x 1″ OD with .050 minimum wall thickness.

Finish: —*select one*—

(a) Standard clear satin anodized.

—*or*—

(b) Custom ________ satin metallic anodized. *Select one:* Gold-Brass or Copper.

—*or*—

(c) Special metallic butyrate ________ finish. *Select one:* Gold-Brass or Copper.

DISTRIBUTED BY:

FRAMING

FiliGrille framing system as shown on plans shall consist of prefabricated elements ready for installation at site. Framing shall be at least 1½″ x 2½″ OD, anodized aluminum with .078 minimum primary wall thickness.

Framing shall be so designed as to provide for insertion or removal of FiliGrille panels without dismantling the basic framing. All connectors to floor, ceiling and between standard units of assembly shall be concealed.

Finish: —*select one*—

(a) Standard clear satin anodized.

—*or*—

(b) Custom ________ satin metallic anodized. *Select one:* Gold-Brass or Copper.

—*or*—

(c) Special metallic butyrate ________ finish. *Select one:* Gold-Brass or Copper.

We reserve the right to change our designs and specifications at any time.

FiliGrille

Manufactured by HOLCOMB & HOKE Mfg. Co., Inc.
1545 Van Buren • Indianapolis 7, Indiana

. . . manufacturers of FOLDOOR fabric covered folding doors and partitions

For additional information and price on FiliGrille write Holcomb & Hoke, or contact our local FiliGrille distributor or dealer, listed in the Yellow Pages under Ornamental Grillework or under Folding Doors.

ARCHITECTS' SPECIFICATIONS

Furnish and install Bulletin (or Directory) Board as manufactured by NELSON-HARKINS INDUSTRIES, 5301 N. Kedzie Avenue, Chicago 25, Illinois. Board shall be MODEL No. 130, SIZE 30 High, 24 Wide. MATERIAL shall be ALUMINUM (Stainless—Bronze—Aluminum) with background for CHANGEABLE LETTERS (changeable letters or cork tack back).

GENERAL INFORMATION

Opening wider than 34 inches requires two doors.

Changeable letters from ¼″ to 2″ in several styles are available for use with standard grooved felt covered changeable letter backs. See back page for letters.

The cork back bulletin board is ideal for posting with thumb tacks. Cork may be natural tan or covered with felt to match changeable letter backs. In all cases black felt will be used unless specified otherwise. Blue, brown, maroon, crimson and green stock colors.

no. 152
extruded aluminum or bronze

Note: **The boards shown on the following pages can be made up using the above mouldings in most cases. Special shapes can be supplied in kalamein bronze or kalamein stainless steel at extra cost.**

Our strip boards are shipped complete with all names. Changeable letter boards will also be set up before shipping.

■ bulletin boards · changeable LETTER TYPES

name capacity of changeable letter board

In all cases the capacities listed in the table to the right allow for a heading in larger letters to be placed at the top of the board, such as, "DIRECTORY," (one line only), in either ¾", 1", or 1½" high letters depending upon the size of the board.

In all cases we have allowed ¼" space between each listing, excepting the ⅜" letters where ⅛" only is the spacing between each listing.

These capacities are approximate, and they are the maximum for each size board.

Our method of figuring is as follows:

¼" letters are 3 to 1"
⅜" letters are 3 to 1¼"
½" letters are 3 to 1½"
¾" letters are 3 to 2¼"

In other words, for figuring purposes you allow the width of the letter the same as the height. For example, assuming that there are 21 characters in the name, this will take up a space of 7" in width using ¼" letters.

ALLEN MARKING PRODUCTS, INC.
806 DELAWARE ST., KANSAS CITY 5, MO.

Allenite

75 YEARS AGO . . . The Allen company began making rubber stamps, cutting keys, stamping plates . . . a general local service. But the challenge to pioneer in the development of "Marking," in all its many facets, set the direction of this firm.

Today this operation is divided into several product divisions, but one of the most influential is the Name Plate Engraving Department.

Now with the discovery of Allenite, any school, church, store, office or public building can have signs that are a distinctive part of its overall decor. The ways in which this plastic laminate can be used are limited only by the imagination of the sign designer!

5 REASONS WHY ALLENITE ENGRAVED PLATES ARE SPECIFIED

1. Wide range of 20 Decorator Colors to harmonize or contrast with interior trim or furnishings.
2. Complete complimentary selection of letter styles and sizes.
3. Latest designs in extruded aluminum holders and attachments.
4. Skilled craftsmen offer a consulting service as an aid in custom planning.
5. Allenite provides the finest permanent type signs that technical know-how and skill of manufacture can produce.

ADVANTAGES OF ALLENITE

LIGHT IN WEIGHT . . . resists breakage . . . handles easily and safely.

DURABLE FINISH . . . resists fading or cracking.

WEATHER RESISTANT . . . no protective coating needed to retain finish.

TEMPERATURE RESISTANT . . . withstands 270° temperature and does not conduct electricity.

GUARANTEED BOND between surface and color core.

NO PAINT PIGMENT . . . letters are engraved to core, exposing contrasting color center.

ALLENITE IS ECONOMICAL

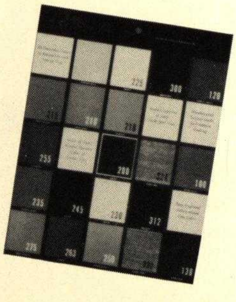
LOW INITIAL COST as compared to metal or painted signs.

NO MAINTENANCE . . . cleaned with a damp cloth.

EASY TO INSTALL with bracket, holder, or adhesive.

NO REPLACEMENT . . . like new after years of service.

WRITE FOR THE ALLENITE COLOR CHART



This hang-up card vividly displays the full range of pastels and wood grains of this quality material. It is designed to assist the architect and engineer to select the correct combination of "go-together" colors.

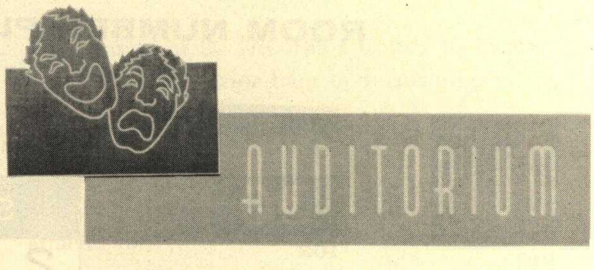
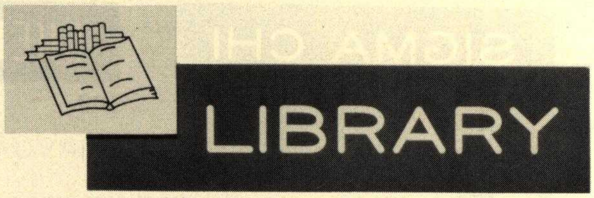
PICTO IDENTIFICATION PLATES

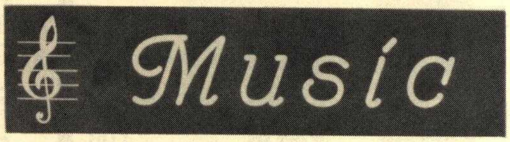
scale: 1/4 actual



STYLE 1



STYLE 2



STYLE 3

"Pictures Speak Louder than Words." Before the development of the alphabet, the early Egyptians conveyed messages by carving or painting pictographs on tombs and monuments. Today modern "picture writing" is used to quickly transmit an idea to a fast moving world.

This PICTO series of Allenite plates is so designed as to be readily understood, visually as well as literally, by combining the title with selected symbols.

Such plates are both pleasing, decorative and effective. Any combination of colors can be used.

ALLEN MARKING PRODUCTS

123

124

"There is an Art to Inlay"

The fanciful arabesques of Greece and Rome, whose inlaid patterns were the cynosure of all decorative art, have inspired this class of architectural plates.

This series of Allenite plates employs the same technique of combining the rich decorator color background with contrasting inlaid geometrical designs.

Such plates are not only attractive in appearance but also capable of harmonizing with the decor.

SILOET TOILET SIGNS

These personable silhouettes are cut to exacting outline and very handily provide an artistic rest room insignia. As in all Allenite products, any combination can be specified from the profuse range of decorator colors. Plate designs are interchangeable.

ACTIVATOR PROCESS ADHESIVE

When applied in accordance with the manufacturer's directions, this material is guaranteed to adhere Allenite signs to metal, glass, tile, plastic, wood, or plaster. The installation is fast and the sign can be removed and relocated by applying additional activator.

SPECIFICATIONS

Signs shall be attached to ....with Activator Process Adhesive, as furnished by Allen Marking Products, Inc., Kansas City, Mo. Mounting instructions shall be supplied by the manufacturer.

OUR PLEDGE

The Allen Marking Products, Inc. is one of the oldest and largest manufacturers of marking devices in the Midwest. Our skilled craftsmen patiently and proudly apply their engraving art to produce signs and plates worthy of the finest in architectural installations. We guarantee satisfaction and, if for any reason our customer is not satisfied, we will do all we can to correct. If you have any special problems, please make inquiry, and we will do all we can to be helpful. We supply estimates promptly. Samples are also available, but particularly we recommend our Allenite Color Chart. Write for yours today!

ALLEN MARKING PRODUCTS, INC.
806 DELAWARE ST., KANSAS CITY 5, MO.
Telephone VIctor 2-0963

ALLENITE CONSTRUCTION

Allenite signs are machine engraved on 1/8" phenolic plastic laminate base. Backgrounds are satin finished. Letters are deeply and evenly cut into the surface, exposing a contrasting color core beneath. Choice of 20 colors are made available as listed on page 2 or shown on the Allenite Color Card, which authentically reproduces the full range of colors and wood grains.

ALLENITE SPECIFICATIONS

All signs shall be of Allenite Plastic Laminate, as manufactured by Allen Marking Products, Inc., Kansas City, Mo. There shall be................. Catalog No.................. signs engraved on Color No................. All lettering shall be style.............., ..." in height. Signs shall be furnished with Catalog No..................... Mounting (or Activator Process Adhesive) (or #................ Screws).

If you need a custom designed **control panel** for an elevator, switchboard or some intricate electronic equipment, BEST guarantees to the letter, execution of exact specification.

UTILITY / BEAUTY / ECONOMY

A practical **building directory** must meet three standards. It must be designed to be easily read and understood. Secondly, it should be attractive and in accord with the architecture and decoration of the building or area it occupies. The third requirement is economy. It must be competitively priced, free of maintenance and easily and inexpensively alterable when necessary. These three qualities are a BEST guarantee. These signs are custom-made to fit your specific needs. Twenty colors are available and may be mounted on a number of fine woods.

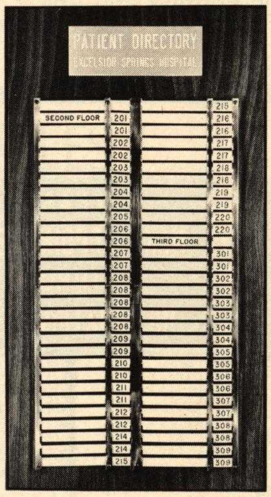
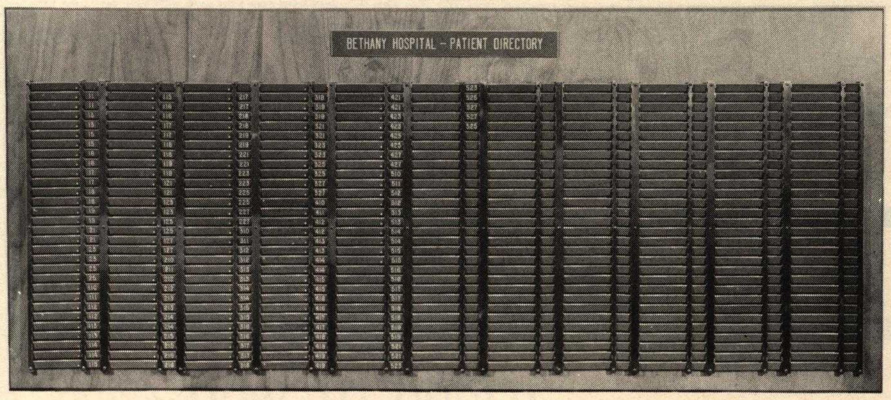
Thirty years of experience in the manufacturing of **memorial plaques,** large or small, guarantees the best workmanship and materials. Memorials may be made to any specification out of laminated melamine plastics, brass, bronze, stainless steel, or aluminum.

INTERCHANGEABLE DIRECTORIES



PATIENT DIRECTORY
EXCELSIOR SPRINGS HOSPITAL
SECOND FLOOR
THIRD FLOOR

Design ESH / 17″ x 36″



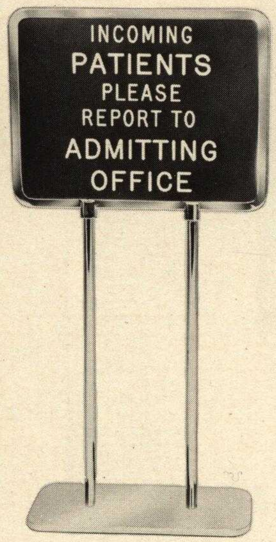
BETHANY HOSPITAL - PATIENT DIRECTORY

Design BH / 70″ x 32″

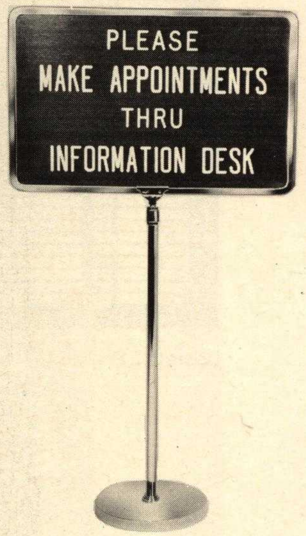
Number plates and various heading plates may be lettered permanently and one or more plates can be removed readily. There are many applications such as: bed directories and operating schedules for hospitals; room directories in hotels, motels and clinics and many more too numerous to mention. At a glance the directory will tell how many beds are available, how many rooms are out of service and why, quarantine patients, male or female patients and attending physician's name.

FLOOR AND COUNTER SIGNS

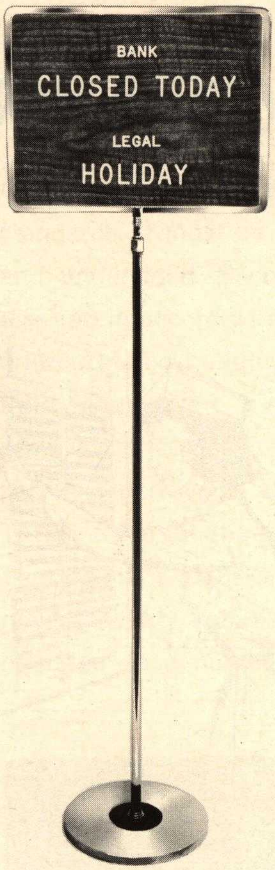
Counter signs, regular and adjustable height, are available as shown. Floor signs measure 14″ x 11″ and come in medium and heavy duty weights. Adjustable for height. Both types are gleaming chrome and any color insert may be used, lettered one or both sides.



No. C-1 / 7″ x 5½″



No. C-2 / 11″ x 7″



No. F-3 / 14″ x 11″

MATERIALS

ADVANTAGES OF "ES" MELAMINE PLASTIC

The most practical material for memorials, signs and directories. This product resists fading, tarnishing or discoloration and will retain its beauty through the years—indoors or out. It is available in 2 thicknesses, 1/16″ and 1/8″, and signs may be made any size up to 36″ x 42″. The most economical material yet discovered. Choose from colors and wood grains shown on back cover. All have a rock-hard surface to resist scratches and may be washed with mild soap and water, and may be lettered one or both sides.

Signs are also available in bronze, brass, stainless steel, aluminum and plexiglas.

HOW TO SPECIFY:

Most architects prefer to specify only letter height, style or styles, color and method of attachment. The following is a typical specification:

SIGNS. All signs shall be of type "ES" laminated plastic as manufactured by Best Manufacturing Company of Kansas City, Mo. and shall consist of 35-Design #10-Room Numbers (1 through 35). All other signs shall have 1" Moderne-C style letters on a 2" high plate x length required by copy. Where length would exceed 16" two or more lines may be used, increasing height of plate 2" for each line added. Where indicated supply right angle wall signs with (specify wood) brackets to read from both sides. All other signs shall be mounted flat and all to be attached with (specify attachments). Colors shall be (specify background and letter).

LETTER STYLES

Charts below indicate approximate number of letters that will fit signs of lengths shown.

1. Give quantity of each and copy.
2. Give material.
3. Give color of plastic or finish of metal.
4. Give letter size (can be approx.)
5. Give letter style or styles, but if specifying length of plate be sure to check chart above to be sure size and style of letter will fit.
6. If not specified we will use double letter height for top to bottom dimension of sign. For example: a 2" plate with 1" letters, etc.
7. Specify any of following attachments (included in price):
    - Wood screws
    - Sheet metal screws
    - "One-way" screws (for wood or metal)
    - Adhesive (specify surface)
    - Expansion shields (masonry)
    - Brads

    (If you don't specify we will supply holes and wood screws).
8. If right angle wall bracket or ceiling bracket signs are to be supplied be sure to specify type of wood. On one sided signs or signs with arrows, be sure to sketch or specify which end will have bracket.

WALNUT BLACK MAHOGANY

Cadillac Engravers P. O. Box 4215 Fort Lauderdale, Florida

THE *Cadillac* LINE

CADILLAC ALUMINUM LINE

(FRONT COVER)

This newly designed line will fill your needs for a line of signs, check desk calendars, folder racks, desk name plates, counter signs, projecting models (made to read one or two sides) glass overhanging models, door and wall models, room numbers.

FEATURES — YOUR SELECTION OF 10 DIFFERENT PANEL COLORS

Black, red, brown, green, gray, tan, white, blond (grained) mahagony (grained) walnut (grained).

All materials have a polished clear bakelite surface and can be kept immaculate simply by wiping with a damp cloth. Lettering is engraved into the matte white core. There is no filling to discolor, fade, or chip out. (White panels have black letters.)

Cadillac Deluxe line of fixtures and back mounting plates. Nowhere can you obtain signs of such distinctive appearance.

All metalwork is aluminum anodized in either a natural or gold finish, and highly polished. It neither tarnishes nor fingermarks and retains its lustre through the years. The quality and outstanding functional beauty are a definite addition to the appearance. Designed in cooperation with architects and decorators, their simplicity harmonizes with today's modern decor.

Hundreds of complete installations from coast to coast in banks, hospitals, schools, churches, and offices, assure the user of a continuing replacement service in the future.

Listed below are the items appearing on the cover of this folder. Engraved replacement panels are available for all units, and are easily changed. Panels are held in place with double-coated tape. Replacement panels are shipped with new tape.

No. 417 Name plate. A feature is the 1″ x 6″ name plate mounted on clip-plate. The clip-plate slides over the back plate. Base is ¼″ x 1¼″ x 6¾″.
No. 418 Name plate. The back plate is ⅛″ x 2″ x 9½″. Base ¼″ x 1½″ x 10½″.
No. 419 Name plate. The ⅛″ x 2″ x 9½″ back-plate is supported at a 55° angle by two solid, machined aluminum legs.
No. 423 Combination sign. A feature is the 1″ x 6″ name plate mounted on clip-plate. The clip-plate slides over the back plate. Designating plate is 2″ x 9″ base is ¼″ x 1½″ x 10½″; legs raise the back plate from the base.
No. 430 and 431 Direction sign. There is a plate on each side with arrow pointing to the left on one side and right on the other. Dimensions 2¾″ high, 2″ wide, 9″ long.
No. 440 Designation sign. The base is ¼″ x 1½″ x 10½″; the back plate is ⅛″ x 3″ x 9⅜″.
No. 442 Designation sign. Size 14½″ x 11¾″.
No. 443 Designation sign. Size 5½″ x 9¾″.
No. 444 F.D.I.C. sign for banks. The base is ¼″ x 1½″ x 9⅜″. Back plate is 1/16″ x 3½″ x 8″.
No. 445 Savings and Loan Insurance sign. Back plate is 1/16″ x 3½″ x 8″.
No. 446 Designation sign. Base ¼″ x 3″ x 14¼″, over all size 9″ x 11¾″.
No. 448 and 449 Club Payment signs. Back plate is 5″ x 9¾″. Base 2″ x 10¼″.
No. 451 Single Folder Rack. Base 5½″ x 2¾″, height 6¼″, capacity 1″ in depth.
No. 452 Double Folder Rack. Base 10½″ x 2¾″, height 6¼″, capacity 1″ in depth.
No. 454 Four Section Folder Rack. Base 15″ x 3″, height 6¼″, capacity 1″ in depth.
No. 455 Calendar Rack. Base ¼″ x 3″ x 14¼″. Back plate 1/16″ x 6¼″ x 13¾″
No. 458 Card Stand. Base is ¼″ x 2″ x 10⅜″. Back plate ⅛″ x 5″ x 9¾″ Card Holder 1″ x 3⅞″
No. 468 Holiday Standard. 14½″ x 10½″
No. 470 Wall or Booth Calendar. 2″ x 8½″ x ⅜″
No. 471 Counter Calendar. 3¾″ x 11″ x 1″
No. 473 Counter Calendar. 2½″ x 11″ x 1″

Cadillac MASTER LINE

Frames are extruded aluminum, designed to hold the engraved inserts of any of the 10 plastic materials. All metalwork is anodized aluminum in either gold or natural finish, and highly polished. It neither tarnishes nor fingermarks and retains its lustre through the years.

This newly designed line will fill your needs for a sign requiring a permanent or a changeable plate. The engraved plastic inserts slide into the metal frame from the ends.

Outdoor bulletins — illuminated or non-illuminated — in genuine bronze or stainless steel. All cases are thoroughly weatherproofed with watertight soldered corners and reinforcing iron corner plates. Doors are provided with top and bottom raindrip. Inside of door frame lined with aluminum. Backs are completely covered with painted galvanized metal — soldered watertight. Illuminated cases are 5″ deep with lighting fixtures mounted inside the top portion of case. Non-illuminated cases are 2½″ deep. Church name is mounted on ¼″ thick opaque plexiglas with raised black plexiglas letters.

Inserts available in either black or white Permalynn backgrounds. Mounting posts and hardware available.

Ace
changeable letter
bulletins

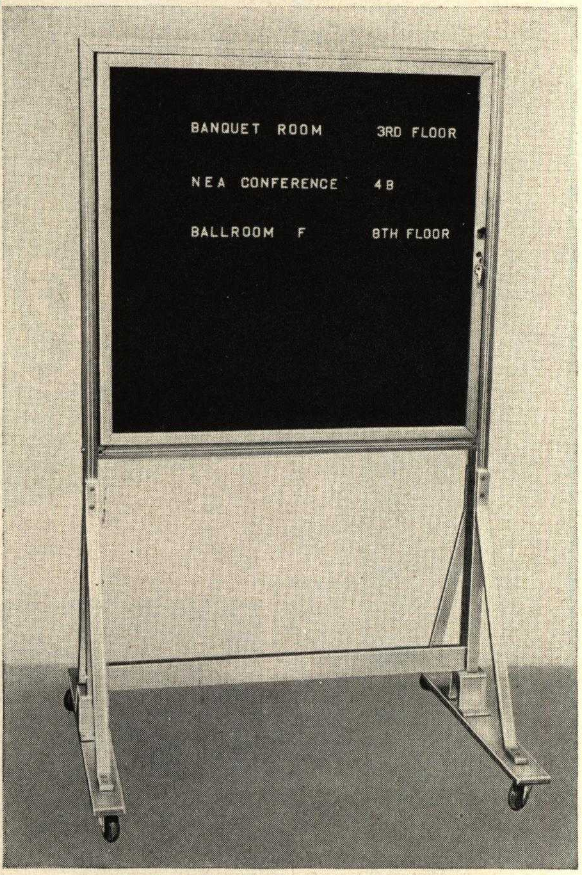
Ace changeable letter bulletins are widely used by all types of businesses, schools and institutions, that have messages that must be changed from time to time — or every day if necessary. They are made in a wide variety of metals or wood, modern in design, all of which are available in varied sizes and kinds of construction.

Ace changeable letter bulletins are easily read because of sharp contrast between letters and background. They are visible at almost any distance because of the varied size letters.

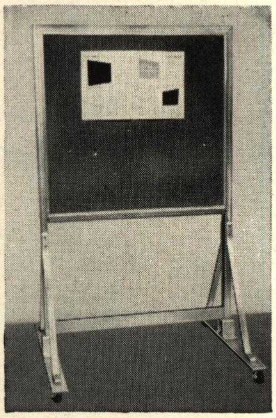
Letters and numerals are easily and quickly changed. There is perfect alignment and spacing because of accurate cloth covered grooves which are one-quarter inch apart.

They are made by a company which has been in business since 1865.

Free standing - Delux type A



The Deluxe type boards are the Cadillacs of the field of changeable letter boards. Made of hollow aluminum tubing with 1/8" thick wall sections. Has anodized finish that will not tarnish or finger mark. Equipped with rubber-tired ball bearing casters. One side has 1/4-inch plate glass door with stainless steel piano hinge and lock and grooved background for changeable letters. Other side has cork bulletin board for thumb-tacking notices. It is not only a versatile item, but also a thing of beauty.



Overall height of unit is 62 inches from floor to top. Standard sizes of board units as follows:

32" wide x 32" high
32" wide x 36" high
32" wide x 40" high

wall mounted

Delux Type B

This is another Cadillac, but for wall hanging with blind hangers in rear. Made of aluminum tubing with non-tarnishing anodized finish. Wall thickness of tubing is ⅛″. Made in single or double door types — double door has mullion between doors. Made with two inch deep tubing without light. With fluorescent light 3″ deep tubing is used. ¼″ plate glass doors with stainless steel piano hinges.

MADE TO ORDER — ENGRAVED BAKELITE SIGNS . . .

Engraved Bakelite Plates are made to order (using our standard styles of lettering) and their clean-cut legibility does not require polishing although it withstands atmospheric conditions as well as most acids and alkalies. The secret lies in the "sandwich-like" construction of the bakelite sheets. The engraving cuts through the black surface of the material—exposing the white center of the bakelite. No paint, lacquer or other coatings—just the original plastic material itself. Extremely legible and easily cleaned with a damp cloth.

COLORS OF BAKELITE AVAILABLE

BLACK — white lettering
BLONDE (grained)—black lettering
GREY (grained) black lettering
MAHOGANY (grained) — white lettering
WALNUT (grained)—white lettering
WHITE — black lettering
DARK STATUARY BROWN with WHITE lettering

300 WORDINGS CARRIED IN STOCK

size: 2" x 8"—1/16" thick

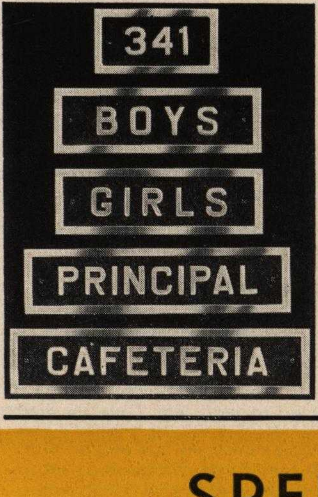
The most popular stock signs on the market. Dignified, legible and inexpensive.

The white lettering is permanently engraved into the black surface. For interior or exterior use. Easily cleaned.

$2.50 each; $21.00 per dozen.

Special wordings—$5.00 each

ALUMILITED ALUMINUM "ENDUROSIGNS"
(die stamped)



style No. 870

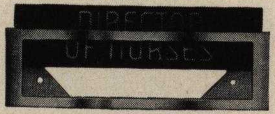
Signs with embossed raised letters, available in 300 stock wordings listed here. Lettering and borders are natural satin *alumilited*, with backgrounds a black wrinkle finish.

2" high x nec. length; all lettering ⅞" high $5.50 each; $55.00 doz.

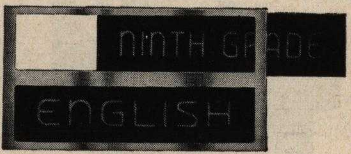
Signs with special wordings priced slightly higher.

INTERCHANGEABLE SIGNS

Model #74



Model #75



To answer a large demand from schools, public buildings and others who wanted an attractive sign frame that would hold our popular engraved bakelite signs—yet permit the sign panels to be changed when desired without drilling additional holes in their fine wood doors—we made our Model #74 interchangeable signs. These sign frames are made of Alumilited Cast Aluminum and measure 8½" long. The sign panels (which easily slide into the aluminum frames) are made of Engraved Bakelite.

PRICES COMPLETE WITH SIGN PANELS

Model #74
(with one sign panel)
8½"x2½" overall $10.00
8"x4" overall 12.00

Model #75
(with two sign panels)
8½"x4½" $15.00

Prices shown include necessary STOCK BAKELITE SIGNS (any one of 300 inscriptions). If signs are to be engraved with names or special wordings—there will be an extra charge of $3.00 per sign panel.

If it's a sign . . . We'll make it!

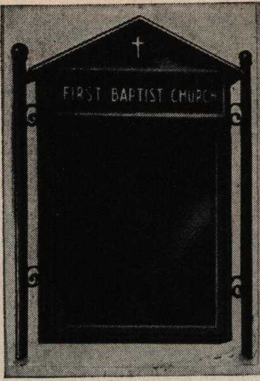
SPENCER INDUSTRIES INC.

1504 N. MASCHER STREET
PHILADELPHIA 22, PENNA.

TELEPHONE
GARFIELD 5-1506

SIGNS OF ALL KINDS



model #1400

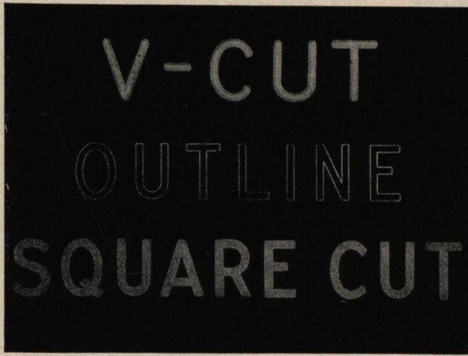
Made in one standard size—40" x 57" overall. Contains a grooved metal changeable letter panel 30" wide x 38" high. Name panel (translucent bakelite) measures 6" x 31". Complete with one set of changeable letters, flashing cross and two lawn posts.

Frame fabricated of paint-grip steel, sprayed-statuary brown color. **$460.00**

Same as above—but with frame made of Stainless Steel **$640.00**

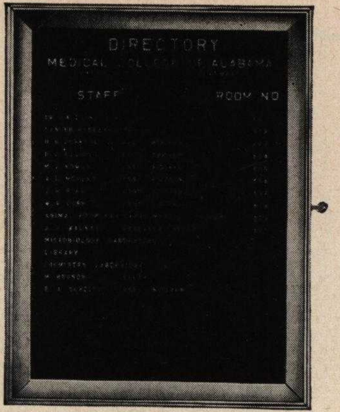
ENGRAVED PLEXIGLAS SIGNS

STYLE #792



STANDARD STYLES OF LETTERING

These signs are made of 3/16" thick clear Plexiglas. The lettering is engraved from the back and is usually colored White or Gold—while the sign background is sprayed Black or any other standard color. These signs are very legible—and require practically no maintenance as the lettering is not on the exposed surface of the sign.

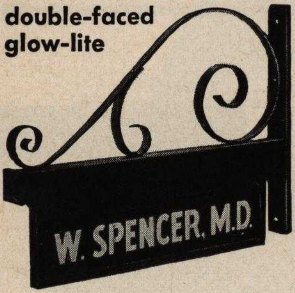


model #1450

This type of changeable letter directory is recommended only for Indoor Use—because it is not made with weatherproof construction. However it is "budget-priced", attractive in appearance and made with our standard kalamein Stainless Steel construction. Complete with hinged glass door and lock—made in almost any size.

---

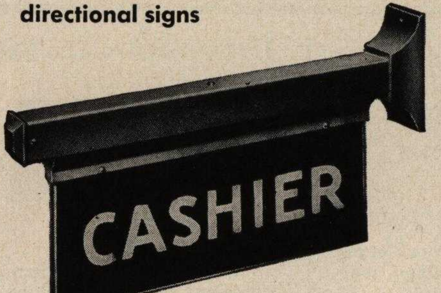
double-faced glow-lite



no. W-720

A professional sign for outdoor use. The scroll adds strength and support to the sign. Indoor models do not have a scroll or metal binding frame around the glass sign panel. Available with square or rounded corners with glass or plexiglas sign panels. Made of copper, sprayed dark statuary brown or duotone bronze. Also in a DeLuxe brushed finish—either bronze or stainless steel. $56.00 and up

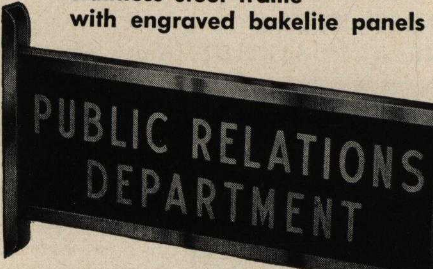
directional signs



no. W-718

This Spencer "Glow-Lite" sign is equally adaptable to both indoors and outdoors. Metal frames are made in statuary brown, brushed bronze and stainless steel, and the inscription is permanently carved into the glass. Illumination is supplied by a 60 watt tubular lamp. Double-faced sign illustrated (indoor type) has sign panels measuring 6" x 18½". $52.00 and up

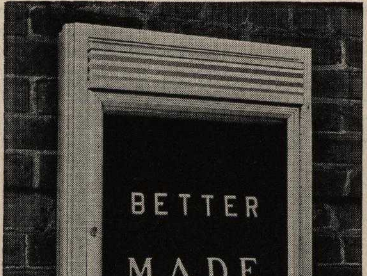
stainless steel frame with engraved bakelite panels



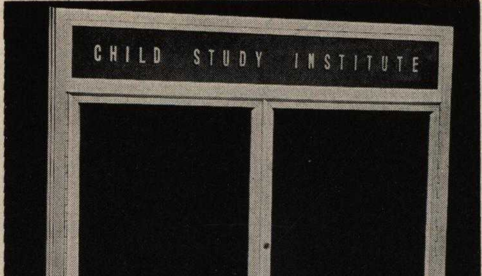
no. 1644

An ideal projecting, non-illuminated sign for directional purposes. These handsome signs are made with engraved black bakelite sign panels encased in lustrous stainless steel frames. The double-faced sign illustrated (indoor type) measures 18" x 6" over-all. $40.00

EXTRUDED ALUMILITED ALUMINUM BULLETIN BOARDS with changeable letter directories



no. 1447 Display Case with changeable letter insert panel. Fluorescent light at top. 31" (high) x 22" x 3" (over-all)



no. 1446 Double Door Bulletin Board (with changeable letter or cork-covered panels) and a raised letter, cast aluminum panel across the top of the case.

Spencer Display Cases are fabricated from our standard sections of heavy 63-ST extruded aluminum with a permanent alumilited finish, a great improvement over cases fabricated of sheet or kalamein metal. They are made with inset doors, piano hinges, cylinder locks and completely waterproof construction. Made in almost any desired size.

These quality cases are made to order, so they can be made with raised letter heading panels, changeable letter inserts, cork, felt covered or plywood backgrounds, illuminated or non-illuminated, flush or recess mounted to wall, etc. Give us details of your requirements and we shall be glad to quote.

EASY to maintain
EASY to own
EASY to keep in alphabetical order

NOW AVAILABLE IN . . .

Kalamein Metal Frames: Anodized aluminum, bronze, chrome or stainless steel. Wood Frames: Mahogany, oak, walnut, bleached (any shade). Background colors are red, green, blue, brown, gray, maroon, and black. Letter colors are white, red, yellow and green.

Anyone can make changes in these directories in a few minutes. Using the extra supply of letters (that are kept in an alphabetical compartment box which we furnish) a new line is set up on a blank changeable strip. This new strip is then inserted anywhere on the Directory by just moving other strips to make room for a new strip.

No need to change other lettering—or to order individual name strips from the factory. DO IT YOURSELF—and keep tenants happy with immediate service. This revolutionary idea in directories is ideal for both small and large Office Buildings—and also has many other uses in schools, clubs and other public places.

Be sure to allow for ENOUGH STRIPS for spaces, alphabetical headings—and possible future needs.

Above prices do not include the Changeable Letters. Only ¼″ high Changeable Letters can be used—price of these letters is 6¢ each. We suggest you order a standard assortment (or font) of letters—which we will pack in a compartment box. We suggest ordering about 200 letters and numerals for each TEN NAMES that will be on the Directory.

EASY DOES IT! No more juggling of names when you add a new one. Simply insert or remove a complete changeable name strip anywhere you want.

ARCHITECTS' SPECIFICATIONS

For ILLUMINATED and NON-ILLUMINATED SECTIONAL STRIP DIRECTORY

Details of standard illuminated and non-illuminated equipment appear below. Sections may be a single tier as shown or in double or triple tiers, depending on the number of sections and dimensions desired.

Frames are available in extruded or formed metal and kalamein in shapes illustrated on opposite page. Aluminum is available in 319-E, 353-E and D-430-E only; stainless steel, in formed metal and kalamein; bronze in both kalamein and extruded. Metal finish may be brushed or polished. Aluminum may be alumilited. Extruded molding frames may be recessed into the wall by reversing the molding as shown in the sketch of the illuminated section. Standard sections can be furnished for your custom made frames to match moldings or trim on your new construction or remodeling projects.

Sections are made with extruded metal matching the frame. Non-illuminated have a beveled plate glass front and padded removable backboard. Strips are held in channels between the glass and padded backboard assuring perfect alignment. The illuminated section consists of extruded frame, double strength clear glass, opal glass diffusion screen, and a reflector light unit which is individually wired to plug into a wired channel on the frame. A recess or cavity in the wall to 6¾" is required for this type directory. Provision must be made so that the recess is dust proof and where necessary filtered ventilation provided for dissipation of excess heat.

Headings are made in black and white under glass or in color to conform to the name strips. They are also made of cast metal to match the frame or can be illuminated.

The Tablet & Ticket Co. offers the only Complete Building Directory Service available today!

SLIP-IN-STRIP—THE EASY CHANGE NON-ILLUMINATED DIRECTORY

T & T Slip-in-Strip Directories are the easiest to change directories available. Strips may be inserted at any point by simply slipping strips in retaining channels and inserting new strip, which can be ordered by mail, at alphabetical points desired. Only name strips to be changed need be disturbed. Ideal for smaller buildings and where self-service is desired. Can be furnished in single or multiple columns and in various heights and name capacities.

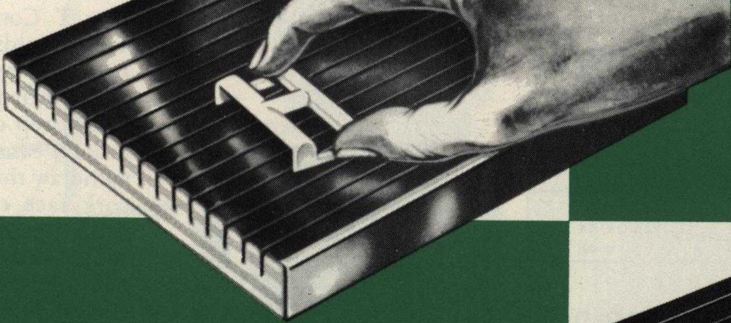
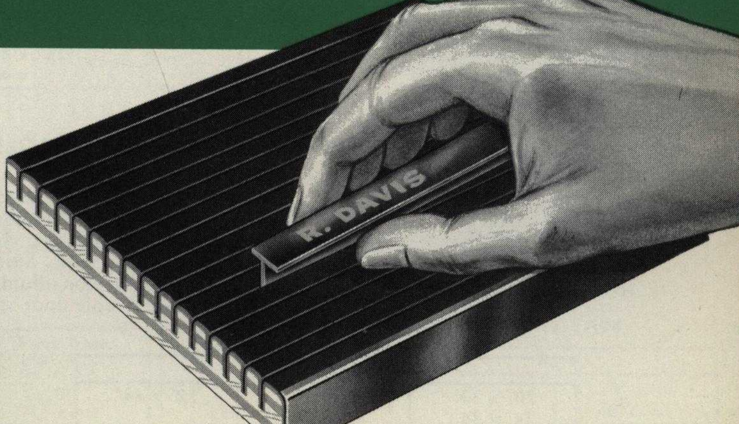
T&T changeable letter signs

SINCE 1870

The new embossed PLASTIC NAME BASES are molded of tenite and produced by a special T&T process. They can be used on any changeable letter board converting it to a directory. METAL NAME BASES with cast metal letters also available.

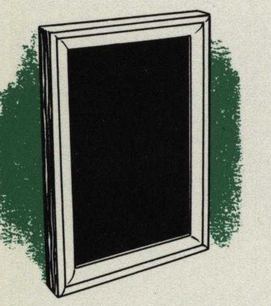




T & T Changeable Letter Signs can be set up quickly and easily by any one. The flanged letters and figures are automatically aligned when inserted in the grooved background assuring straight, evenly spaced copy that is neat and orderly in appearance—pleasing to the eye.

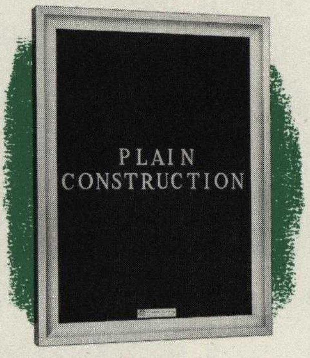
the basic types of

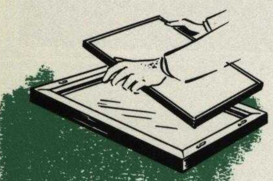
INDOOR SIGNS AND DIRECTORIES



Style No. S-110 — PLAIN CONSTRUCTION

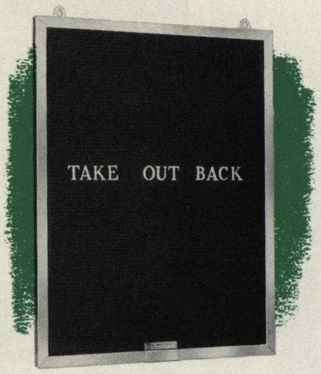
This type of sign is the simplest, lightest, least expensive and the most adaptable of any sign construction. It consists of a grooved, cork or chalk board composition background with a molding of metal channel, wood, or kalamein.*

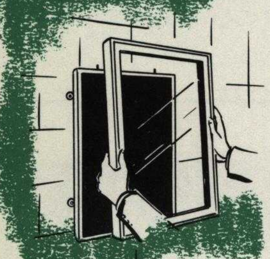




Style No. S-120 — TAKE OUT BACK CONSTRUCTION

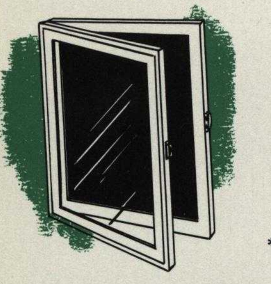
This is the least expensive of the glass covered signs. It can be displayed in congested areas or in a position that would be awkward for a a swinging door because it is light enough to be easily removed to any convenient place where the background may be taken out and the sign lettered without interference from traffic. It is equipped with hangers for fastening to the wall. The outer frame may be metal channel, wood, or kalamein* molding.





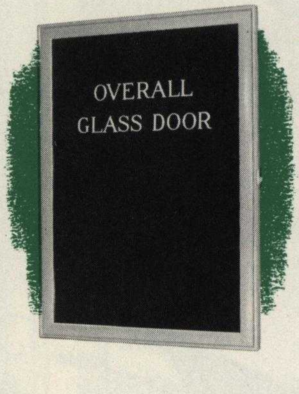
Style No. S-125 — REMOVABLE FRONT CONSTRUCTION

This style of sign is also available with a REMOVABLE FRONT. The grooved background remains fastened to the wall while the REMOVABLE FRONT is easily removed for quick copy changes.



Style No. S-130 — OVERALL GLASS DOOR CONSTRUCTION

This is the most popular of all glass covered signs. Protection against dust aud dirt, and against tampering is afforded by this style of construction. A glazed door is hinged against a backframe that holds the cork or grooved background. It is available with lock and key if desired and in wood or kalamein* moldings.



*Kalamein is metal drawn over a wood core.

S-188 STYLE
FORMED
STAINLESS STEEL

Style No. S-188 — LEAST EXPENSIVE GLASS DOOR STAINLESS STEEL SIGN

20 gauge, 316 type alloy, 1-3/16″ stainless steel molding with 1½″ depth, brushed finish. Inset door, piano hinge, D S A glass, with lock. Non-removable background grooved, cork or combination grooved and cork. Non-illuminated. Single door only.

Sizes	
20″ x 30″ 24″ x 36″ 28″ x 40″	30″ x 36″ 32″ x 44″ 36″ x 48″

Style No. S-189 — AVAILABLE IN 361-E MOLDING

Rolled stainless steel molding, ¾″, 20 gauge, 316 style alloy, brushed finish. Inset door, piano hinge, D S A glass. Lock in door. Removable background of grooved, cork, or combination grooved and cork. Surface or flush recess mounting. Non-illuminated. Available in single or double door styles in the following sizes:

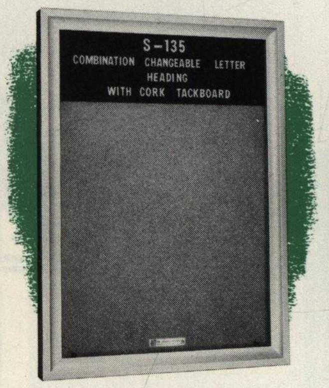
S-189 STYLE
STAINLESS STEEL
SIGN

Single Door: Sizes		
20″ x 30″ 24″ x 36″	28″ x 40″ 30″ x 36″	32″ x 44″

Double Door: Sizes	
48″ x 24″ 48″ x 36″	60″ x 36″ 72″ x 48″

Style No. S-186 DELUXE CONSTRUCTION

The T & T DeLuxe Sign combines unusually attractive appearance with utility. The wide variety of frame materials and background colors make it possible to select the combination that will blend with and more than complement any surroundings. This style features a set-in door with lock and is available with or without heading bar. It can be had in wood, kalamein, extruded bronze, nickel or aluminum molding and either grooved or cork background or a combination of the two. It may be hung on the wall or mounted on standards.



T & T DEEP-CORK TACK BOARDS

T & T Cork Background Tack Boards are made of ¼ inch cork sheet cemented to ⅜ inch plywood back. Extra deep cork is used to make it easier to insert and withdraw thumb tacks. The cork face can be had in either green, natural cork color or covered with various colors of wool broadcloth if desired. Deep-Cork Tack Boards can be furnished with any T & T Changeable Letter Sign Frames. Combination grooved board and tack board backgrounds in one frame are also available.

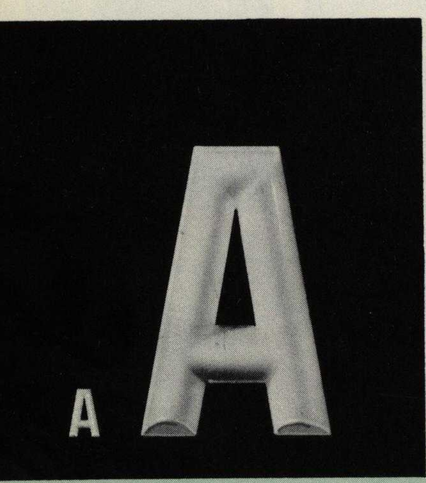
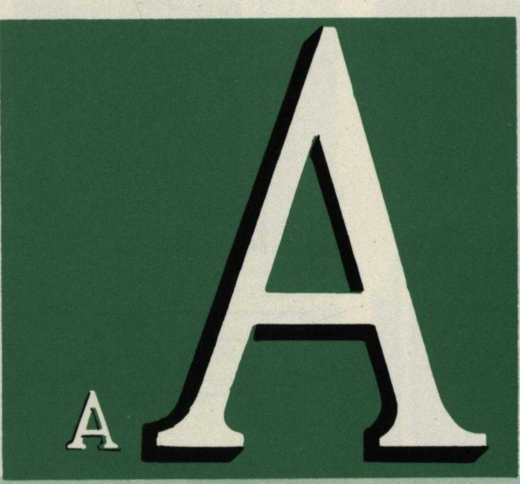
T&T *changeable letters, flange plastic strips and cast metal nameplates*

T & T Changeable Letters and Figures are of three types—die cut and formed flat celluloid, injection molded plastic and precision cast metal. Smooth rounded line-up flanges will not wear or scuff broadcloth covering.

Also available, but not shown here, are Flanged Plastic T Bases which make it easy to insert or remove one or more names or words at a time. These are ideal where changeable letter signs are used as directories. Also not illustrated are the Cast Metal Word Plates. These can be made up in the seven sizes of metal letters shown below. Metal Word Plates are recommended for menu boards, or are excellent for headings.



MOLDED PLASTIC CHANGEABLE LETTERS
DOUBLE FLANGE—From ¼″ to 1½″ high



CAST METAL CHANGEABLE LETTERS

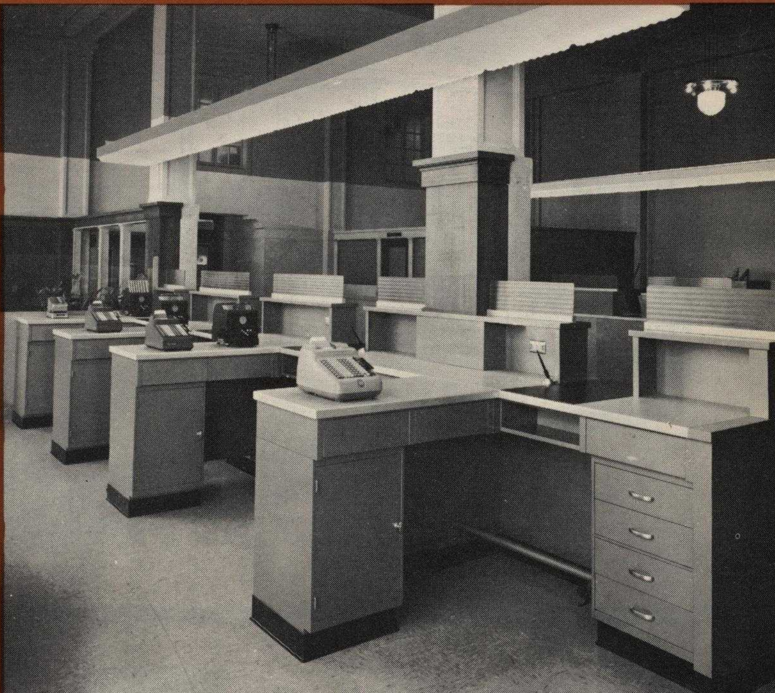
Art Metal MODULAR BANK COUNTERS and EQUIPMENT



Art Metal's complete line of Modular Bank Counters, coupled with over 70 years experience in metal, offers exceptional possibilities in the design of bank interiors. With a wide flexibility of arrangement, Art Metal standard equipment with optional treatment of the counter front makes this line the most economical solution to the requirements of any bank . . . regardless of size.

Standard counter fronts are furnished in two styles, sloping or vertical, with fluted trim in a decorative metal. Counter assemblies can be used either with Art Metal fronts, marble, or other facing material. Counter top and pedestal units are available in various styles and combinations to form highly efficient work units. They include well sections for bookkeeping machines, counter safes, drawer and cupboard units, currency storage units. The 25″ counter work depth provides ample space for coin and calculating machines.

Three complete Art Metal desk lines, "Correct Seating" office chairs, and distinctive guest furniture provide inviting officers' quarters and public lounges. In addition, Art Metal has unusual facilities and experience in planning vault storage equipment, custom-built counters, check desks, and other items to satisfy special requirements.

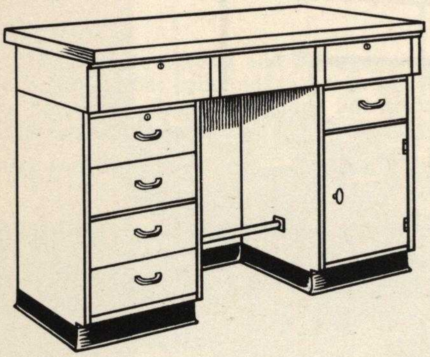
Art Metal MODULAR BANK COUNTER ASSEMBLIES



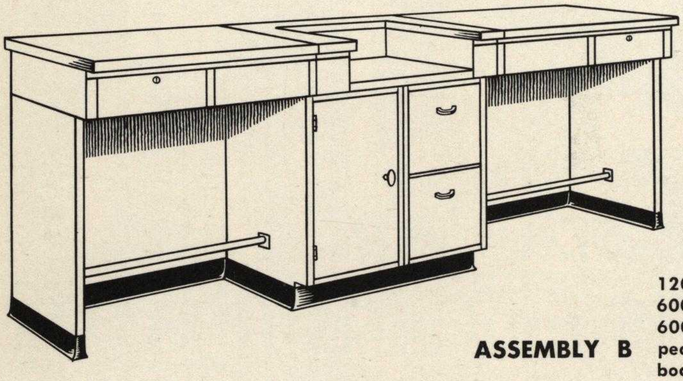
ASSEMBLY A

60″ unit. Style 600-A1 Counter Top with Styles 600-C1 (left) and 600-D1 (right) pedestal units Foot rest.

600 LINE counters are based on standard 60″ wide modules which, in combination, are readily adapted to any bank floor plan . . . any customer service requirement. These standard counters are so flexible in design, they can be easily regrouped *or* rearranged to accommodate future expansions or remodeling. The Machine Well Counter Top in Assembly B combines with two Style 600-A3 Counter Tops to form a 120″ double unit. Additional flexibility is provided by 90° and 135° Corner Units.

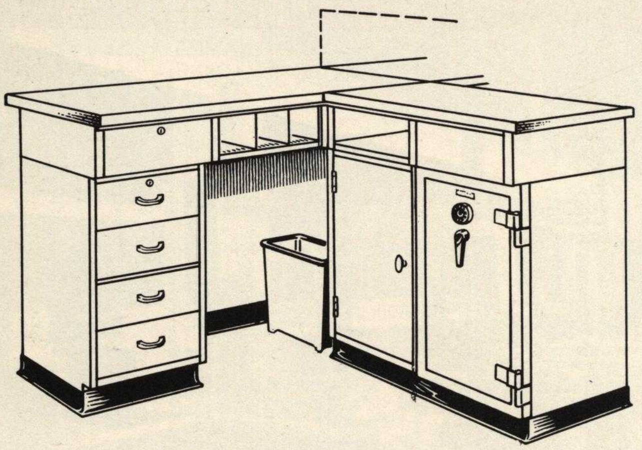
Standard counter tops are linoleum covered. A continuous linoleum top may be ordered to cover the entire counter. Also available are two-color linoleum tops with the customer side in one color . . . the work area in another. Standard bindings and trim are aluminum.

Other features include Style 600-A4 Front Counter Machine Well with special sliding machine shelf. Style 650-A1 Tellers' Bus can be placed under counter aprons by adding a Finished End Counter Support to either front or side counter. It can be used in Assembly B by omitting foot rests. See specifications for additional features. Consult Art Metal Bank Equipment Catalog for complete data.



ASSEMBLY B

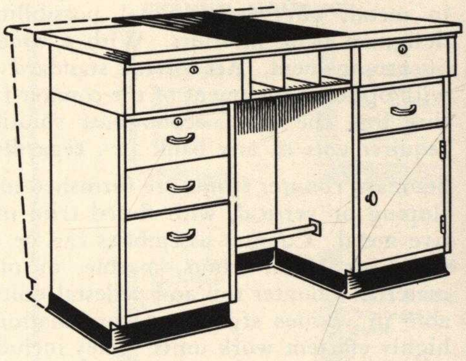
120″ assembly consisting of two Style 600-A3 Counter Tops and one Style 600-A4 Machine Well Top. Center pedestal group has Style 600-E2 Cupboard and 600-C1 unit with two No. 060545 inserts. Counter Top has Style 600-F1 Finished End Supports. Foot rests.



Note use of Art Metal Style 138 Wastebasket with Assembly K. Guard rails, 10″ high, can be used to give separation for each teller station on both front and side counter tops.

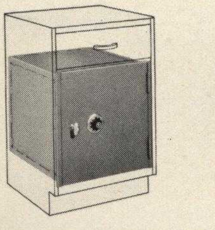
ASSEMBLY K

60″ unit. Style 600-A6-1 Front Counter Top with Style 600-C1 pedestal unit. Style 600-B1 Side Counter Top with 600-E1 Cupboard and Safe Style 600-K1. Guard Rail (broken lines on top).



ASSEMBLY E

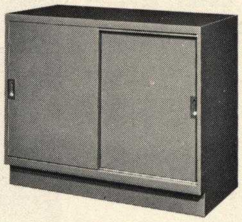
60″ unit. Style 600-A5 Counter Top, flush counter-sunk deal plate with pedestal units 600-C1 with one No. 060545 insert (left) and 600-D1 (right). Foot rest. Broken lines indicate sloping front.



STYLE 600-Y1
Bulk Currency Storage Unit. Used in Style 600-D1 indicated by outline.

STYLE 650-A1
Tellers Cash Bus.

STYLE 630-A50-1
Single Box Drawer mounted on Style 600-D1 Drawer and Cupboard Unit.



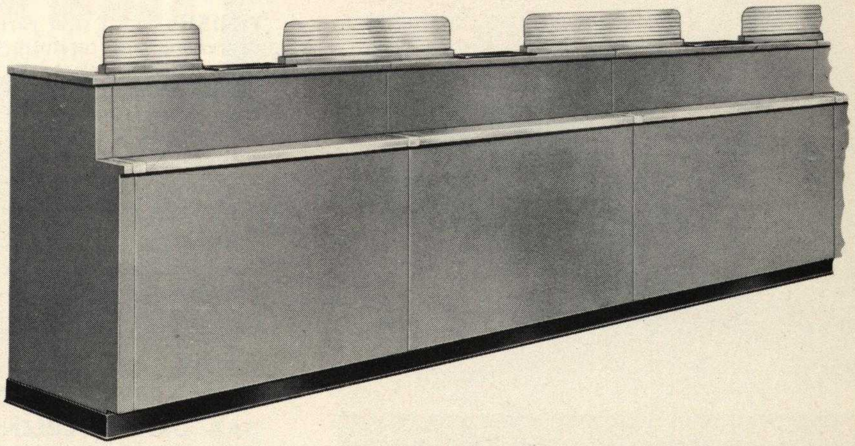
STYLE 600-E5
Double Cupboard with sliding doors.

PEDESTAL UNITS

Art Metal drawer and cupboard units are placed under the top counter sections and provide required storage space for tellers. All units are equipped with a recessed toe space faced with 4″ high black rubber cover base. Four 2″ long leveling bolts are furnished with each unit providing for convenient leveling on uneven floors.

Art Metal COUNTER FRONTS

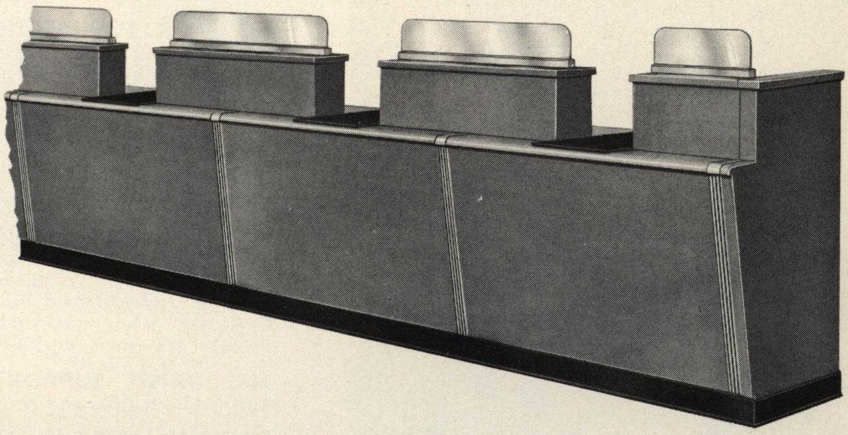
Art Metal Counter Fronts are assembled in 60″ modules and consist of sloping or vertical fronts, superstructures and screens. Counter fronts may be plain or decorated with fluted metal moldings. If desired, marble, wood or plastic fronts may be procured.



SUPERSTRUCTURES, SCREENS, WICKETS

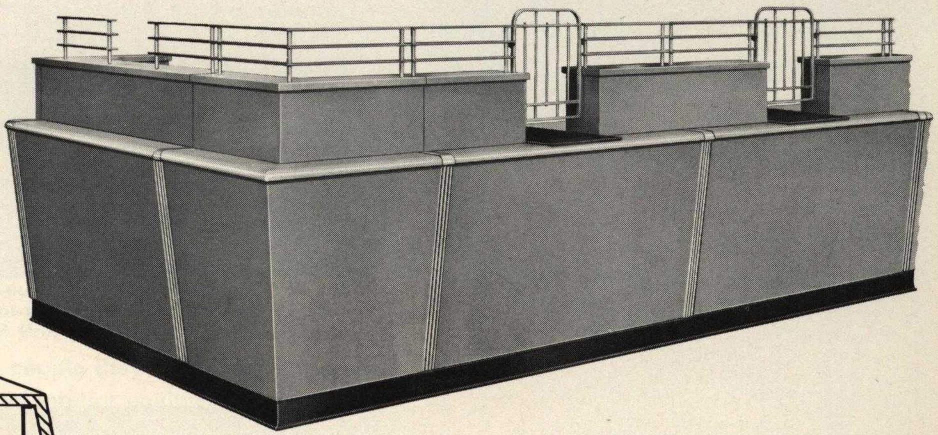
Superstructures are made in five lengths and four corner styles to fit any counter layout. By using these standard styles, either ledge or counter-height teller stations may be provided. Superstructures at tellers' openings have return ends for protection of currency and papers on counter top. Double wall construction provides space for concealed wiring and outlets. If desired, tops may be linoleum-covered and edged with a metal binding.

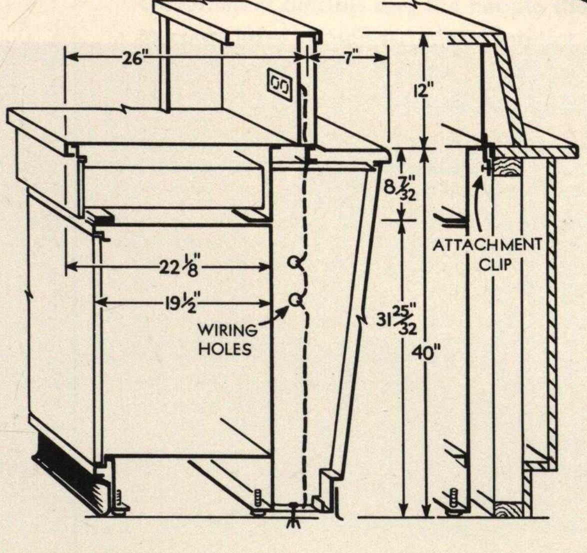
Where wickets are required, Art Metal offers both high and low types. (Style 600-W1 High Wicket shown on counter at lower right.) Any one of three screen styles—clear glass, fluted glass, and bar grille screens in aluminum or bronze—may be used on the superstructure.



COUNTER DEAL PLATES

Glass or steel deal plates are mounted on top of the counter or the ledge and run the full length and width of the teller's window. Ledge style deal plate used on counter front at top. Counter height deal plate shown on counter at lower right.

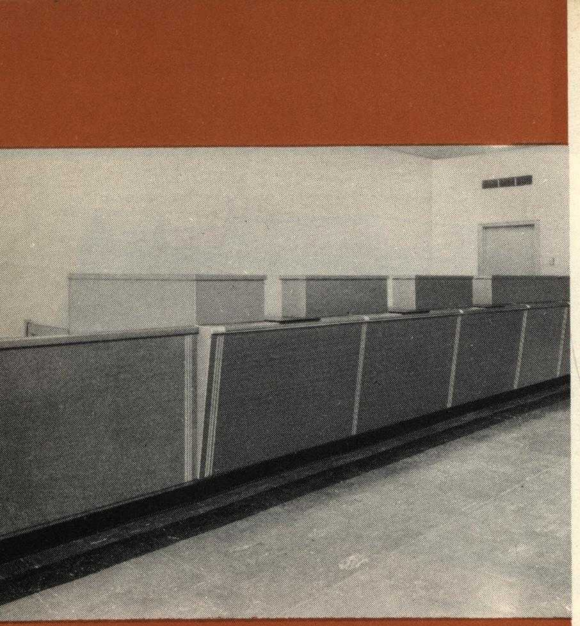




BANK COUNTER – SECTIONAL VIEWS

Assembly procedure is simplified by factory located screw holes which insure accurate alignment of units. Leveling bolts adjust pedestal heights. The complete section shows the ample provision for concealed electric wiring with double wiring holes in each front counter support and wiring holes in ends of all superstructure sections. Electrical cut-outs are made in superstructure back panels when specified.

The partial section illustrates the use of marble or other fronts with Art Metal counter assemblies. Attachment clips, bolted or screwed-on furnish a ready means of connection and offer complete flexibility in design of counter fronts.



Slope Counter Front at the Lakewood, N. Y. Branch of the First National Bank, Jamestown, N. Y.

Teller Side of counter showing three teller stations, Lakewood, N. Y. Branch of the First National Bank, Jamestown, N. Y.

WRITE FOR—
Your copy of complete catalog on Art Metal Modular Bank Counters.

Specifications

MATERIAL — All finished units shall be made of patent-leveled, furniture quality steel. Interior framing and reinforcing members shall be rolled or formed shapes. Gauges are U. S. Standard except as noted.

FINISH — All steel parts shall be thoroughly cleaned by hot vapor and spray degreasing, and carefully wiped with clean cloths when dry. All parts shall be immediately protected by rust inhibitive primer. Prime coat shall be baked, inspected and filled where needed. When dry, finished surfaces shall be sanded, cleaned and sprayed with full-bodied enamel coat and baked. Bronze surfaces shall have a fine brush finish protected by a coat of clear lacquer. Aluminum surfaces shall have a rubbed finish, cleaned and alumilited thoroughly.

All hardware shall be polished to a satin finish and protected with a coat of high grade clear lacquer.

COUNTER FRONTS — Shall be made of 18 ga. steel. Front panel shall be securely anchored. All vertical joints to be concealed with recessed aluminum or bronze fluted trim. Counter tops shall be linoleum covered with metal binding. Superstructure shall have double walls of 18 ga. steel, with space for wiring and outlets, and securely fastened to counter.

GLASS SCREENS — Shall be of 1/4" clear or fluted glass, exposed edges polished, and set in bronze or aluminum channels secured to superstructure.

BAR GRILLE SCREENS, Aluminum or Bronze — Shall have 3/8" x 2 1/2" rails and 3/4" dia. vertical tubings anchored by 1/4" steel tie rods.

COUNTER TOP SECTIONS — Containing cash and box drawer shall be self contained to permit interchangeability. Top shall be #14 ga., front apron #13 ga., backs, ends, and intermediate member #18 ga. Top covered with not less than .08 ga. desk grade linoleum. Front edge to have metal binding with concealed fastening. Continuous linoleum over two or more units if specified.

DEAL PLATES — Shall be 3/8" black carrara glass, honed finish, or 3/8" plate glass (frosted bottom) with chamfered edges, or 3/32" thick chrome nickel steel deal plate with #4 polish or 1/8" thick Formica with color as specified.

DRAWER AND CUPBOARD UNITS — Uprights, base and cupboard shelves #18 ga., top, back #20 ga. Drawer heads of #20 ga. to be flat, with edges formed to 7/16" thickness. Drawer bottom and sides of #24 ga. formed in one piece. Cupboard doors of #20 ga. with channel stiffner and provided with latch, lock when specified. Shelf adjustable 1" on centers. Each unit to have recessed toe space and four 2" long leveling bolts.

END PANEL SUPPORTS — Shall be made of double wall, 18 ga. panels, finished both sides and reversible. Each panel has two 2" leveling bolts.

FINISHED ENDS — For covering end of counter front, counter and superstructure, to be of #18 ga. with #18 ga. top rail, securely fastened to counter and front.

RUBBER BASE — Of 4" high black rubber. Shall be furnished for both public and work sides of counter units.

KNEE SPACE BACK PANELS — Knee space under counter to be provided with #18 ga. back panel and 1 1/4" steel pipe foot rest.

LOCKS — Cash drawers only shall be furnished with paracentric key lock which can be masterkeyed. Drawer base units may have individual drawer or unit locks.

SUSPENSIONS — "Easy Roll" Ball-Bearing Suspensions shall be furnished for all standard drawers in base units. Side-Arm Ball-Bearing Roller Suspensions shall be furnished for all counter-top drawers. Side-Arm Suspension and drawer is interchangeable with Easy-Roll Suspension and drawer.

ART METAL BANKING SERVICES

CUSTOM-BUILT BANKING EQUIPMENT by Art Metal offers fine craftsmanship, over 70 years experience and specialized, cooperative planning to meet the most exacting requirements of modern banking.

ART METAL OFFICE EQUIPMENT for bank offices and clerical departments presents a most complete line of desks, chairs, filing equipment and work counters to meet any specific need. Postindex Visible Records offer a wide variety of special forms for bank record-keeping.

BANK PLANNING is part of Art Metal cooperative service. It provides many invaluable suggestions on bank layout and the best type of equipment for every banking function. It includes the combined ideas of bank and office equipment specialists, engineers and planners of wide experience. It is yours for the asking.

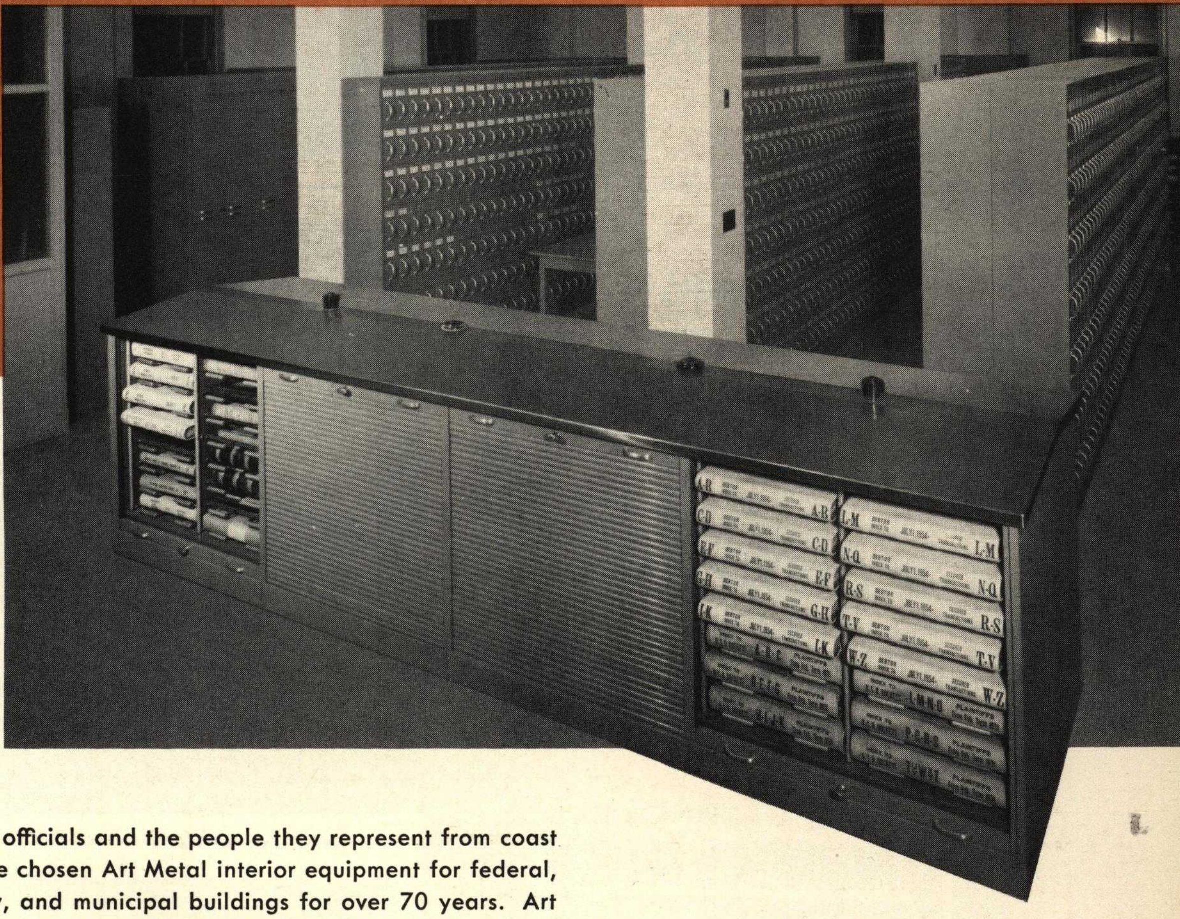
CUSTOM DESIGNED EQUIPMENT FOR MUNICIPAL, STATE, AND FEDERAL BUILDINGS



CRAWFORD COUNTY
COURT HOUSE
Meadville, Pa.

Government officials and the people they represent from coast to coast have chosen Art Metal interior equipment for federal, state, county, and municipal buildings for over 70 years. Art Metal produces both standard and custom-built metal equipment for public buildings and, as in other specialized fields, maintains a staff skilled in designing and planning of interiors.

ART METAL CONSTRUCTION COMPANY
JAMESTOWN, NEW YORK DIVISION

RECORD BOOK STORAGE UNITS (ROLLER SHELVES)

Art Metal Roller Shelf Units are designed for the convenient filing of numerous record books normally found in most public buildings. Counter-height units with flat or sloping tops, each holding up to 8 or 10 books, are among the custom-built and standard styles made by Art Metal. High units capable of holding 16 books or more are also available. Units may be equipped with steel counter-balanced curtains which provide protection from smoke, dust, and moisture.

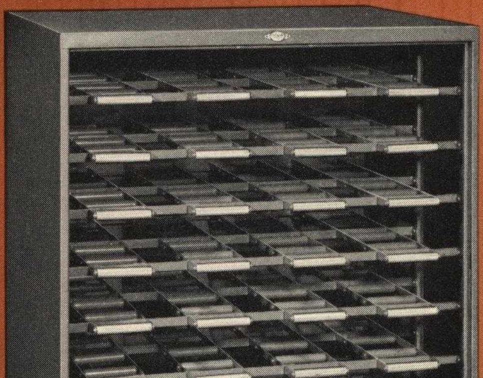
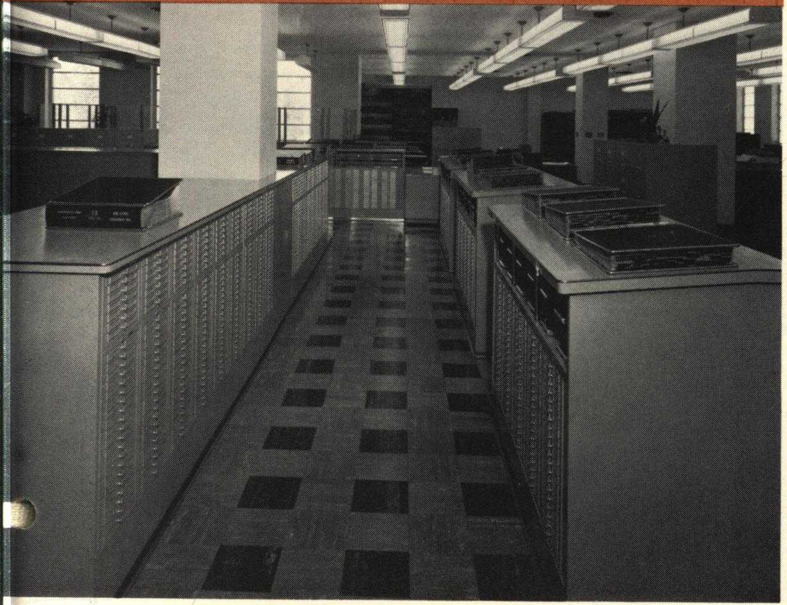
Bottom —
CRAWFORD COUNTY COURT HOUSE
Meadville, Pa.
Hanna and Stewart, Architects
Meadville, Pa.

SHELF CONSTRUCTION

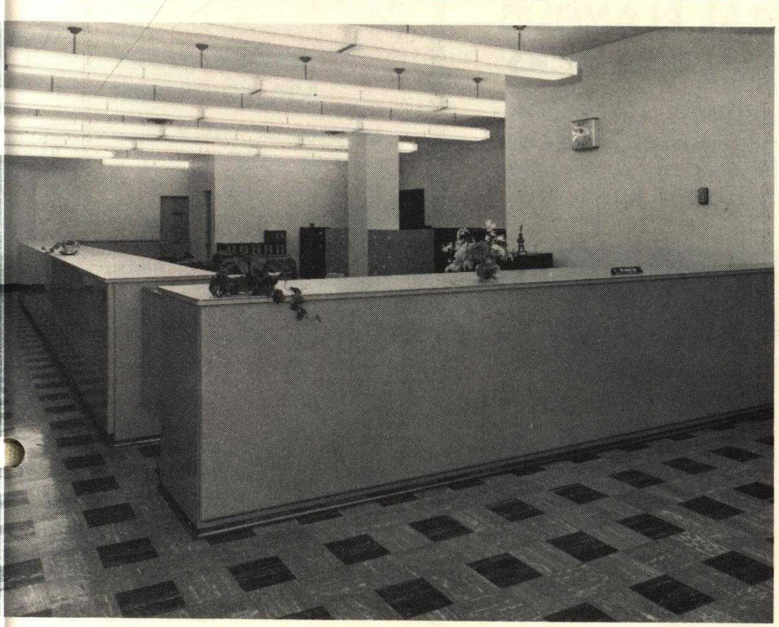
Shelves are equipped with two or four rows of rollers having 5 rollers in each row. Each roller shelf is 1″ thick and adjustable every ½″ full height of unit. Plain shelves, ¾″ thick, available if desired.





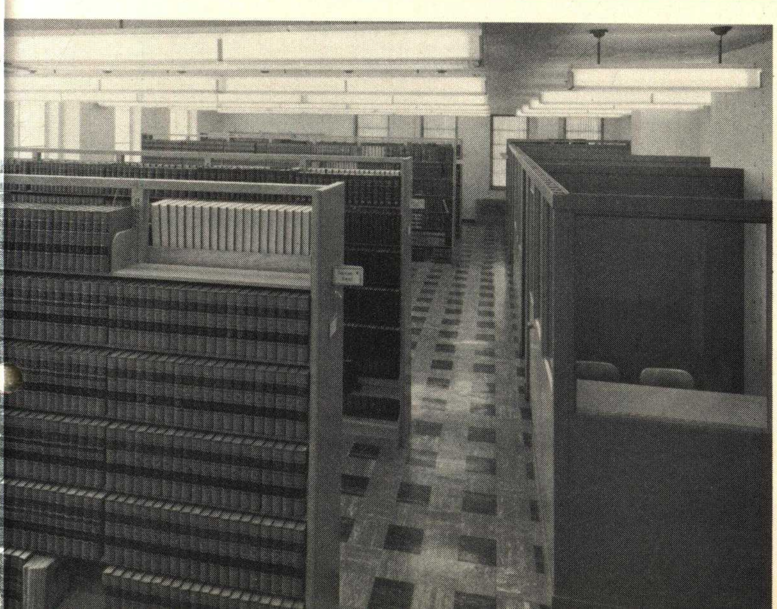
POSTINDEX COUNTER-HEIGHT RECORD CABINETS

Many types of records may be indexed and housed in Postindex Visible Index Files. Shown at left in a County Tax Assessor's office are location and evaluation real estate records in both 20 and 7 drawer Postindex Cabinets which are housed in special-built counter-height cases. Installation has capacity of over 193,000 record cards. Forms are mounted on trunnion wires which permit perfect layback of forms and quick one-hand posting.



CUSTOMER SERVICE COUNTER

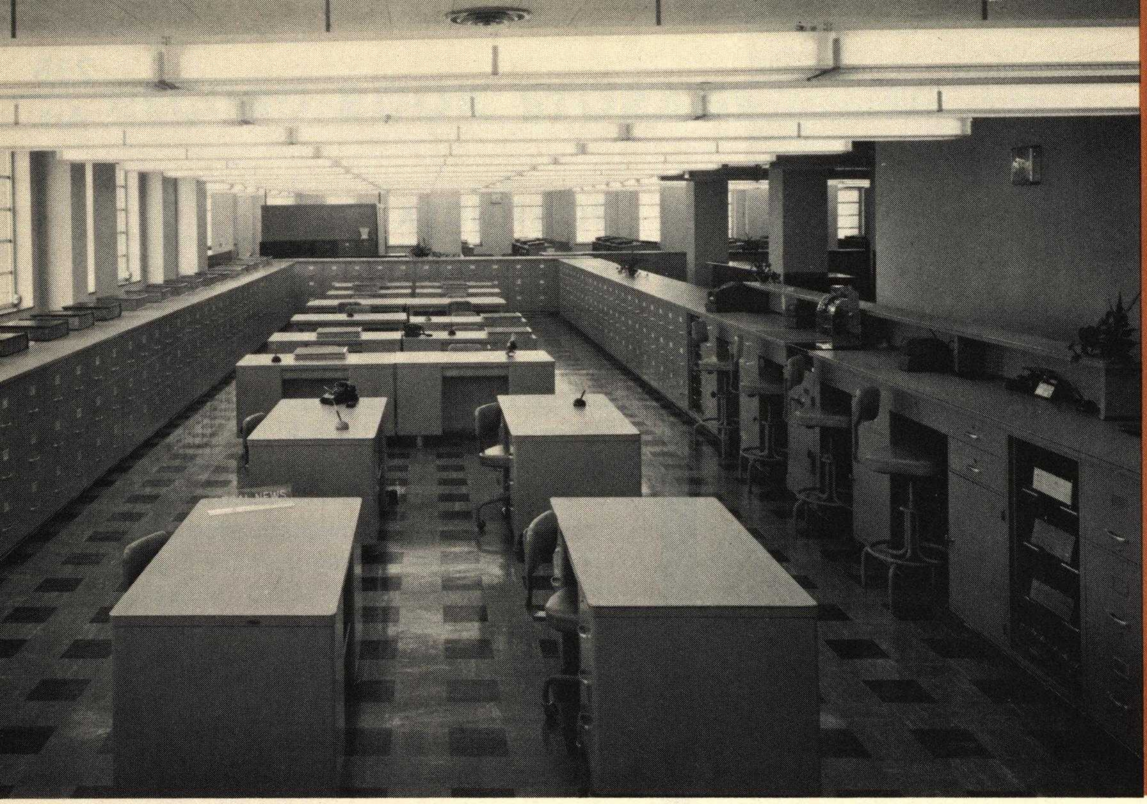
Service counters provide for ample and convenient record filing space while counter top is at a convenient working height for transactions with the public. Knee-space units serve as counter work stations for clerks. With the wide range of both stock and special-built counter-height equipment — letter and legal files, card record and general files, knee space units — Art Metal is well prepared to meet the requirements for equipping public buildings.



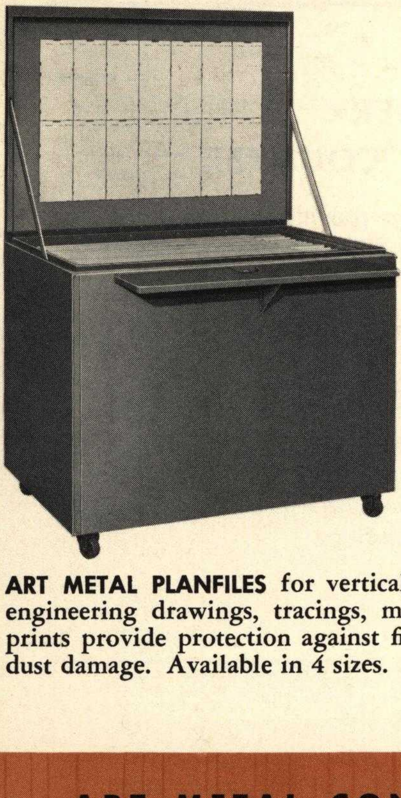
LEGAL LIBRARY EQUIPMENT

Legal departments of municipal, county, state and federal buildings require library bookshelving as well as carrel desks (open and closed) for convenience and privacy in research and study. Art Metal's contribution can range from occasional tables, bookcases or files to a complete installation including bookstacks, counters, reading tables, and countless other pieces of specialized equipment for libraries.

**All installations on this page at
Tulsa County Court House, Tulsa, Oklahoma**



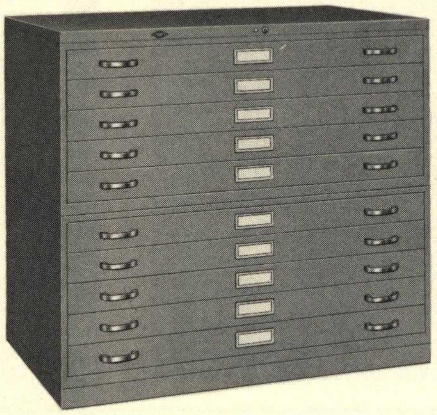
County Clerk's office is equipped with Art Metal Pace-Setter Desks, each selected and fitted with drawer accessories to fit individual requirements. Desk area is enclosed by counter-height files holding mortgage and other county records. Work stations are provided by knee space units while toe space along base permits maximum working comfort for employees at counter.



ART METAL PLANFILES for vertical filing of engineering drawings, tracings, maps, blueprints provide protection against fire, water, dust damage. Available in 4 sizes.

ART METAL PLANFILES AND PLAN DRAWERS

PLAN DRAWER UNITS for storing blueprints, maps, tracings, other large sheets may be used in combination with Counter-Height Roller Shelf Units.



SPECIFICATIONS FOR EQUIPMENT

MATERIAL — All finished units shall be made of patent-leveled, furniture quality steel. Interior framing and reinforcing members shall be rolled or formed shapes.

FINISH — All steel parts shall be thoroughly cleaned by hot vapor and spray degreasing, and carefully wiped with clean cloths when dry. All parts shall be immediately protected by rust inhibitive primer. Prime coat shall be baked, inspected and filled where needed. When dry, finished surfaces shall be sanded, cleaned and sprayed with full-bodied enamel coat and baked.

BRUNING COPYFLEX®

REPRODUCTION MACHINES

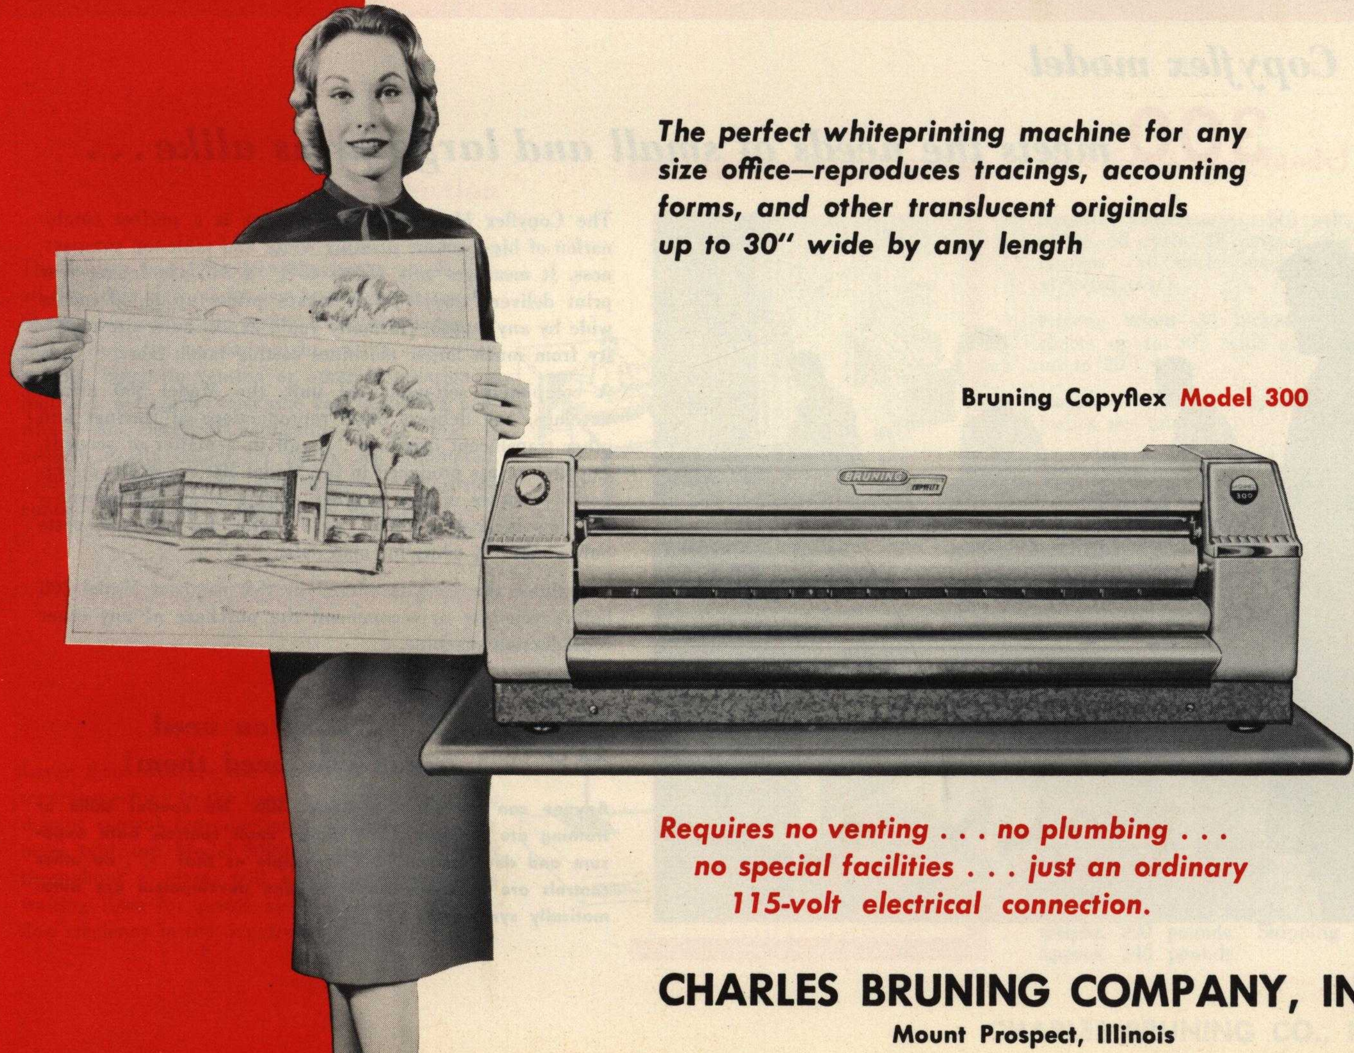
The Copyflex Model 300 . . .

ideal in size and price for . . .

Small Engineering Firms and Departments
Large Engineering Firms and Departments
Architects' Offices • Contractors • Builders
Secondary School Drafting Departments
Industrial Arts and Technical Schools
Accounting Firms and Departments
Business Systems . . . and many others

The perfect whiteprinting machine for any size office—reproduces tracings, accounting forms, and other translucent originals up to 30" wide by any length

Bruning Copyflex Model 300



Requires no venting . . . no plumbing . . . no special facilities . . . just an ordinary 115-volt electrical connection.

CHARLES BRUNING COMPANY, INC.
Mount Prospect, Illinois

some of the reasons why
COPYFLEX
is the preferred reproduction process . . .

direct, dry, positive reproductions—in seconds

In a matter of seconds, Copyflex gives you clean, dry, direct positive reproductions of anything drawn, written, typed, or printed on ordinary translucent material such as tracing paper. The process utilizes only the original itself and Copyflex sensitized paper film, or cloth—no negatives or other intermediates are required.

economical—small prints cost as little as 1¢ each . . . large prints only pennies

Copyflex prints are inexpensive to make—small prints cost as little as a cent apiece for materials, large prints only pennies each. By providing increased reproduction flexibility, Copyflex makes many other savings possible, too.

sharp, clear, intense lines and images

Copyflex prints are flat, durable, and easy to read — with clean, sharp, permanent lines of uniform density and contrast. Because of their durability and performance, Copyflex prints are more convenient to use than the original, and because of their high line contrast, are often easier to read.

Copyflex is clean, quiet, and odorless —emits no noxious fumes, requires no venting

The Copyflex diazo process is clean, quiet, and odorless. There are no noxious fumes to bother the operator or others in the vicinity, and there are no messy inks, masters, stencils, or negatives for the operator to handle. Fume venting is not necessary, and in most cases only an electrical connection is required for installation.

the Copyflex model
300 *meets the needs of small and large firms alike . . .*

The Copyflex Model 300 whiteprinter is a perfect combination of big-machine printing width and table-top compactness. It measures only 15″ x 45¾″ x 31″ (including rear print delivery tray)—yet it makes prints up to 30 inches wide by any length. Normally you'd expect such size capacity from much larger machines costing much more.

A completely self-contained unit, the Model 300 prints, develops, and delivers diazo reproductions of tracings and other translucent originals . . . all in a matter of seconds. Copyflex prints produced in the Model 300 are exact, direct-positive copies of the original—sharp, clean, permanent—and low in cost. An 8½″ x 11″ print, for instance, costs only about 1¼ cents for materials.

Investigate the benefits offered by this compact Model 300 before you buy or recommend the purchase of any other reproduction machine.

now! the prints you need when you need them!

Anyone can operate the Model 300. No special skills or training are required. One simple knob controls both exposure and development. It's as simple as that . . . no other controls are necessary—exposure and development are automatically synchronized.

wide variety of sensitized materials for every reproduction requirement

Bruning Copyflex offers an extremely wide variety of materials for all kinds of diazo printmaking. Included are white and tinted opaque papers of various weights for making low-cost prints with black lines or colored lines . . . white and tinted cardstocks for prints requiring extra rigidity . . . opaque cloths for prints requiring extra durability . . . translucent paper, films, and cloth for making intermediate prints on which reproducible alterations can be made . . . Reflex film for reproducing opaque or two-sided originals . . . Multicolor films and acetate coated papers for making brilliant, vivid prints containing several colors . . . and highly dimensionally stable polyester films and glass cloths. Whatever the printmaking need, there's a Copyflex material that will meet it!

automatic capillary type developer system assures positive development at all speeds

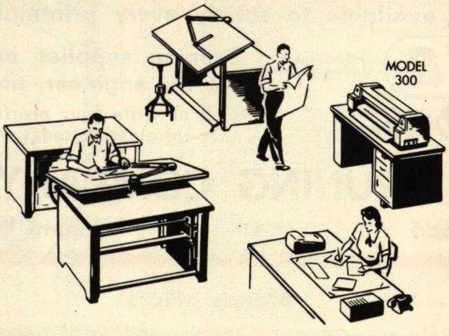
In the Copyflex process, developer solution is applied in metered amounts to exposed prints by direct capillary action, assuring complete developer coverage at all printing speeds and on all types of materials. Because the proper amount of developer is applied to each print automatically, no manual controls or feed adjustment levers are necessary.

Copyflex machines are easy to operate —no skill or experience required

Anyone can learn to operate a Copyflex machine with just a few minutes' explanation and demonstration. One simple knob controls the synchronized exposure and development of Copyflex diazo prints—there's no need for any separate developer adjustments.

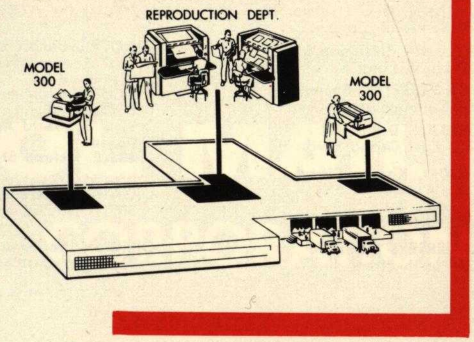
. . . an "inside" reproduction service for the small firm . . .

The budget-priced Model 300 gives a small firm all the advantages of its own reproduction service. Sharp, black-on-white prints—whether many or just a few—can be made right on the spot when needed. Since no venting or other installation is required, a Copyflex machine can be placed anywhere—an electrical connection is all that is needed. Costly delays for prints are eliminated, printmaking expenses are slashed, and inside control of valuable originals is maintained.



. . . a departmental whiteprinter for the large firm . . .

Large firms can use the Model 300 as a supplemental machine to the overworked and sometimes distant central reproduction department. One or more table-top Model 300's, strategically located throughout a plant, will eliminate time-wasting waiting lines for prints and will improve workflow efficiency in the department and in the plant.



specifications—model 300

Electrical Requirements—115 volt, single phase, 60 cycle, 18 ampere alternating current (50 cycle machine available at extra cost).

Printing Width—30 inches. Takes cut sheets up to 30" wide and roll stock up to 28" wide.

Maximum Mechanical Speed—8 feet, 10 inches per minute.

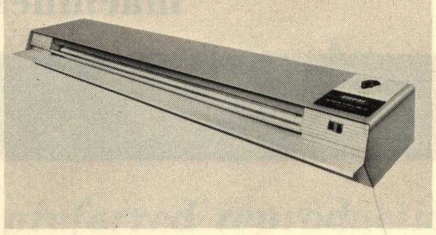
Lamp and Transformer—1,200 watt mercury arc lamp. Active length of lamp, 34". Constant wattage type transformer assures dependable, consistent light intensity regardless of fluctuations in line voltage.

Drive System—Electronic type. Variable speed D. C. motor. Selenium rectifier and transformer control. No vacuum tubes required.

Feed and Delivery Features—Rear print delivery tray stacks prints up to 12" x 30" in size.

Cabinet—Heavy gauge steel, with baked-on, gray hammertone enamel finish.

Dimensions and Weight—Over-all depth, including rear print delivery tray, 31"; without tray, 20½". Over-all width, 45¾". Over-all height, 15". Net weight, 290 pounds. Shipping weight, approx. 340 pounds.

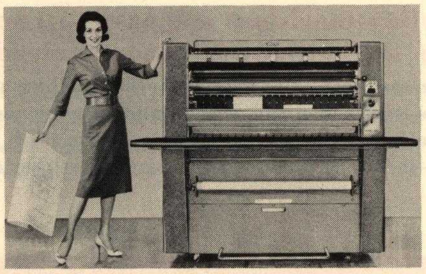


model 42

A quality table-top printing unit at a very low price. Enables even the smallest firm to have its own reproduction department. Exposes prints up to 40 inches wide by any length. Development is accomplished separately either with handy Copyflex developer spray or with developing machine. Measures only 5½" x 12" x 56". Operates on 115 volt AC.

model 110

A low-cost, compact diazo machine for copying translucent originals up to 11" wide by any length. Just slightly larger than a typewriter—can be placed anywhere for fast, on-the-spot copying. Self-contained exposure and developing sections. A valuable money- and time-saver in a variety of business systems applications. Also valuable for relieving larger reproduction machines of small-size jobs. Can make up to 300 8½" x 11" prints per hour. Runs on 115 volt AC.



model 435

A moderately priced, medium-volume diazo machine for engineering reproduction. Produces quality prints at a rate comparable to that of much costlier machines. Combines a 3,000-watt exposure lamp with an operating speed of up to 40 feet per minute and a 42-inch printing width. Features include automatic separation and air filter system. Measures 64" high by 65" wide by 50" deep. Operates on 230 volt AC.

model 675

A super-volume reproduction machine with a host of operating features for expediting the feeding, exposing, developing, and delivery of prints. Features include split-shade lamp control which enables two operators, using different types of materials, to make prints simultaneously. Machine height is adjustable at touch of a switch. Has fast-printing 7,500-5,000 w. lamp, 75 feet per minute mechanical speed, and 42" printing width. Occupies 72½" x 53" of floor space. Runs on 230 volt AC.

Other Copyflex machines also available to satisfy every printmaking need, every budget

BRUNING Specialists in Copying Since 1897

Copies anything typed, written, printed or drawn on ordinary translucent paper — in seconds.

Copyflex

Bruning supplies everything—from pencil to print—for the engineer, architect or draftsman.

CAPITOL MAIL CHUTE
CORPORATION

AIA FILE NO. 35-H-1

CAPITOL MAIL CHUTE CORPORATION

INTRODUCTION

The Capitol Mail Chute Corporation is an organization of skilled fabricators who have been manufacturers of mail chute equipment since 1931. It is part of an organization that have been manufacturers and erectors of aluminum, bronze and stainless steel metal work with experience since 1905.

The Capitol Mail Chute Corporation has at all times maintained the highest standards in its workmanship and materials and has refused to compromise operational qualities by producing several grades of mail chute equipment. Consequently, the Capitol Mail Chute Corporation manufactures only its Model "D" Deluxe Model and its newly designed Model "E", insuring functional perfection.

products and services

The Capitol Mail Chute Corporation manufactures and installs a complete line of standard Letter Receiving Boxes and Bundle Boxes plus various types of Auxiliary Boxes and Special Boxes for Post Office collection service throughout the United States, its possessions and foreign countries.

The Model "D" and newly designed Model "E" mail chutes are available as single or twin chute installations and can be supplied surface wall mounted, semi-recessed or fully recessed in the wall as required.

FEATURES

1. construction

The Capitol Model "D" and Model "E" Mail Chute is completely assembled in our factory as a complete unit. Each floor is individually wrapped and shipped in one unit. Each mail chute floor is installed in the building individually without removing the protective covering by a telescopic method starting from the top of the mail box and fitting each successive mail chute floor into the mail chute installed on the floor below. The mail chute on each floor can be fastened to either the adjoining wall or to the floor slabs. These mail chutes are fabricated to allow a three inch (3") leeway in each floor.

The factory built Model "D" and Model "E" mail chute require no additional assembling of miscellaneous parts such as floor connectors, back panels, lock straps or fascia parts at the job site. Thus, there are no field assembled parts to become loose or be improperly installed and form traps and blockages or obstruct the smooth passage of deposited mail.

The inner core of the Model "D" and Model "E" mail chutes are constructed of durable steel, painted with black enamel and all exposed sections of the mail chute are made of 63-ST5 alloy of extruded aluminum. If required these may be clad with stainless steel or bronze.

The removable glass frames are fabricated of extruded aluminum 63-ST5 alloy complete with glass installed and may also be clad in the desired finishes.

MAIL CHUTE EQUIPMENT

2. design

The design of the mail chute equipment is dependent upon the type of building, the character of its occupancy and the number of collections to be made. With this in mind the Capitol Mail Chute Corporation has available either single or twin mail chute equipment, single or combined receiving boxes and multiple bundle receiving boxes.

If requested our engineering and design staffs are available at all times to assist the architect, designer and owner as to the recommended requirements.

3. sliding floor connector

A special feature of Capitol Mail Chutes Model "D" and Model "E" is the sliding floor connector which permits the clearing of any blockages between floors. This floor connector can be lowered into view and any blockage cleared without the use of tools and locked back into position without any delays.

4. cigarette ejector

The Capitol Mail Chute Corporation pioneered in supplying this important feature and is standard equipment at no additional cost in installation on both the Model "D" and Model "E" mail chutes.

5. finishes

The Capitol Mail Chute Model "D" and Model "E" are available in aluminum, standard satin finish clear methacrylate lacquered; anodized (alumilited) aluminum, stainless steel or bronze clad finishes as specified.

U. S. POSTAL REGULATIONS

regulations

All mail chute equipment is subject to the approval of the local Postmaster and may be placed in public buildings, railroad stations, hotels, office buildings and apartment houses at the expense of the owner. Business or office buildings may not be less than four stories and apartment houses may not have less than forty residential apartments.

This equipment is intended for the receipt and deposit of First Class mailing matter only. Receiving Boxes shall be located not more than 100 feet from a mail entrance and on the ground floor of the building and this location is subject to the approval of the Postmaster.

The construction of the Capitol Mail Chutes and Receiving Boxes conforms to Postal Regulations and Specifications.

Upon request the Capitol Mail Chute Corporation will furnish copies of the Post Office Department Mailing Chute Rules, Regulations and Specifications as printed by the Post Office Department in their publication "POD Publication 16" dated May 1956.

approval

Capitol Mail Chute bears the approval of the Post Office Department and this company is under $10,000 Surety Bond to strictly carry out the Postal rules and regulations.

BOXES

All Capitol Mail Chute Receiving Boxes, Bundle Boxes, and Multiple Receiving Boxes are manufactured of heavy sheet metals with the design and lettering engraved or applied as desired.

The standard Receiving Boxes as shown are the most popular models but if the character and size of the building requirements demand a larger capacity box, these can be readily furnished.

Receiving and Bundle Boxes of all models can be made available surface mounted, semi-recessed in wall, or fully recessed in wall.

All Receiving Boxes are available in aluminum, standard satin finish clear methacrylate lacquered; anodized (alumilited) aluminum; stainless steel or bronze and are individually wrapped and crated.

Auxiliary Receiving Bundle Boxes are available in the same design as the standard mail Receiving Boxes, or may be furnished as a combined double box. (See #418 at right.)

ARCHITECT'S SPECIFICATIONS

MODEL D & MODEL E

Furnish and install where shown on the drawings and as hereinafter specified the "CAPITOL MAILING SYSTEM MODEL________" as manufactured by the CAPITOL MAIL CHUTE CORPORATION of Brooklyn, New York.

All to be installed complete except for rough floor openings, general cutting, patching and repair of plaster, which the Architect shall make provisions for in other trades.

The "CAPITOL MAIL CHUTE MODEL________" system consisting of ________floors of mail chute with glass panel moulding in design #________and________"CAPITOL MAIL RECEIVING BOXES" in design #________.

"CAPITOL MAIL CHUTE MODEL________" shall extend from top of mail receiving box on ground floor level (unless otherwise specified) through________floors to a point 4′ 8″ above finished floor to ________story, (unless otherwise specified).

Letter drop opening shall be provided for receipt of mail with cigarette ejector provided on each floor (unless otherwise specified.)
The continuous vertical sides of the chute shall be of extruded aluminum .125″ thick in________finish (aluminum standard satin, clear alumilite, enamel paint steel, bronze clad, nickel bronze clad or stainless steel clad as required) in the lobby floor and in________finish (aluminum standard satin, clear alumilite, enamel paint steel, bronze clad, nickel bronze clad or stainless steel clad as required) in the upper floor mail chutes.

Mail chute shall be equipped with cigarette ejector, removable glass panels set in frames of extruded aluminum (bronze clad, nickel bronze clad or stainless steel clad shall be provided if required, in which case matching glass panels are supplied.)
Sliding floor connections, top and bottom fascia plates, cigarette ejector, mail drop, lock strap with lock, and penalty card frame to be installed in each story.
All in accordance with the rules and regulations of the Post Office Department.

CAPITOL MAIL CHUTE CORPORATION shall furnish a surety bond in the sum of $3,000.00 guaranteeing the faithful execution of this contract against defects of workmanship or material for a period of three (3) years in full compliance with the orders of the Post Office General.

CORBIN WOOD PRODUCTS DIVISION

CORBIN letter boxes

Corbin cast bronze letter boxes, operated by dial, key or latch offer maximum security, rich appearance and user convenience.

uses

Apartment houses, dormitories, resident hotels, offices, clubs, hospitals and other commercial and institutional buildings.

features

1 modular versatility: nests are designed and custom-built to accomodate the required quantity of each size of box.
2 Corbin letter boxes feature the same sturdiness and high quality materials as found in U. S. Government Post Office boxes, plus added refinements that provide greater security, ease of operation and simplicity of designs that harmonize with present day architecture and complement contemporary interiors.
3 Lock of key type boxes can be set up to operate on key systems of principal manufacturers.
4 Double dial box can be opened in less time than any other combination type box.

distribution

Boxes are furnished in sections, completely assembled and ready for service. Construction is such that mail can be distributed from the:

1 front by means of masterdoors
2 rear through pigeonholes (standard)

construction

pigeonholes

the roundabout forms the shell of the nest into which the horizontal shelves and vertical partitions are fitted. This roundabout is of 1″ thick birch or oak. The exposed roundabout is finished as specified and the interior, as well as the whitewood divisions, is shellacked and varnished. A brass card holder is mounted at the rear and above each pigeonhole.

letter boxes

(exclusive of standard single dial box)

CORBIN designed boxes have flush hinges with inaccessible hinge pins. The door recesses into the bronze frame. This frame is mortised flush into the pigeonhole——an unobstructed opening from front to rear.

specifications

general

Furnish the following CORBIN letter boxes complete with wood pigeonholes: (here state type and quantity of each size as selected from table of page 3)

boxes

- *double dial type*—to have dials made with raised letters against a contrasting black background. The lock is to be so constructed that the combination can be changed easily. A positive automatic device is to be provided to throw off the combination when the door is opened and the latch released.

(delete this paragraph if either key type or latch type boxes are specified)

- *key type*—with 6-pin tumbler lock, each provided with 3 nickel-silver keys. Locks to be keyed all different. Keyboard numbered same as boxes to be furnished for segregation and storage of keys.

(delete this paragraph if dial operated or latch type boxes are specified)

- *latch type*—to have turn latch.

(delete this paragraph if either dial operated or key type boxes are specified)

finish—to be (medium statuary bronze) or (satin chrome US26D)

door and frame—to be of cast bronze with frame and all raised surfaces finely polished.

hinges—to be flush with frame of door.

door—to recess into frame.

frame—to be mortised flush in pigeonhole.

pigeonholes—14″ deep to be (horizontal or inclined) with (birch or oak) roundabout. Roundabout to be finished (specify) with ½″ hardwood divisions shellacked and varnished.

numbering—is to be done by means of red and black number cards in card holders back of the glass (where regularly furnished) and a card holder is to be attached at the rear and above each pigeonhole.

- *standard single dial type box*—to have fret and other raised surfaces finely polished

finish—to be (lusterless brown lacquer) or (satin chrome US26D)

hinges—to be protuding type. Door to close against frame and frame to be surface mounted to pigeonhole.

numbering—to be done by means of decals on inside of glass and card holder mounted at rear and above each pigeonhole.

Above to be as manufactured by Corbin Wood Products Division, The American Hardware Corporation, or approved equal.

THE CUTLER MAILING SYSTEM
since 1883 . . .
the standard of excellence

Cutler mail chute company
ROCHESTER 7, NEW YORK
a subsidiary of The Federal Equipment Co. / Carlisle, Pa.

A. I. A. File No. 35-H-I

why Cutler is the first name in mail chutes . . .

LETTERS
MAIL
LETTER BOX

Since 1883, when the world's first mail chute was installed in Rochester, N. Y., the Cutler Mail Chute Company has continued to emphasize highest uniform quality. In 1958, the company became a subsidiary of The Federal Equipment Company, Carlisle, Pa. (incorporated in 1907), manufacturers of lock-type letter boxes and mail handling equipment. The entire organization of this progressive company is concentrated on the production of only one type of product: Mail handling equipment.

All Cutler products conform to Post Office Department Rules, Regulations and Specifications; and the vast experience of Cutler engineers and designers assures that each installation will meet exactly the requirements of any particular job.

types of buildings

Cutler mail handling equipment is found in all types of modern buildings including:

- Office buildings
- Hospitals
- Hotels
- Apartments
- Dormitories
- Nurses homes
- Public buildings
- Motels
- Y.M.C.A. buildings
- and others

In addition to these large buildings, many smaller apartment houses and buildings are today using Cutler equipment to realize actual savings in reducing elevator operation and conserving employees' time. Moreover, the appearance of Cutler equipment in any lobby not only adds to its appearance, but also indicates a progressive, modern building of quality construction.

U.S. Post Office Department regulations

Every contract is subject to approval by the local Postmaster and governed by Post Office Department regulations as stated in "Mailing Chute Rules, Regulations and Specifications," excerpts from Chapter 1, Postal Manual dated May 1956.

After the chute and box are installed and accepted for service, the Postmaster provides a Government Lock for the mail box and thereafter the entire equipment is under the "exclusive care and custody of the Post Office Department." Letters deposited are legally mailed.

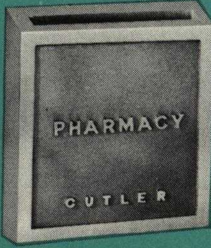
In connection with every Cutler Mail Chute contract, we furnish to the owner a bond guaranteeing that the construction and installation of the equipment, including the mail box, is in accordance with the rules, regulations and specifications of the Post Office Department, and guaranteeing to remedy any defect within three years.

Copies of the regulations relating to mail chutes will be furnished on request. We suggest that where there is any question as to the arrangement of the work, architects consult us before drawings are completed.

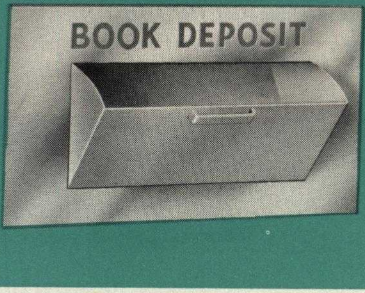
ADVANTAGES OF SPECIFYING AND BUYING

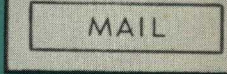
Cutler

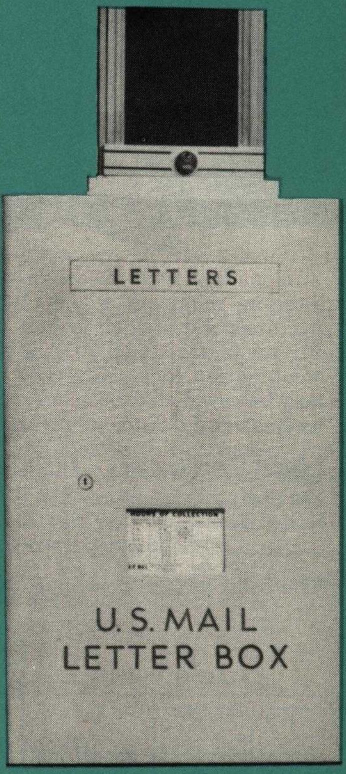
MAIL HANDLING EQUIPMENT



U.S. MAIL
COLLECTIONS
CUTLER MAILING SYSTEM
U.S.
MAIL







. . . no other chutes and letter boxes are comparable in design, quality, construction, performance

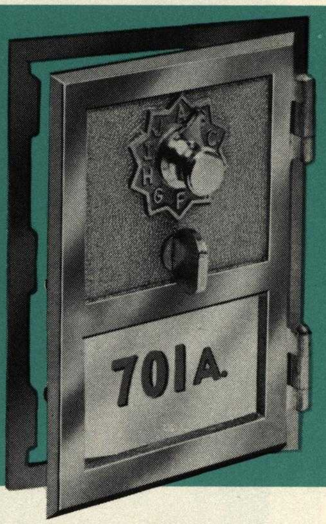
- Experience in solving mail handling problems since 1883
- Engineering Service—the only complete engineering service for this type of product
- Highest Quality materials and Superior workmanship pay off in extra years of service
- Matching or harmonizing finishes
- Complete representation in all major marketing areas
- Full Guarantee of all equipment
- Construction Technicians constantly "on the road" throughout the U.S.
- Complete facilities for manufacturing component parts
- Leasing of equipment is possible only from Cutler
- Factory service

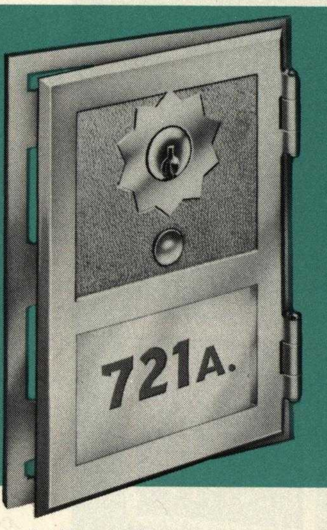
Use Cutler planning service

Cutler has aided thousands of architects, colleges, business firms and institutions to plan and equip their mail departments, and is in a position to work closely with architects and contractors. Cutler's sales and engineering staff is at your service to bring you the benefits of their wide experience in planning mail and communication systems of all types.

Cutler LETTER BOXES—key or combination lock types

bronze ARCHITECTURAL model





This widely used model is available to harmonize with interiors requiring a U.S. 10 statuary bronze finish. The Architectural model is also furnished in U.S. 26D dull chrome plate. Model 701A is equipped with a three-tumbler combination lock. Key-type locks are also available, and may be keyed alike or master keyed with equipment supplied by Schlage Lock Co. and other leading lock manufacturers.

Typical Specifications—ARCHITECTURAL Model

Furnish________(quantity) CUTLER Architectural model letter boxes, catalog number________. To be finished in ________(U.S. 10 statuary bronze or U.S. 26D dull chrome.)

The solid metal doors and frames to be made of best cast bronze. Frame and all raised surfaces to be finely polished. A glass panel, held in place with brass spring brackets, to be provided in lower part of door. Each door to be supplied with a designated number (red and yellow decals) or a brass name card holder, if desired.

Doors and frames to be nested on cases of________ (22 gauge furniture steel or 1″ solid oak with white wood divisions) with 14″ depth. Finish of cases is to harmonize with adjacent building interior. A name card holder and card shall be provided on the back of each opening.

The above to be manufactured by the Cutler Mail Chute Company, Rochester, New York.

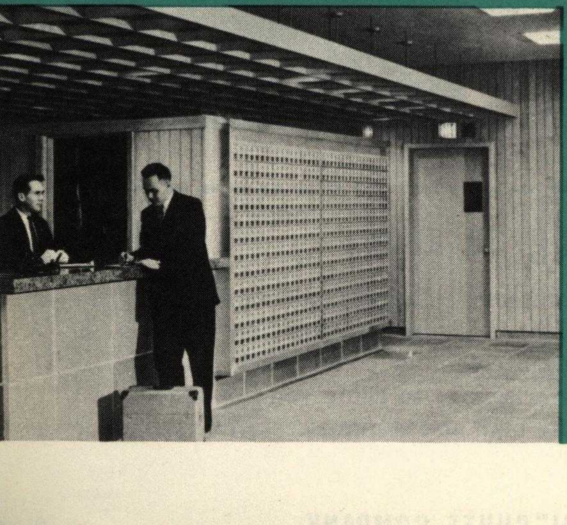
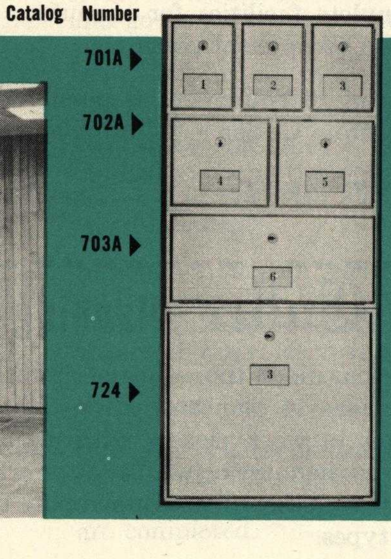
WIDTH OVERALL:
Multiply number of horizontal units by outside dimension width. Add 1½″.

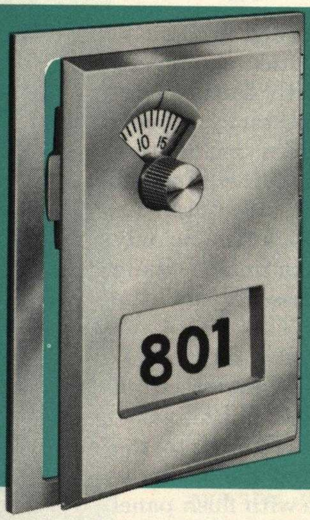


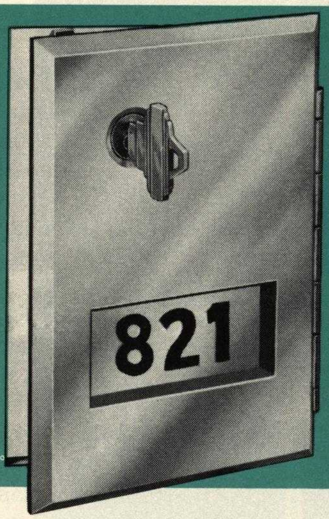


lock-type letter boxes are available in four compatible sizes

The aluminum FUTURA model and the ARCHITECTURAL model are manufactured in four compatible sizes that can be nested in any combination and arranged to meet your job requirements and space availability. This assures maximum efficiency for any installation, regardless of specific requirements or space limitations.

aluminum FUTURA model





The ultimate in plain design with concealed hinge treatment. Satin smooth finish by Master craftsmen. Equipped with combination locking mechanism with over 8,000 possible combinations. Also supplied as standard equipment is a key-type locking mechanism which, if desired, may be keyed alike or master keyed with equipment of leading lock manufacturers. On request, special finishes also available including gold or black anodize.

This model features patented construction that permits simple rearrangement of units by the owner to meet future space requirements.

Typical Specifications—FUTURA Model

Furnish__________(quantity) CUTLER FUTURA letter boxes, catalog number__________.

Frame and all raised surfaces to be finely polished, satin-finish aluminum. A designated number (in black), applied by the opaque carbolic etching process, is to be provided on plexiglas window on lower portion of each door.

The solid aluminum doors and frames to be nested on cases of 22 gauge furniture steel with 14″ depth. Finish of cases is to harmonize with adjacent building interior. A name card holder and card shall be provided on the back of each opening.

The above to be manufactured by the Cutler Mail Chute Company, Rochester, New York.

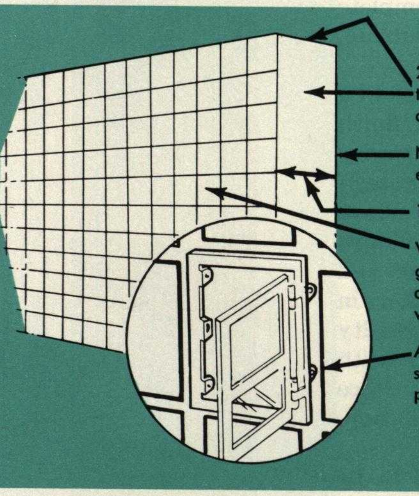
#803	#823	5½″	12″	5″	11¼″	14″
	#824	11″	12″	10½″	11¼″	14″

TO FIGURE TOTAL SPACE REQUIRED

WIDTH OVERALL:
The overall width of each group of boxes should be limited to multiples of 12″ for most economical installation. Each 12″ will accommodate three #801, 821 boxes; two #802, 822 boxes; or one #803, 823 box.

HEIGHT OVERALL:
Multiply number of vertical units by 5½″ and add ¼″.



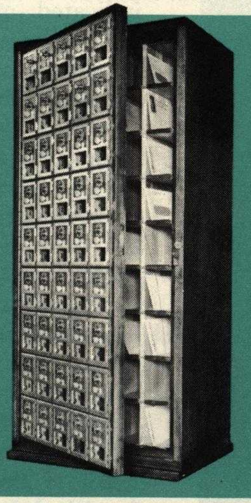
22 gauge furniture steel or 1″ thick hardwood "pigeon-hole" casing . . .

Name card holders on back of each opening . . .

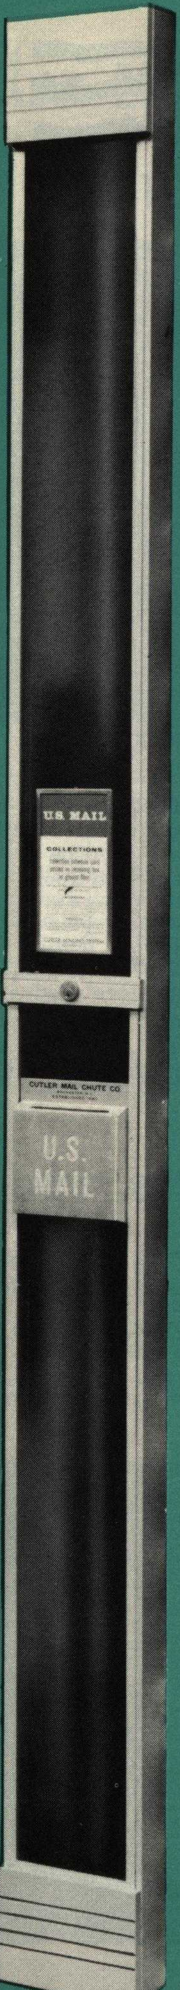
14″ depth . . .

Verticals and horizontals of 22 gauge furniture steel on steel case or ½″ solid poplar on wood nest . . .

Aluminum or bronze fronts attach solidly to nest, insuring tamper-proof construction . . .



New Master Door Front provides access to all letter boxes of installations where boxes are accessible from only one side.



MAIL CHUTES
CLASSIC model

CUTLER Mail Chutes

CUTLER Mail Chutes are unmatched in quality, design and appearance. Only Cutler equipment has heavy-duty construction with features designed to outlast building life expectancy. This is doubly important in that modern installation methods demand the mounting of this equipment within the actual building wall structure. An additional feature of Cutler chutes, available only from Cutler, permits the use of continuous chute sides to eliminate all narrow passages and the problem of mail stoppages.

The Cutler MODERNE Model (at right, page 7) is designed to conform to modern architectural composition, and to provide an economical, packaged installation. Construction is similar to the Classic Model described below, and the Moderne presents a plain, neat appearance with flush panel moldings, bases and ceiling members. This mail chute is arranged as a complete unit for each floor, and factory shipments include complete materials for each story.

The Cutler CLASSIC Model (at left) has been tested and proved in many types of buildings for many years. It is furnished with finely finished castings, with or without horizontal lines. Floor connections in each story are removable as are back pieces, with anchors and fastenings underneath. There are no lateral projections from the sides. Available in bronze, nickel bronze and stainless steel.

Suggested Specification for the CLASSIC Model

Provide all labor and material to furnish and erect ....(quantity) Cutler CLASSIC Model Mail Chutes to serve.......stories with glass moulding No........and.......(quantity) Mail Boxes in design..........(catalog number) in the location indicated on the drawing, installed complete except for rough floor openings, general cutting, patching and repairing of plaster.

The continuous vertical sides of the chute to be extruded aluminum .105″ thick, in satin finish clear anodized or enamel color (supplementary covers in bronze, nickel bronze or stainless steel) extending from the top of the box to 4′7½″ above the floor in the top story. Mail chute to have removable glass panels, floor connections and backs with bases, lock bands and ceiling collars in heavy cast metal, mailing pocket, lock and penalty card frame in each story, all in accordance with the rules and regulations of the Post Office Department governing construction, installation, guarantee and bonds.

All of the above including installation to be furnished by the Cutler Mail Chute Company, Rochester, New York.

twin chutes MODERNE model

Suggested Specification for the MODERNE Model

Provide all labor and material to furnish and erect ....(quantity) Cutler MODERNE Model Mail Chutes to serve.......stories with glass moulding No........and.......(quantity) Mail Boxes in design..........(catalog number) in the location indicated on the drawing, installed complete except for rough floor openings, general cutting, patching and repairing of plaster.

The continuous vertical sides of the chute to be extruded aluminum .105″ thick, in satin finish clear anodized or enamel color (supplementary covers in bronze, nickel bronze or stainless steel) extending from the top of the box to 4′7½″ above the floor in the top story. Mail chute to have removable glass panels, floor connections and backs with bases, lock bands and ceiling collars in heavy plate metal, at least 3/16″ thick, mailing pocket, lock and penalty card frame in each story, all in accordance with the rules and regulations of the Post Office Department governing construction, installation, guarantee and bonds.

All of the above including installation to be furnished by the Cutler Mail Chute Company, Rochester, New York.

Note: For installation of the MODERNE Model, general contractor must be prepared to permit CUTLER personnel to erect the complete installation on one visit to job site.

twin chute equipment

Two or more chutes should be provided for buildings of large area or of fifteen stories or more in height. While chutes may be in separate locations or close together, twin chutes side by side (see left) present several important advantages:

- By closing the openings in each chute on alternating stories, the mail is divided and the possibility of congestion is avoided.
- One chute may be cleaned or repaired while the other remains in service. Mail service thus continues uninterrupted.
- Both chutes can discharge into one large box.
- Establish one central location for mail.

Twin chutes have been installed in buildings with less than ten stories to provide separate handling for air mail and regular mail. Buildings of large area and height having more than one entrance should have twin chute equipment at each bank of elevators.

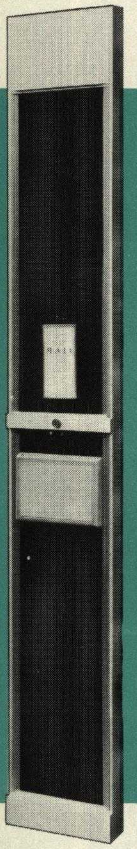
CUTLER MAIL CHUTES for special requirements

wide chutes



Wide chutes, available exclusively from Cutler, are designed to accommodate up to 8″ x 10″ mailing envelopes, or where exceptionally heavy volume of mail is anticipated by the owner or architect. These chutes are usually installed where extra size envelopes are in constant use, such as governmental, commercial or industrial buildings. Where desired, mail collection boxes to be attached to the receiving end are furnished as standard equipment in the desired style.

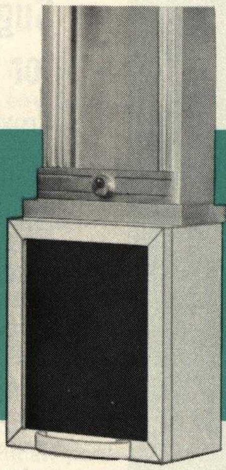
communication chutes



for hospitals and similar service buildings

Cutler communication chutes, are a low cost, efficient system for handling mail and communications. These chutes provide direct, fast communication from upper floors to kitchen, linen supply or pharmacy. There are no moving parts, no maintenance costs.

communication drop pockets

KITCHEN
CUTLER

For use to kitchen —for menu, special diet or other messages.

PHARMACY
CUTLER

For use to pharmacy —for prescriptions, instruments or other messages.

RECORDS
CUTLER

For use to records —for quick, efficient handling of all types of communications.

leasing of cutler chutes

When initial cost is a factor in the purchase of equipment, Cutler offers mail chute equipment under a lease contract. These contracts run for 15 years at a monthly rental payable quarterly.

Under a leasing arrangement, mail chutes are installed flush to the wall with backing furnished by Cutler or the building owner. Sleeves or thimbles must be installed to extend through floor thickness for the chute which is fastened to the backing. There is a nominal charge for preparing the building.

A Cutler leasing arrangement has these advantages:

- small down payment
- rental charges can be carried as operational expense and thus deducted from annual income
- all service and maintenance are performed by Cutler

mail (collection) boxes

for use with or without chutes

Cutler has furnished mail boxes from thousands of different designs to meet many varying conditions, and is well prepared to execute special work from architect's drawings. The facilities of the designing and engineering staff are always at the disposal of architects. It is possible to illustrate only a very few designs but the staff is always glad to submit photographs or to prepare special drawings.

The boxes shown are among those in general use at the present time.

construction and finish

These boxes are made of heavy sheet metal and plates with incised or applied letters, and in strict accordance with Post Office Department rules. The high standards of quality and workmanship at Cutler are maintained in all boxes, no matter what the size or cost. Boxes may be made with exposed portions of aluminum, bronze, nickel bronze, stainless steel or steel in baked enamel. With stainless steel exterior, any applied ornament is of nickel bronze.

capacity

The capacity required for the mail box depends not only on the area but on the character of occupancy of the building and frequency of collections. The capacity of the box is, in every case, subject to the approval of the Postmaster. In general, a box 36″ x 20″ x 10″ is adequate for an office building of average area up to 10 stories in height. Box capacity may be increased by adding a recessed extension. In case of doubt, Cutler's engineering department should be consulted in advance.

auxiliary boxes

Boxes illustrated on these pages with the suffix A after box number are auxiliary units, and, by postal regulation, cannot be attached to the receiving end of a chute. These boxes supplement the mail chute receiving box, and are designed to accommodate large quantities of letters tied in bundles and envelopes too large for the chute. Without an auxiliary box such mail may be left on the floor or on top of the mail chute box. This involves the risk of loss and is untidy in appearance. These boxes are furnished in designs similar to most of the Cutler standard boxes and, if desired, may be combined with the mail chute box to form a single unit.

mail separation boxes and chutes

Boxes such as No. 6248 and 6025, illustrated at left, facilitate and expedite the dispatch of U.S. Mail. Mail separation chutes are a logical extension of this idea and separate chutes for air mail and regular mail are recommended. Further information will be gladly furnished on request.

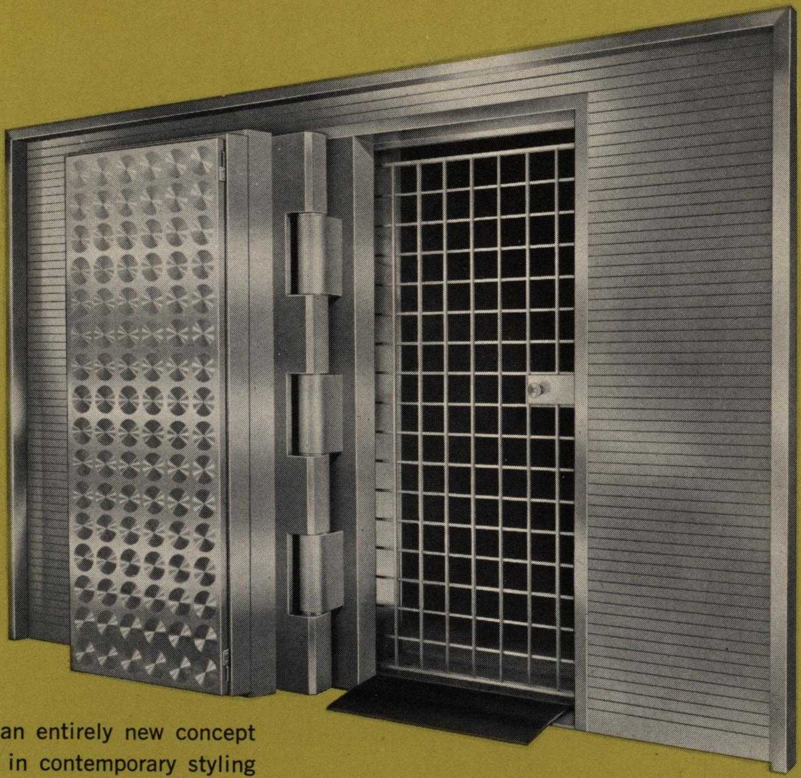
Diebold Drive-In Banking Windows

A leader in the bank equipment field for more than 100 years, Diebold has continually introduced new ideas in drive-in banking...ideas that benefit both bank customers and bank personnel. The Diebold line of drive-in banking windows is a comprehensive one, offering the right type of window for every application.

Walk-Up Banking Windows

A logical and successful development, Diebold Walk-Up banking windows help relieve over-crowded banking rooms...bring to pedestrians the same convenience and speed drive-in banking brings to motorists. Diebold Walk-Up banking windows are available in a wide range of different models.

FOR COMPLETE INFORMATION



The Diebold-Basic bank vault door initiated an entirely new concept in vault door design ... combining the finest in contemporary styling with the impregnable security traditional with bank vault doors. Diebold-Basic doors are available with a wide choice of architrave styling options ... blend magnificently with any bank interior design.

New "Polaris" After-Hour Depository provides for both bagged and envelope deposits ... is handsomely styled to complement contemporary architecture. Diebold After-Hour Depositories have been approved by Underwriters' Laboratories — provide the ultimate in protection and convenience.

VAULT CONSTRUCTION

for fire-resistive record-storage vaults

Size of Vault: Record-storage vaults should not exceed 5000 cu. ft. in volume and the height should not exceed 11 feet.

Materials: Walls should be built of (1) reinforced concrete, (2) sand-lime building brick, (3) hollow load-bearing concrete masonry units, or a hollow wall of brick. Walls of hollow units, or hollow construction shall be plastered both sides with at least ½″ of gypsum or portland cement plaster. See chart at right for additional information.

For Fire-Resistive File Rooms: As a general measurement, File room construction should parallel that of 2 hour construction for fire-resistive record-storage vaults. Size: File storage rooms shall not exceed 50,000 cu. ft. in volume (preferably not over 40,000 cu. ft.) and the height shall not exceed 15 ft. Minimum Wall Thicknesses: The following construction is recommended — (1) Reinforced Concrete . . . 4 in., (2) Plain Concrete . . . 6 in., (3) 6 inch hollow tile, 6 inch concrete block, or 6 inch gypsum block, plaster on both sides . . . 7 in., (4) Brick . . . 8 in.

The Chart shown at right is a table of suggested minimum wall thickness that applies to ground-supported vaults. For structure-supported vaults, use the wall thickness shown for the TOP floor of ground-supported vaults. Complete specifications for the construction of Fire-insulated Vaults can be had on request.

Kind of Material	Reinforced Concrete			Brick (a)			Hollow Units (b)
Class of Wall	AA (6 hr.)	A (4 hr.)	B (2 hr.)	AA (6 hr.)	A (4 hr.)	B (2 hr.)	B (2 hr.)
Floor—counting from top down	THICKNESS OF WALL IN INCHES						
Top	10	8	6	12	12	8	8
2nd from top	10	8	8	12	12	12	12
3rd from top	10	10	10	12	12	12	12
4th from top	12 (c)	10	10	16 (d)	16 (d)	16 (d)	16 (d)
5th from top	12	12	12	16	16	16	16
6th from top	12	12	12	20 (d)	16	16	16
7th from top	12 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)
8th from top	12 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)
9th from top	12 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)
10th from top	14 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)

Example: For a four-story building use thicknesses in first four lines of table, the fourth line representing the minimum thickness suggested for walls of a ground floor vault, the first line the thickness of walls for a fourth floor vault, etc.

Example: For an eight-story building use thicknesses in first eight lines of table, the eighth line representing the minimum thickness suggested for walls of a ground floor vault, the first line the thickness for walls (panel construction) for an eighth floor vault, etc.

(a) Sand-lime building brick—American Standard ASA-78.1-1942.

(b) Hollow Load-Bearing Concrete Masonry Units — American Standard ASA-79.1-1942; or hollow wall of bricks.

(c) Thickness in panel construction may be 2 in. less.

(d) Thickness in panel construction may be 4 in. less.

(e) These thicknesses apply to panel construction.

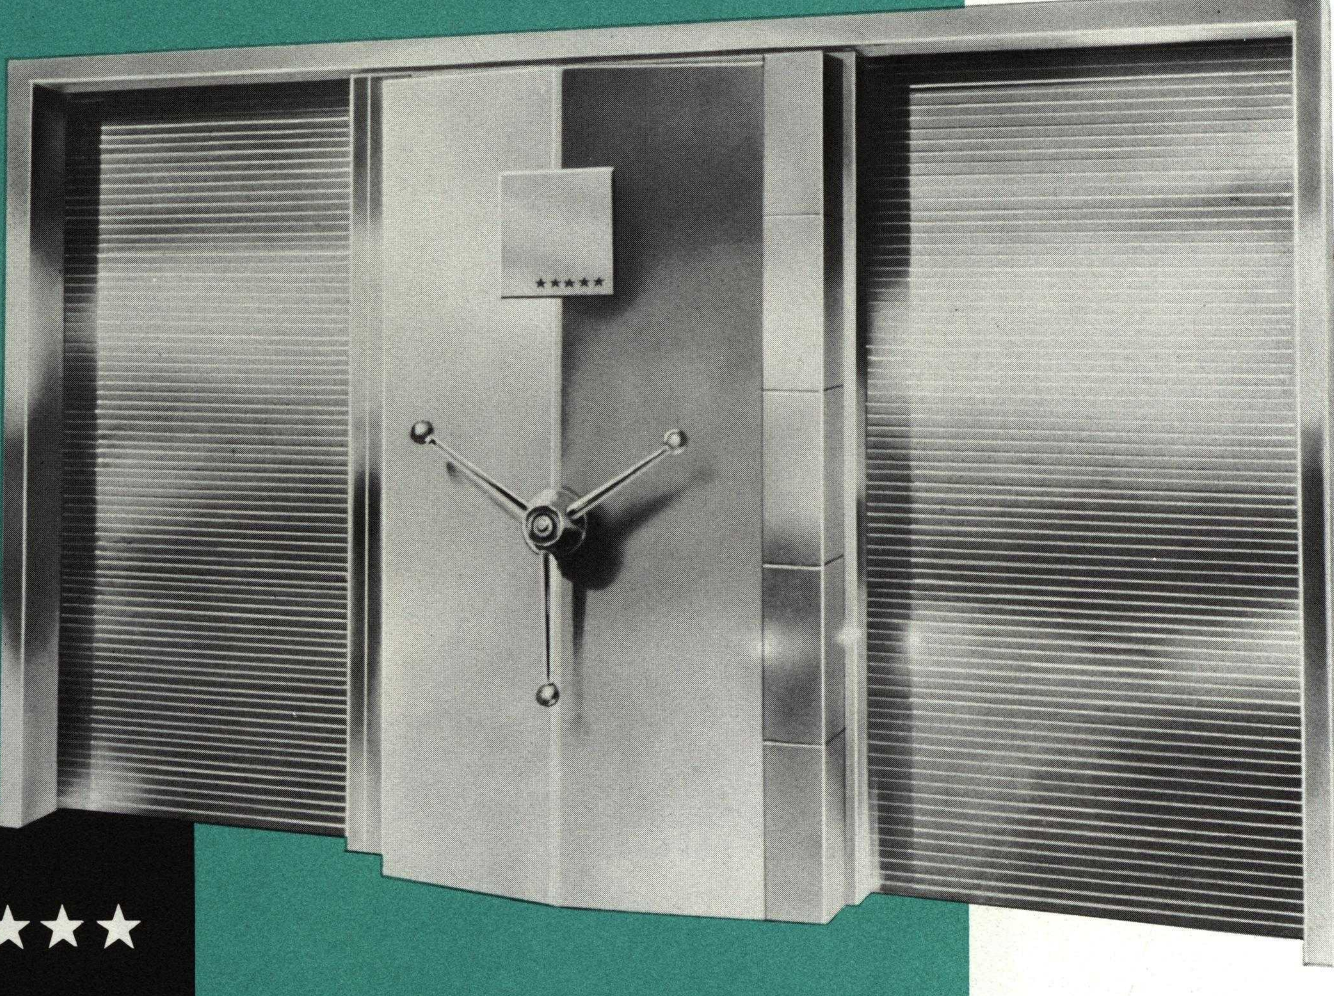
Five Star Constellation Vault Entrance



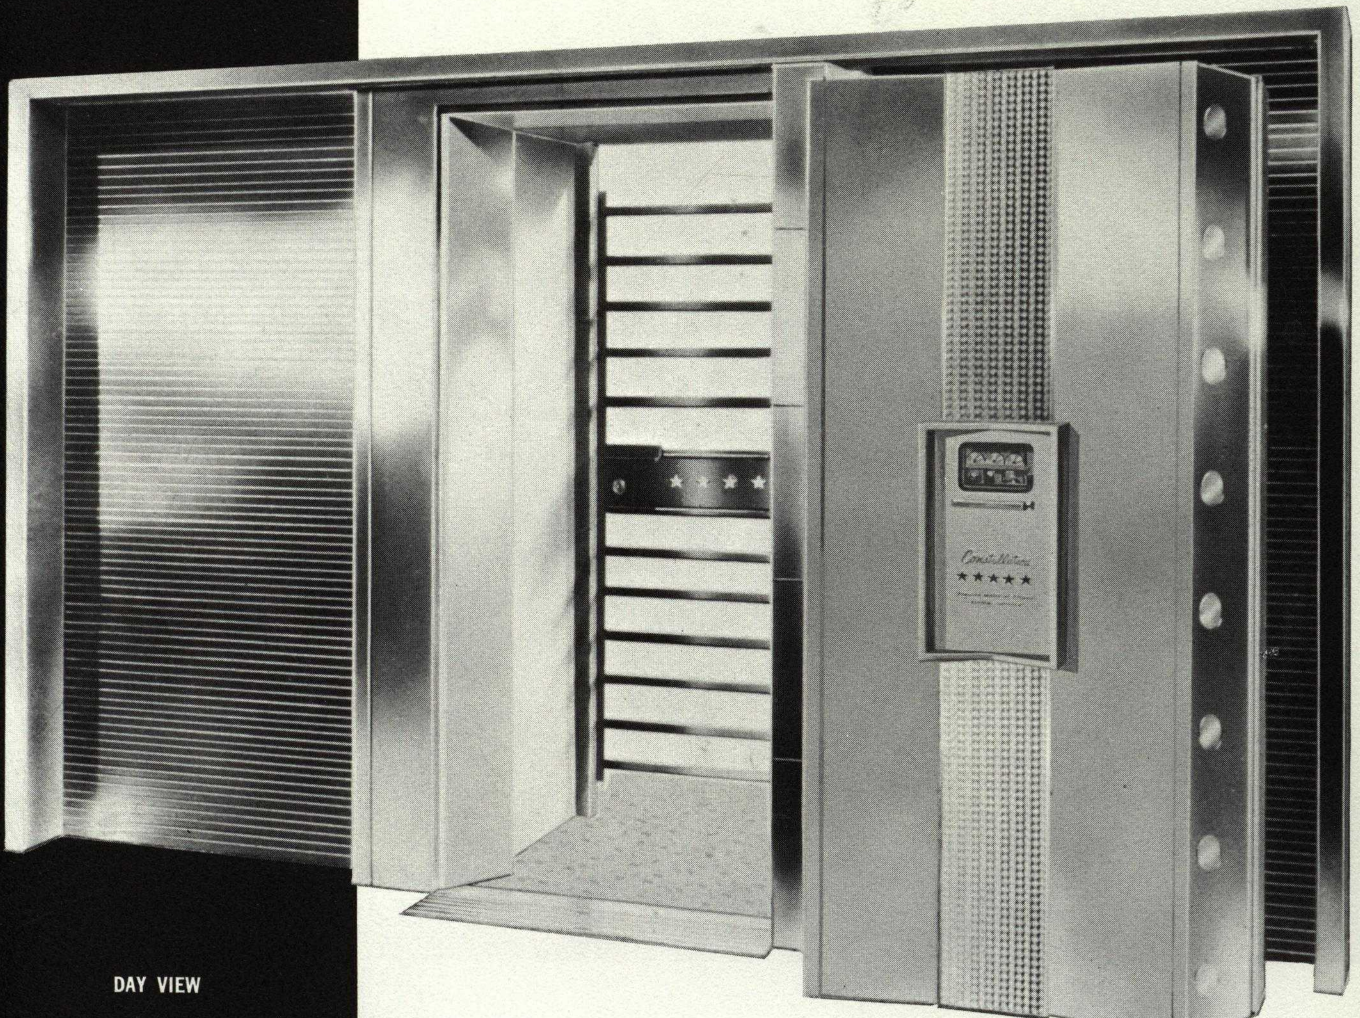
★★★★★

NIGHT VIEW. Architrave design "A". 7′ high; 10′7″ wide.

This magnificent vault entrance—the Herring·Hall·Marvin Five Star Constellation—is operated by electro-hydraulic power—completely automatic. After turning on the power with a switch key (kept by a bank official), the push of a button operates the mechanism which withdraws the locking bolts and swings the door open over an arc of 180 degrees. To close the door the operation is exactly the same, in reverse.

In the event of power failure, the decorative triplex handle can be used to operate the door manually.

Doors can be furnished in all standard thicknesses—3½″, 7″, 10″, 12″, 16″ and 20″. Push-button control is standard equipment but manual control may be specified. The architrave may be specified in any width. Alternate architrave designs and masonry openings are shown on pages 4 and 5.



DAY VIEW

OTHER FEATURES OF DESIGN AND EQUIPMENT

FLOOR LEVEL THRESHOLD . . . NO FOOT BRIDGE. No back-breaking lifting of a foot bridge. No tripping hazards. Teller's buses and other mobile equipment roll into and out of the vault with ease.

INTERLOCKING VESTIBULE. The vault entrance is anchored directly to the masonry reinforcement. This construction eliminates the danger of removal of the door and vestibule in case of an explosion. The vault entrance, so installed, may be expected to withstand even an atomic blast.

RESISTANCE TO CARBIDE-TIPPED DRILLS. A new material, developed in our own laboratory and trade-named CHI-TEN®, protects the combination locks and time lock against carbide-tipped drills.

TORCH RESISTANCE. A combination of torch-resisting metal and a solid plate of 99% pure electrolytic copper protects combination locks and time lock against the oxy-acetylene torch.

DUAL COMBINATION DIAL. A single dial selectively operates two combination locks.

DRAMATIC BEAUTY. All surfaces are satin-finish stainless steel with bronze plaque on door or our new, exclusive "Golden Swirl". The design, by N. L. Strickland, has the new "straight-line" look which characterizes today's modern equipment. The fluted architrave can be furnished in any width specified by the architect.

BURGLAR ALARM. Available as an accessory. Complete catalog on request.

8 VARIATIONS OF ARCHITRAVES FOR

HERRING·HALL·MARVIN

Five Star Constellation Vault Entrance

3½" and 7" Doors*

An examination of the drawings shown here will reveal that the principal difference between the "A" and "A-1" styles, for example, is in the direction of the fluting. Style "D" is without fluting. All architraves are stainless steel or our new, exclusive "Golden Swirl".

Beyond these standard styles, Herring·Hall·Marvin places no limits on the size and shape of the architrave. The architect may give full scope to his imagination in designing the architrave and we will build it to his specifications.

*For doors of greater thickness, the width of the architraves is increased. For details, write to factory.

DRIVE-UP WINDOWS

Mark IV and Mark III Models

The drop-front depository drawer in these models is an exclusive Herring•Hall•Marvin feature. As the drawer rolls forward to the customer, the wedge-shaped front lowers, providing ample reach-in space. A special safety device prevents any danger of catching hands or fingers as the drawer closes.

The top of the drawer has a hinged lid of Plexiglas, so that contents are always visible, yet completely shielded from wind, rain and snow.

A special feature of the Mark IV model is the front skirting which extends almost to the sidewalk.

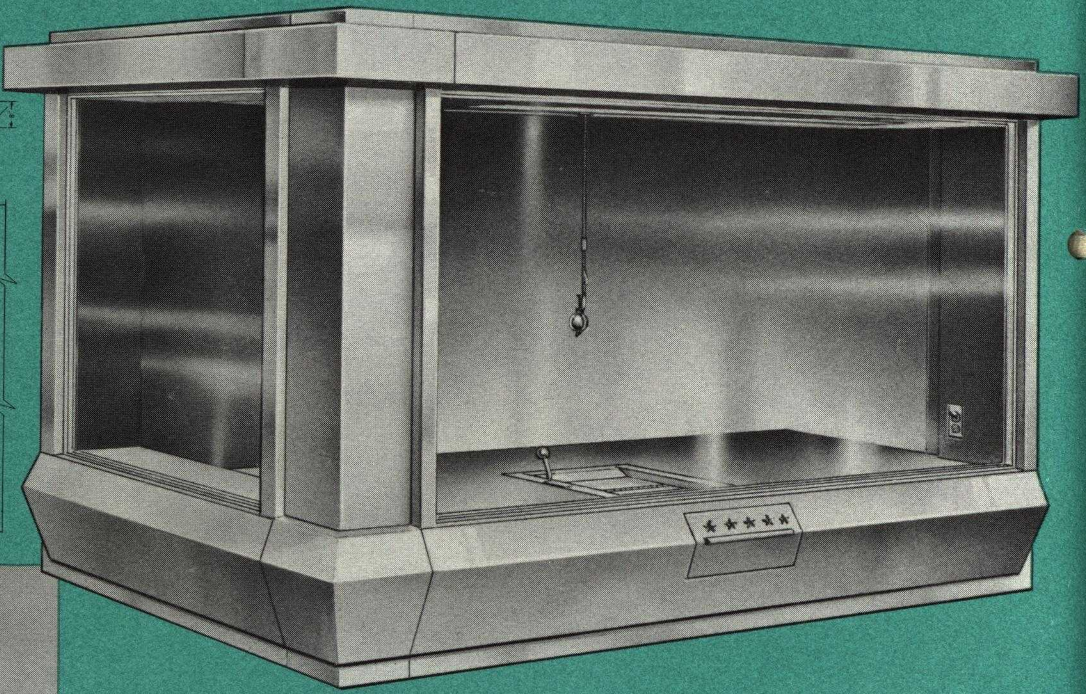
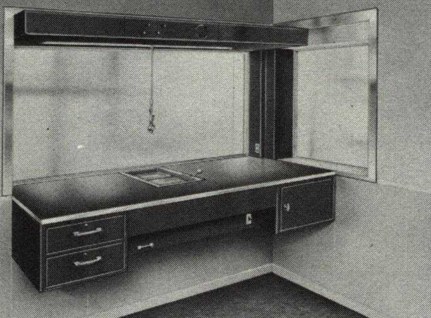
FRONT VIEW



Models 59802 and 59672



Whether used in island or corner installations or in a row, these windows expedite the flow of traffic. Cars swing up to and away from these windows with equal ease. No maneuvering into position when approaching. No backing, turning, twisting to get in the clear when leaving.

Tellers work more efficiently because through the glass area on the side they see customers approaching and prepare to serve them.

OTHER FEATURES

• Exclusive drop-front all-weather depository drawer • Full 18-inch drawer extension • Manual or electric control of depository drawer • In electrically controlled models, instant switch-over can be made from electric to manual operation • High-fidelity sound system; pendant microphone for teller • Roller suspension on key-locked cash drawer; removable tray • Storage drawer and storage compartment; key-locked when specified • Fluorescent counter illumination • Optional window defroster unit • Exterior of satin finish stainless steel; interior finished in cocoa brown • Counter top covered with heavy black linoleum • Tinted bullet-resistive glass listed by Underwriters' Laboratories.

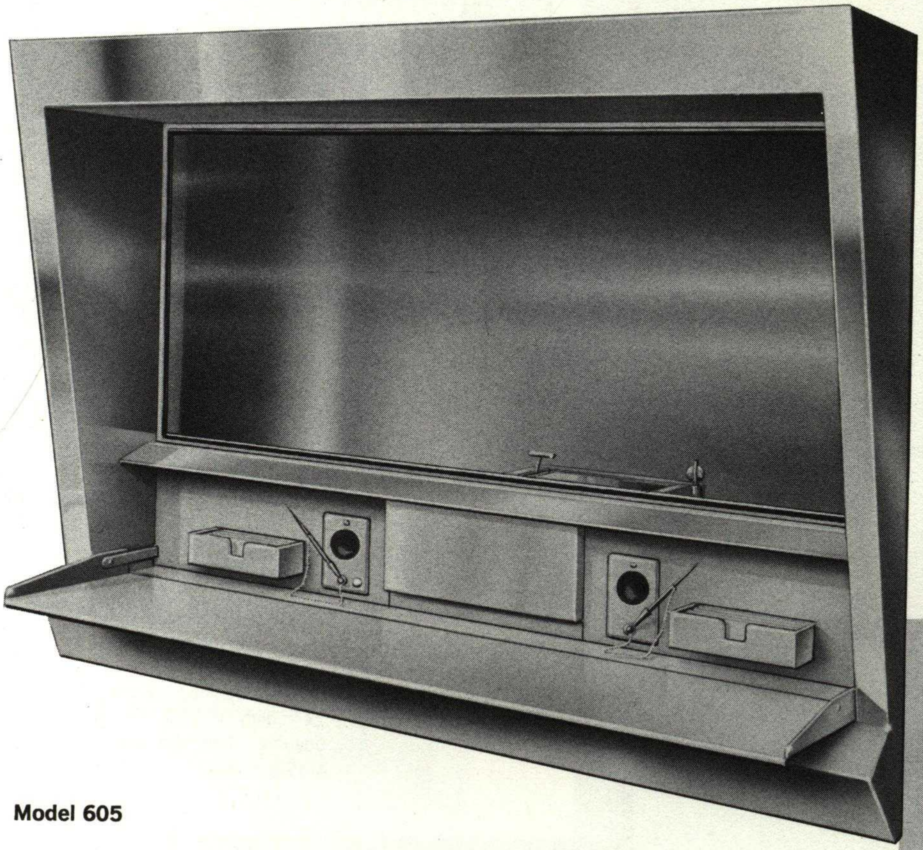
HERRING·HALL·MARVIN *Five Star Constellation*

PEDESTRIAN WINDOW



Model 605

Double customer facilities speed up service. Front panel, operated by the teller, lowers to form a writing shelf.

OTHER FEATURES

• Glass-covered depository receptacle • Roller-suspension on key-locked drawer; removable tray • Storage drawer; key-locked when specified • High-fidelity sound system; teller's microphone on counter • 180-degree visibility for teller • Fluorescent counter illumination • Exterior of satin finished stainless steel; interior finished in cocoa brown • Counter top covered with heavy black linoleum • Tinted bullet-resistive glass listed by Underwriters' Laboratories.

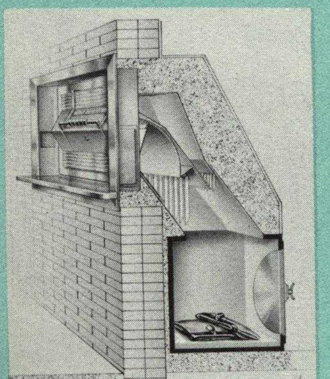
Frame size, recessed design—30¾″ high x 29¼″ wide. Frame size, flush design—24″ x 24″. Masonry opening, recessed design—28¾″ high x 27¼″ wide. Masonry opening, flush design—22″ x 22″.

MODEL 958

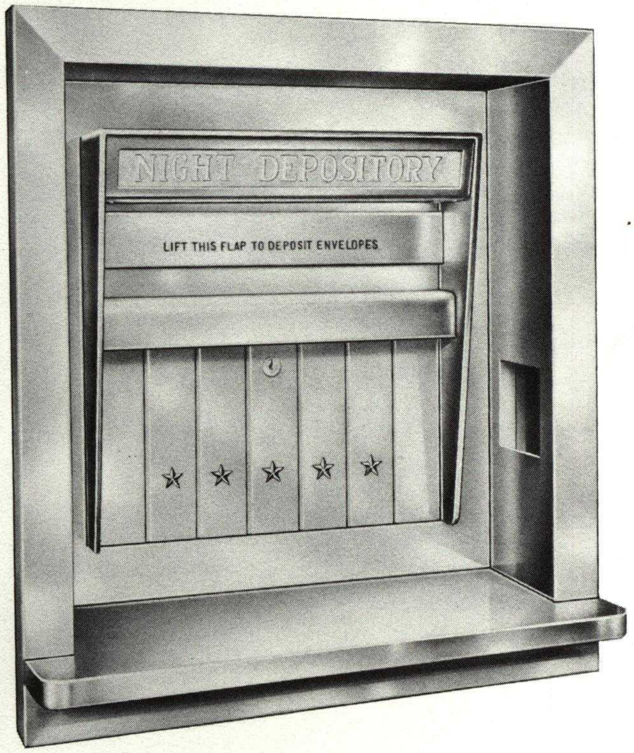
Five Star Constellation DEPOSITORY



Furnished in recessed design, as shown, or in flush design. Equipment of recessed model includes writing shelf and pocket for deposit envelopes. All surfaces are satin-finish stainless steel.

The hopper in this model—12¼″ wide x 5″ high by 9½″ deep—provides for bulky bags and packages.

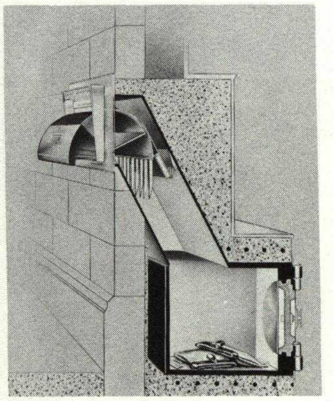
Push-in envelope slot connects with a separate chute. The words "NIGHT DEPOSITORY" are on ground glass with concealed illumination.



Frame size, recessed design—29½″ high x 27″ wide. Frame size, flush design—22⅝″ high x 21 11⁄16″ wide. Masonry opening, recessed design—24″ high x 24½″ wide. Masonry opening, flush design—20¼″ high x 19¾″ wide.

MODEL 901

Five Star Constellation DEPOSITORY



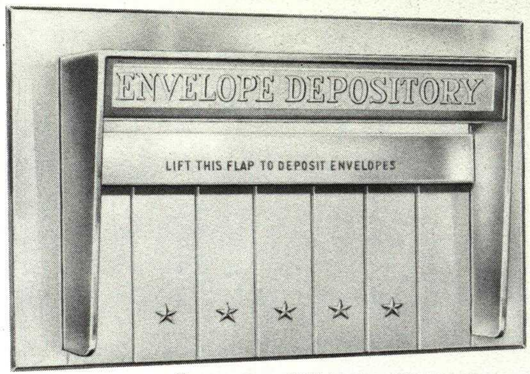
Furnished in recessed design, as shown, or in flush design. Equipment of recessed model includes writing shelf and pocket for deposit envelopes. All surfaces are satin-finish stainless steel.

This popular model has an extra-large hopper, 14¼″ wide by 12″ high, for bags and other bulky packages.

The envelope slot is connected with a separate chute.

The weather hood assures protection against driving rain.

The words "NIGHT DEPOSITORY" are on ground glass with concealed illumination.



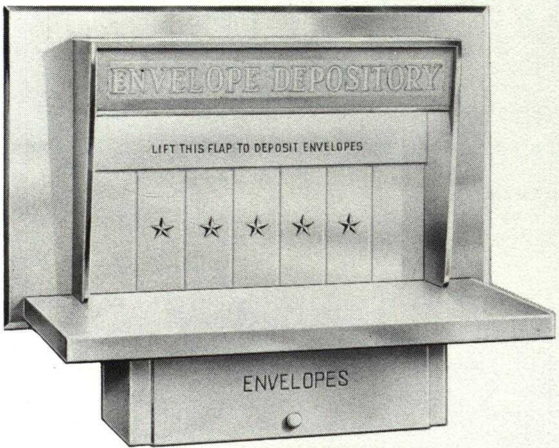
ENVELOPE DEPOSITORY
LIFT THIS FLAP TO DEPOSIT ENVELOPES

Frame size—13″ high x 21¾″ wide. Masonry opening, 11″ high x 19¾″ wide.

MODEL 910
Five Star ENVELOPE DEPOSITORY

Furnished in flush design only, as shown. All surfaces are satin-finish stainless steel. The envelope slot is ¾″ high x 5″ wide. Weather hood affords protection against rain and snow.

The words "ENVELOPE DEPOSITORY" are on ground glass with concealed illumination.

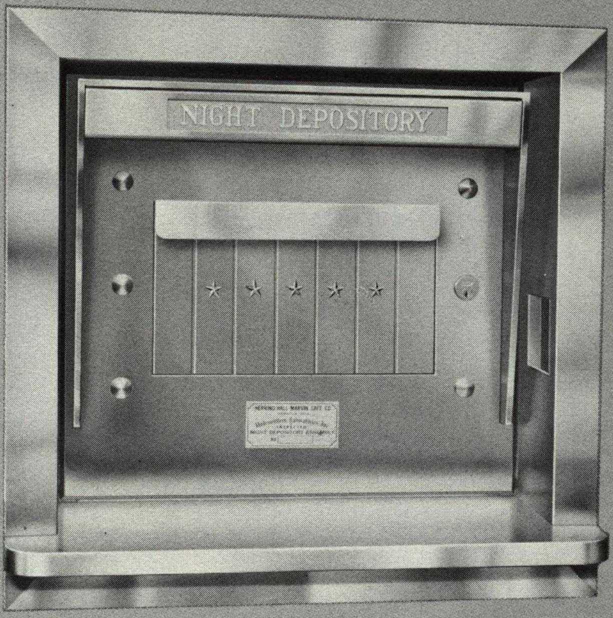


ENVELOPE DEPOSITORY
LIFT THIS FLAP TO DEPOSIT ENVELOPES
ENVELOPES

Frame size—13″ high x 21¾″ wide. Masonry opening, 11″ high x 19¾″ wide.

MODEL 915

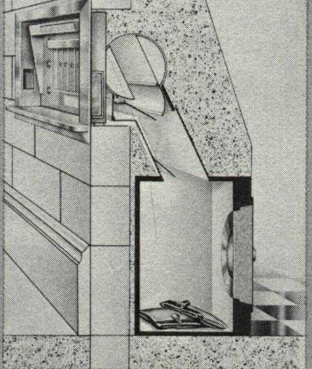
This envelope depository is like the Model 910 except that it has a stainless steel writing shelf with envelope storage compartment.



NIGHT DEPOSITORY

Frame size, recessed design—29½″ high x 30″ wide. Frame size, flush design—22¾″ high x 24¾″ wide. Masonry opening, recessed design—25″ high x 27½″ wide. Masonry opening, flush design—20¾″ high x 22¾″ wide.

MODEL 7200-J
Deluxe Five Star ROTARY DEPOSITORY



Furnished in recessed design, as shown, or in flush design. Recessed design has convenient writing shelf for deposit envelopes. All surfaces are satin-finish stainless steel.

Receptacle is 13¾″ wide x 6″ high x 12″ deep.

Rotary cylinder provides maximum protection against "fishing". An inner safety door assures the customer that his deposit has dropped into the receiving safe.

Words "NIGHT DEPOSITORY" are on ground glass with concealed illumination.

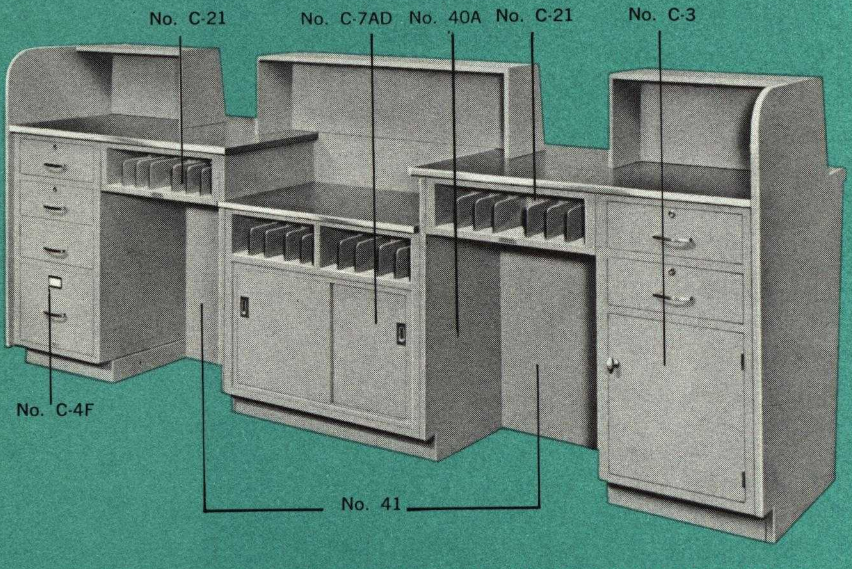
STANDARD DIMENSION STEEL
UNDER-COUNTER UNITS

For the equipment of a new banking building or the remodeling of an old one, we have developed a remarkably flexible system for creating custom-designed bank counters at production prices. The elements include pedestal units with various combinations of doors and drawers, machine well units, return counters and back counters.

All units are of heavy-gauge furniture steel, in a choice of seven decorator colors.

Shown here are two typical assemblies. Complete catalog will be furnished on request.

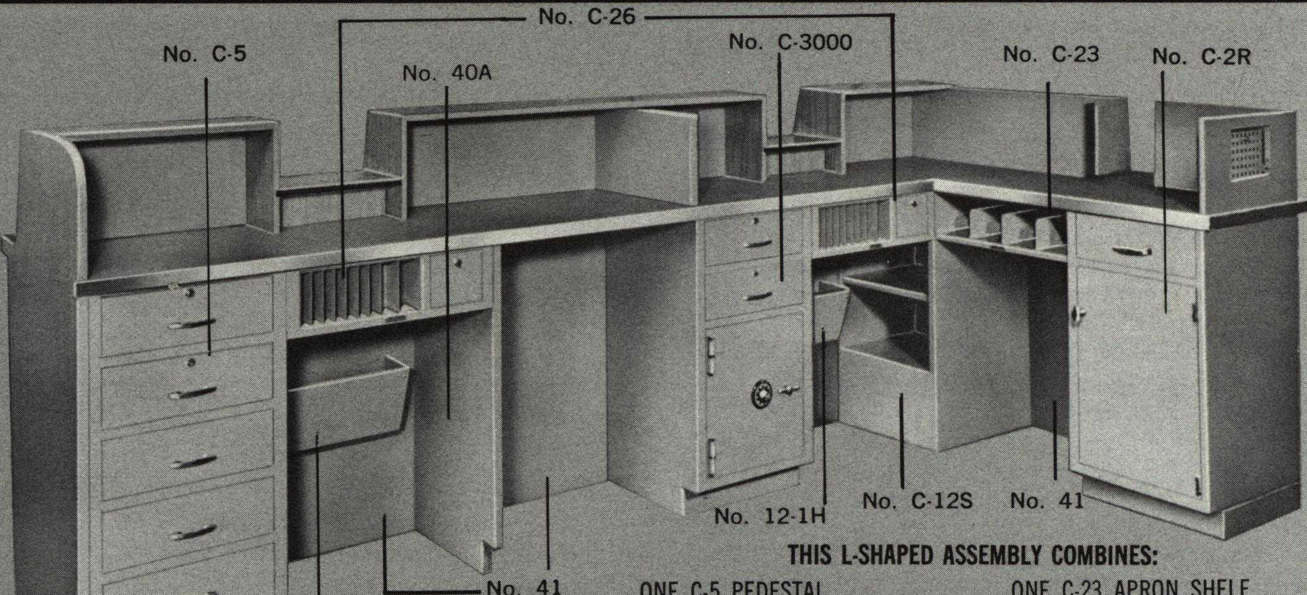


IN ONLY 9 ft. 11 inches THIS EFFICIENT UNDER-COUNTER ASSEMBLY COMBINES:

ONE C-4F PEDESTAL
TWO C-21 APRON CASES
ONE C-7AD MACHINE WELL UNIT

ONE C-3 PEDESTAL
TWO 40A END PANELS
TWO 41 KNEE SPACE BACKING PANELS

With this arrangement two tellers can share one machine conveniently.



Over-all length of front counter assembly is 11 ft.

THIS L-SHAPED ASSEMBLY COMBINES:

ONE C-5 PEDESTAL
TWO C-26 APRON CASES
ONE 40A END PANEL
ONE C-3000 PEDESTAL
ONE C-2R PEDESTAL
ONE C-12S OPEN STORAGE UNIT

ONE C-23 APRON SHELF with adjustable dividers
TWO 12-1H WASTE PAPER RECEPTACLES
FOUR 41-KNEE SPACE BACKING PANELS

FEATURES

LABELS. All models carry three labels; the Underwriters' Laboratories and the Safe Manufacturers National Association labels stating the degree of fire resistance; the Underwriters' Laboratories Relocking Device label.

INSURANCE. All models qualify for Class "B" Mercantile Burglary Insurance. The Underwriters' labeled Relocking Device further entitles users to a 10% preferential burglary insurance discount.

RELOCKING MECHANISM. This device gives added burglary protection, automatically relocking and setting the bolts in case of attack upon the locking mechanism.

ESCAPE DEVICE. This device makes it possible for a person when locked inside the vault, either by accident or in a holdup, to release the boltwork from the inside and open the door.

FLAT SILL. Allows door to swing 1/4″ above the finished floor, presents a practically flush surface for rolling buses and vault trucks into and out of the vault.

INSTALLATION. All Herring•Hall•Marvin Entrances are designed for the utmost ease and economy of installation. Complete printed instructions are included with each shipment. The door may be hinged to swing right or left, as specified.

1/2-HOUR FIRE-RESISTANCE. MODEL NO. D-63 Fire-insulated File Room Door should be specified for File Rooms rated up to 1/2-hour fire risks. **1-HOUR FIRE-RESISTANCE. MODEL NO. D-64** Fire-insulated File Room Door should be specified on File Rooms rated as 1/2-to-1 hour fire risks.

2-HOUR FIRE-RESISTANCE. MODELS NO. D-7832-2 and D-7640-2 (SPECIAL WIDTH) Fire-insulated Vault Doors should be specified for vaults in buildings that are rated as 1-to-2 hour fire risks by the Herring•Hall•Marvin Fire Hazard Analysis Chart.

4-HOUR FIRE-RESISTANCE. MODEL NO. D-7832-4 Fire-insulated Vault Door should be specified for vaults in buildings that are rated as 2-to-4 hour fire risks by the Herring•Hall•Marvin Fire Hazard Analysis Chart.

6-HOUR FIRE-RESISTANCE. MODEL NO. D-7832-6 Fire-insulated Vault Door should be specified for vaults in buildings that are rated as 4-to-6 hour fire risks by the Herring•Hall•Marvin Fire Hazard Analysis Chart.

RECOMMENDED CONSTRUCTION for fire-resistive record-storage vaults

SIZE. Record-storage vaults should not exceed 5000 cu. ft. in volume and the height should not exceed 11 feet.

MATERIALS. Walls should be built of (1) reinforced concrete, (2) sand-lime building brick, (3) hollow load-bearing concrete masonry units, or a hollow wall of brick. Walls of hollow units, or hollow construction shall be plastered both sides with at least ½" of gypsum or portland cement plaster. See chart at right for additional information.

FIRE-RESISTIVE FILE ROOMS. As a general measurement, file room construction should parallel that of 2 hour construction for fire-resistive record-storage vaults. Size: File storage rooms shall not exceed 50,000 cu. ft. in volume (preferably not over 40,000 cu. ft.) and the height shall not exceed 15 ft. Minimum Wall Thicknesses: The following construction is recommended —(1) Reinforced Concrete . . . 4 in., (2) Plain Concrete . . . 6 in., (3) 6 inch hollow tile, 6 inch concrete block, or 6 inch gypsum block, plaster on both sides . . 7 in., (4) Brick . . . 8 in.

Shown here is a table of suggested minimum wall thickness that applies to ground-supported vaults. For structure-supported vaults, use the wall thickness shown for the TOP floor of ground-supported vaults. Complete specifications for the construction of fire-insulated vaults on request.

Kind of Material	Reinforced Concrete			Brick (a)			Hollow Units (b)
Class of Wall	AA (6 hr.)	A (4 hr.)	B (2 hr.)	AA (6 hr.)	A (4 hr.)	B (2 hr.)	B (2 hr.)
Floor-counting from top down	THICKNESS OF WALL IN INCHES						
Top	10	8	6	12	12	8	8
2nd from top	10	8	8	12	12	12	12
3rd from top	10	10	10	12	12	12	12
4th from top	12 (c)	10	10	16 (d)	16 (d)	16 (d)	16 (d)
5th from top	12	12	12	16	16	16	16
6th from top	12	12	12	20 (d)	16	16	16
7th from top	12 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)
8th from top	12 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)
9th from top	12 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)
10th from top	14 (e)	12 (e)	12 (e)	16 (e)	16 (e)	16 (e)	16 (e)

Example: For a four-story building use thicknesses in first four lines of table, the fourth line representing the minimum thickness suggested for walls of a ground floor vault, the first line the thickness of walls for a fourth floor vault, etc.

Example: For an eight-story building use thicknesses in first eight lines of table, the eighth line representing the minimum thickness suggested for walls of a ground floor vault, the first line the thickness for walls (panel construction) for an eighth floor vault, etc.

(a) Sand-lime building brick—American Standard ASA-78.1-1942.
(b) Hollow Load-Bearing Concrete Masonry Units—American Standard ASA-79.1-1942; or hollow wall of bricks.
(c) Thickness in panel construction may be 2 in. less.
(d) Thickness in panel construction may be 4 in. less.
(e) These thicknesses apply to panel construction.

THE KEYLESS LOCK COMPANY
INDIANAPOLIS

LOCK BOXES
MAIL HANDLING
POST OFFICE EQUIPMENT MANUFACTURERS

LETTER BOXES

USES

Educational Institutions Office Buildings
Hospitals Apartment Buildings
Corporation Post Office Systems
Any place central distribution is desired

FEATURES

- All brass and bronze combination parts which insure durability and trouble-free service.
- Combination or Key Lock available
- Key lock units may be master keyed and keyed to fit corresponding dormitory rooms
- Units may be arranged using various sized lock box doors in one unit.
- Combination lock setting may be changed in one minute
- No combination is duplicated in any one installation
- Pigeon hole construction from 20 to 24 gauge steel with baked enamel finish

FINISHES

Lock box doors are bronze, highly polished, with light tan background. They may be specified completely dull chrome. Steel nesting is furnished in matching tan with baked on enamel. Paint is applied to give a 5 mil thickness.

SPECIFICATIONS

The letter boxes shall be Grecian Style as manufactured by The Keyless Lock Company, Indianapolis, Indiana. Letter boxes shall be constructed of cast bronze, hinged front on steel pigeon holes and fitted with three tumbler combination lock or key lock keyed alike or master keyed. The front of each box will have a large plate glass window with two-tone numbers or letters (dependent on customer). Each box shall have an identification tag on the rear side. All raised fretwork on box face to be finely polished with background painted lusterless brown color, Federal Specification TT-C-595 No. 3030. Complete satin chrome finish also available.

The steel cases shall be 14″ deep with baked enamel finish. Color shall be egg shell, Federal Specification 2351, TT-C-595.

All construction shall meet Federal Post Office Specifications.

GUARANTEE

The Keyless Lock Company of Indianapolis, Indiana, guarantees to replace any units, individual or composites, should they not function to the buyer's satisfaction. This offer is good for one year from date of final acceptance by the buyer.

sizes and nesting tables

Method of Determining Size of Various Nestings

For No. 1 size Standard Lock Box To figure width of case composed of No. 1 boxes only, first consult chart below for number of boxes wide. This dimension is the total width of doors and door frames. Then add 1¾″ (which is for the two ⅝″ side fillers and two ¼″ gaps at each side) to dimension obtained from chart giving total width of unit.

Number of boxes wide:

1	3-11/16″	7	25-11/16″	13	47-11/16″
2	7-11/32″	8	29-11/32″	14	51-11/32″
3	11″	9	33″	15	55″
4	14-11/16″	10	36-11/16″	16	58-11/16″
5	18-11/32″	11	40-11/32″	17	62-11/32″
6	22″	12	44″	18	66″

To figure front height of unit composed of No. 1 boxes only, take number of boxes high times 5″. This answer is the space occupied by doors and frames. Then add 1¼″ for total height of case. To figure height at rear of case add 2¾″ to total height at front of case.

Note: It is desirable for any one unit not to be more than 18 boxes wide. If more boxes are needed they may be made by designing two units or three units, etc., and using connecting fillers which add 1″ to total width of unit.

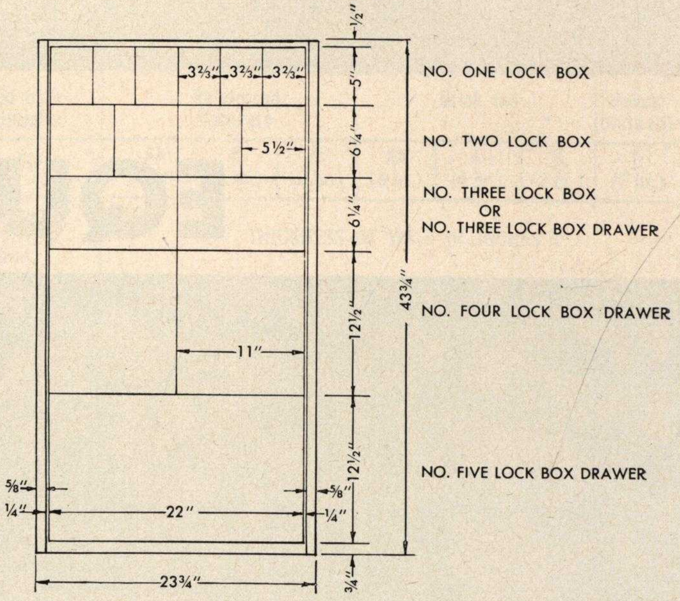
Height at the front of unit, if possible, should not exceed more than 61¼″, or 12 boxes high.

For No. 2 size Standard Lock Boxes:
To figure width of case take number of boxes wide times 5½″. Then add 1¾″ to this answer for total width of case.

To figure height at front and rear of unit, follow procedure for No. 1 boxes substituting 6¼″ for height of box.

Note: It is desirable for any one unit not to exceed 12 boxes wide. See note for No. 1 box should more boxes be required.

Height at front of the unit, if possible, should not exceed 57½″, or 9 boxes high.



ELEVATION

For No. 3 size Standard Lock Boxes:
To figure width of case take number of boxes wide times 11″. Then add 1¾″ to this answer for total width of case.

To figure height at front and rear of unit follow procedure for No. 1 boxes substituting 6¼″ for height of box.

Note: It is desirable for any one unit not to exceed 6 boxes wide. See note for No. 1 box should more boxes be required.

Height at front of the unit, if possible, should not exceed 45″ or 7 boxes high.

LeFebure

PLANNING SERVICE and EQUIPMENT for BANK TELLER STATIONS

Good ideas are bound
to develop when
an architect . . . a bank
. . . and LeFebure
get together.

The LeFebure Corporation

Today, LeFebure is a recognized authority on systems and equipment to meet the operational patterns of banks and businesses throughout the nation.

LeFebure Corporation was founded in 1894 by E. L. LeFebure, who originated and patented America's first self-indexed ledger. Then as accounting machines came into general usage, the LeFebure line was expanded to include a line of posting trays, steel office equipment and machine forms. The sales force had grown to national coverage, with trained sales representatives working in specific territories.

LeFebure is the world's largest manufacturer of posting trays and stands, and a leader in the manufacture of bank operational equipment. Continuing its early association with the banking, and savings and loan businesses, more than one-half of LeFebure's volume today results from these sources. Because of this, all of the LeFebure staff members, both in the general offices and in the field, are extremely familiar with banking problems, requirements and every phase of operations. And because of this, LeFebure has been instrumental in the planning and designing of systems and equipment for banks throughout the country — a service that LeFebure feels would be enhanced if combined with the talent and skill of the architect.

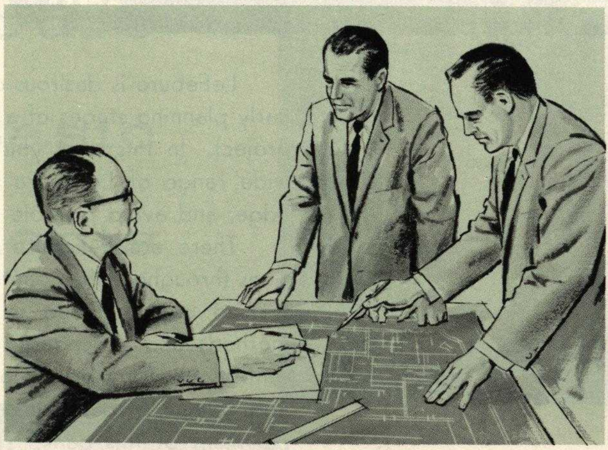
Although LeFebure recommends and furnishes standard equipment whenever applicable, no two banks are exactly alike. Therefore, LeFebure is of the belief that most banks will benefit greatly from custom-designed equipment to fit their individual needs.

PLANNING SERVICE and EQUIPMENT for BANK TELLER STATIONS

The LeFebure Service

The three-way combination of Architect-Banker-LeFebure can be beneficial to all parties concerned.

THE ARCHITECT is provided with an opportunity to perform a **complete** service, by being certain that his plans conform to the necessary operational requirements of the individual bank.

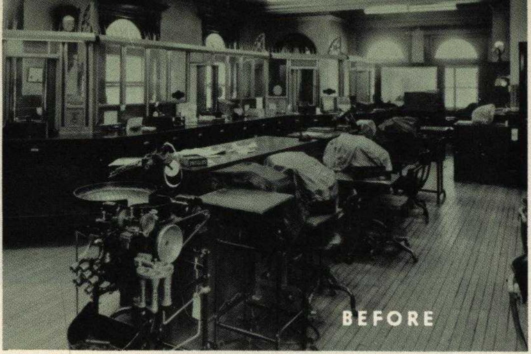


THE BANKER will benefit from having a complete package, including planning, layout and design that takes into consideration the everyday functions in every department of his bank, and by having equipment built to fit his operating methods and volume of business.

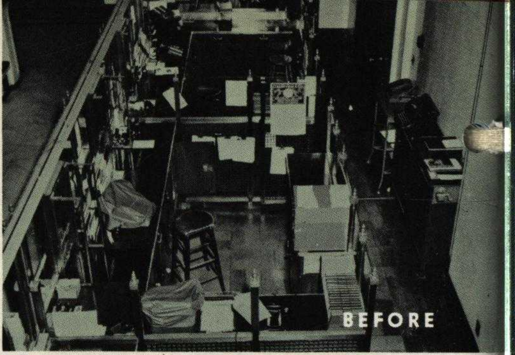
Le FEBURE, contributing its long experience and fine facilities, also has something to gain. By working on a project as a part of a well-rounded team, the information from the banker and the architect can be used to assure the absolute maximum in efficiency at the lowest possible cost. The resulting experience from each job is added to our fund of knowledge, and passed on to each future project in which we become involved.

Everybody contributes . . . everybody benefits!

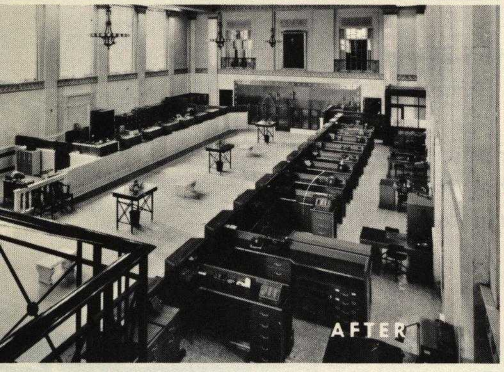
BEFORE



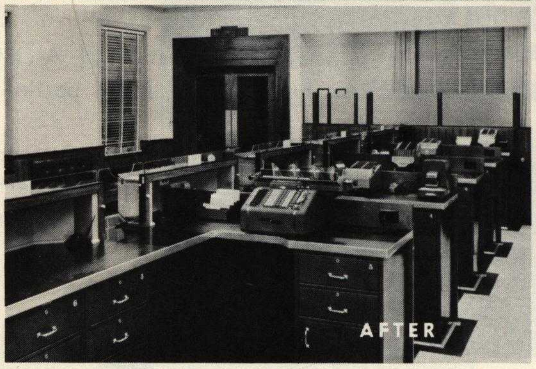
BEFORE



BEFORE



AFTER



AFTER

AFTER

The LeFebure Service

LeFebure is desirous of being called in during the early planning stages of a bank building or remodeling project. In this way, you can take advantage of the wide range of LeFebure bank experience and knowledge, and avoid possible errors before they occur.

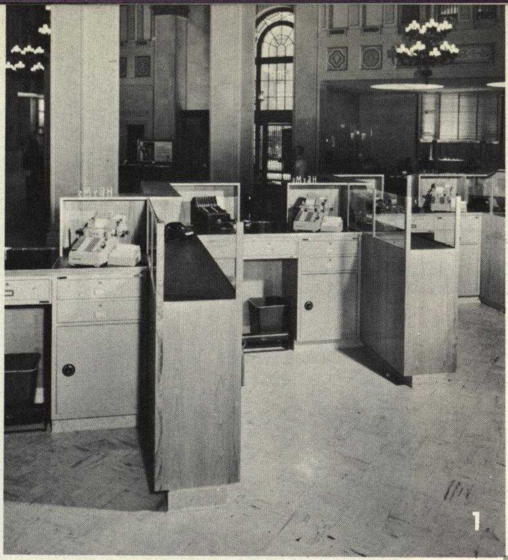
There are LeFebure representatives in key locations throughout the country. These men are thoroughly trained and qualified in the most up-to-date bank methods and procedures. The LeFebure field representative will make a report of the functions, accounts and volume of business being transacted in every department of this bank. This report will be submitted to LeFebure, where within a short time, the amount of equipment, and most suitable types of equipment, will be determined.

The engineering department will then make an analysis, without charge, of your frame and floor space drawings, relating them to the operational requirements of the bank. This analysis will then be presented to you, with suggestions and recommendations for your study and approval. Through the combined talents of architect and LeFebure, the bank will be receiving the best possible planning efficiency.

LeFebure's flexibility of equipment construction and finish permits full use of the architect's ideas and talent, minus the restrictions imposed by assembly line equipment.

LeFebure also provides on-the-spot installation supervision. Every unit is set into proper place, checked for proper dimensions, finish and condition. All LeFebure equipment is guaranteed to be operationally sound.

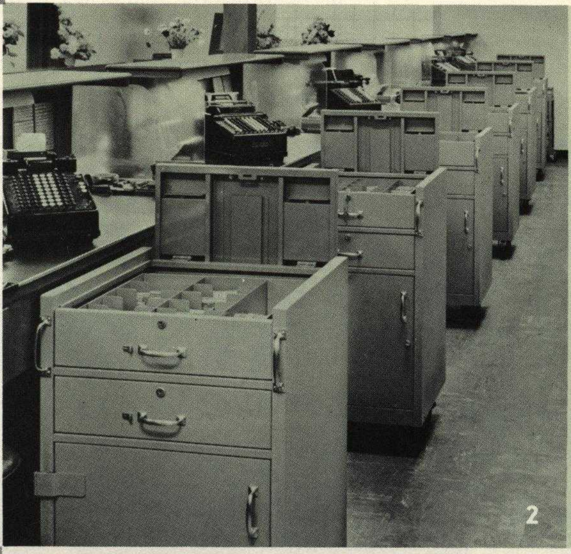
PLANNING SERVICE and EQUIPMENT for **BANK TELLER STATIONS**



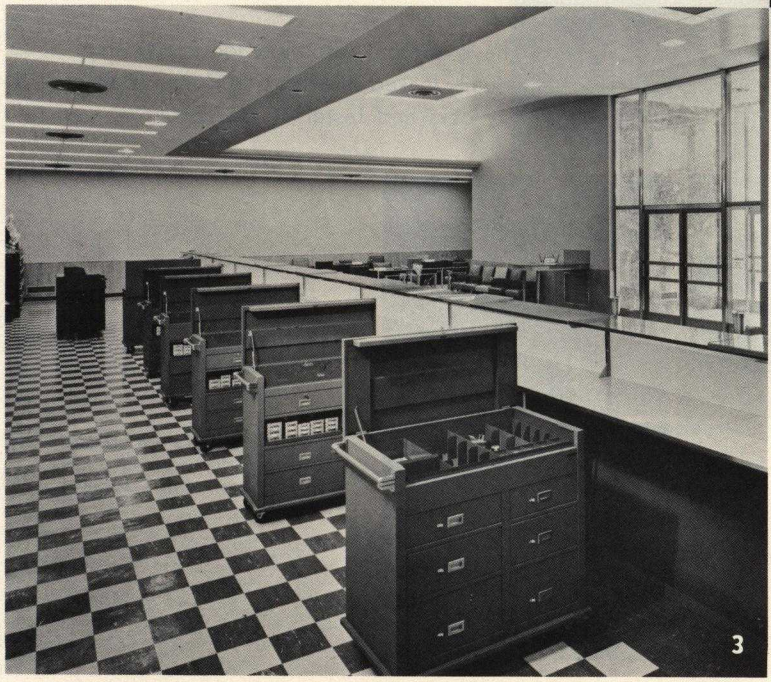
1

1. **Fixed Equipment — Permanent Spacing**
2. **Mobile Equipment — Permanent Spacing**
3. **Mobile Equipment — Variable Spacing**

LeFebure Three Basic Arrangements



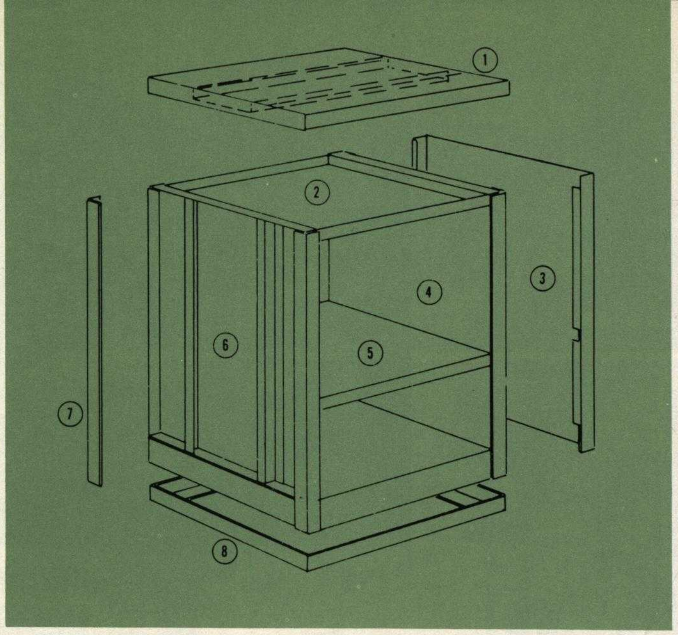
2



3

No two banks are exactly alike . . . neither are their cash handling requirements. Functionally, there are only three basic ways to arrange teller work stations to meet today's needs. Beyond this, however, are numerous individual drawer and storage arrangements of teller equipment.

LeFebure is qualified to analyze the cash handling procedures of any bank of any size, and to recommend the exact number and type of units to fit the most suitable arrangement for each individual bank. LeFebure then designs, and supervises installation of, these units. Wherever necessary, LeFebure also will have a representative on hand to make sure that the bank obtains maximum efficiency from the arrangement.



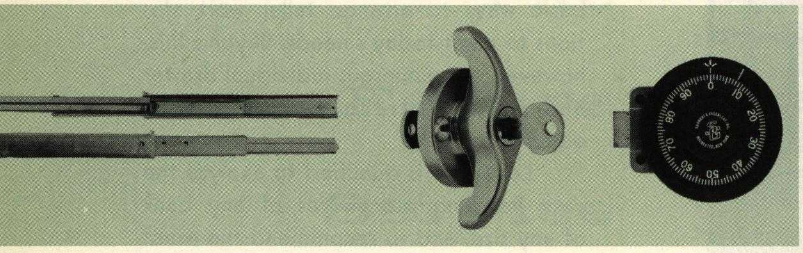
LeFebure Construction Features

Extreme loads, uneven floors, vault ramps and other factors are all considered in the design and construction of all LeFebure equipment.

Double steel wall unit weld construction (shown above), has the following features:

1. Solid top with reinforcing pan
2. Sub-top
3. 20-gauge steel outer wall
4. 18-gauge steel inner wall
5. Reinforced solid shelf
6. 18-gauge stiffening channels between walls
7. Vertical reinforcing (1½″ x 1½″ x ⅛″ angle iron) for movable units and larger stationary units
8. Angle iron base

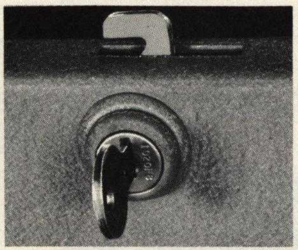
Units can have general automatic locking arrangements or individually locked drawers and doors. Above are some of the locks and fastening devices:



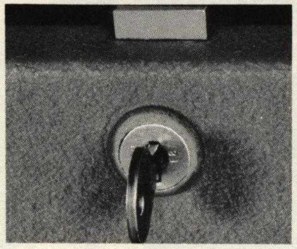
FULL PROGRESSIVE BALL GLIDE SUSPENSIONS—All money drawers in LeFebure units are equipped with easy rolling ball glide suspensions, permitting easy removal of currency trays when transferred to cash locker or money buses.

LOCKING HANDLES are used to secure tilting lids, telescoping doors, etc., and operate throw rods which engage the side walls of the unit.

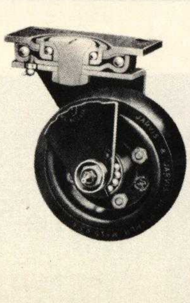
COMBINATION LOCKS of several types are available to fit where key locking is undesirable.



A CAM LOCK is used to secure raising covers, hoods, etc., which are opened vertically.



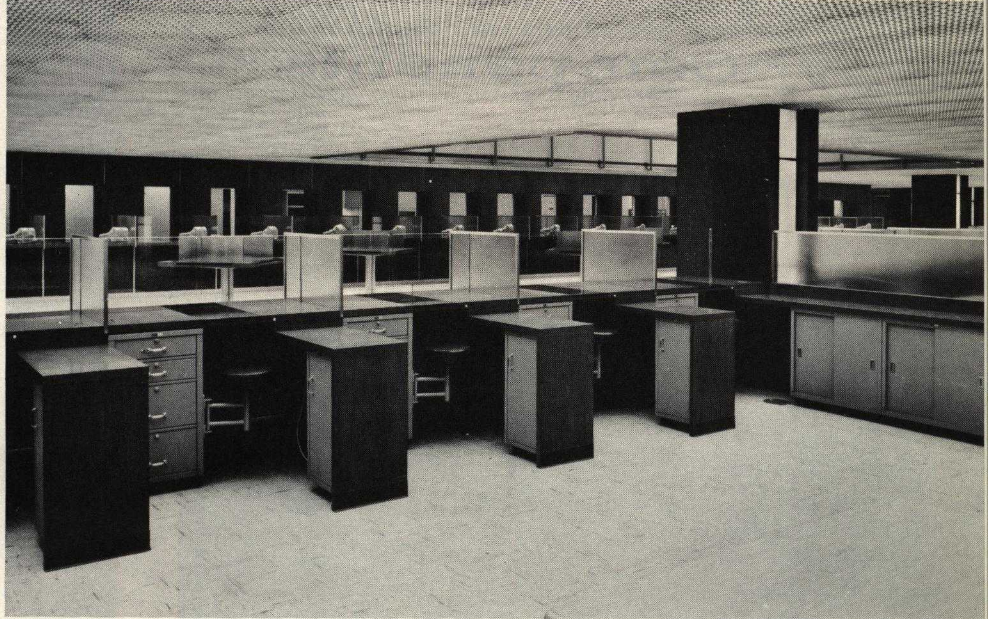
BOLT LOCKS are used to secure drawers and doors that open with a forward pull.



CASTERS—Mobile units are equipped with the highest quality casters. Wheels are of 4″, 5″ and 6″ diameter. Foot brakes are optional on either fixed or swivel casters.

LeFebure approaches the equipment problem with a firm belief that a bank is far ahead with equipment designed and built to fit a particular operation — in an available space. This is more logical than asking the banker to fit his operation to existing equipment.

LeFebure Custom Planning



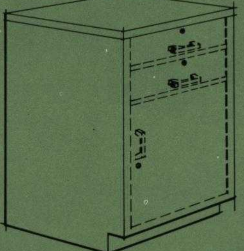
Each bank has character, personality and a specific decor. These factors, plus operating methods, quarters, clearing times, laws and local customs, are all considered in the design, construction and finish of really fine operating equipment.

Equipment can be economical or expensive, depending upon how well it functions. Real economy is derived from savings in time, effort and space. These economies can be achieved with LeFebure equipment designed for the requirements of each installation.

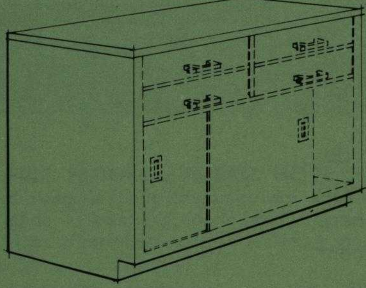
LeFebure Standard Components

LeFebure standard under-counter components are adaptable for all window operations in the Bank and Savings and Loan Lobby area. Typical installations include components for:

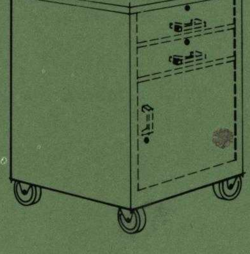
- CASH HANDLING
  - Commercial Tellers
  - Savings Department
  - Loan & Discount Department
  - Installment Loan Department
- CARD FILE STORAGE
  - Signature Cards
  - Cross Reference Cards
- STATEMENT FILES
  - Customers Service Department
- SUPPLY STORAGE
  - All Departments



FRONT COUNTER UNIT



RETURN COUNTER UNIT



MOBILE TELLER UNIT

At the left are shown the three LeFebure basic units. Each of these three units can be adapted to fit many individual space and operations requirements of individual banks.

STANDARD OVERALL DIMENSIONS

UNIT	HIGH	WIDE	DEEP
Front Counter	38″	21″	22″*
Return Counter	38″	42″	20″**
Mobile Teller	38″	21″	22″

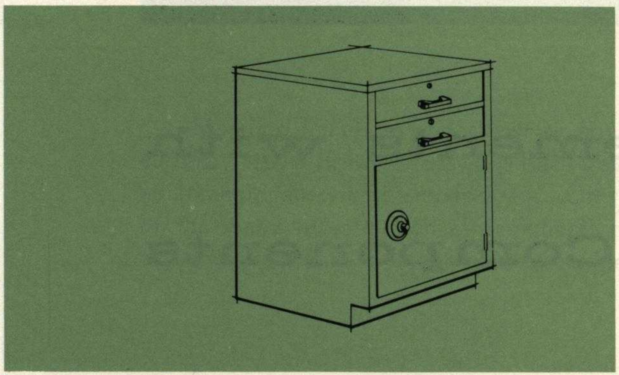
*Furnished in 20″ depth when specified, at no extra charge.

**Furnished in 22″ depth when specified, at no extra charge.

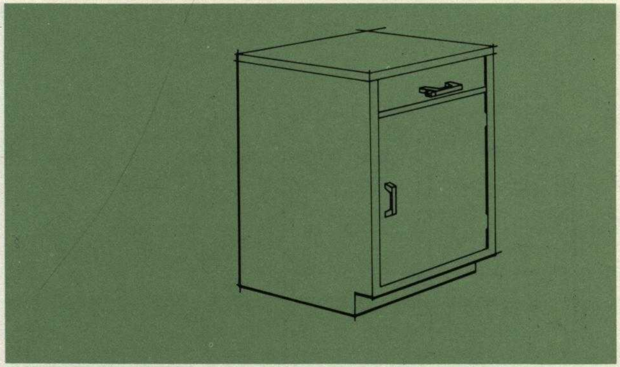
The basic Mobile Teller Unit is interchangeable with the under-counter teller unit. To provide flexibility of the teller operation, this unit is often used. The relief teller operation is greatly simplified with mobile equipment.

Unless otherwise specified, box type drawers are used.

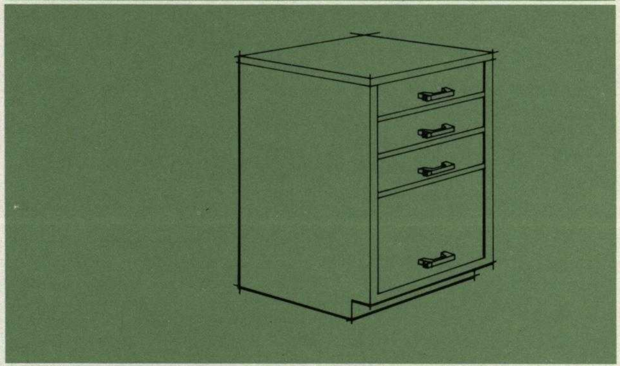
Each of the three LeFebure Standard Components shown on the opposite page has numerous adaptations to fit the space and operational requirements of individual banks and savings and loan associations. Below are merely a few ways in which LeFebure Front Counter Units can be modified.



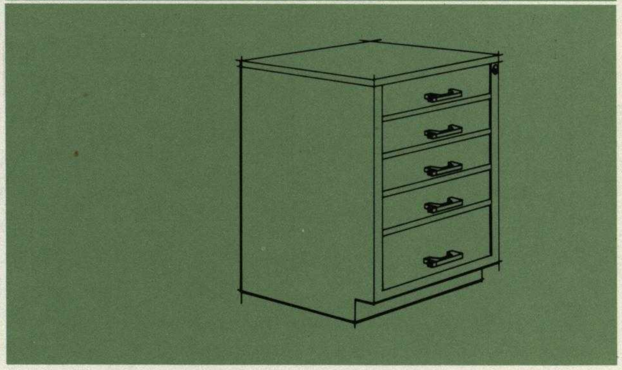
Cash handling generally requires two drawers — one for "working" currency and one for "reserve" currency, "mutilated" currency and "wrapped" coin, plus a storage area. This is one of several two-drawer LeFebure Front Counter Units for cash handling.



While generally used for storage, LeFebure units, such as the one at left, are often used for cash handling. This particular unit has one box drawer, equipped with drawer pull and positive acting thumb latch.



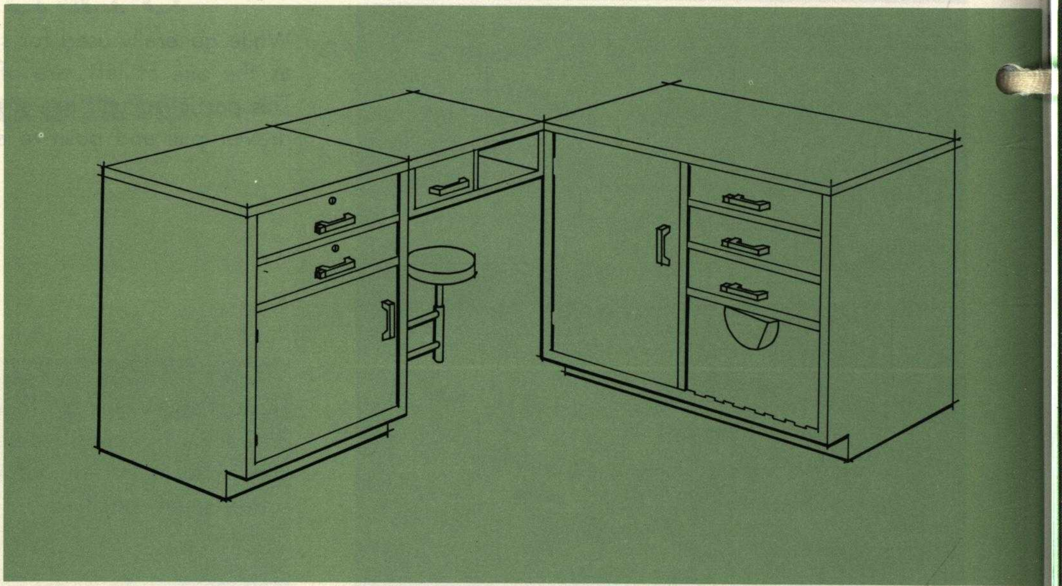
This LeFebure unit has four box drawers equipped with drawer pull and positive acting thumb latch. Individual drawer locks or an automatic general lock can be added when specified.



There are many uses of under-counter file units for storage of customer statements, signature cards, note files, etc. This LeFebure unit has five box drawers, all of which can be locked with one key when desired. A wastebasket can replace the two lower drawers.

In many cases, when the quantity ordered is sufficient, LeFebure standard units may be modified at no extra cost to fit individual requirements. When standard sizes or arrangements do not conform exactly to the intended uses, custom-designed units are available.

Typical Arrangements with Standard LeFebure Components



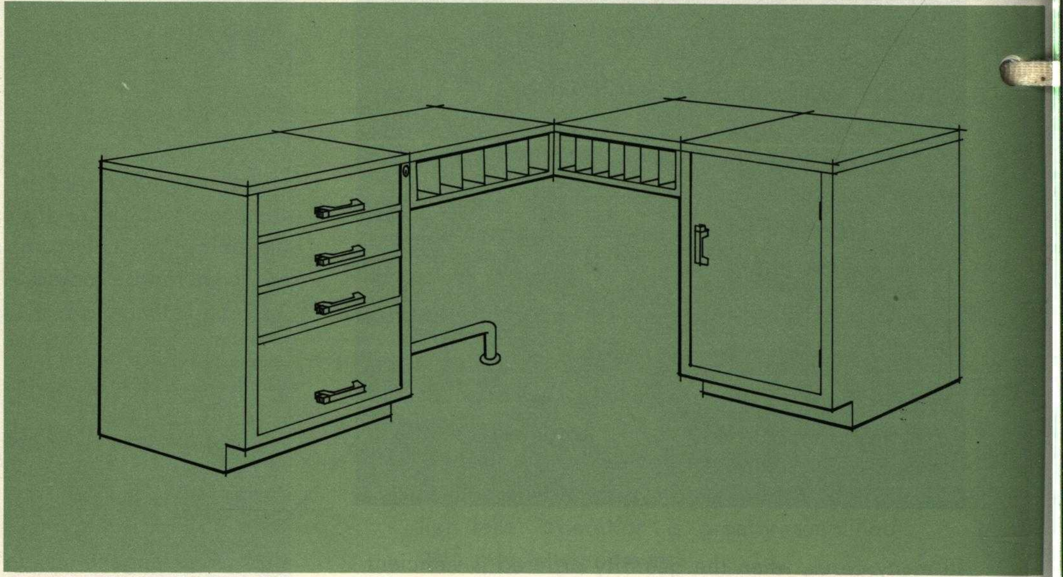
STANDARD COMPONENTS USED:

TELLER CASH UNIT WITH SUPPLY COMPARTMENT

TELLER SEAT

APRON CASE

RETURN COUNTER UNIT



STANDARD COMPONENTS USED:

TELLER CASH UNIT WITH EXTRA DRAWER STORAGE

APRON CASE

RETURN COUNTER UNIT

TELLER SEAT

In addition to banking and savings and loan systems and equipment, LeFebure also provides systems and equipment for department stores, lumber yards, insurance firms, hospitals, hotels, governmental offices and offices of all types of businesses. The LeFebure installation list reads like a "who's who" of American business.

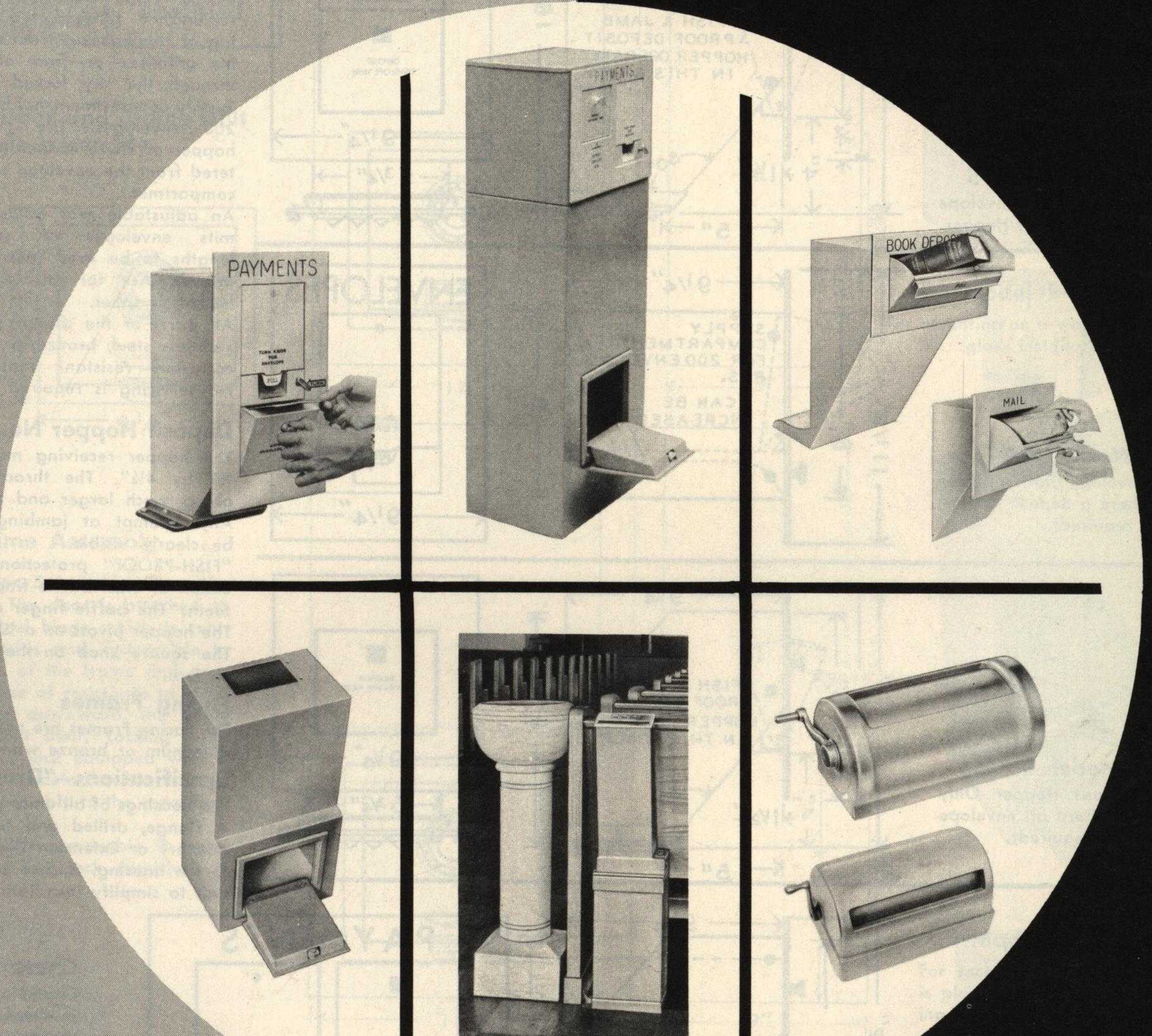
Definition of "DROPOSITORY"

A means of depositing envelopes or other objects in a Repository (receiving container) without opening same. The "DROPOSITORY" may be in an area remote from the Repository.



Improvement and New Development—The Dropository Corporation is continually developing improved methods and equipment. As this brochure goes to press, other "DROPOSITORY" units are in an advanced stage of development.

ARCHITECT:
To save your time all detail drawings are scaled 1½" = 1' (Except as noted).

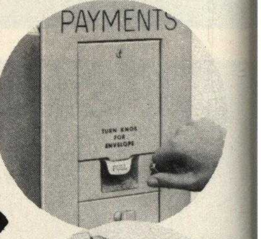
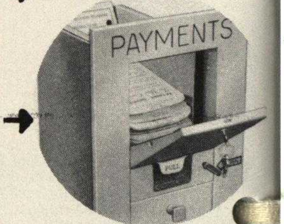
Envelope Unit No. 456 →

The PULL flap of an envelope moves into easily reached position when the "T" handle is pushed or turned in EITHER direction. (Once withdrawn the envelope cannot be reinserted in the supply compartment by mistake.) →



PAYMENTS
TURN KNOB FOR ENVELOPE

The envelope supply may be replenished through the open top of the housing from inside the premises—or—from outside through the key locked door. Supply compartment holds over 200 envelopes. The deposit hopper or chute cannot be entered from the envelope supply compartment. →



PAYMENTS
PULL

An adjustable rear guide permits envelopes of several lengths to be used (not intermixed). Ask for envelope illustration sheet.

All parts of the dispenser are stainless steel, bronze, or other corrosion resistant materials. No servicing is required.

TURN KNOB FOR ENVELOPE
PULL
TURN
DEPOSIT ENVELOPE

Deposit Hopper No. 85 →

The hopper receiving mouth is restricted in size to ⅝″ by 4¼″. The throat, however, will accept an object much larger and therefore cannot be jambed. Any attempt at jambing the hopper throat would be clearly visible.

"FISH-PROOF" protection is made possible by the action of steel baffle fingers, interlocking with baffle teeth. The baffle finger assembly is cadmium plated. The hopper pivots on a ¼″ dia. stainless steel bearing. The square knob on the hopper front cannot loosen or turn.

Facing Frames

The Facing Frames are normally furnished in alumilited aluminum or bronze with satin finish.

Specifications—"Dropository" Housings

The housings of all units are 16 gauge paint grip steel. A flange, drilled and tapped for bolting to a Repository or Extension Chute, is REMOVABLY attached to the housing. Anchor studs are provided with each unit to simplify installation.

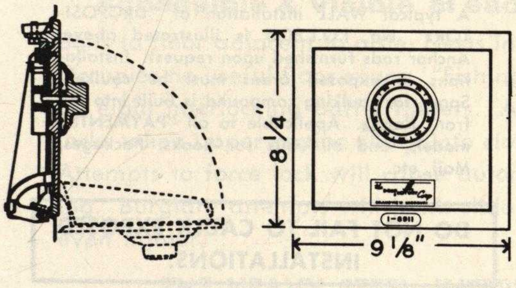
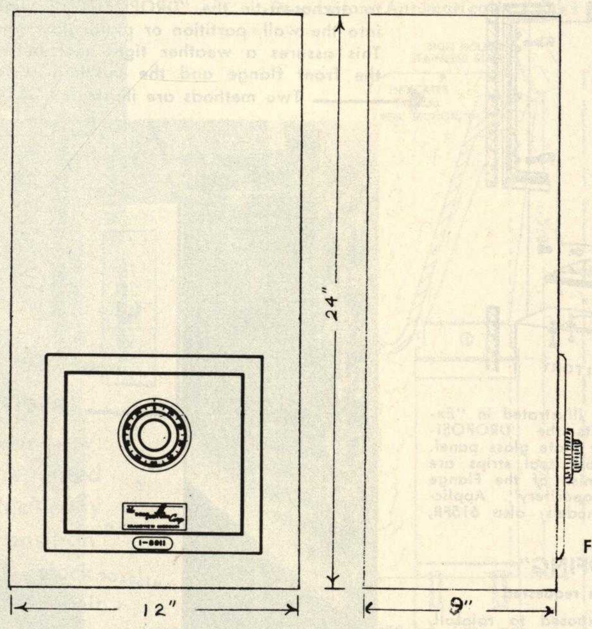
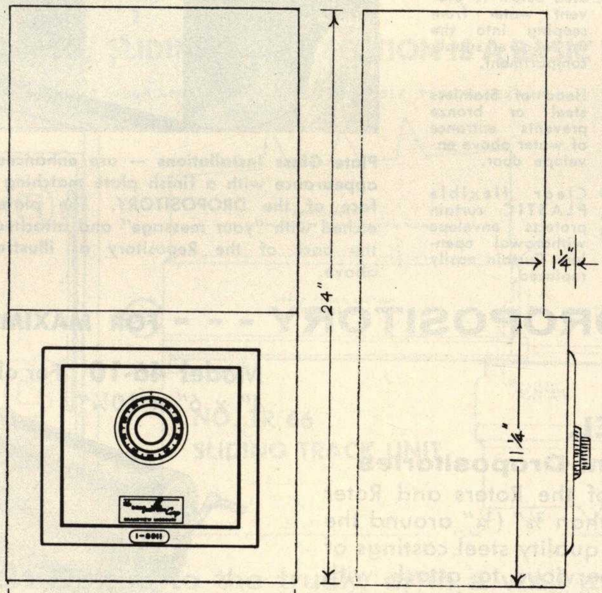
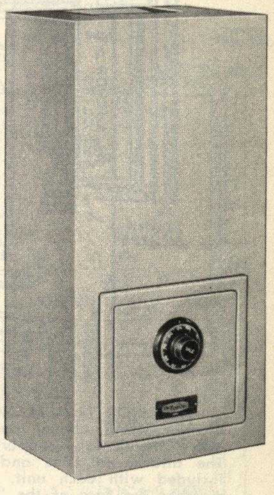
Standard Equipment in all Repositories unless otherwise specified

No. 89—Repository Door and Frame Unit
A detachable assembly



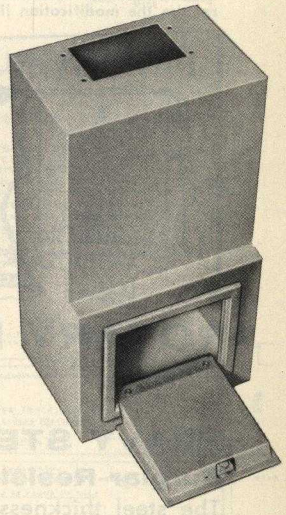






Model B-2412

For mounting on a wall or for plate glass installation.



Model BR-2412

For recessing into a wall that is plastered or paneled, exposing only the door portion.

Specifications—
No. 89 Door and Frame Assembly

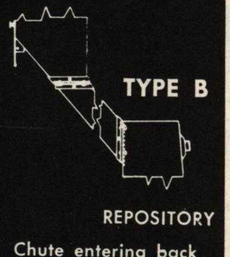
Steel castings of high quality, 5/16" thick, form the door and frame members. The door is attached to the frame with a heavy steel hinge which is completely invisible on the outside and inaccessible to burglary attack. The design of the frame and door affords a considerable degree of resistance to forcible entry. Opening out and downward, the inside surface becomes a convenient shelf. Locking is by a three-tumbler combination lock equipped with a reinforced bolt. Bolts, with heads accessible through the open door, secure the assembly to the repository opening.

The locking dial can be made removable if specified, at small extra cost. Key lock furnished if specified.

For Special Applications

May be Ordered Separately. The door to a repository is its most essential and vulnerable element. The No. 89 door and frame assembly is a complete unit which can be placed in a repository of the size and shape dictated by available space, WITHOUT INVOLVING SPECIAL CONSTRUCTION. Larger doors on request.

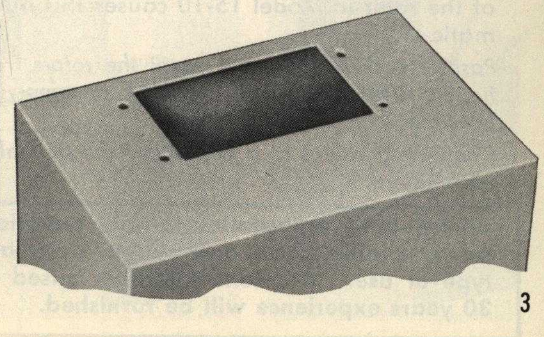
Specifications—Repository Housings—Unless otherwise specified, Repository housing will be made of 14 gauge Paint Grip Steel, electric arc welded at the seams and ground smooth. The unit is thoroughly cleaned and painted a base coat of zinc chromate primer. The inside painted aluminum. The Repository front is embossed to receive the frame of the No. 89 door and frame assembly.



Chute entering back or side of Repository.

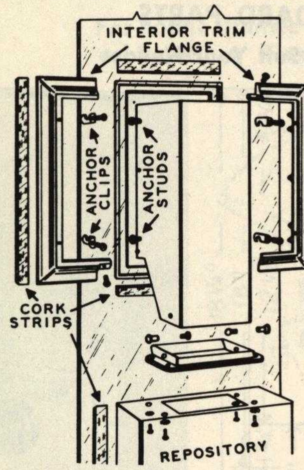
IMPORTANT

The 'DROPOSITORY' or extension chute unit can be bolted to the Repository at any point. Unless otherwise specified, the opening will be cut in the Repository top center, adjacent to the back as illustrated right. Small variations easily made on the job.



INSTALLATION — The Mosler DROPOSITORY Corporation — INSTRUCTIONS

PLATE GLASS

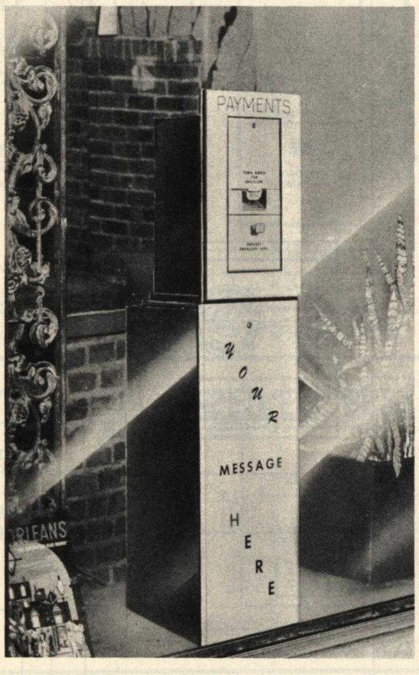


INTERIOR TRIM FLANGE
ANCHOR CLIPS
ANCHOR STUDS
CORK STRIPS
REPOSITORY

The INTERIOR TRIM FLANGE illustrated in "Exploded" form above, permits the "DROPOSITORY" to partially support a plate glass panel. The attachment clips and cork seal strips are included with each unit. Finish of the Flange matches the face of the "Dropository". Applicable to all "PAYMENTS" models; also 615FR, 1112FR, and 712FR units.

ANCHOR STUDS

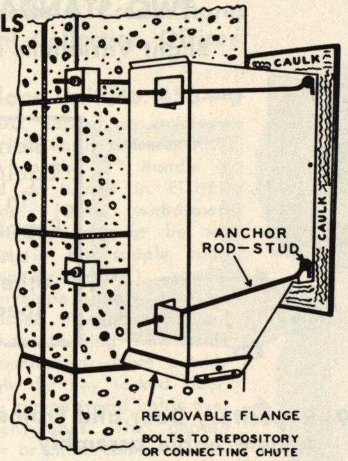
Two (or four) anchor studs are attached to each DROPOSITORY unit. They may be used to anchor-or-tie the "DROPOSITORY" tightly into the wall, partition or plate glass panel; This assures a weather tight seal between the front flange and the building surface. ← Two methods are illustrated. →



PAYMENTS
Y O U R
MESSAGE
H E R E

Plate Glass Installations — are enhanced in appearance with a finish plate matching the face of the DROPOSITORY. The plate is etched with "your message" and attached to the back of the Repository as illustrated above.

WALLS



CAULK
CAULK
ANCHOR ROD—STUD
REMOVABLE FLANGE
BOLTS TO REPOSITORY OR CONNECTING CHUTE

A typical WALL installation of "DROPOSITORY" No. I.O.L.80-5 is illustrated above. Anchor rods furnished upon request. Installations in exposed areas must be caulked. Space for caulking compound is built into the front flange. Applicable to all "PAYMENTS" models, and all units for Books, Packages, Mail, etc.

DO NOT FAIL TO CAULK EXPOSED INSTALLATIONS.

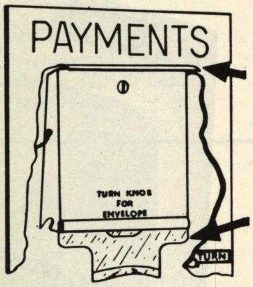
NOTICE — "DROPOSITORY" units containing an envelope dispenser require circulation of ROOM AIR in the envelope supply compartment. The equivalent of a ½" diameter opening located above the compartment is usually sufficient.

An access opening to permit refilling envelope supply compartment from inside the premises should be provided if feasible.

"WATERPROOFING"

Supplied ONLY when requested

Installations in locations exposed to rainfall, require the modification illustrated below to prevent water from seeping into the envelope supply compartment.



PAYMENTS
TURN KNOB FOR ENVELOPE
TURN

Hood of Stainless steel or bronze prevents entrance of water above envelope door.

Clear flexible PLASTIC curtain protects envelope withdrawal opening. Curtain easily replaced.

ROTARY DROPOSITORY - - - FOR MAXIMUM PROTECTION AGAINST BURGLARY

HEAVY STEEL

Burglar Resistant Dropositories

The steel thickness of the Roters and Roter Housings is not less than ⅜" (¾" around the openings). The high quality steel castings of these units are impervious to attack with sledge hammers, wedges or other burglar tools.

The drawings indicate the handle and roter positions of both models in open (receiving) position. Release of the handle allows the roters to automatically return to closed (emptying) position. A removable spring in Model 46-10 and the counter balance design of the roter in Model 15-10 causes this automatic closing.

Positive cushioned stops prevent the rotors from turning beyond correct receiving or emptying positions.

Connecting chutes to a Repository are available as required.

Custom-built repositories to suit conditions are available. Give dimensional data and type of user. A recommendation based on 30 years experience will be furnished.

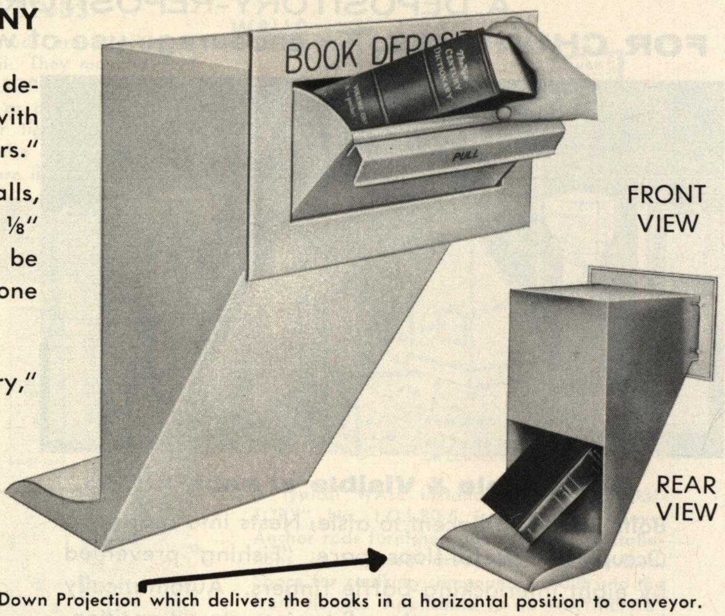
BOOK DEPOSITORY BOOK CONVEYORS

For LIBRARIES PUBLIC • SCHOOL • COMPANY

The complete Model *1112SD as illustrated, is a basic unit designed specifically and primarily (through years of research with Librarians and Architects) for the return of books "after hours."

Installation easily made (see Installation Instructions) in walls, doors, or panels (Masonry, Wood, Metal, Glass, etc.), from ⅛" to 12" thick. NOTE: The 12" depth of the housing may be increased, but any reduction would cause the sacrificing of one or more of the important features detailed below.

Model *712SD not recommended as an only "Book Depository," due to the maximum width of books being limited to 6¾".



BOOK DEPOSITORY
PULL
FRONT VIEW
REAR VIEW

- **FRONT FRAME,** Alumilited Aluminum or Bronze, Satin Finish. Standard Face Wording "BOOK DEPOSITORY."
- **DEPOSIT HOPPER,** "fish-proof", with "PULL" Handle, complete with Sides, Top and Stainless Steel Bottom.
- **HOUSING,** complete with Baffle Fingers. Stainless Steel Chute forms the Slow Down Projection which delivers the books in a horizontal position to conveyor. book truck, table or other.

Detailed Drawing, Photographs and Descriptive Data of this model, also apply to other "all PURPOSE" models.

"SLOW DOWN" PROJECTION

THE "SLOW DOWN" PREVENTS BOOK DAMAGE BY DELIVERING THEM IN HORIZONTAL POSITION TO A CONVEYOR OR BOOK TRUCK.

CAPACITY

The No. 1112 Deposit Hopper clear opening is 11¼" wide x 3" high.

Note the Relative Position of the Hopper Bottom and Deposit Opening.

Because Books must be placed in the hopper at an angle; (about 23 degrees) thin books may be of greater length than thick ones. See examples below.

A—2½" thick—May be up to 12" Long
B—2" thick—May be up to 14" Long
C—1½" thick—May be up to 16" Long
D—3" thick—May be up to 4½" Long

NOTE: Any change in size and/or shape of this unit may affect it's resistance to "fishing" or its capacity to accept the maximum size object. LARGER AND SMALLER SIZES ARE AVAILABLE.

INTERIOR OPENING DIMENSION changes to 7½", rear panel to 14½" whenever SLOW DOWN PROJECTION is omitted from the "all PURPOSE" models.

The dimensions of the housings indicated in the drawings (left) provide a maximum of protection against "fishing" while at the same time permitting books 16" or more in length by 11¼" wide* to be deposited. It is recommended, when possible, to utilize the maximum capacity of the unit by specifying the standard dimensions, shown in the drawings.

Hopper closes against a P-shaped neoprene seal at the top and a metal water block at bottom to prevent entrance of water during rainfall.

*The dimension chart illustrates Model 1112. Model 712 is identical except all width dimensions are reduced 4½".

SPECIAL FLANGES for interior opening trim and extensions for Housing and Chute can be fabricated to suit.

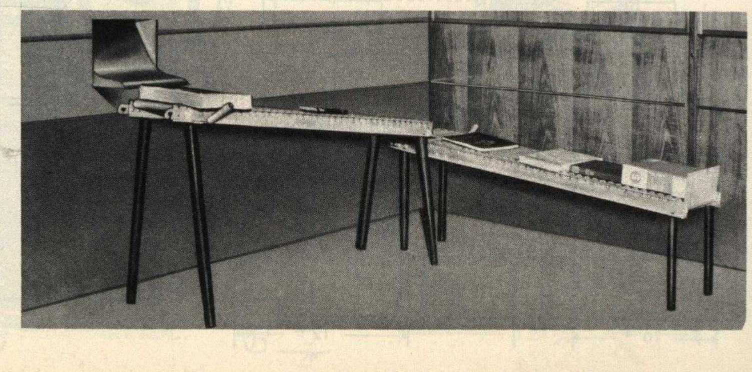
AUTOMATIC GRAVITY TYPE BOOK CONVEYORS may be used as a BOOK TRUCK

Safely moves Books away from the "BOOK DEPOSITORY" chute. BOOKS can be stored on the CONVEYOR.

BALL-BEARING ALUMINUM ROLLERS, activated automatically by books coming out of "Book Depository." An incline of 8 to 10 degrees is adequate.

THE GRAVITY-TYPE CONVEYOR, illustrated is available in lightweight 5' sections, which can be set up in a straight run, and a Special Exclusive "Dropositroy" feature permits set-up for 90 degree turns.

SUPPORTING LEGS, can be made stationary, or folding for easy storing when not in use, and with casters which will permit easy moving and positioning of the Conveyor Sections.



The Mosler DROPOSITORY Corporation

DEPOSITORY UNITS

MAIL • PACKAGES • FILM • DRUGS

for all PURPOSES and all HOURS • for all BUSINESSES and INSTITUTIONS

Hospitals • Laboratories • Drug Houses • Film Companies • Insurance Companies
Public Utilities • Savings and Loan Associations • Banks • Finance Companies

The Standard Model 1112 and Model 712 "Dropository" units consist of three basic sections:

(1) THE FRONT FRAME with Standard Face Wordings as shown (Special Engraving Extra)
(2) THE DEPOSIT HOPPER* "fish-proof" with Front and "PULL" Handle to match Frame
(3) THE HOUSING** with Stainless Steel Chute, with or without Slow Down Projection

***THE DEPOSIT HOPPER** is a complete unit with sides, top and stainless steel bottom. Hopper pivots on stainless steel bearing.

** **THE HOUSING** has steel Baffle Fingers built in, and the Bottom is Double Thickness 16 ga. Steel, with the Top Layer Stainless Steel.

INNER FLANGES and CHUTES will be fabricated to suit the requirements of each job when specified.

ANCHOR STUDS and ANCHOR RODS, standard on all models (see installation instructions).

REPOSITORY UNITS, if required, will be quoted upon receipt of requirements data.

"WH" Models

FRONT FRAME AND HOPPER without housing, chute, or Baffle Finger Assembly. Will receive an object up to:

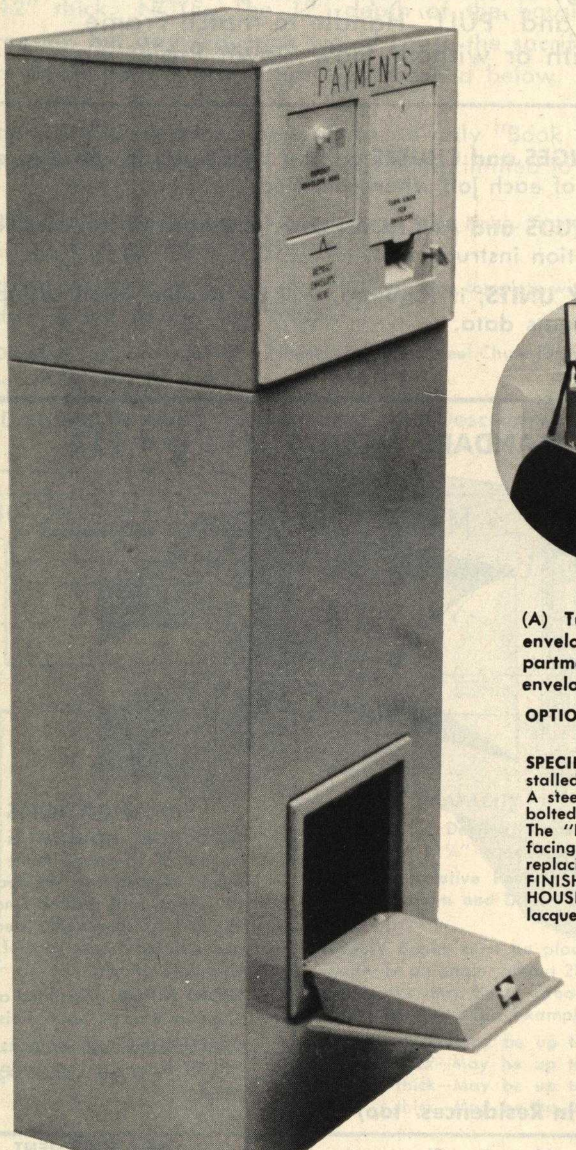
PAYMENT COUNTER

COMPLETE SELF-SERVICE UNIT

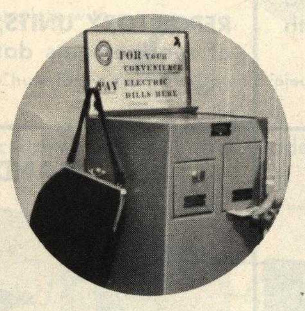
A customer convenience located in retail stores, banks, etc., to receive payments of Utility bills, etc.

The "DROPOSITORY" Payment Counter is a completely self-contained unit including an envelope supply compartment, with a "one-at-a-time" dispenser—Convenient writing surface—Fool-proof deposit hopper—Repository (safe)—and as optional equipment, a Sign Holder and Hook to hold a shopping bag or purse.

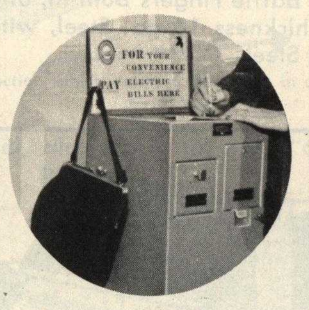
- **Costs to Utility Company reduced — NO fee to agent**
- **Customer serves himself — no waiting**
- **Records deposit — Customer writes data on envelope**
- **Responsibility "pinpointed" — deposits handled ONLY by customer and authorized company collector**
- **Increases traffic in agent's store**
- **Agent's time not required in making collection**
- **Saves floor space — Approximately 1 square foot required**
- **Portable — Floor-Anchor permits fast re-location as required**



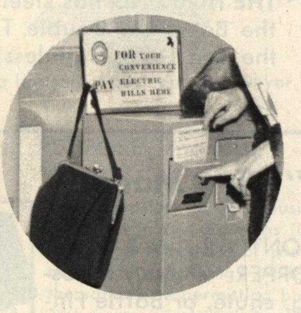
EASY TO USE



(A) Turn knob — withdraw envelope — (supply compartments hold 200 empty envelopes).



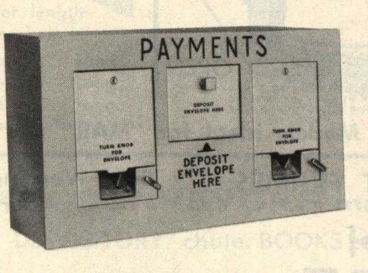
(B) Write required data on envelope — insert payment seal.

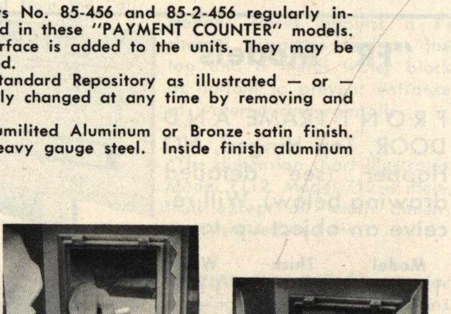


(C) Deposit envelope.

OPTIONAL EQUIPMENT — Sign Holder with purse hook as shown in the above photos.

SPECIFICATIONS — Standard "DROPOSITORY" units No. 85-456 and 85-2-456 regularly installed in walls and plate glass windows are utilized in these "PAYMENT COUNTER" models. A steel housing to provide uninterrupted exterior surface is added to the units. They may be bolted on a Repository of the size and type required.
The "DROPOSITORY" unit may be bolted on the standard Repository as illustrated — or — facing in the opposite direction — This may be easily changed at any time by removing and replacing four bolts.
FINISHES: The fronts are normally furnished in Alumilited Aluminum or Bronze satin finish.
HOUSING: Exterior finish, neutral gray lacquer. Heavy gauge steel. Inside finish aluminum lacquer.





P.C. 85-456
Description—42" high, 15" wide, 10" deep

P.C. 85-2-456
Description—42" high, 21" wide, 10" deep

Floor-Anchor Description — The "Payment Counter" may be permanently attached to the floor with lag screws — or — may be removably attached by use of the "Dropository" Floor-Anchor attachment (see illustration). This device permits a very solid anchorage of the "Payment Counter" but can be removed within 30 seconds after unlocking and opening the Repository door.

Each "PAYMENT COUNTER" model is a two part unit; a "Dropository" and Repository. The "Dropository" is priced separately and may be purchased without a Repository. See Equipment Price List. Two standard size Repositories are regularly furnished, however, special sizes or shapes are available at small additional cost.

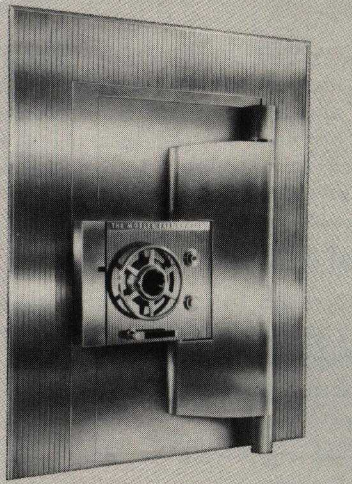
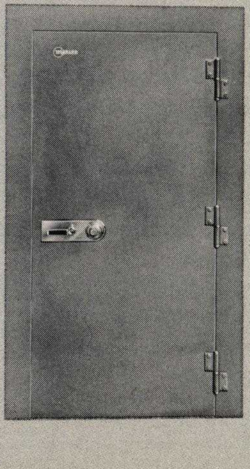
SAFES AND VAULTS

Since 1848

23b
Mos





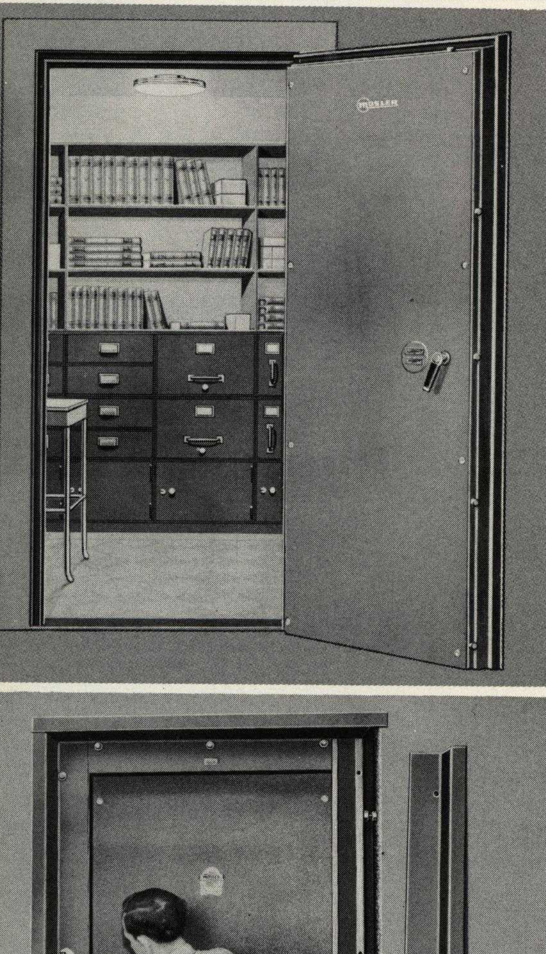
The
Mosler
Safe
Company

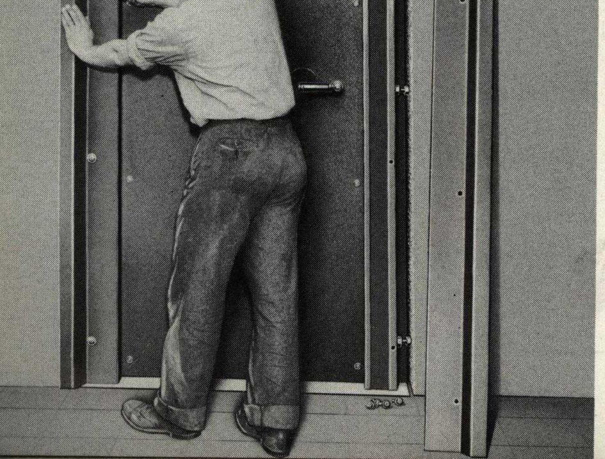
WORLD'S LARGEST BUILDERS OF SAFES AND BANK VAULTS

MOSLER INSULATED FILE

Mosler Insulated Files bring an entirely new dimension to record keeping – real fire-stopping protection for valuable papers. There's a world of difference between these and ordinary files. In the latter, heat alone can turn valuable papers to ashes. By contrast, Mosler's unique inner-wall insulation keeps papers safe even when temperatures reach 1700°F!

Handsomely styled by Henry Dreyfuss, Mosler Insulated Files come in 2, 3 and 4-drawer models. Quality features . . . roller-drawer suspension, push-button drawer latches, and interchangeable key or combination locks. These, plus their ability to protect against loss by fire, make Mosler Insulated Files a low-cost investment that pays high dividends in office efficiency and record security.





MOSLER FIRE-RESISTIVE VAULT DOORS AND FILE STORAGE ROOM DOORS

Now available in decorator compatible colors. Mosler standard mist green, standard tan and standard gray without additional cost.

INSURANCE SAVINGS

Mosler flat sill vault doors and file storage room doors come under the "B" classification of equipment for Mercantile Burglary Insurance.

A further discount of 10% is earned by the Underwriters' Laboratories, Inc. relocking device for its resistance to attack with mechanical tools, and oxyacetylene torch when used in an attempt to punch or burn out the lock. Under the Broad Form of insurance for Money and Securities these doors qualify for the "Fireproof" rating.

ADVANTAGES

1. Doors are clamped into openings from inside the vault (see diagrams). Concrete grouting is eliminated. Doors can be grouted if desired.
2. Time required for installation is greatly reduced.
3. Installation costs are greatly reduced.
4. Available to open either to right (R), or left (L) as specified.
5. Possibility of soiling finish, from splashing grout or subsequent plastering, is eliminated.
6. Door alignment can be adjusted at any time as it is not grouted in permanently. This adjustment is often necessary due to settling of vault walls or building.
7. Doors can be easily removed at any time by releasing flanged clamp plates from inside.
8. Doors can be installed in finished walls without the necessity of refinishing walls around doors.
9. Back flanges to fit up to 12″ wall thickness available on request for 2, 4 and 6 hour doors.
10. Combination lock may be provided with key locking knob for dual control and additional security on all vault doors.

HOW TO SPECIFY

6-HOUR DOOR (Model FS-6)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive Vault Door(s) of the type which does not require grouting for installation. The hinges shall be on *(left or right)* side, when facing front of door from outside of vault. Door(s) shall bear the following labels: Underwriters' Laboratories, Inc. six-hour fire-resistive label; Underwriters' Laboratories, Inc. relocking device label; and Safe Manufacturers National Association label for six-hour door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Clear door opening shall be 78″ high by 32″ wide. The door shall have $\frac{3}{16}$″ outer door plate welded to jambs and shall be insulated with Monolithic fire-resistive material. Baffles in door designed to prevent penetration of heat. In addition, the door shall be equipped with at least $\frac{1}{2}$″ insulation over boltwork, mounted on fusible studs, thermostatically controlled, designed to automatically seal opening at door frame when temperature reaches approximately 165°F. The door shall be equipped with seven bolts, 1″ in diameter, operating four to the front, two to the rear, and one to the top, with tenon and groove at top and front, and interlocking jamb at rear, checked by three-tumbler, Underwriters' Approved Group I Manipulation Resistant hand change combination lock, with spindle shouldered against lock plate to prevent driving, and two hard pins in spindle to prevent drilling. The entire locking mechanism to be guarded by $\frac{1}{4}$″ drill-resisting plate. The door shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the vault. The door shall be finished in wrinkle gray (green), and chrome trim. Jambs smooth gray (green).

6-HOUR DOUBLE DOOR (Model FS-6D)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive Vault Door(s) of the type which does not require grouting for installation. Door(s) shall bear the following labels: Underwriters' Laboratories, Inc. six-hour fire-resistive label; Underwriters' Laboratories, Inc. relocking device label; and Safe Manufacturers National Association label for six-hour door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Clear door opening shall be 78″ high by 42″ wide. The door shall have $\frac{3}{16}$″ outer door plate welded to jambs and shall be insulated with Monolithic fire-resistive material. Baffles in door designed to prevent penetration of heat. In addition, the door shall be equipped with at least $\frac{1}{2}$″ insulation over boltwork, mounted on fusible studs, thermostatically controlled, designed to automatically seal opening at door frame when temperature reaches approximately 165°F. The RH door shall be equipped with seven bolts, 1″ in diameter, operating four to the front, two to the rear, and one to the top, the L. H. door one top, one bottom, two back with tenon and groove at top and front, and interlocking jamb at rear, checked by three-tumbler, combination lock and approved by Underwriters' Laboratories, Inc., for manipulation resistance Group I with spindle-shouldered against lock plate to prevent driving, and two hard pins in spindle to prevent drilling. The entire locking mechanism to be guarded by $\frac{1}{4}$″ drill-resisting plate. The door shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the vault. The door shall be finished in wrinkle gray (green), and chrome trim. Jambs smooth gray (green).

4-HOUR DOOR (Model FS-4)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive Vault Door(s) of the type which does not require grouting for installation. The hinges shall be on *(left or right)* side, when facing front of door from outside of vault. Door(s) shall bear the following labels: Underwriters' Laboratories, Inc. four-hour fire-resistive label; Underwriters' Laboratories, Inc. relocking device label; and Safe Manufacturers National Association label for four-hour door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Clear door opening shall be 78″ high by 32″ wide. The door shall have $\frac{1}{8}$″ outer door plate welded to jambs and shall be insulated with Monolithic fire-resistive material. Baffles in door designed to prevent penetration of heat. In addition, the door shall be equipped with at least $\frac{1}{2}$″ insulation over bolt work, mounted on fusible studs, thermostatically controlled, designed to automatically seal opening at door frame when temperature reaches approximately 165°F. The door shall be equipped with five bolts, $\frac{3}{4}$″ in diameter, operating four to the front and one to the top, with tenon and groove at top and front, and interlocking jamb at rear, checked by three-tumbler, Underwriters' Approved Group I Manipulation Resistant hand change combination lock, with spindle shouldered against lock plate to prevent driving and two hard pins in spindle to prevent drilling. The entire locking mechanism to be guarded by $\frac{1}{4}$″ drill-resisting plate. The door shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the vault. The door shall be finished in wrinkle gray (green); and chrome trim. Jambs smooth gray (green). The door and frame shall be installed after the masonry opening and plastering have been completed.

4-HOUR DOUBLE DOOR (Model FS-4D)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive Vault Door(s) of the type which does not require grouting for installation. Door(s) shall bear the following labels: Underwriters' Laboratories, Inc. four-hour fire-resistive label; Underwriters' Laboratories Inc. relocking device label; and Safe Manufacturers National Association label for four-hour door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Vestibule shall be equipped with double outer doors giving clear opening 78″ high by 42″ wide. The doors shall have $\frac{1}{8}$″ outer door plates welded to the jambs and shall be insulated with Monolithic fire-resistive material. Baffles in doors designed to prevent penetration of heat. Right-hand door shall be equipped with six bolts, $\frac{3}{4}$″ in diameter, operating four to front and one to top and one to the bottom. Left-hand door, two bolts, $\frac{3}{4}$″ in diameter, operating one to top and one to bottom. Each door shall have tenon and groove at top and front, and interlocking jamb at rear. Bolts shall be checked by three-tumbler, combination lock and approved by Underwriters' Laboratories, Inc., for manipulation resistance Group I with spindle shouldered against lock plate to prevent driving, and two hard pins in spindle to prevent drilling. The entire locking mechanism to be guarded by $\frac{1}{4}$″ drill-resisting plate. The doors shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the vault. The doors shall be finished in wrinkle gray (green), and chrome trim. Jambs smooth gray (green).

2-HOUR DOOR (Model FS-2)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive Vault Door(s) of the type which does not require grouting for installation.

The hinges shall be on *(left or right)* side, when facing front of door from outside of vault. Door(s) shall bear the following labels: Underwriters' Laboratories, Inc. two-hour fire-resistive label; Underwriters' Laboratories, Inc. relocking device label; and Safe Manufacturers National Association label for two-hour door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Clear door opening shall be 78″ high by 32″ wide. The door shall have $\frac{1}{8}$″ outer door plate welded to jambs and shall be insulated with Monolithic fire-resistive material. Baffles in door designed to prevent penetration of heat. The door shall be equipped with five bolts, $\frac{3}{4}$″ in diameter, operating four to the front and one to the top, with interlocking tenon and groove at top and front, and interlocking jamb at rear, checked by three-tumbler, Underwriters' Approved Group I Manipulation Resistant hand change combination lock with spindle shouldered against lock plate to prevent driving, and two hard pins in spindle to prevent drilling. The entire locking mechanism to be guarded by ¼″ drill-resisting plate. The door shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the vault. The door shall be finished in wrinkle gray (green), and chrome trim. Jambs smooth gray (green). The door and frame shall be installed after the masonry opening and plastering have been completed.

2-HOUR DOUBLE DOOR (Model FS-2D)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive Vault Door (s) of the type which does not require grouting for installation. Door (s) shall bear the following labels: Underwriters' Laboratories, Inc. two-hour fire-resistive label; Underwriters' Laboratories, Inc. relocking device label; and Safe Manufacturers National Association label for two-hour door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Vestibule shall be equipped with double outer doors giving clear opening 78″ high by 42″ wide. The doors shall have ⅛″ outer door plates welded to the jambs and shall be insulated with Monolithic fire-resistive material. Baffles in doors designed to prevent penetration of heat. Right-hand door shall be equipped with five bolts, ¾″ in diameter, operating four to front and one to top. Left-hand door, two bolts, ¾″ in diameter, operating one to top and one to bottom. Each door shall have tenon and groove at top and front, and interlocking jamb at rear. Bolts shall be checked by three-tumbler, Underwriters' Approved Group I Manipulation Resistant hand change combination lock, with spindle shouldered against lock plate to prevent driving, and two hard pins in spindle to prevent drilling. The entire locking mechanism to be guarded by ¼″ drill resisting plate. The doors shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the vault. The doors shall be finished in wrinkle gray (green), and chrome trim. Jambs smooth gray (green). The door and frame shall be installed after the masonry opening and plastering have been completed.

1-HOUR AND ½-HOUR DOORS (Models FS-1 and 32)

The contractor shall furnish and install *(quantity)* Mosler Insulated Flat Sill Fire-resistive File Storage Room Door (s) which does not require grouting with hinges on *(left or right)* side, when facing front of door from outside of file storage room. Door (s) shall bear the following labels; Underwriters' Laboratories, Inc. *(one-hour or one-half hour)* fire-resistive label; Underwriters' Laboratories, Inc. relocking device label; and Safe Manufacturers National Association label for *(one-hour or one-half hour)* door. Relocking device shall be designed to function under mechanical, explosive or torch attack.

Clear door opening shall be 78″ high by 32″ wide. The door shall be $2\frac{11}{16}$″ (for 1-hour door) 2″ (for ½-hour door) thick, exclusive of handle and hinge projections, and have ⅛″ outer door plate to which ⅛″ Z angle sections shall be electrically welded to form bolt frames. The door shall be equipped with six bolts ¾″ in diameter, namely three live bolts at front and three interlocking bolts at rear, checked by three-tumbler, Underwriters' Approved Group I Manipulation Resistant hand change combination lock, with spindle shouldered against lock plate to prevent driving, and hard pin in spindle to prevent drilling. The entire locking mechanism to be guarded by ⅜″ open-hearth steel and ¼″ drill-resisting plate. The door shall be equipped with Emergency Escape Device, having auxiliary inside handle, a turn of which will permit immediate escape of anyone locked in the file storage room. The door shall be finished in wrinkle gray (wrinkle green optional), and chrome trim. The door and frame shall be installed after the masonry opening and plastering have been completed.

Day gate for daytime protection furnished at nominal extra cost. As an added protection feature, doors are so designed that both door and day gate may be closed and locked. It is not necessary to leave day gate open over night.

SUGGESTED MINIMUM THICKNESS OF WALLS FOR GROUND-SUPPORTED VAULTS

The following is a table of suggested minimum thicknesses of walls for various floors to take care of ordinary structural conditions and ordinary vault loads.

(The first line of the following table may be considered as the minimum thickness of walls for structural-supported vaults.)

KIND OF MATERIAL CLASS OF WALL FLOOR-COUNTING	THICKNESS OF WALL, IN.						
	REINFORCED CONCRETE			BRICK			HOLLOW CONCRETE MASONRY
FROM TOP DOWN	6 HR.	4 HR.	2 HR.	6 HR.	4 HR.	2 HR.	2 HR.
TOP	10	8	6	12	12	8	8
2ND FROM TOP	10	8	8	12	12	12	12
3RD FROM TOP	10	10	10	12	12	12	12
4TH FROM TOP	12*	10	10	16†	16†	16†	16†
5TH FROM TOP	12	12	12	16	16	16	16
6TH FROM TOP	12	12	12	16	16	16	16
7TH FROM TOP	12‡	12‡	12‡	16‡	16‡	16‡	16‡
8TH FROM TOP	12‡	12‡	12‡	16‡	16‡	16‡	16‡
9TH FROM TOP	12‡	12‡	12‡	16‡	16‡	16‡	16‡
10TH FROM TOP	14‡	12‡	12‡	16‡	16‡	16‡	16‡

**Thickness in panel constrution may be 2 in. less.*
‡Thickness in panel constrution may be 4 in. less.
†These thicknesses apply to panel construction.

VAULTS

Example: For a four-story building, use thicknesses in first four lines of table, the fourth line designating the minimum thickness suggested for walls of the ground floor vault, the first line the minimum thickness for the walls of the top or fourth floor vault, etc.

Example: For an eight-story building, use thicknesses shown in first eight lines of table, the eighth line designating the minimum thickness suggested for walls of the ground floor vault, the first line the minimum thickness of walls (panel construction) for the top or eighth floor vault, etc.

VAULT FLOORS AND CEILINGS

Floor and ceiling of a vault shall be of a construction equivalent in strength and fire-resistance to the walls.

FILE STORAGE ROOMS

Thickness: To provide not only the necessary minimum resistance to fire and fire hose streams, but also to provide for structural considerations and variations in quality of materials and workmanship, walls shall not be less than 6 in. in thickness if of reinforced concrete, nor less than 8 in. if of brick or hollow concrete units.

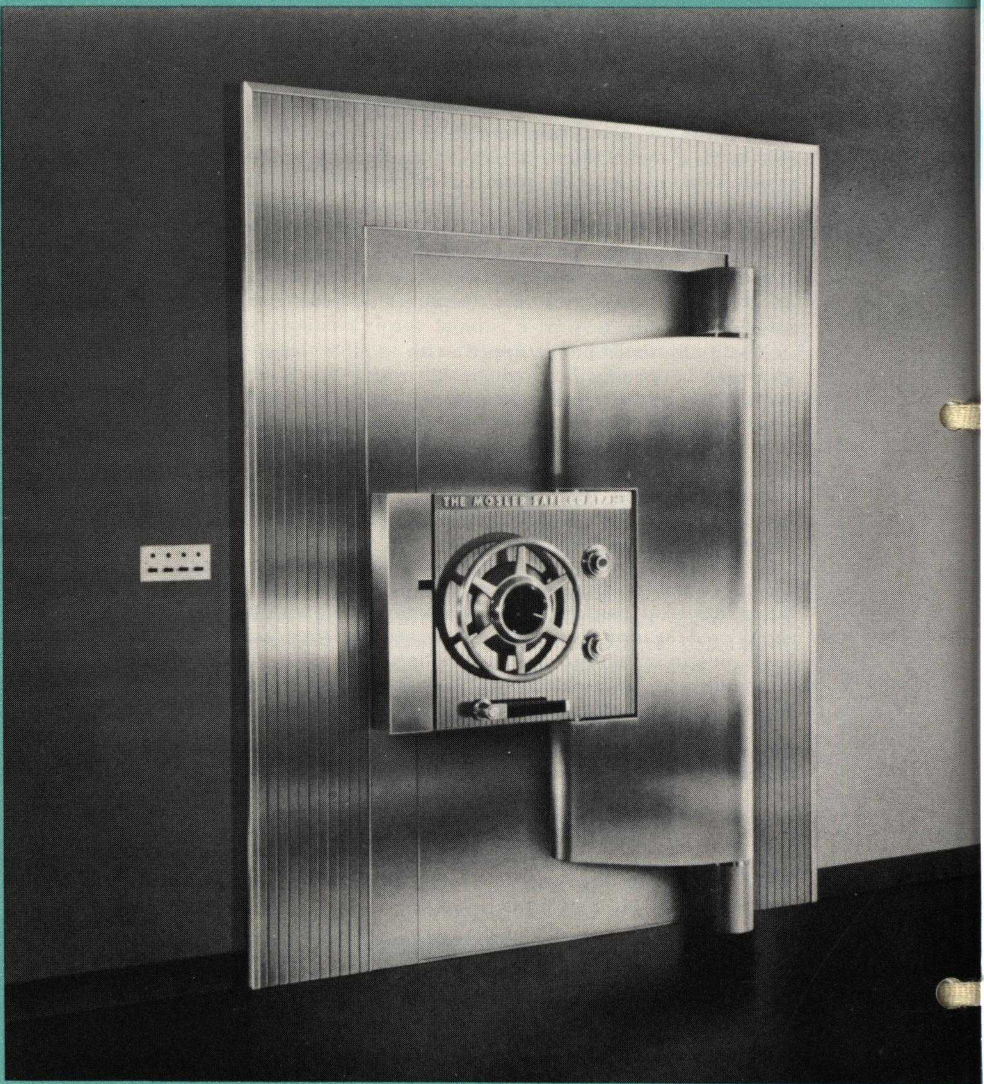
Mosler CENTURY BANK EQUIPMENT

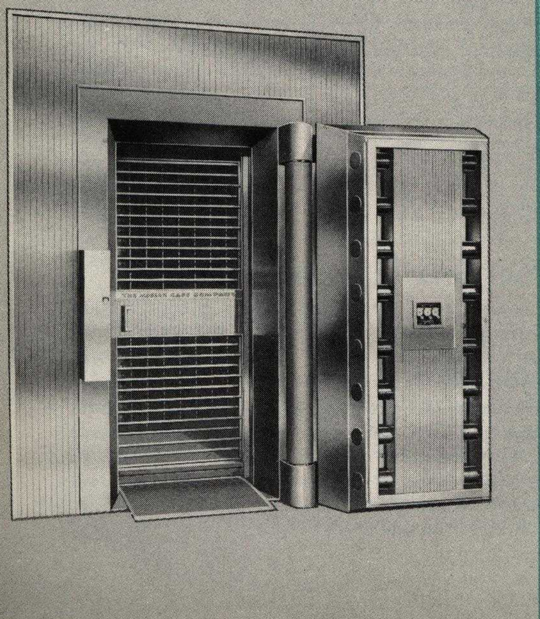
The Mosler Century Series offers the perfect blend of traditional dignity and impregnability with the beauty of modern functional design. The wide range of architrave designs enables you to incorporate the vault into your overall architectural plan.

Century Vault Doors are available in 3½″, 7″, 10″, 12 ″and 16″ models. Circular doors are included in the Century Series.

Standard vault doors are produced in 1½″, 3½″, 7″, 10″, 12″ and 16″ thickness. Special size doors are available.

The open view (below) reveals the heavy bolts and intricate jeweled movements of the timelocks – features that fascinate most bank customers and give an added feeling of strength and security. The modern horizontal day-gate harmonizes with the vault door design and eliminates the old-style "jailhouse" or "cage" appearance.



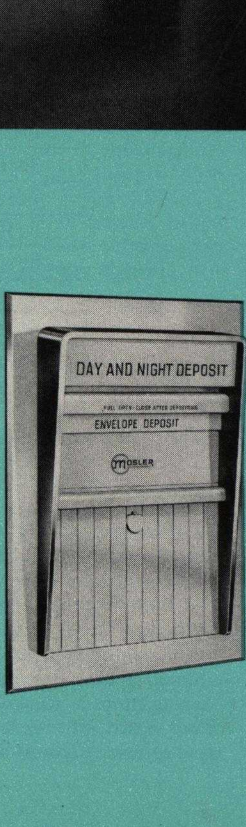


DUAL DEPOSITORY

Provides "round the clock" banking facilities for all customers. Protected slot for envelope deposits. Key-locked hopper permits bag deposits by commercial customers.

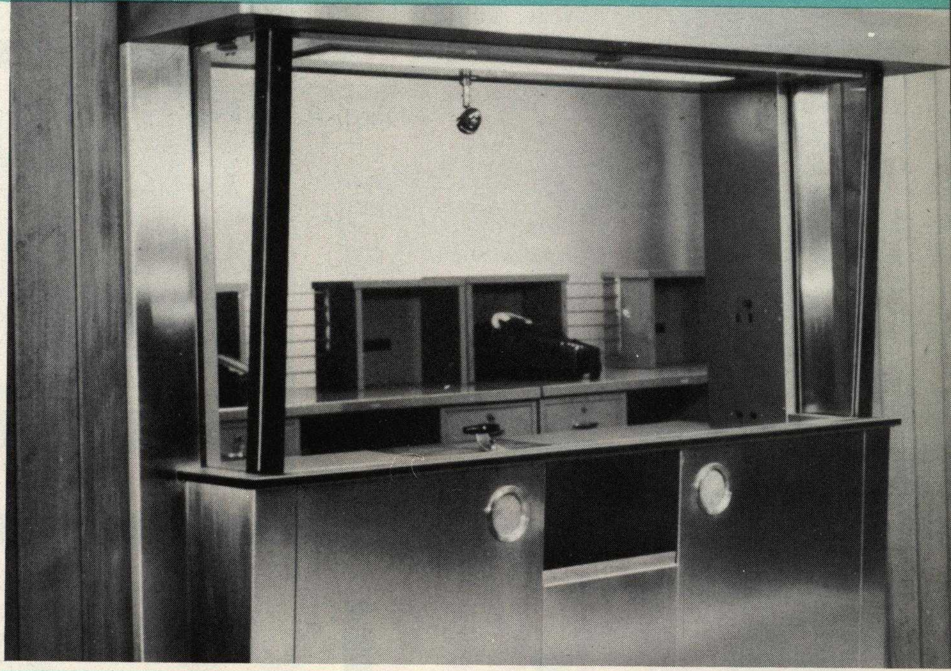
DELUXE TYPE

Available at slightly higher cost: Translucent letters are illuminated, in addition bag deposits trip switch causing light to flicker, indicating to depositor that bag has entered safe.



Mosler

DRIVE-IN WINDOWS



A completely new style in drive-in windows. This dramatically new picture window was designed after exhaustive studies of existing installations and hundreds of interviews with bank tellers and customers.

Only Mosler Drive-In Windows offer all these features:

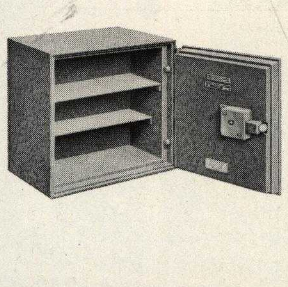
1. Easy installation . . . just slide in the entire window and seal. Bolts adjust the window's depth from 8 to 14 inches to match wall thickness.
2. The new picture window's heavy gauge, stainless steel skirt extends to the ground, provides ample leg room, maximum security.
3. The new Mosler picture window handles vehicles of any size — from sports cars to trucks — comfortably.
4. Modular under counter equipment gives flexible storage below counter, plus ample work space and room for teller's machines.
5. New high fidelity intercom eliminates squeaks, echoes and squawks.
6. Redesigned electrically operated deposit drawer stops anywhere up to 14 inches. A pushbutton extends it further when required.

Mosler | WALL SAFES

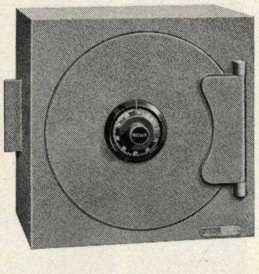
Ideal for installation in homes under construction. Also advantageous for multiple residences for convenient protection of valuables and papers against fire and sneak thievery.

Inside: 12 in. high, 12 in. wide, 5 in. deep, except for lock projection.

Outside 13¾ in. high, 13¾ in. wide, 7 in. deep, body. Highest quality combination lock with relocking device for protection against mechanical or explosive attack.



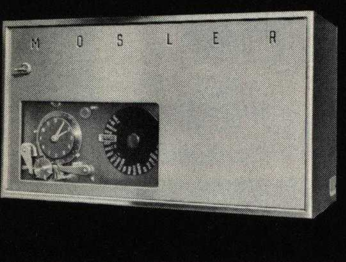
NO. 125-S



NO. 8

Inside: 11″ high, 11″ wide, 4⅜″ deep, clear. Outside 12″ high, 12″ wide, 7″ deep, body. Overall depth 8¼″, clear door opening 9½″.

Mosler | BANK ALARMS



Central panel, located inside vault, controls the system. No need to turn the alarm on each night . . . with the Mosler Century Alarm you see it and forget it. If the alarm is activated the Control-Point Panel indicates the area that signalled the alarm.

Completely restyled outside bell housing. Blends with all styles of architecture. Stainless steel construction is weatherproof, maintenance free.

CONTROL-POINT PANEL

The Mosler Century Alarm is designed to give all-in-one protection to bank premises. The only alarm of its type to give full protection to the building, vault, night depository and any other key area.

The unique design of the system provides tremendous flexibility. When alarm requirements increase you can easily provide the additional coverage. The system can be installed in new construction or existing buildings.

For more detailed information contact your nearest Mosler office.

SHAW-WALKER work-organized counters

Space-Saver
Step-Saver
Teller Stations

all made from
Stock Under-Counter Units

Drawing on our experience gained during the past 60 years, Shaw-Walker has developed new means of saving floor space and speeding depositor service.

Shaw-Walker's complete family of Step-Saver Module Teller Stations are composed of stock under-counter units. All are adaptable for *architect-designed** counter tops and fronts in units of 60-inch modular arrangements. Also available with Shaw-Walker stock counter tops and fronts.

Because of Shaw-Walker know-how, plus years of experience in design and production of every type banking equipment, we can be most helpful in *transforming the architect's creative ideas* into counters and work spaces that are efficient, compact and attractive.

*Architect-Designed—See Houston, Texas picture on preceding page. Allentown and Muskegon pictures show stock fronts and tops. For other pictures and facts get our 36-page bank handbook and 244-page general catalog described on page 4 of this insert.

Typical Under-Counter Units for Savings Tellers and Commercial Tellers

The two typical counter sections illustrated are enclosed with architect-designed wood fronts, and finished tops of grained laminate with marble deal plates. The steel under-counter equipment is assembled from Shaw-Walker's stock units.

Across on the opposite page, at left, is line drawn illustration of the stock units. At the extreme right are plans and sections giving detailed dimensions.

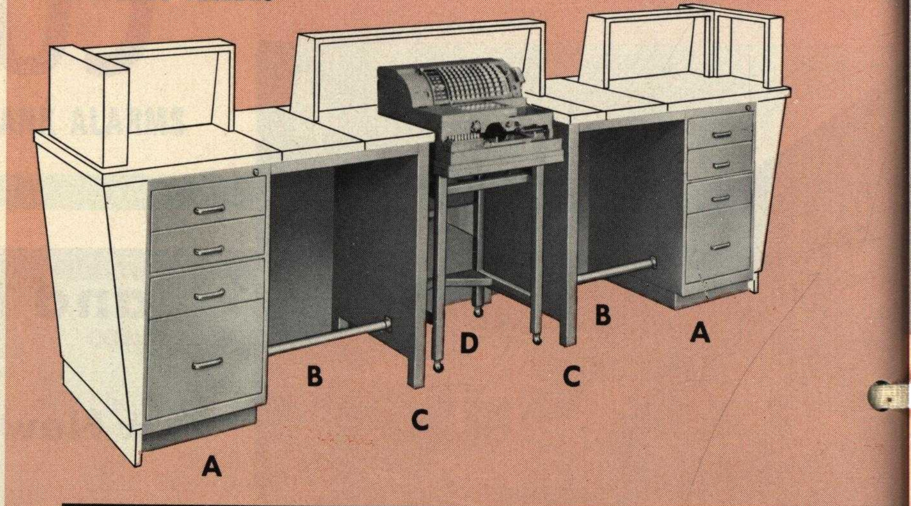
SAVINGS TELLERS COUNTER—This 10-foot Module is widely used for Savings Tellers. Two Tellers share savings machine. Machine is usually on a portable stand.

The stock steel units: Ⓐ Two, Teller Cabinets No. 9107-1; Ⓑ Two, Knee-Spaces No. 9130; Ⓒ Two, Leg Units No. 9133 with Foot Rails No. 9138; and Ⓓ One Machine Opening No. 9127. Top drawer of Teller Cabinets has three lift-out Trays, two for currency and one for checks and debit and credit slips. (Three of our nine stock Teller Cabinets are pictured on page 4.)

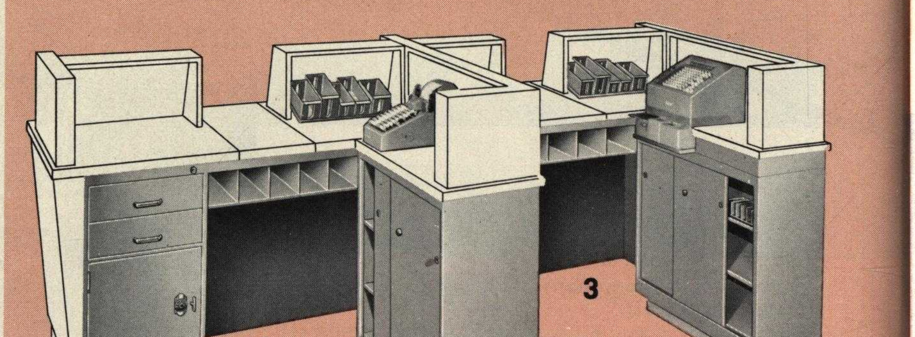
COMMERCIAL TELLERS COUNTER—Here's the most commonly used work-organized step-saver for Commercial Tellers. Pictured are two, 5-foot Modules with "Returns." These counters are often used in a straight line, without the "Return."

The stock steel units in first Module: Teller Cabinets, ① No. 9106 and ② No. 9108; ③ Knee-Space No. 9131 with Pigeon Hole Unit No. 219. Second Module is the same except Teller Cabinets are ④ No. 9107 with five box drawers and ⑤ No. 9109 Cupboard with No. 9110 Cutout Top for NCR Receipting Machine.

SAVINGS TELLERS



COMMERCIAL TELLERS



SPECIFICS FOR DESIGNING

Under-Counter Equipment is made in two depths—22⅛" and 27⅛". If the counter fronts and superstructures are standard units, furnished by Shaw-Walker, the 27⅛" units are used.

For counter fronts and superstructures designed by the architect and furnished by others, the 22⅛" depth units are required to allow clearance for counter construction.

Shaw-Walker steel under-counter equipment is standard in 5-foot Modules and can be varied to fit any requirement.

Being sectional, the equipment is easy to install, to expand or to rearrange. All stock units are interchangeable.

Under-Counter Teller Cabinets are made in nine stock models —See page 4 of this insert.

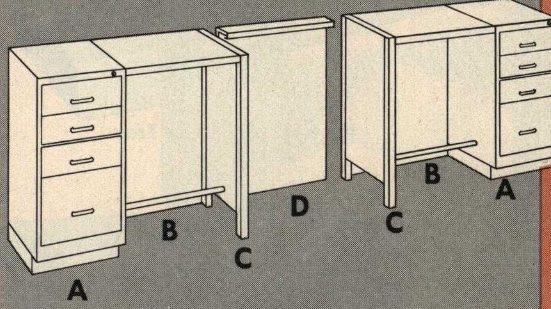
Counter Fronts and Superstructures can be wood, marble or metal. Surfaces of counter tops can be linoleum, laminate, marble or wood, etc., as specified and *designed by the architect.* All tops can be equipped with Deal Plates.

Superstructures can be the low-vision "friendly" style, or the "grille" style for greater hold-up protection. Either can be used with Shaw-Walker standard counter or custom-built architect-designed counter enclosures.

Fireproof Equipment for Savings Ledgers is "movable furniture" but often *specified by architect.* We make three models of fireproof savings desks. *Also* point-of-use insulated fireproof desks, ledger trays and files for every bank department —46 stock models, described in our 244-page catalog.

Consultation Service for Architects

Competent Shaw-Walker representatives with down-to-earth experience will *welcome the architect's request* for planning assistance, estimates for budget allowance, etc. Each Shaw-Walker representative has behind him our national staff . . . 60 years' experience in effecting time- and space-economies in financial institutions of every size. Branches and dealers in 485 cities throughout the United States and Canada.



The above illustration shows the recommended and most used arrangement of Shaw-Walker units for Savings Tellers, as illustrated with architect-designed counter enclosure at the left.

The illustration below indicates the ideal arrangement for Commercial Tellers, as shown with architect-designed counter arrangement—photo illustration at the left.

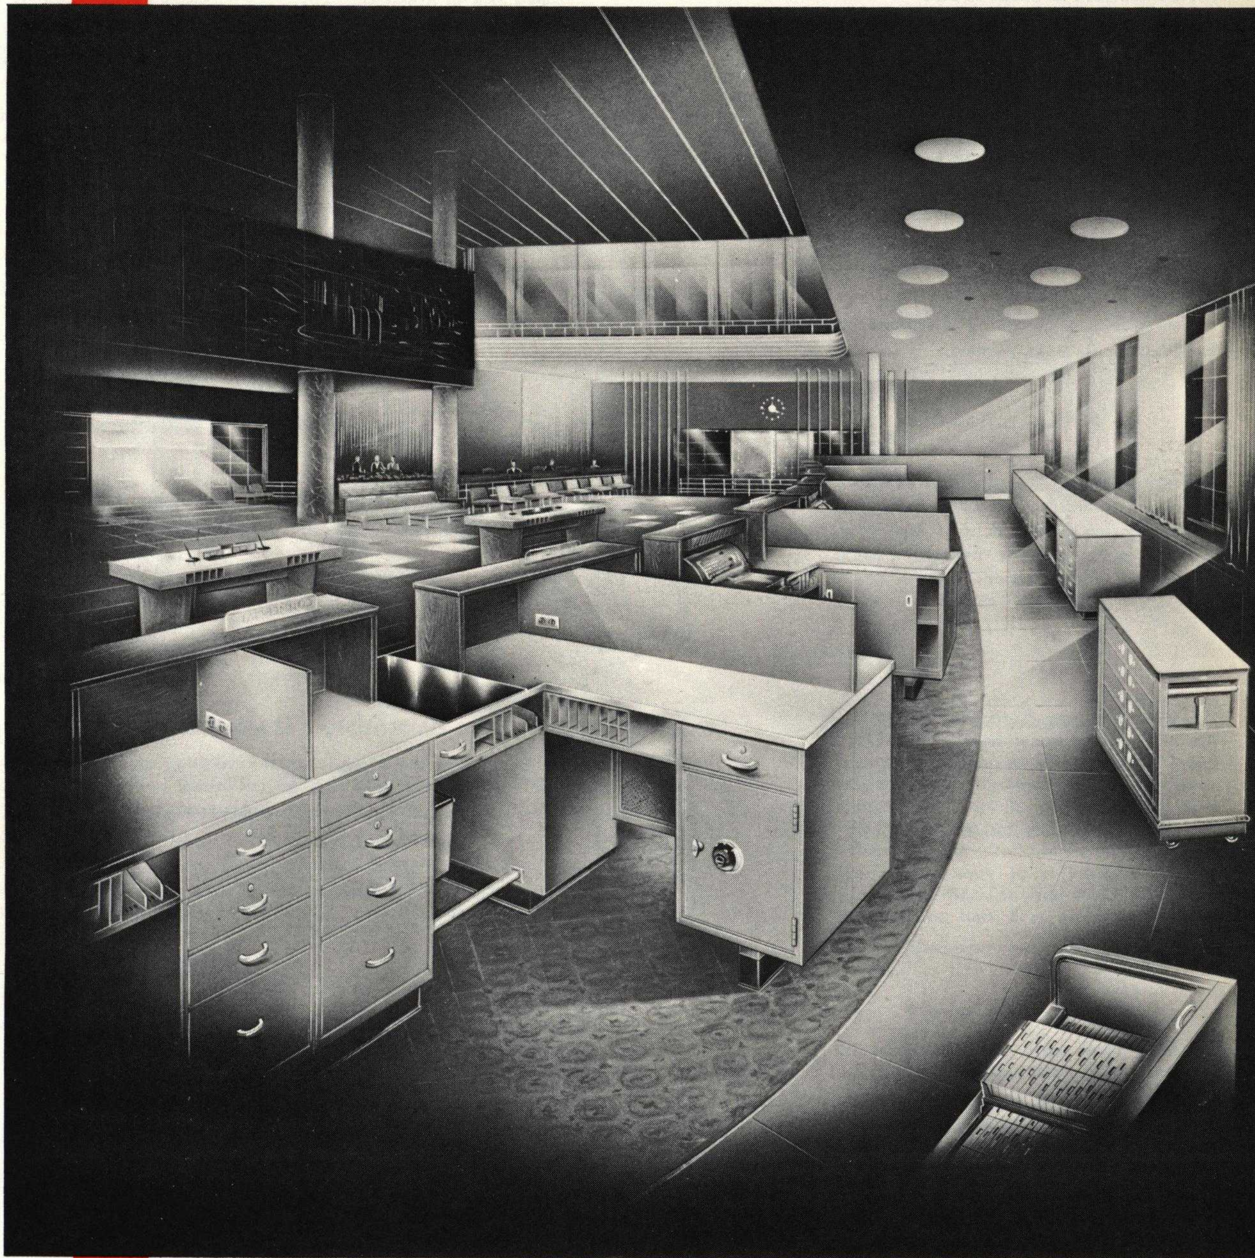
Watson

the finest Metal Bank Counter Equipment



In harmony with building designs and interior plans, our engineers and skilled metal craftsmen create and develop counter equipment to meet architects' specifications, all coordinated to reflect the individual and personal character of each bank.

WATSON
JAMESTOWN, N.Y.
U.S.A.

A.I.A. 35-S

WATSON MANUFACTURING COMPANY, Inc., Jamestown, New York

Watson BANK COUNTER EQUIPMENT

These two pages illustrate basic Watson bank assemblies. We wish to point out that a chief Watson feature is flexibility. We can adapt to your specific requirements — you do not need to adapt to ours.

standard

Our line of Standard units encompasses all equipment that is needed to provide the proper facilities for efficient operation in the bank tellers row. The line includes drawer and cupboard pedestals (single and double), coin safe pedestals, apron units, partitions, bases, counter tops and fronts. A catalog describing this Standard line is available upon request.

semi-standard

Semi-standard is a functional median between standard and custom layouts, adapting special design and operation features in the overall theme to modern engineered tellers' sections.

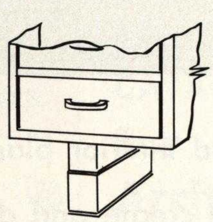
custom

This is our most proud offering. Watson has the engineering know how — the skilled metal craftsmen — to design, arrange, and produce a custom installation that will provide the ultimate in efficiency and distinction. This is the line for the "free rein" architect. Our staff, with their extensive bank experience is at your service; our metal craftsmen are able to produce to specification. You will find us easy to work with.

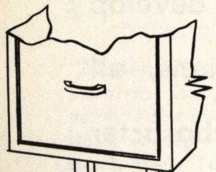
types of bases

We have three base styles in order to harmonize with your design:

- Full recessed toe space bases
- Island bases
- Contemporary leg bases



island
(off the floor)



contemporary

commercial teller assembly

A typical commercial teller's assembly made up of the following standard equipment:

Ⓐ Apron unit contains:
  - **A-1** cash drawer
  - **A-2** box drawer
  - **A-3** tilting 3 compartment drawer (clips, etc.)
  - **A-4** top recessed for deal plate
  - **A-5** recess for teller's machine

Ⓑ Pedestal with:
  - **B-1** bulk currency drawer
  - **B-2** cupboard

Ⓒ Side counter apron with:
  - **C-1** 8 compartment wrapper insert
  - **C-2** box drawer

Ⓓ Cupboard pedestal

Ⓔ Divider partition (with outlet cut-outs)

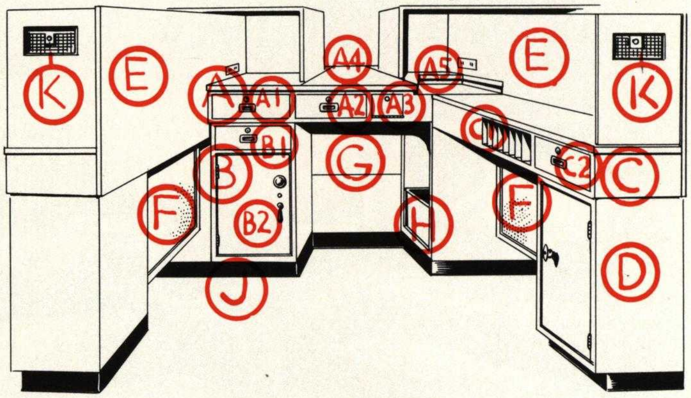
Ⓕ Cane panel

Ⓖ Back panel (top removable for access to wiring)

Ⓗ Removable waste basket (curved back panel)

Ⓙ Recessed toe space

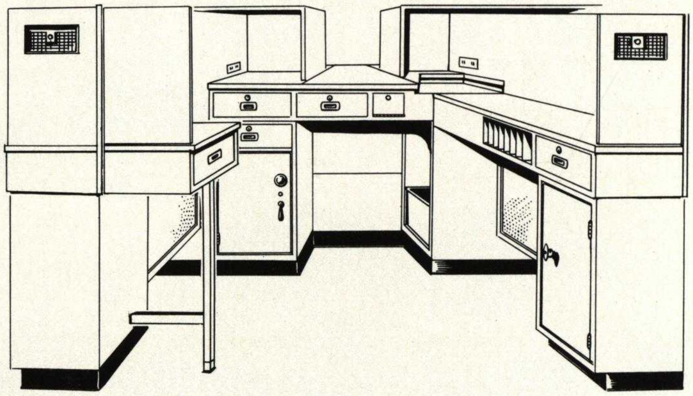
Ⓚ Tilting pass basket

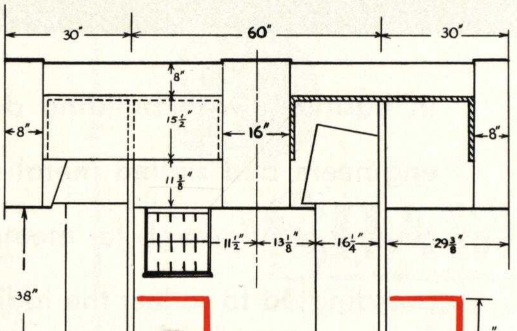


with machine recess

commercial teller assembly (two side counters)

This assembly is identical to the above with the addition of a side counter return on the left. An extended work counter area and an additional box drawer are provided.





Layout details of accompanying perspective drawings indicate approximate dimensions for overall layout purposes.

BASIC STANDARD TELLER UNITS SHOWN ON BACK PAGE

savings teller assembly

Two savings tellers are provided an efficient work station with this typical Watson assembly, broken down as follows:

Ⓐ Apron unit with:

A-1	cash drawer
A-2	box drawer
A-3	tilting 3 compartment drawer (clips, etc.)
A-4	top recessed for deal plate
A-5	recess for posting machine (half from each apron — see below)

Ⓑ Pedestal with:

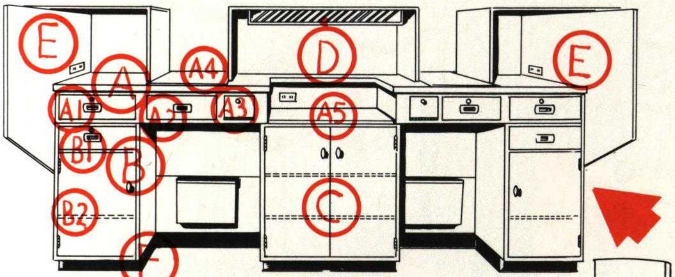
B-1	bulk currency or box drawer
B-2	cupboard or coin safe

Ⓒ Double door cupboard

Ⓓ 16 compartment ledger rack

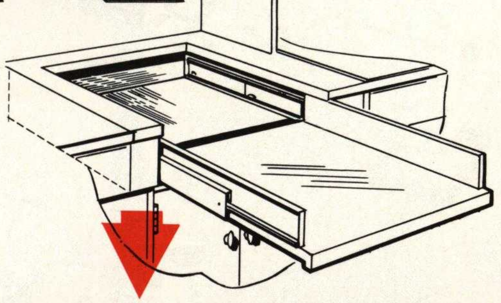
Ⓔ Optional divider wings

Ⓕ Recessed base



machine cut-out with pull-out platform

The cut-out for the posting machine is formed when a left and right apron meet. This can be a common recess or can contain a heavy-duty suspension pull-out platform for machine servicing.



savings and loan

In addition to the units in the assembly described above, this typical work center has:

Ⓖ Side counter apron with box drawer

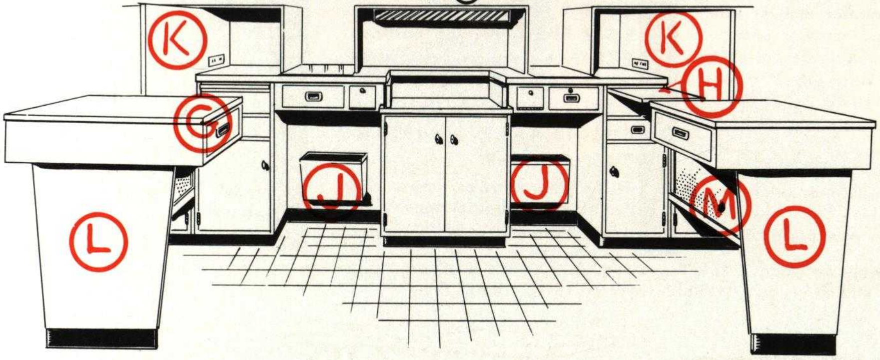
Ⓗ Sliding work shelf in front apron to meet the side counter and form a continuous work shelf

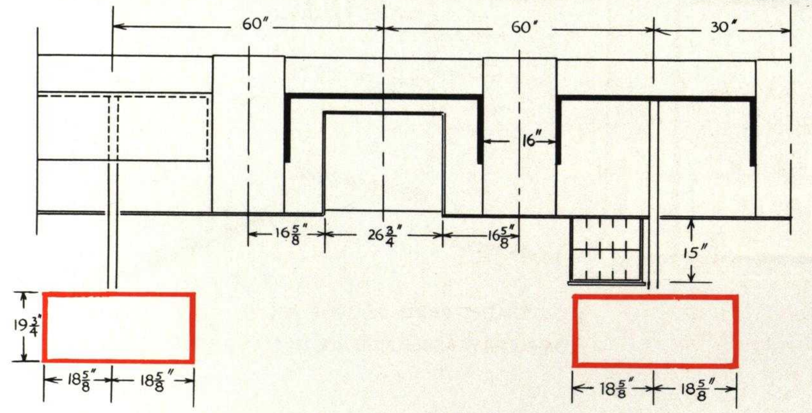
Ⓙ Removable waste basket

Ⓚ Divider partition

Ⓛ Tapered support

Ⓜ Cane panel





types of counterfronts

We can provide standard counter fronts or work to your specifications. Shown here are three examples of construction; "X" dimensions vary in side elevations to fit requirements.

Select and Specify THE REFRIGERATOR DOOR TO MEET YOUR PARTICULAR REQUIREMENTS

GENERAL INFORMATION

IT IS OF UTMOST IMPORTANCE TO CONSIDER THE FOLLOWING BASIC FACTORS TO INSURE CONTINUOUS EFFICIENCY AND SATISFACTORY PERFORMANCE OF YOUR REFRIGERATOR DOOR.

1 **SPECIFY WIDTH AND HEIGHT (IN CLEAR DOOR OPENING),** wall or rough buck openings. If Track Type Door is desired, give dimensions from finished floor to top of track rail. (See charts for each type of door.) (Note drawings for Single Seal or Double Seal Doors and specify preference.)

2 **TEMPERATURE TO BE MAINTAINED WITHIN THE REFRIGERATED SPACES.** Temperature and the amount of humidity on the "warm" side to which the door will be exposed.

3 **TYPE OF INSULATING MATERIALS AND THICKNESS TO BE FURNISHED.** The insulation thickness inserted into the door should be equal to the insulation thickness in the walls.

4 **WHAT IS THE BEST TYPE AND STYLE REQUIRED?**

FOR MODERATELY LOW TEMPERATURES of plus 50 degrees F to plus 25 degrees F **we recommend**—Butcher Boy "X-Type" Cooler and Freezer Doors, Butcher Boy "X-52" Plywood Panel Cooler and Freezer Doors. See Pages 6 and 7.

FOR ZERO TEMPERATURES **we recommend**—Butcher Boy "Low Temperature" Doors. See Page 10.

FOR SUB-ZERO TEMPERATURES **we recommend**—Butcher Boy "Super-Freezer" (overlap type) Doors. Super-Freezer (overlap type) doors are available for varying degrees of sub-zero temperatures. Remember that the insulation factor of the door should equal insulation thickness in the walls. See Page 11.

WHERE LONG PERIODS OF OPENING PREVAIL, to prevent refrigeration losses **we recommend**—Butcher Boy Vestibule Door units of Cooler, Freezer, Track, Low-Temperature or Super-Freezer (overlap) Doors equipped with Self-Closing Auto-Close Doors hung within one common frame. See Page 14.

FOR NON-REFRIGERATED DOORWAYS. Loading docks or warehouses **we recommend**—Butcher Boy "Auto-Close" Double Swinging Doors, as separate units. See Page 14, Fig. 36.

5 **SPECIFIC ADVANTAGES OF METAL CLADDING DOORS AND FRAMES.**

A. Protection of doors against adverse weather conditions.
B. Metal clad doors are recommended for fire retarding purposes.
C. Metal clad doors increase the insulating efficiency.
D. Metal coverings protect doors against hard usage, such as trucking in and out of door openings.
   1. Specify "Kickplates" to be applied 4′ 0″ high (standard) or any preferred height on front and or back of doors.
   2. Specify "Armored Jambs" metal protection for frames 4′ 0″ high (standard) or any preferred heights.
   3. Specify character and gauge of metal best suited for your particular applications. Galvanized metal protections are most commonly used in standard No. 10, No. 16, No. 20, or No. 26 gauges. Stainless Steel or other metal finishes are special categories.

6 **TYPE OF HARDWARE AND FINISH DESIRED.** Hot dipped galvanized finish is standard. Chromium or other finishes are special categories.

SPECIAL NOTE: All "X-Type" refrigerator doors are equipped with the standard "Wedge-Type" Fastener with an inner releasing push rod and pull handle.

All "X-52" Plywood Panel refrigerator doors are equipped with double contact "Super-Seal" Fasteners and Finger-Tip Door Openers.

7 **SPECIFY DOOR SWING.** (Left Hand or Right Hand)

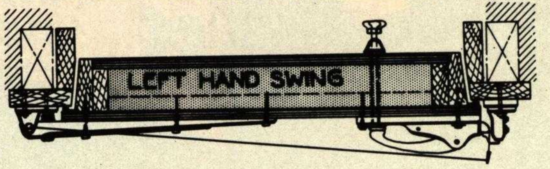

Fig. 1

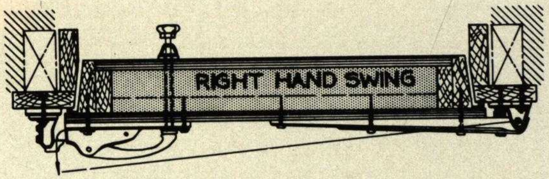

Fig. 2

8 **SELECT AND SPECIFY TYPE OF SILL.** (Angle Iron for concrete floor, Beveled wood, or High wood.

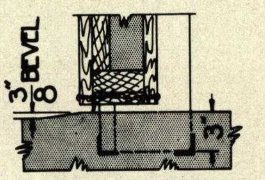

Fig. 3

ANGLE IRON SILL

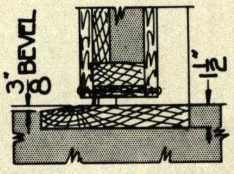

Fig. 4

BEVELED WOOD SILL

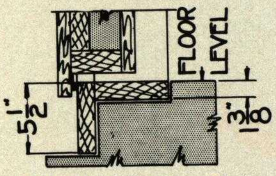

Fig. 5

HIGH WOOD SILL

NO SILL TYPE—As name implies, no sill is provided for a particular type of installation, such as pouring of concrete on job before door arrival or for replacement of old doors. This type of installation saves time, expense, and is practical for emergency installations.

9 **HELPFUL HINTS FOR PROPER DOOR INSTALLATIONS.**

A. Follow directions for installing as recommended by the manufacturer. Each door shipment contains installation data.
B. Use dimensional bucks as per instruction. Do not skimp on the rough bucks if you want a rigid type of door installation.
C. When installing the door frame, make certain that installation is plumb and true. Use a spirit level. If frame is not plumb and true, the door will not fit properly nor will there be the necessary airtight seal between the door and the frame.
D. Lubricate all moving hardware parts at time of installation and at regular intervals thereafter.

"Butcher Boy" Superior Construction

Since 1885

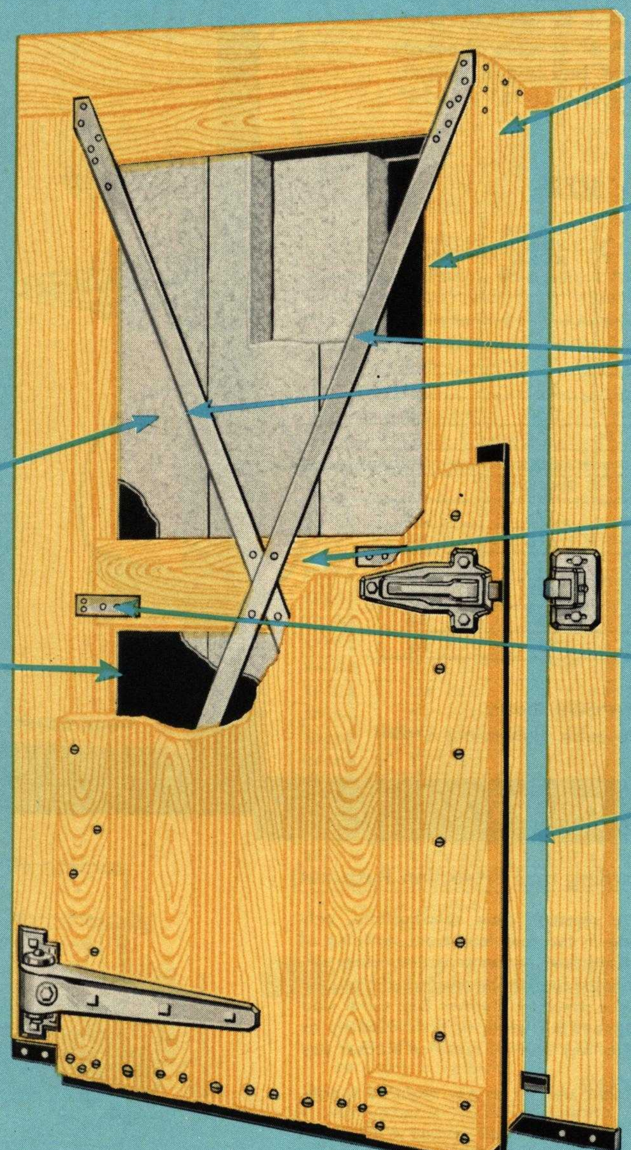
INCORPORATING "X-TYPE" STEEL DIAGONAL BRACING FOR GREATER STRENGTH

"X-TYPE" STEEL DIAGONAL BRACING IS THE BASIC PRINCIPLE OF RIGIDITY

GUARANTEES MAXIMUM INSULATION FILL INSIDE OF DOOR

THE ONLY POSITIVE METHOD TO PREVENT DOOR SAGGING

ALLOWS REVERSAL OF DOOR SWING IF NECESSARY



PRIMARY INSULATION
Insulation as per specifications selected by architect or consumer. Accurately fitted into moisture proof cells and sealed with asphalt cement—this forms a permanent lasting seal.

VAPOR SEAL
Frost-proof, odorless, water-resisting paper. Placed on EACH SIDE of insulation to form highest type of moisture-proofing.

FRAME STRUCTURE
Made of full 1⅝″x5½″ solid clear Douglas Fir lumber.

INSIDE UPRIGHTS
The "BACKBONE" of Butcher Boy Doors. Uprights placed so as to receive back and front of door making one solid unit.

STEEL DIAGONAL BRACING
2½″ wide by full height of door. These 20 gge. galvanized STEEL X STRAPS are fastened securely with heavy nails, staggered to increase holding power. This construction is the ONLY positive method to prevent door sagging.

CROSS MEMBERS
Three (3) 6/4x5″ face cross members. NO SHORT PIECES. All must be full width of the door.

STABILIZERS
Used to tie in the "Frame Structure," "Inside Uprights," and "Cross Members" as one unit through the center of the door.

BACK OF DOOR
Made of ¾″x4, 5, or 6″ clear Fir, with special tongued and grooved stock — proper allowance made for expansion and contraction.

IMPORTANT NOTE ON SEALING —

We recommend SINGLE SEAL door construction for all temperature maintenance. Double seal door construction available but not recommended since secondary seal at frame stop is vulnerable to trucking upon contact through the door opening.

"INTERLOK" NO-SAG

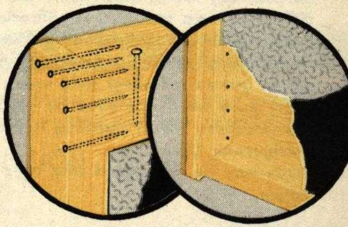


Fig. 6

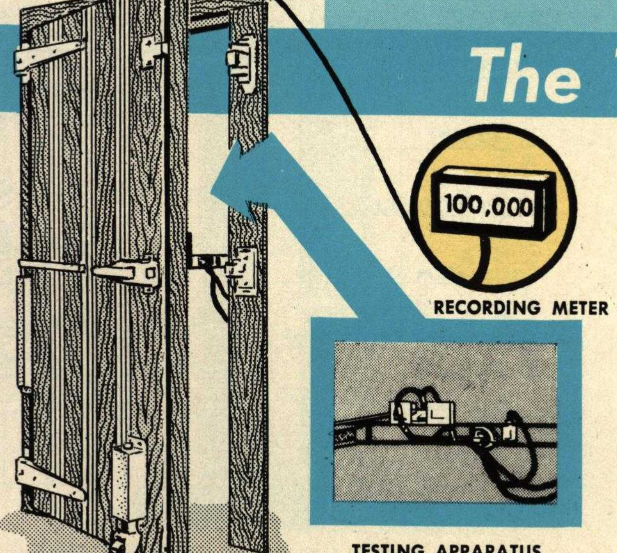

TESTING APPARATUS

The Test of DURABILITY...

TYPICAL METHODS USED IN TESTING ORIGINAL MODELS OF "BUTCHER BOY" DOORS FOR DURABILITY AND PERFORMANCE

These tests are severe, under actual door operation to assure trouble free action at all times. Note that a record meter is used in conducting these tests. Each original door model is opened and closed 100,000 times, subject to more usage than the average life of any refrigerator door.

We reserve the right to change specifications without notice, when in our opinion, they will improve our product.

STANDARD COOLER-FREEZER DOORS *For Temperature Ranges*

COOLER DOORS are insulated with 4" of loose fill insulation, packed and encased in heavy waterproof insulating paper. Used where small differences in temperature exist, such as rooms maintaining temperature of +50° F to +35° F.

FREEZER DOORS are insulated with 4" of boardform or selected board insulation, and laid in asphalt. Used where temperature differences of +35° to +25° exist.

FREEZER DOORS insulated with 6" or more of boardform or selected board insulation, and laid in asphalt. Used where temperature differences of +25° to +10° exist.

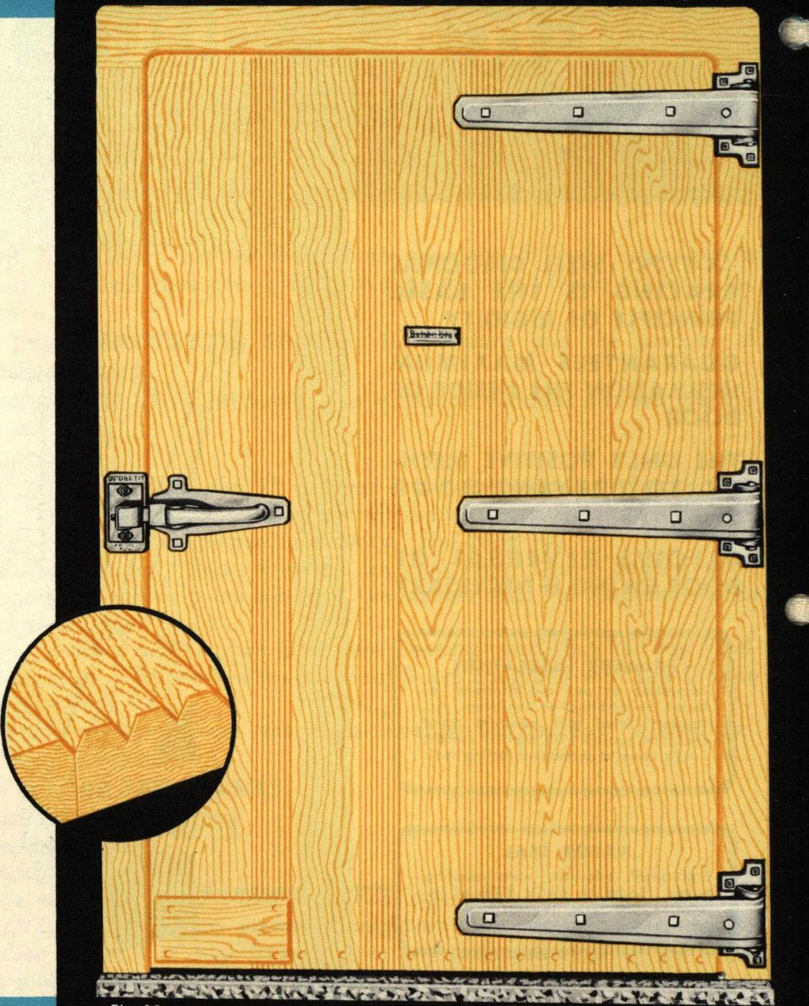

Fig. 13—Standard Door, Right Hand Swing, Beveled Sill with Steel Wearing Plate.

METAL CLAD DOORS

(For Fire and Adverse Weather Retarding and Protection Purposes)

Butcher Boy metal clad doors are built to standard door specifications, only difference from standard specifications being in the complete metal cladding of door, frame, casing, and jamb. The metal clad feature increases insulating efficiency as well as for fire protection. Butcher Boy doors are metal clad with No. 26 gauge galvanized sheet steel unless otherwise specified. Butcher Boy metal clad doors have been approved by users throughout the world in their capacity as fire retarders. Metal cladding is available on any and all types of Butcher Boy Refrigerator Doors.

Doors may be metal clad with copper, stainless steel or as per required specifications.

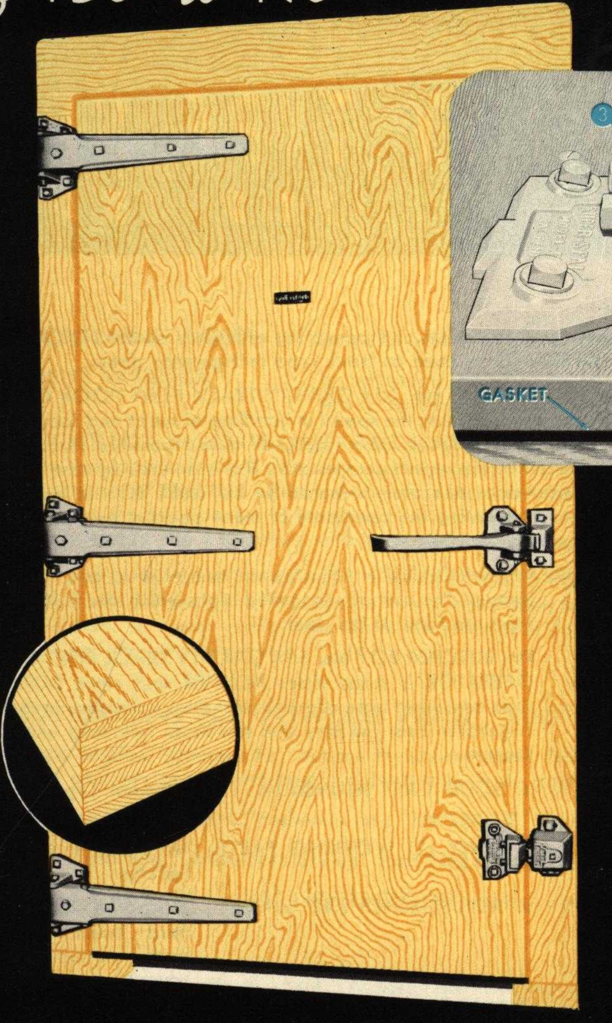

Fig. 16— "X-52" Plywood Panel Door, Left Hand Swing, Angle Iron Sill.

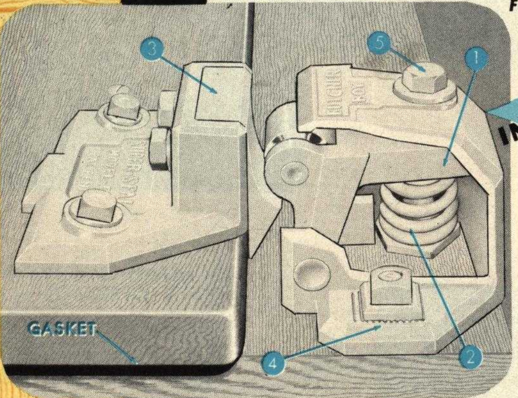

Fig. 17—Cut-away View—"Super Seal" Fastener

NEW IMPROVED *feature*

"SUPER-SEAL"

Model "B" FASTENER

(PATENT PENDING)

The MODEL "B" two point contact "SUPER-SEAL" fasteners are compact in design, maintaining the utmost efficiency of operation when installed to any type of refrigerator door.

Constant automatic spring pressures of the two point contact fasteners "Distribute and Hold" gasket pressures uniformly against the door frame; consequently, a vast improvement over the usual single type fastener.

The MODEL "B" two point contact fasteners maintain a 100% airtight seal between the door gaskets and frame, thereby preventing door warping and icing conditions.

DURABLE—COMPACT—MODERN

Adjustments are simple and positive from the face of the door. (See No. 5.)

The BUTCHER BOY MODEL "B" Super Seal Fasteners are HEAVIER and more DURABLE than any other type of two point contact fasteners in the refrigerator door industry, and have these following exclusive features.

1. 7 to 1 leverage ratio.......More holding power through leverage
2. Coil springs...............Holds spring replacements to absolute minimum
3. Adjustable Strikes.........Permits field adjustments for each individual unit
4. Ribbed Base Mountings.....No slip action possible from constant door slamming

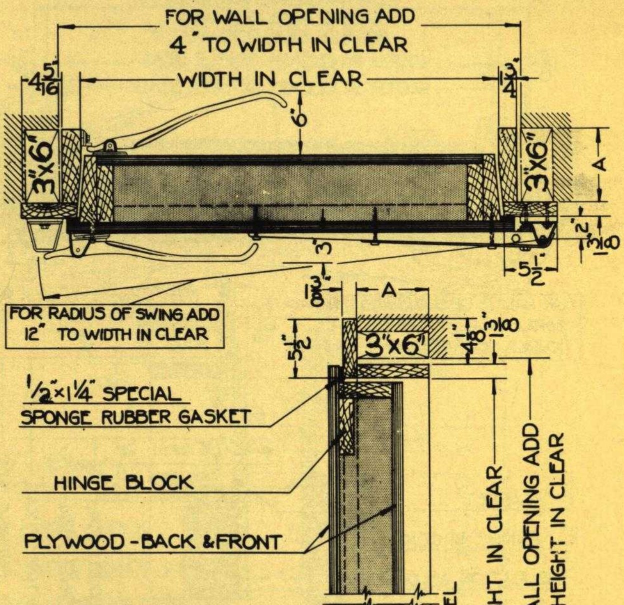
* Three hinges furnished.

♦ For 6" freezer doors add 20% to weight.

♦♦ For 6" freezer doors add 15% to cubic shown.

The MODEL "B" Super Seal Fasteners are designed to replace other types of double contact fasteners with a minimum of work required. In a majority of replacements, no new hole drilling is necessary. Merely remove the old fasteners and install the MODEL "B" Super Seal Fasteners.

SPECIFY the BUTCHER BOY MODEL "B" "SUPER SEAL" FASTENERS and eliminate the "headaches" which have been so prevalent in the field for so many years. Help make the job easier for the plant engineer and maintenance men.



"A"—Standard 5⅝"—Special jambs to order.

SPECIFICATIONS FOR PLYWOOD PANEL "X-52" DOORS

Specifications include the door hung into the frame, with all necessary galvanized hardware, ready to set into the door bucks furnished by others. (Sanded finish—no paint or varnish)

CONSTRUCTION

All lumber is 100% Old Growth "Douglas Fir."

DOOR is Butcher Boy "X-Type" construction.

SECONDARY INSULATION—Frost-proof odorless, water resisting paper placed on each side of insulation to form the highest type of "vapor barrier."

PRIMARY INSULATION—Corkboard, Fiberglass, Rock Cork, or any insulation as specified, sealed with asphalt emulsion.

BACK OF DOOR—One piece plastic bonded marine plywood ⅝" thick, 5 ply type "Douglas Fir" securely fastened to inside uprights.

FRONT OF DOOR—One piece plastic bonded marine plywood ⅞" or ¾" thick, 7 ply "Douglas Fir" over secondary insulation, and asphalt emulsion forming best type of vapor seal possible, securely fastened with 2" No. 12 wood screws staggered into stiles and inside uprights.

DOOR FRAME—Made of 1⅝" jambs and 1⅜" casings.

HARDWARE—"Super-Seal," a new type "Double Spring" Pressure Fastener, applied at two (2) contact points on the door to maintain a 100% airtight gasket seal. The use of "Super-Seal" Fasteners prevents warping, sweating and door icing.

"Finger-Tip" door openers are strong, heavy, modernistic handles, designed so that mere "Finger-Tip" pressure will open any size door. "Finger-Tip" Openers are applied to the front and back of the doors.

GASKETS—"Freeze-Proof" door gaskets are made of a special moulded sponge rubber, made of soft, resilient waterproof rubber, skin coated on all four sides for maximum protection. This ⅝" x 1¼" special gasket carries the Butcher Boy name to avoid substitutions. The "Freeze-Proof" gasket is the "seal" gasket applied to the perimeter of the door. The "sill" gaskets are of 1/16" pure moulded rubber of a 50-55 Duro test which will not stiffen under freezing temperatures. Designed for replacement without removing the door from its hinges through gasket blocks screwed from front and rear of door.

No. 654
BUTCHER BOY HARVARD, ILL.
BUTCHER BOY HARVARD, ILL.

Fig. 18—
Track Door, Left Hand Swing, Angle Iron Sill

An improvement in design and operating efficiency of the TRACK PORT DOOR OPERATOR as used on track type refrigerator doors.

The new BUTCHER BOY No. 654 GRAVITY TRACK PORT DOOR OPERATOR substantially increases the speed in handling of meat and food products on track rails, reduces labor costs, all made possible through the "gravity action" of this new type operator. This is an entirely new concept of a track port door operator, invented by BUTCHER BOY to cope with the problems confronting the operators of meat packing and processing plants throughout the country.

DURABLE—HEAVY—MODERN— Adjustments are simple and positive through the use of elongated slots which are adjustable from the face of the door.

The BUTCHER BOY No. 654 GRAVITY TRACK PORT DOOR OPERATOR is many times HEAVIER and more DURABLE than any other type of track port door hardware in the refrigerator door industry and has these following exclusive features.

1. SOLID CAST ALUMINUM . . . . . Wooden Types Crack or Split
2. ONLY (2) WORKING PARTS . . No Cams, No Links, No Springs
3. ADJUSTMENTS ARE SIMPLE . . . Elongated slots permit field adjustment for each individual unit when necessary.

LOW TEMPERATURE DOORS (Infitting)

AVAILABLE WITH SOLDERED JOINTS

For temperatures from zero to -15° Below

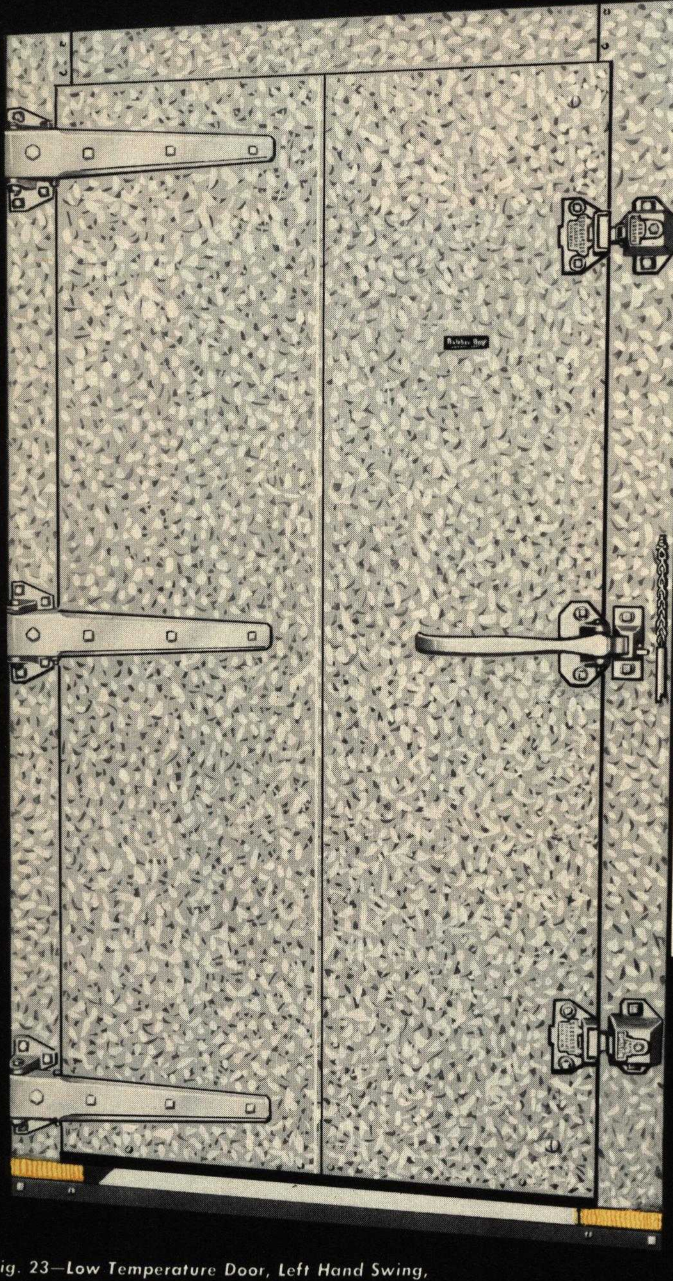

Fig. 23—Low Temperature Door, Left Hand Swing, Angle Iron Sill.

The Butcher Boy Low Temperature Door is an (infitting) type door unit which may be used at the lower temperatures, where more efficient operation is necessary for extreme temperature differences. This (infitting) door is metal covered on the front, edges, and the entire frame to meet these low temperature requirements.

Special hardware applications consist of two point contact "SUPER-SEAL" Fasteners and "FINGER-TIP" Door openers, also heavy duty Adjustable Spring Hinges (see Fig. 9). This special hardware combination distributes and holds gasket pressure uniformly against the door frame.

A single seal "FREEZE-PROOF" (½" x 1¼") rubber gasket of the Super-Freezer (overlap type) (see **Fig. 29**) is applied to the perimeter of the door, which acts as a permanent door seal between the door proper and the edges of the casing.

Butcher Boy Low Temperature (infitting) doors are also available completely metal clad at an additional extra.

ALSO AVAILABLE AS LOW TEMPERATURE VESTIBULE DOORS

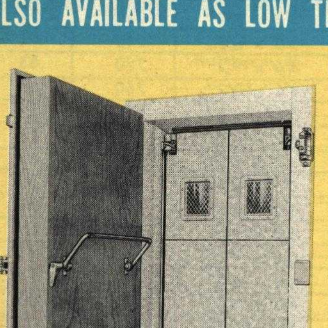

Fig. 24—BUTCHER BOY Low Temperature (infitting) doors are also available VESTIBULE TYPE, for installation where long periods of openings prevail, to offset refrigeration losses. The value of having the double swinging auto-close doors installed in the same common frame with the insulated Low Temperature Door cannot be minimized. In the absence of the double swinging auto-close doors at zero temperature rooms, the cold temperature being maintained within the room will be materially effected with the infiltration of the warm air from the outside, causing unfavorable humidity conditions within the room and frost builds up on the refrigeration coils.

See details on vestibule doors, pages 14 and 15.

SUPER FREEZER (Overlap) DOORS

AVAILABLE WITH SOLDERED JOINTS

FOR SUB-ZERO TEMPERATURES

The BUTCHER BOY Super-Freezer (Overlap) Door is expressly designed for use at SUB-ZERO temperatures.

The Super-Freezer (Overlap) Door completely "overlaps" its door frame a full four (4) inches for maximum efficiency. No portion of the overlap door protrudes within the wall opening, and consequently there are no spaces for accumulation of ice to form.

Butcher Boy Super-Freezer (Overlap) Doors may be furnished in unlimited thicknesses of insulation to suit any particular requirement Standard applications are 6" or 8" of boardform or corkboard insulation.

The standard practice is to metal clad the entire warm side of the door as required (either front or back—as specified) with No. 26 gauge galvanized steel to offer protection against moisture infiltration and add to the efficiency of insulation value.

Butcher Boy Super-Freezer (Overlap) Doors are also available in VESTIBULE TYPE where long periods of openings prevail, to offset refrigeration losses. Refer to Page 2 for additional details.

DOUBLE SPRING ACTION
BUTCHER BOY

Fig. 26—

The BUTCHER BOY No. 50 (Shock-Absorbing) "ADJUSTABLE-SPRING" hinge is the only DOUBLE-SPRING Super-Freezer (overlap) Door hinge in the refrigerator door industry.

DOUBLE SPRINGS develop double action. This is "SHOCK-ABSORBING" action.

A. Constant automatic spring pressures regulate 100% air-tight gasket sealing at all times.

B. *Flexibility* of double springs automatically compensate for any strain due from direct blows from trucks, rough handling, or slamming of the door.

The BUTCHER BOY No. 50 hinge is *MODERN, HEAVY, DURABLE*, and has these exclusive features.

1. Springs and links are built into base. All stationary and enclosed.
2. Adjustments made from face of door —not sides.
3. Alemite grease fittings insure proper lubrication.

BUTCHER BOY
CONTACT ADJUSTMENT
SPRING TENSION ADJUSTMENT

Fig. 28— **PATENT No. 2,514,904**

The No. 100 BUTCHER BOY "DOUBLE-SPRING" Fastener is the only DOUBLE SPRING overlap door fastener in the cold storage door industry. The double spring feature assures extra holding power to compress the heavy type gasket ½" x 4" for improved sealing efficiency so necessary at zero and below zera temperatures. 100% operating efficiency cannot be anticipated with a single spring overlap type fastener.

GASKETS FOR SUPER FREEZER AND LOW TEMPERATURE DOORS

Unlike standard sponge rubber base gaskets, "FREEZE PROOF" gaskets are a CLOSED CELLULAR RUBBER and made of extremely soft, resilient rubber (nitrogen filled cell composition banded together by strong live rubber), waterproof, and has high insulating factor. This "FREEZE PROOF" gasket is exceptionally light weight and "air cushioned" thereby acting as a perfect "shock-absorber" and controls vibration. Since this gasket composition is of closed nitrogen filled cells, it is sanitary. No water, dust or dirt can reach beyond its surfaces. It is vermin proof and outlasts any other soft rubber materials several times over.

Standard available size for Super Freezer (Overlap) Doors—½" x 4".

For Low Temperature (Infitting) Doors—½" x 1¼".

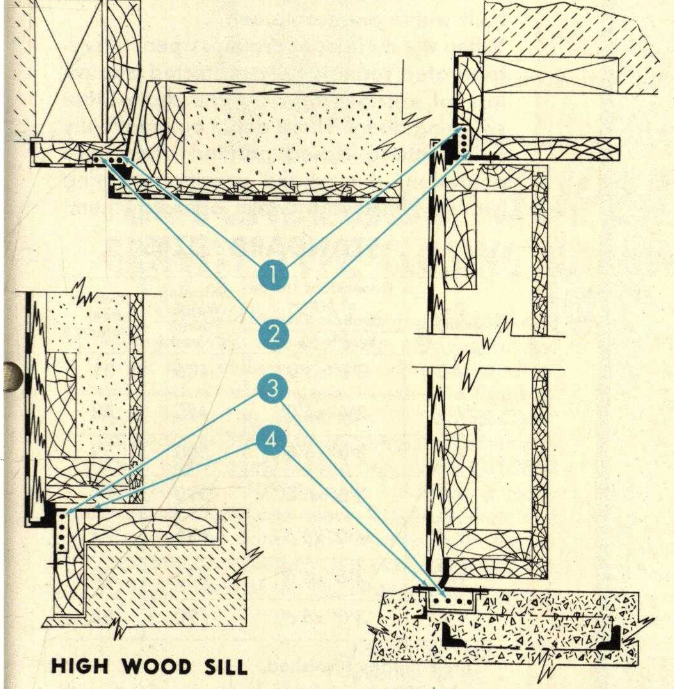
HIGH WOOD SILL
STEEL ANGLES FOR CONCRETE FLOORS

LOW TEMPERATURE DOORS

WITH ELECTRIC Heating Cable DEFROSTERS

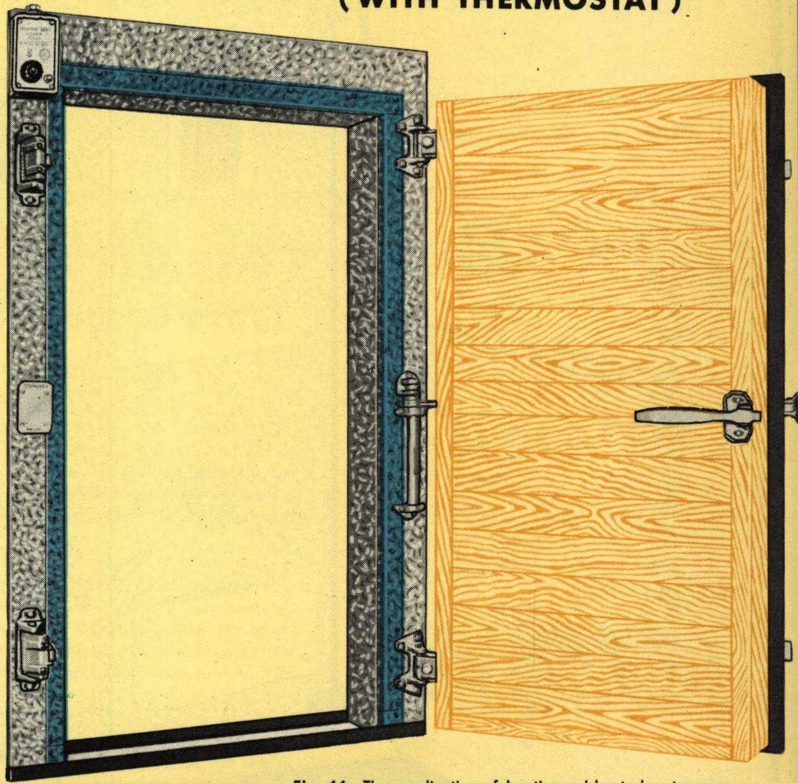
(WITH THERMOSTAT)



HIGH WOOD SILL

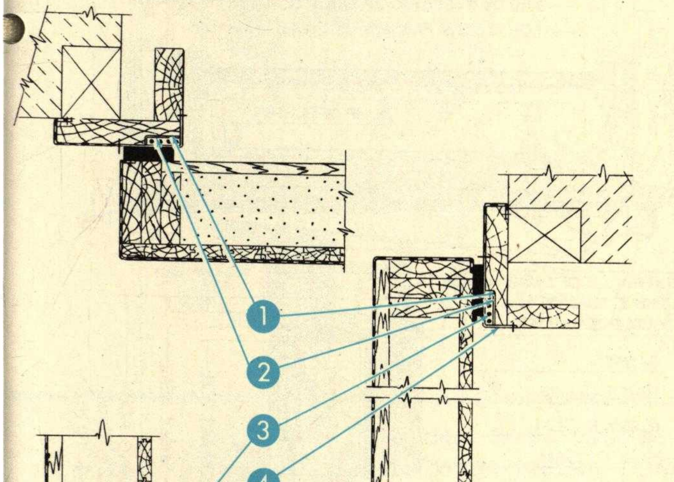
STEEL ANGLES FOR CONCRETE FLOORS

The purpose of heating cables is to prevent icing conditions at the frame and sill areas where the door gaskets make their contact. The cables which are recessed into the frame casing are electrically heated and controlled by a "calibrated thermostat" (new improved feature by Butcher Boy), adjustable above the "dew point" of the air temperature. Since the heat expended prevents condensation it thus prevents freezing conditions.



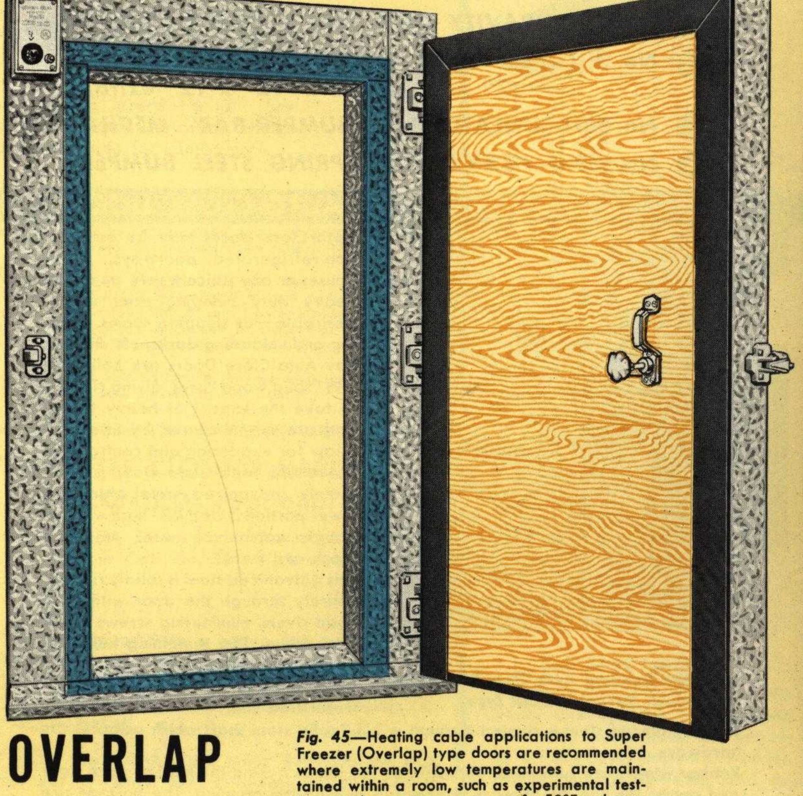
INFITTING

Fig. 44—The application of heating cables to low temperature doors is most practical where below freezing temperatures are maintained. The low temperature (infitting type) door will open and close efficiently at all times since there cannot be any "Freeze-Up" at the gasket points due to the heat expended by the heating cables. Refrigeration losses are prevented and possible damage from prying the door open is eliminated.



HIGH WOOD SILL

STEEL ANGLES FOR CONCRETE FLOORS



OVERLAP

Fig. 45—Heating cable applications to Super Freezer (Overlap) type doors are recommended where extremely low temperatures are maintained within a room, such as experimental testing at sub-zero temperatures of −50°F or lower.

VESTIBULE DOORS

TO MINIMIZE REFRIGERATION LOSS

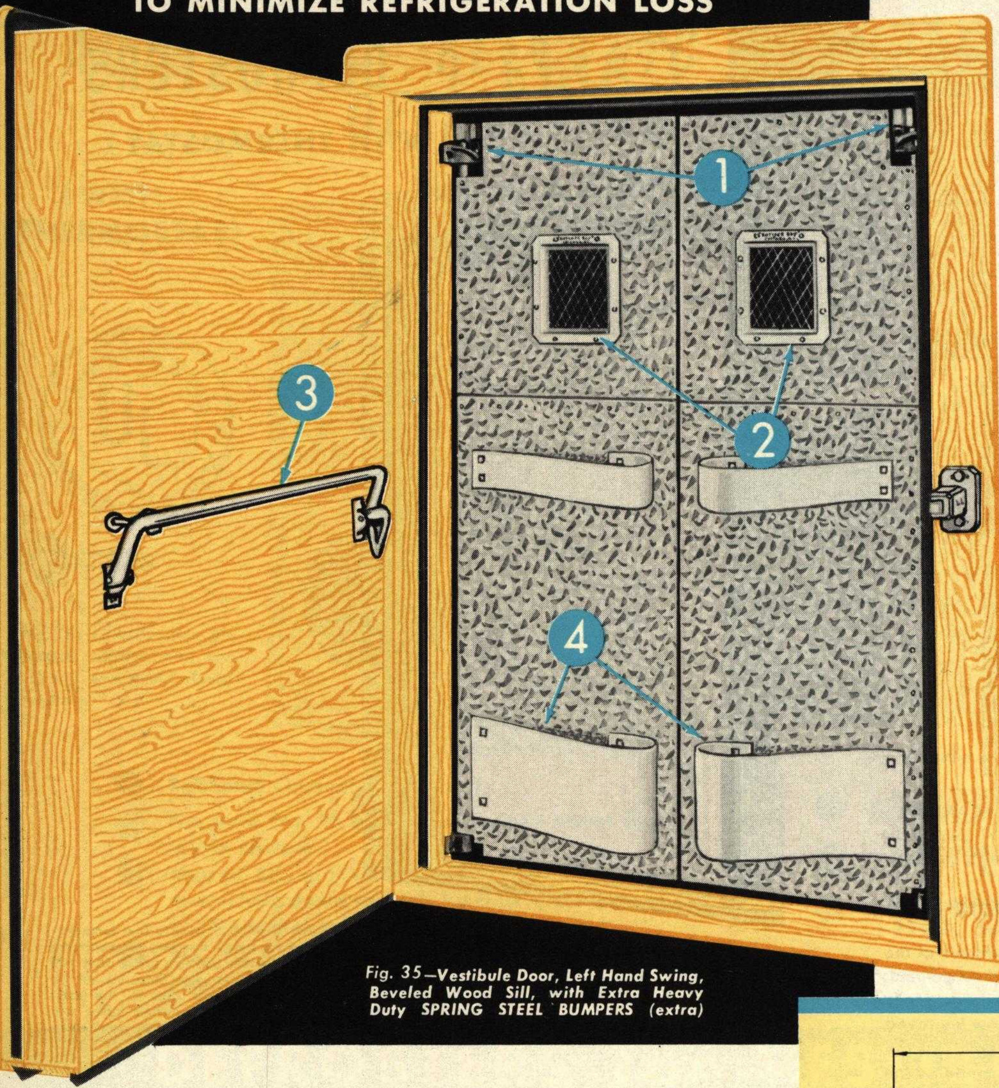


Fig. 35—Vestibule Door, Left Hand Swing, Beveled Wood Sill, with Extra Heavy Duty SPRING STEEL BUMPERS (extra)

Vestibule Doors are highly recommended where long periods of opening prevail, to offset refrigeration losses.

Vestibule Doors are a combination of Cooler, Freezer, Track, Low-Temperature, Super-Freezer (overlap) or Double Doors, equipped with double or single swing self-closing Auto-Close Doors, See Fig. 36, built within one frame unit.

When the main door remains open, the refrigerated room is fully protected against loss of refrigeration by the Auto-Close swinging doors. These doors automatically swing into a closed position after each operation, due to the gravity actuating two-way hardware which operates them.

AUTO-CLOSE DOORS

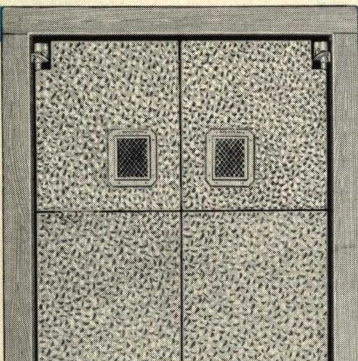

Fig. 36—Standard Auto Close Door (Double Swing) No Sill Type

Auto-Close Doors may be used for non-refrigerated doorways, warehouses or any place where an extra-heavy duty swinging door unit is desirable—as shipping rooms, loading and unloading docks, etc. Butcher Boy Auto-Close Doors are built with 1½" solid wood cores, giving rigidity to take the impact of heavy trucks, and are supplemented by inserts to allow for expansion and contraction. The entire Auto-Close Door is completely galvanized metal clad; the lower portion is clad 48" high with 14 gauge galvanized steel, to resist shock and wear.

This galvanized steel is solidly riveted entirely through the door with truss head rivets, eliminating screws which work loose. The remaining height is similarly clad with 20 gauge galvanized steel to form a complete metal clad unit.

The galvanized steel is riveted through a 1¼" solid steel shaft which actuates the hardware.

Rubber wipers are furnished full height on the jambs behind the heel of each door and across the top, to allow a reasonable seal on the opening. The bottoms are constructed to clear the sill in a closed position, and lift as they open; therefore no seal is necessary.

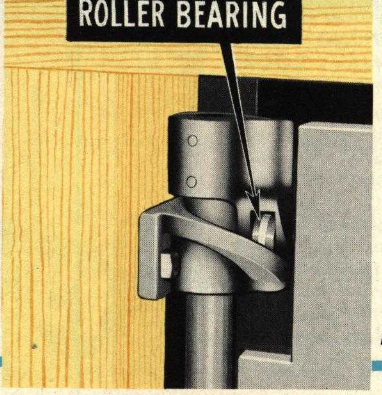

Fig. 37

No. V-6 GRAVITY CAM TYPE CLOSING HARDWARE

(Standard Equipment)

This standard two-way gravity cam hardware used on standard or average size batten doors (not recommended for large size or heavy traffic batten doors, see Super Cam No. 34 hardware below) is the basic principle of a self closing operation.

The design of this hardware lifts the doors as they swing open. The force of gravity immediately brings the doors into a closed position after each operation. NO SPRINGS.

"BUTCHER BOY" *SUPER CAM No. 34* ▶ GRAVITY TYPE CLOSING HARDWARE (Optional Extra)

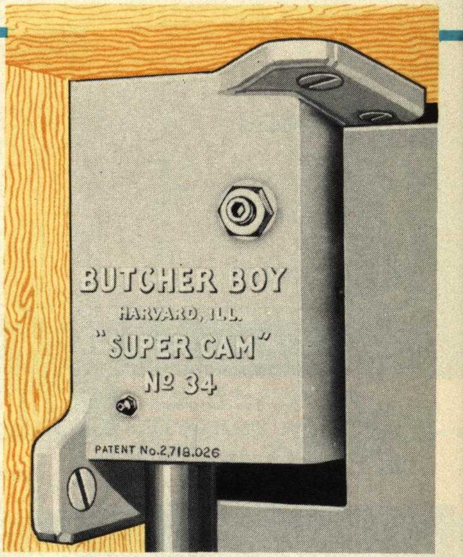

Fig. 38

The "SUPER-CAM" No. 34, newly designed and engineered for top operating efficiency of the larger sizes of Batten Doors, either as separate door units or as component parts of a Vestibule Type Door. The application of "SUPER-CAM" hardware to Batten Doors insures smoother and easier opening and closing operations. BUTCHER BOY No. 34 "SUPER-CAM" hardware is many times HEAVIER and more DURABLE than any other type of Batten Door hardware in the refrigerator door industry. It is designed to DO THE JOB regardless of the size of door units involved.

SPECIFICATIONS

1 The BUTCHER BOY No. 34 "SUPER-CAM" (See No. 2) rides on an oversized 1½" diameter roller (See No. 3) making possible utmost ease in movement of this mechanism. BOTH machined parts are cyanide hardened for extra long life.

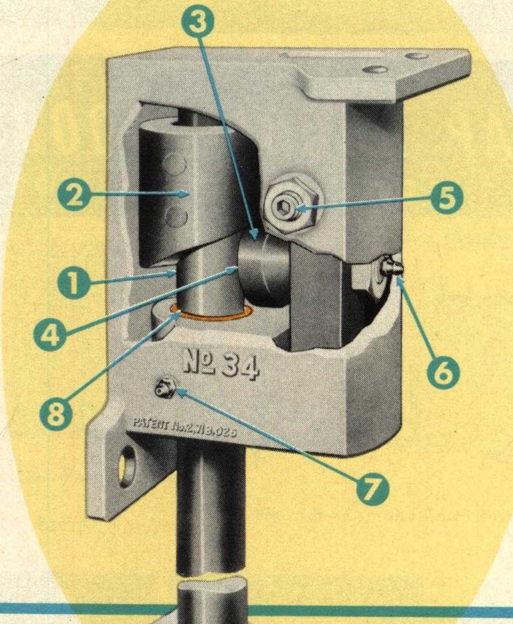
2 Oversized roller (See No. 3) creates the possibility for usage of an oversized diameter bearing surface or axle (⅞" diameter hardened steel) (See No. 4) which will carry the heaviest doors and door armor with the greatest of ease.

3 The fixed position of the oversized axle (See No. 4) and roller allows for a design which will permit direct lubrication to the roller axle (See No. 4) and the roller (See No. 3) made through the Zerk lubrication fitting. (See No. 6).

4 The development of the above type of design offers "friction-free" motion between all moving parts, increasing the ease and smoothness in operation of the BUTCHER BOY No. 34 "SUPER-CAM" Hardware, and long lasting service.

5 Solid Bronze Bushing inserts 1⅝"x2" (See No. 8) lubricated by Zerk lubrication fittings (No. 7) from either side for convenience.

Cut-a-way view of No. 34 and No. 34 SC



ADJUSTMENT AND ALIGNMENT FEATURES

1 Adjustments are made by changing the points of contact between "SUPER-CAM" (See No. 2) and oversized roller, (No. 3).

2 Simply loosen lock nuts (See No. 5) with an end wrench or crescent wrench. Use a ⅜" Allen type wrench and loosen one side of ½" set screw (See No. 5) and tighten opposite side of set screw for one direction of change of contact or movement. Opposite application will reverse direction of change in contact.

3 Most positive type of locking known. Merely snug up set screws from both sides, and lock up locking nuts tightly.

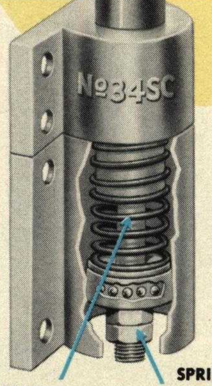


Fig. 39

No. 34 SC "SUPER CAM" GRAVITY CLOSING HARDWARE WITH SPRING COMPENSATOR CONTROL (Optional Extra)

Newly designed for use with Butcher Boy Batten Doors. Basically, the "Super Cam" No. 34 SC is the exclusive Super Cam No. 34 with a spring compensator built as an integral unit.

FEATURES

A. The Super Cam No. 34 SC, equipped with a heavy duty compensator, returns the battens immediately into a closed position after each operation. THE CLOSED POSITION OF THE BATTENS IS FIRMLY RETAINED, THEREBY ELIMINATING OPEN DOORWAYS, DRAFTS, AND RETARDING UNNECESSARY REFRIGERATION OR HEAT LOSSES.

B. Butcher Boy No. 34 SC Super Cam hardware is many times heavier and more durable than any other type of batten door hardware in the industry. This precision built mechanism is adaptable for use with heavy as well as light-weight batten doors of any type and door size.

RIGID HARDWARE INSTALLATION

(Standard Application)

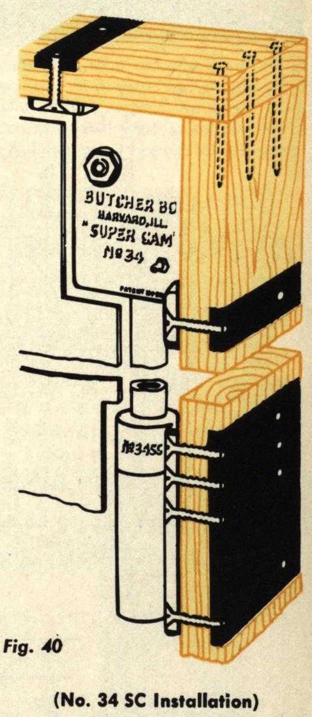

Fig. 40

(No. 34 SC Installation)

Hardware (No. V-6, No. 34, or No. 34 SC Gravity Cam Type Closing Hardware Mechanisms) are securely attached to standard wooden frame (factory furnished and assembled) by means of ½" steel back up plates, secured with ½"x2½" machine screws for a very rigid installation.

DOUBLE DOORS for Palletizing and Car Loading

INFITTING DOUBLE DOORS

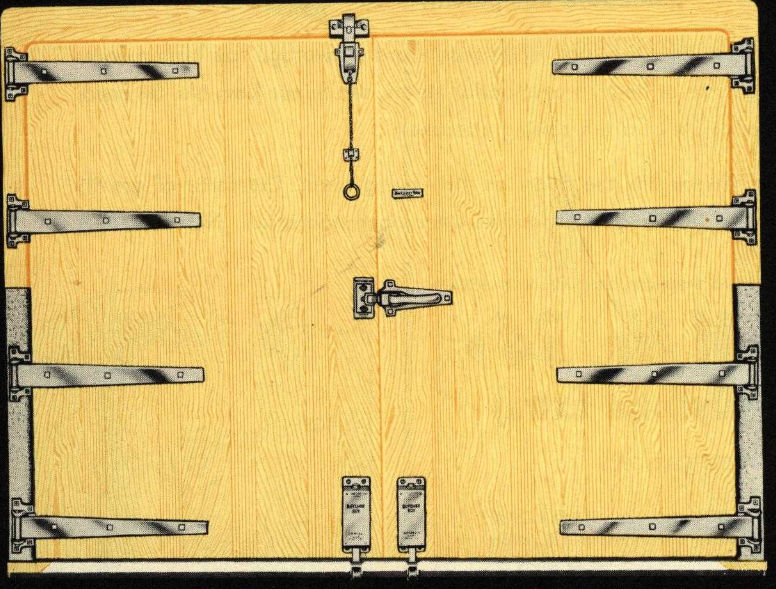

Fig. 30—Infitting Double Doors, Right Hand Door Opens First. Angle Iron Sill Butcher Boy Adjustable Spring Roller Casters at Extra Cost (See Fig. 35 below, right)

"ADJUSTABLE-SPRING" ROLLER CASTER FOR HEAVY DOORS

Patent No. 2,627,081

A special type of roller caster designed to carry the greater portion of the actual door weight (or load). Relieving the load results in easier opening and closing operation.

The adjustment of the two (2) ¾" jamb nuts on the shaft make possible any required spring tension, necessary to "support" any door weight from 400 lbs. to 2000 lbs. The jamb nuts make the locking of the proper tension positive.

Recommended for use where even floor pervail. ***Fig. 32***

DOUBLE DOORS

Butcher Boy Double Doors are a combination of two single doors, Standard, Track, Vestibule, Low Temperature or Super Freezer (Overlap) Type hung into a single frame.

These types of doors are most commonly used where extra large openings are desirable, such as car loading docks, elevator shafts, palletizing, or experimental testing rooms.

Specifications for double doors are generally the same as for single doors, as they are furnished with any of the four (4) types of sills, insulation thicknesses as required, with standard Butcher Boy hardware (extra top fastener on second door) and applicable gaskets. Double doors do not have a center obstructing post, which would defeat the desired opening advantage.

Unless otherwise specified, the right hand door opens first, and is equipped with the inside release push rod.

Standard sizes are 6'x0" x 6'6" and 8'x0" x 6'6". Special sizes will be built to meet your requirements.

OVERLAP DOUBLE DOORS

FOR SUB-ZERO WORK

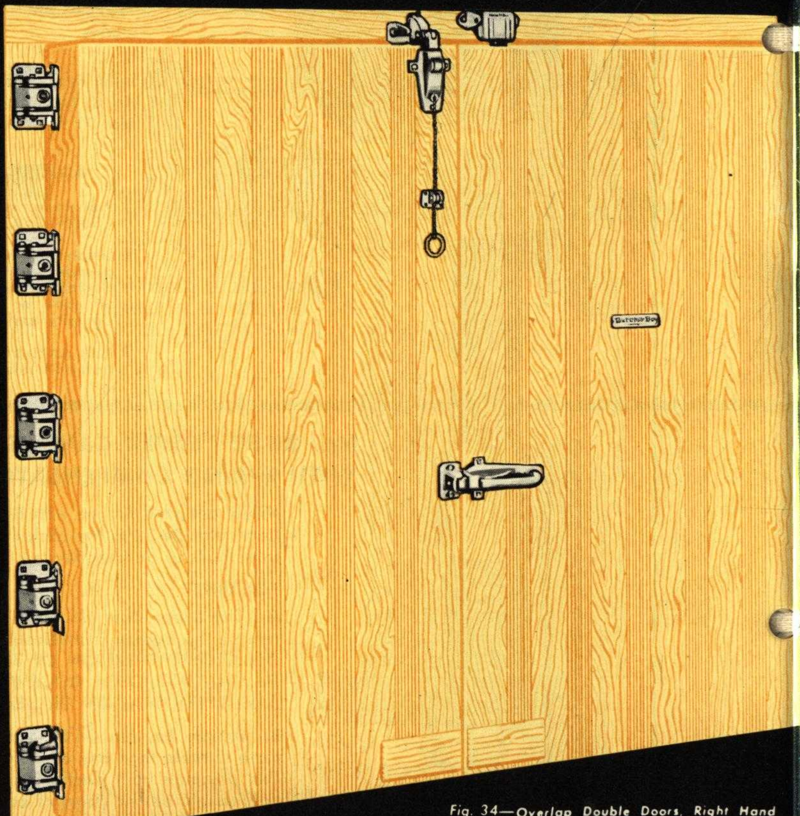

Fig. 34—Overlap Double Doors, Right Hand Door Opens First, Angle Iron Sill

"BUTCHER BOY" *Manually Operated* OVERHEAD DOORS

SPECIALLY designed offset (overlap type) insulated doors, for installation at loading docks of meat packing plants or at any moderately refrigerated areas. Other factors which may dictate their use is where the spacing problem will not permit the use of swinging type or horizontal sliding door applications.

Prints and specifications available upon request.

Butcher Boy overhead type doors are of sectional design. For instance, a door for a 7′0″ high opening will consist of three (3) sections, each approximately 2′4″ high. Additional sections of approximately same dimensions comprise overhead doors for larger openings as required.

The sectional overhead doors are properly counter-balanced, easily raised to a horizontal overhead position, leaving a clear opening for access to and from trucks.

Doors are furnished in varying thicknesses of insulation (2″, 3″, or 4″ thicknesses are standard), fully gasketed (each section) for necessary sealing of the opening, complete with hinges, cam rollers, track and angles, and counter-balancing spring mechanisms. The doors are metal covered with No. 26 gauge galvanized steel as a standard application.

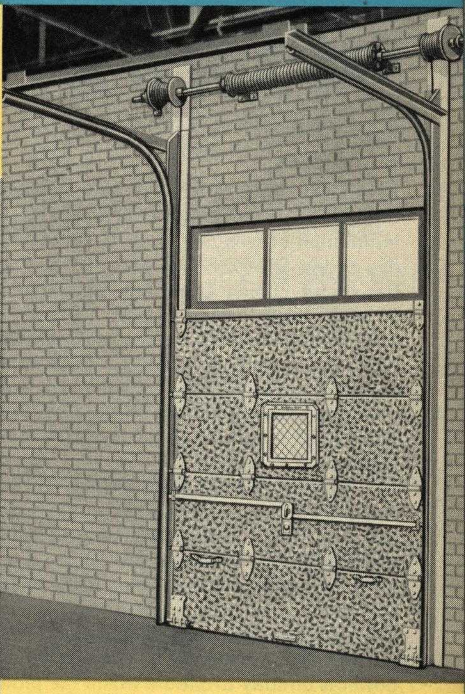

Fig. 34-A—Inside View

Glazed vision peepholes installed into doors (7″x9″ or 12″x12″) are optional extras.

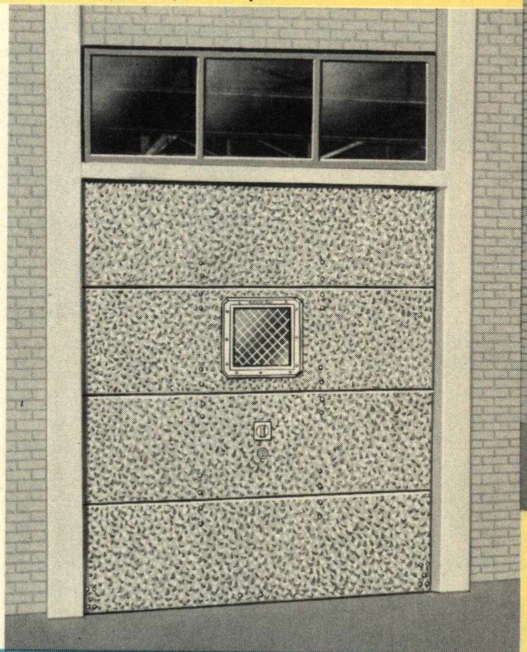

Fig. 34—Outside View

SPECIAL APPLICATIONS and SLIDING DOORS

SPECIAL APPLICATIONS OF BUTCHER BOY DOORS

Extensive production facilities make it possible for us to build any special type of cold storage door unit to meet your requirements. Refrigerator Doors may be specially designed for hospitals, hotels, institutions, kitchens, galleys, stores, laboratories or any conceivable application where food products are to be kept under refrigerated temperatures. These doors are available in any special wood or metal finishes (hardware to match).

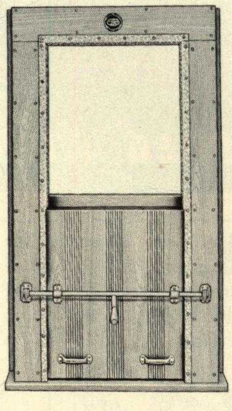

Fig. 48—Vertical Sliding Door

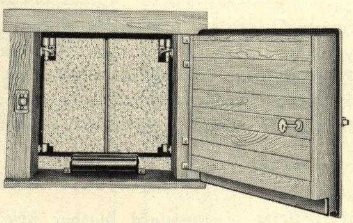

Fig. 52—Can and Crate Passing Door

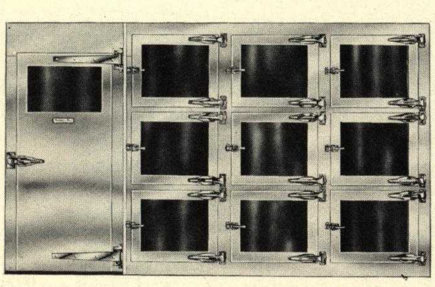

Fig. 49—Stainless Steel Refrigerator Front

FLEXIBLE RUBBER CURTAINS for PASS DOORS

Stripped rubber curtains are particularly suitable for packages or commodities that do not have sufficient weight to pass through regular auto-close batten doors. The rubber curtains (usually consisting of two layers), are stripped and staggered so that one layer overlaps the other. Composition of rubber enables curtains to remain flexible at extremely low temperatures.

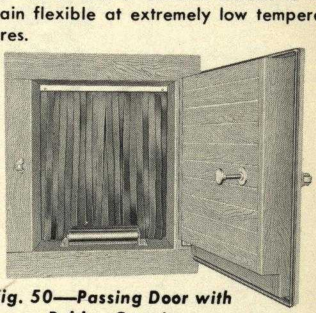

Fig. 50—Passing Door with Rubber Curtain

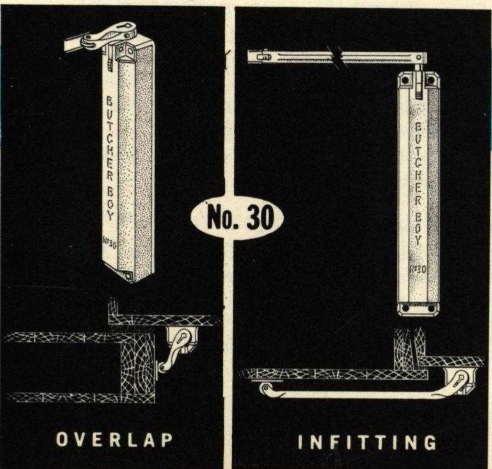


No. 30 and No. 36 AUTOMATIC DOOR CLOSERS

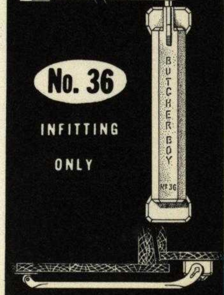
The BUTCHER BOY No. 30 (large size) and No. 36 (small size) **Door Closers** automatically return the door to a closed position after each operation. These door closers are of **heavy duty** design, can be made **instantly** non-operative, and again be placed readily into operation.

For doors 4′-0″ and wider use the No. 30 Door Closer (also recommended for **all** overlap doors).

To in-activate door closer, merely depress the heavy duty steel "holding pawl" into desired recess (30, 90 or 120 degree angle door opening) of the "tension adjusting cog."

To activate door closer, push door slightly past the setting used to in-activate the closer—closer is **immediately** under pressure and operating.

Specify whether for in-fitting type, or Super Freezer (overlap) doors, right or left hand swing.



''BUTCHER BOY'' HORIZONTAL

MANUALLY OPERATED (Standard)

BUTCHER BOY Horizontal Sliding Doors are recommended for use at locations where installation of swinging doors is impractical due to the SPACE FACTORS.

Horizontal Sliding Doors are available in three distinct types.

MANUAL OPERATION—The most popular type, where traffic through the door opening is very limited, also at moderate temperature areas, (+55 to +25 F.) where loss of refrigeration is not an important factor.

AIR POWER OPERATION—Highly recommended for heavy continuous traffic, especially at freezer areas, combining speed in movement of commodities through the doorways and holding refrigeration losses to the absolute minimum.

The use of air operated sliding doors may be specially economical if compressed air power is already available within the plant, thereby eliminating the necessity of purchasing additional capital equipment for air operation.

ELECTRIC OPERATION—The mechanically operated door specially designed for freezer areas, combining speed of operation, safety, and efficient performance in one self contained unit. Electric sliding doors open and close quickly, (2½ ft. of door opening per second) holding refrigeration losses to a minimum. See pages 18 and 19 for complete data on Butcher Boy Electro Safety Slide horizontal sliding doors.

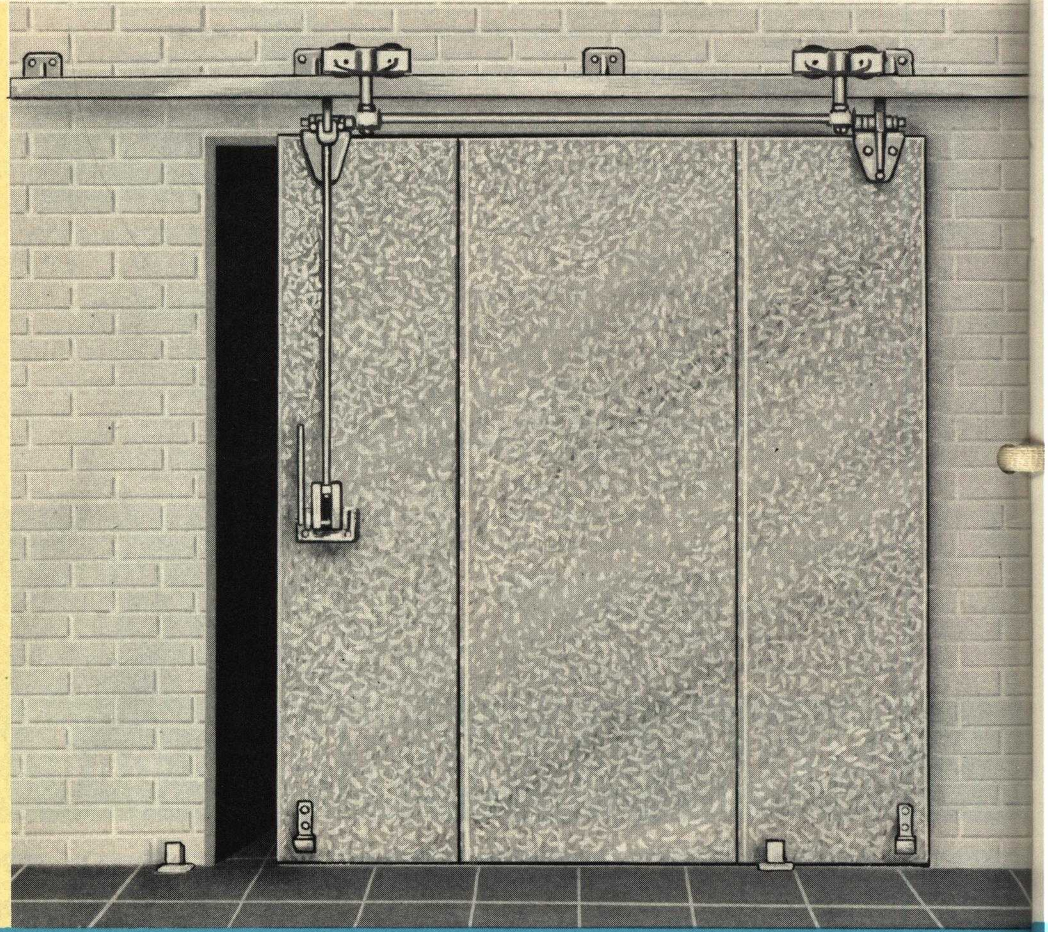


Fig. 5

AIR POWER OPERATED—*Equipped with*

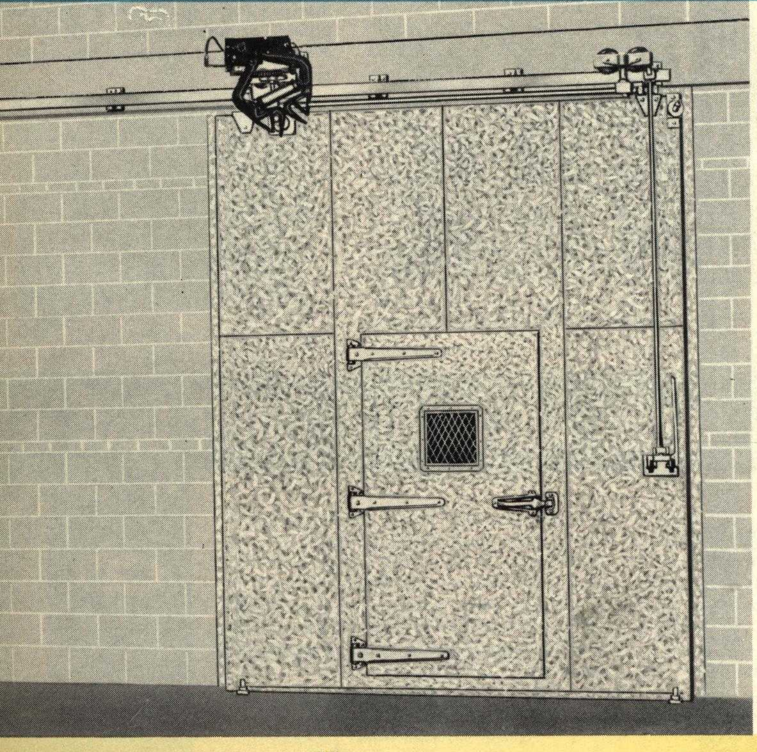

Fig. 6

Air Power Operated horizontal sliding doors are designed for heavy traffic doorways, for speed in opening and closing operations, also to save refrigeration losses at freezer areas. They are engineered to permit opening, entering, and closing of the doors in less than 9 seconds, regardless of door size.

SPECIFICATIONS

CONSTRUCTION	Standard Butcher Boy X-Type door construction. (Maximum strength and insulation fill).
INSULATION	In accordance to specifications selected by the Architect and/or owner.
METAL COVERING	No. 26 gauge galvanized steel, entirely metal covered, unless otherwise specified. This feature increases insulating efficiency, plus the fire protection purpose.
HARDWARE	Automatic Sealing Assembly—See page 17 for details. Exclusively engineered by Butcher Boy.
GASKETS	Butcher Boy ½"x4" heavy duty wool felt, applied with special treatment.
OPTIONAL EXTRAS	1. Electric Heating Defrosters. 2. Safety Feature — Standard refrigerator door built into the horizontal sliding door. 3. Vestibule Type Feature.

See optional extras as detailed above (for manually operated doors).

SLIDING DOORS

SPECIFICATIONS Manually Operated Sliding Doors

CONSTRUCTION—Standard Butcher Boy X-Type door construction throughout including "X-Type" steel diagonal bracing for strength and maximum insulation fill.

INSULATION—In accordance with specifications selected by Architect and/or owner, accurately fitted into moisture proof cells and sealed with asphalt cement. Frost proof, water resisting paper placed on each side of insulation to form highest type of moisture proofing.

METAL COVERING—The metal clad feature increases insulating efficiency and also serves for fire protection purposes. All Butcher Boy horizontal sliding doors are metal covered with No. 26 gauge galvanized sheet steel unless otherwise specified.

HARDWARE—DURABLE-MODERN-EXCLUSIVELY ENGINEERED BY BUTCHER BOY from field experience.

1. ON and OFF Cam Action with leverage provides *EXTRA SEALING PROVISION* for night locking and stand-by periods.
2. Solid Steel Rollers machined to tolerances and cyanide hardened for *LONG LIFE.*
3. Roller Bearing Inserts with Zerk fittings for *PROPER LUBRICATION.*
4. Horizontal and Lateral Adjustments for *EASY and SMOOTH operation regardless* of the size of doors.
5. Built In Adjustable Stops for *SAFETY FACTORS.*

GASKETS—½"x4" Heavy Duty Wool Felt, cemented and secured with non ferrous "never stain" aluminum drive screws. Extra treated for low temperature work.

DOOR SIZES AVAILABLE—3'0" wide and wider—7'0" high or higher as required.

OPTIONAL EXTRAS—

1. Electric Heating Defrosters—built into horizontal sliding door frames for low temperature purposes, to prevent gasket freeze-up.
2. Safety Feature—a standard type refrigerator door (See Figure 00) can be built into the horizontal sliding door for escape purposes, also for minimizing refrigeration losses at sub zero temperatures.
3. Vestibule Type Feature—double swinging batten doors can be built into common frame with the insulated sliding door. This feature recommended for heavy traffic openings.
4. Gear Box Attachment—a worm and spiral gear of special design to minimize the "lift" effort in the opening and closing of extra large size horizontal sliding doors. "Finger Tip" touch through detachable crank handles from either side of the door minimizes the ON and OFF cam action of the leverage linkage which also provides the EXTRA SEALING PROVISION for all Butcher Boy Horizontal Sliding Doors.
5. JAMBS of any depths to order.

New Automatic Sealing Assembly

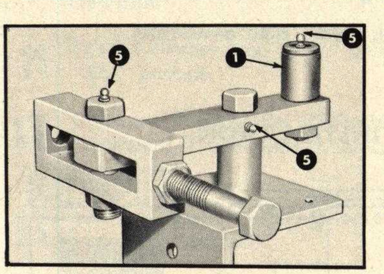

Fig. 7

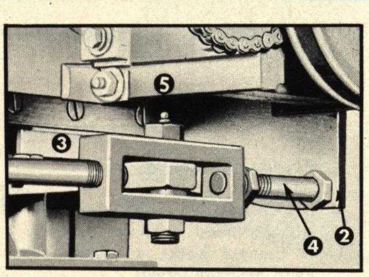

Fig. 8

AUTOMATIC SEALING ASSEMBLY—EXCLUSIVELY A BUTCHER BOY FEATURE

Lever mounted rollers (1) travel to point of contact with rail stop (2), then engage roller wedge blocks (3) which create instantaneous automatic sealing of door gaskets against the frame. Lateral adjustment by means of screw type fitting (4). Zerk fittings for proper lubrication (5).

Automatic sealing at sill areas is accomplished by the pre-determined decline of the door sliding into closed position. HORIZONTAL and VERTICAL adjustment by means of screw type fittings.

Gasket seal pressure adjustments in ALL THREE (3) MAJOR PLANES—VERTICAL, HORIZONTAL, LATERAL.

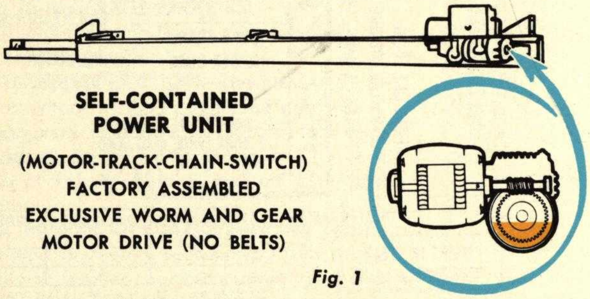
Electro SAFETY-SLIDE

Exclusive Features!

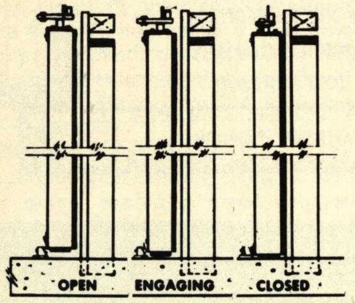


SELF-CONTAINED POWER UNIT

(MOTOR-TRACK-CHAIN-SWITCH)
FACTORY ASSEMBLED
EXCLUSIVE WORM AND GEAR
MOTOR DRIVE (NO BELTS)

Fig. 1

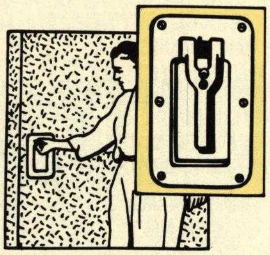
A NEW CONCEPT OF GASKET SEALING BY MEANS OF AN AUTOMATIC SEALING ASSEMBLY



Lever mounted rollers travel to point of contact with rail stop, then engage roller wedge blocks which create instantaneous automatic sealing of door gaskets against the frame.

Fig. 2

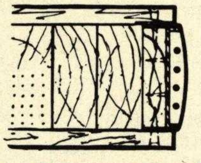
MANUAL SAFETY RELEASE



Consists of a flexible cable attached to a hardened steel pin link assembly which is an integral part of the overhead chain drive. Operable in the event of power failure.

Fig. 3

SAFETY EDGE



Instantly reverses travel of door upon contact. Applied to full height of leading door edge.

Fig. 4

HEAVY DUTY OVERHEAD SERVICE SWITCH

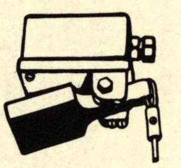


Fig. 5

Actuated by flexible aircraft cables from either side of door opening. Extra rugged and durable.

FEATURING **STRUCTURAL SIMPLICITY**

- **MECHANICALLY SOUND**
- **COMBINED "SPEED AND SAFETY"**
- **EXCLUSIVE AUTOMATIC SEALING**
- **SIMPLIFIED INSTALLATION**

"ELECTRO" SAFETY SLIDING DOORS have been primarily designed for freezer and cooler installations, also where swinging doors are impractical, due to the space factors. Butcher Boy "Electro" Safety Sliding Doors are available in varying thicknesses of selected insulation, dependent upon the architect's recommendations and usage in cooler or freezer areas. Cooler doors with 4" of insulation, Freezer doors with 6" of insulation.

AVAILABLE TYPES

SINGLE HORIZONTAL SLIDING DOOR COMPLETE WITH FRAME. This is the preferred design because "field" experience dictates this preference. The following predominant advantages of single horizontal sliding doors should be considered.

1. Complete assurance of an airtight seal when the door is in a closed position since the installation of gaskets is LIMITED TO THE PERIPHERY of the door only.
2. Gasket surfaces are not exposed to truck contacts; hence they cannot be torn from the door, eliminating the possibility of destroying the "vital" seal between the door and frame.
3. Single sliding doors open and close quickly (2½ feet of door opening per second).

Bi-Parting Horizontal Sliding Doors also available.

SIMPLIFIED INSTALLATION

1. Provide substantial rough bucks.
2. Secure frame to wood bucks with flat head wood screws. If channel bucks, use flat head machine screws.
3. Overhead rail channel secured to walls with ½" machine bolts, bolted through the wall.
4. Door placed on track rail, subject to available adjustments, ready for sliding operation.

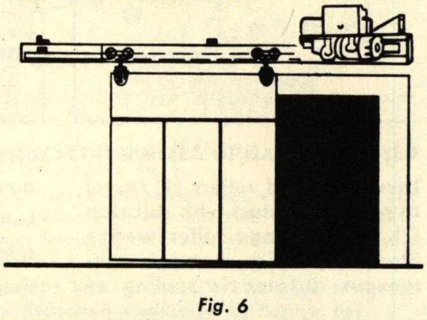

Fig. 6

SPECIFY WHEN ORDERING "ELECTRO" SAFETY SLIDING DOORS

DOOR SIZE

Width and Height. Standard sizes are 6'0", 7'0", 8'0" widths by any required door height.

DOOR TYPE

COOLER (4" selected insulation).
FREEZER (6" selected insulation).

ELECTRIC CURRENT

1 Phase 115/230 V 60 Cycle or 3 Phase 208/220/440 V 60 Cycle.

DOOR SLIDE

Right or Left Slide.

OPTIONAL EQUIPMENT AT EXTRA COST

1. Heavier gauge metal protections on doors and/or frames other than No. 26 gauge galvanized iron.
2. Padlocking Safety Provision.
3. No. 51 Electric Defrosters for 4" cooler doors.
4. Waterproof motor assembly.

HORIZONTAL DOORS

14 OUTSTANDING FEATURES

1. Overhead chain drive "Idler Assembly Adjustment".
2. Compact electric power operator assembly. Exclusive self-contained motor drive—no belts. Heavy-duty, disc type brake for positive no-coast control.
3. Heavy malleable iron Hanger Brackets.
4. Hyatt roller bearing Door Bracket Assembly, zerk lubricated, (concealed, arrow shows approximate locations).
5. Manual "Safety Release" (in event of power failure).
6. Automatic Sealing Assembly (cyanide hardened working parts, zerk lubricated).
7. No. 51 Automatic Electric Defrosters with "adjustable" thermostat.
8. Concealed electric systems—only *ONE* hanging power line.
9. Safety Edge—Instant Reverse Action upon contact.
10. Complete Frame (casing and jamb) metal clad No. 26 gauge galvanized iron.
11. Special Butcher Boy "SEAL" and "SILL' gaskets.
12. Defroster Drain Outlet (Defroster Protection) Underwriters Laboratory Requirement.
13. Manual "Interior Safety Release" (exterior illustrated).
14. "Roller-Type" Floor Wedges.

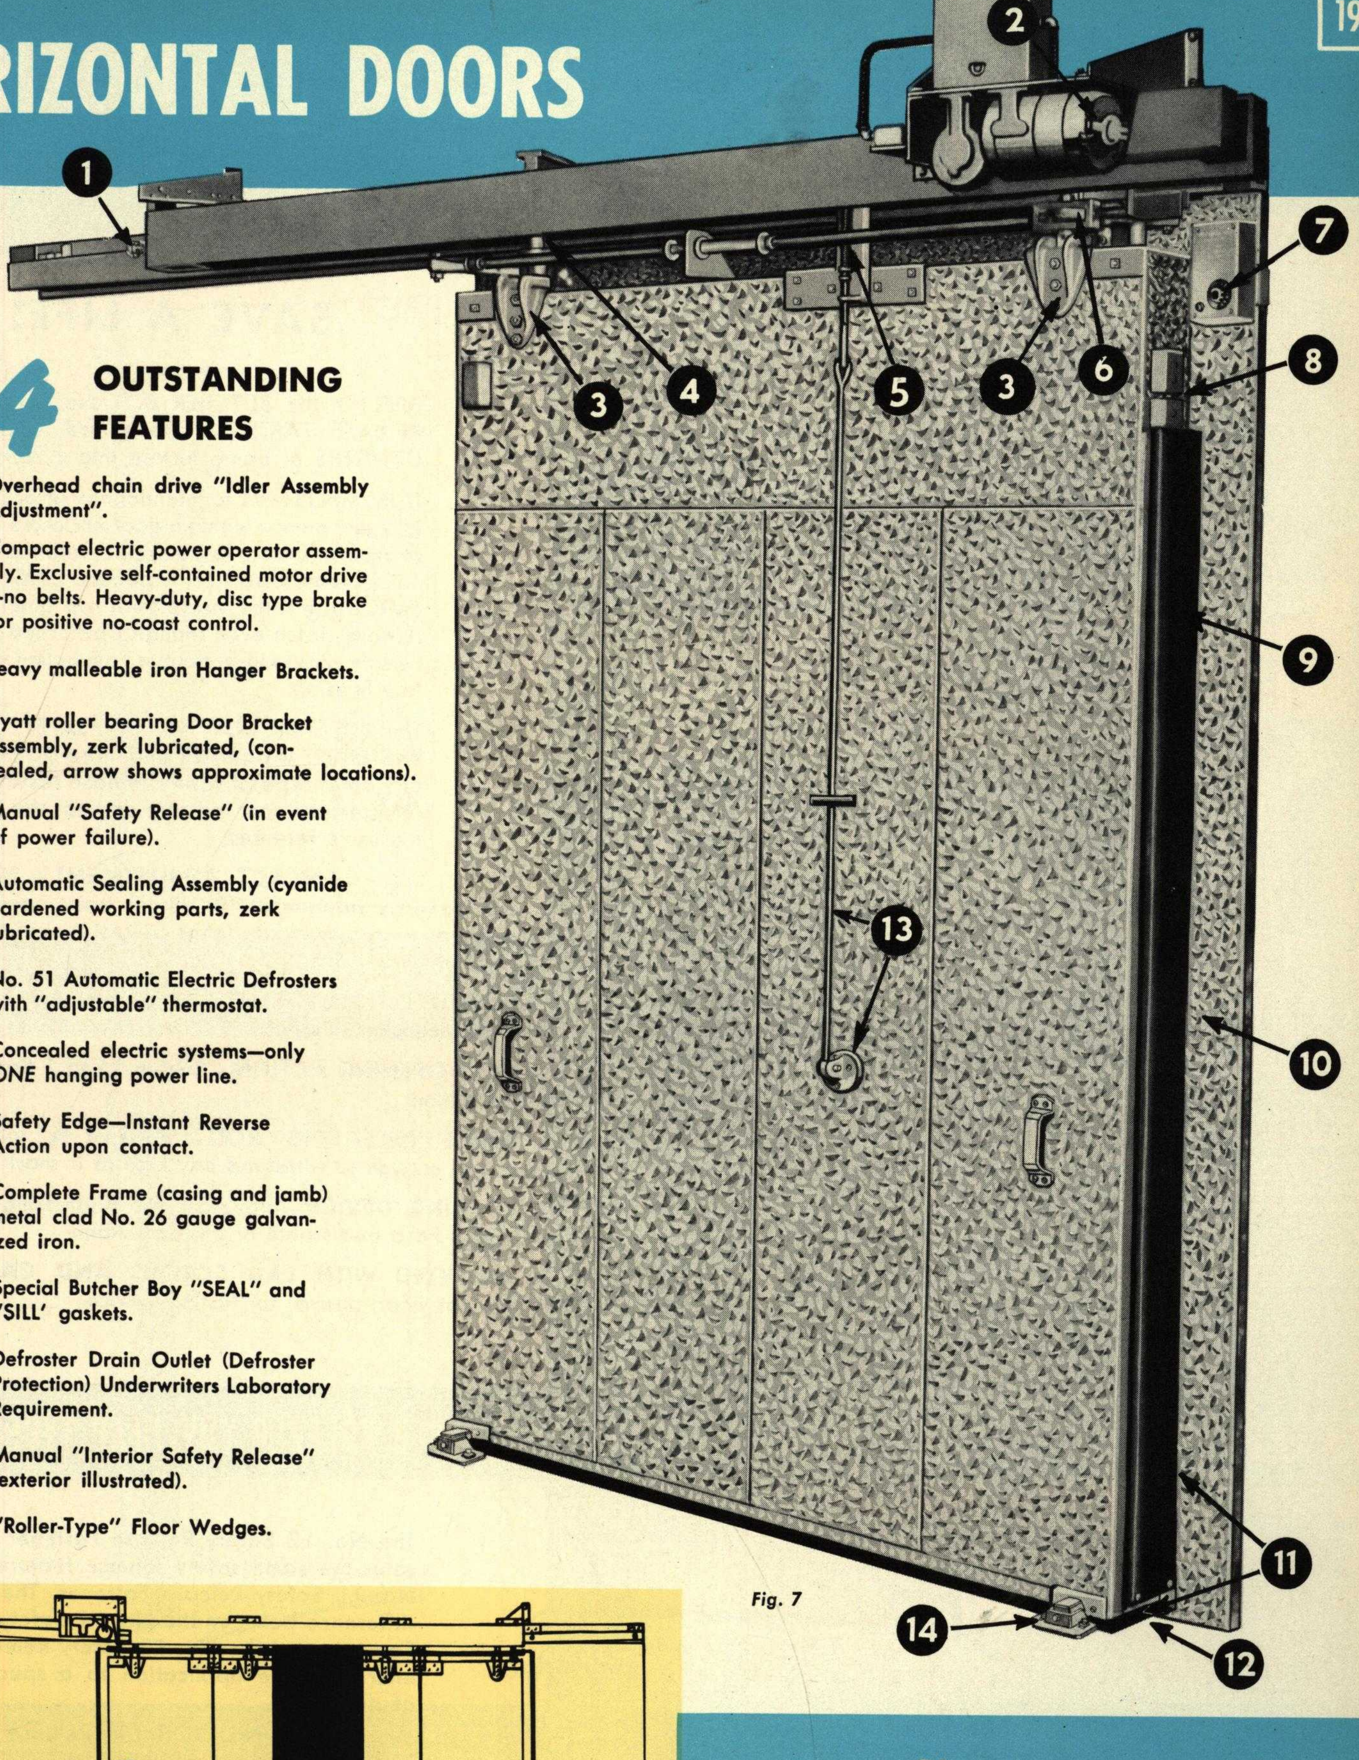

Fig. 7

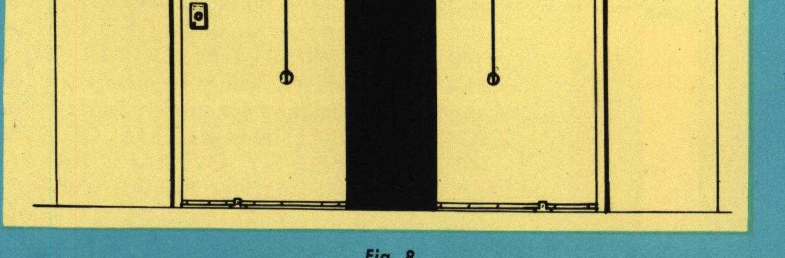

Fig. 8

BI-PARTING *Electro* SAFETY SLIDE DOOR

Available where space factors dictate their use. We strongly recommend bumpers, curbs or rails installed on both sides of the door opening, not only for protection of the doors and wall but also to protect the exposed gasket seals at the center of the opening.

"Butcher Boy"
Since 1885

No. 11

ATENT No. 2,718,421

SAFETY RELEASE FASTENER FOR INFITTING DOORS

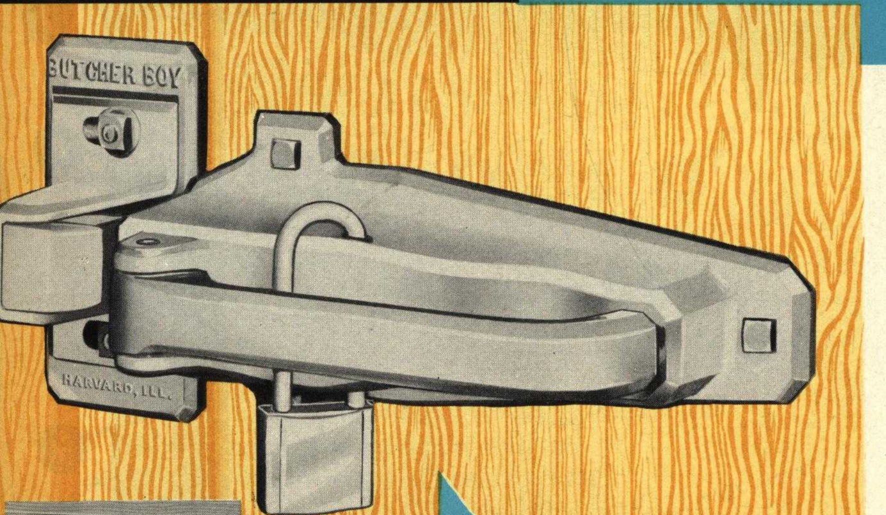

Fig. 7—
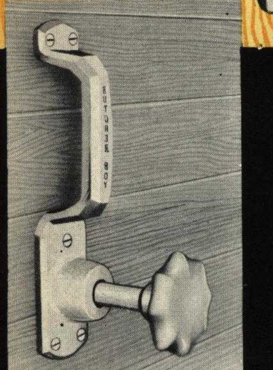
Safety Release
Fastener



NEW IMPROVED *feature*

INSIDE RELEASE MECHANISM

Unlike other types, the leverage mechanisms are FULLY CONCEALED within the lock proper (outside of door) and only the operating push rod mechanism is partially exposed on the back side of the door.

Since the operating push rod is only partially exposed, damages from catching employees' clothing on protruding handles is held to the absolute minimum.

The concealed operating mechanisms minimize maintenance costs since they are not exposed to contacts of trucks when passing through the door openings.

All inside parts, including the conventional inside pull handle, are made of extra heavy cast malleable iron (not of light gauge pressed steel).

SAVE A LIFE!

SPECIFY the BUTCHER BOY No. 11 "SAFETY RELEASE FASTENER" to guard against *ALL DANGERS* of being locked into a refrigerator.

IT IS IMPOSSIBLE to intentionally or accidentally lock any person within a door enclosure when the refrigerator door is equipped with the new No. 11 patented safety fasteners. *SLIGHT PRESSURE* against the inside push rod automatically releases latch even though padlocked from the outside thru built-in double cam action within the lock housing.

The BUTCHER BOY No. 11 "SAFETY RELEASE FASTENER" is HEAVIER and more DURABLE than any other type of safety release fastener in the refrigerator door industry and has the following exclusive features.

1. **CONTACT ADJUSTMENT**—Elongated slots provide easy adjustments to assure easy opening and closing operation and eliminate wear caused by overriding of the spring and lock parts.

2. **PRESSURE ADJUSTMENT**—Double lock nut setting assures positive gasket "seals."

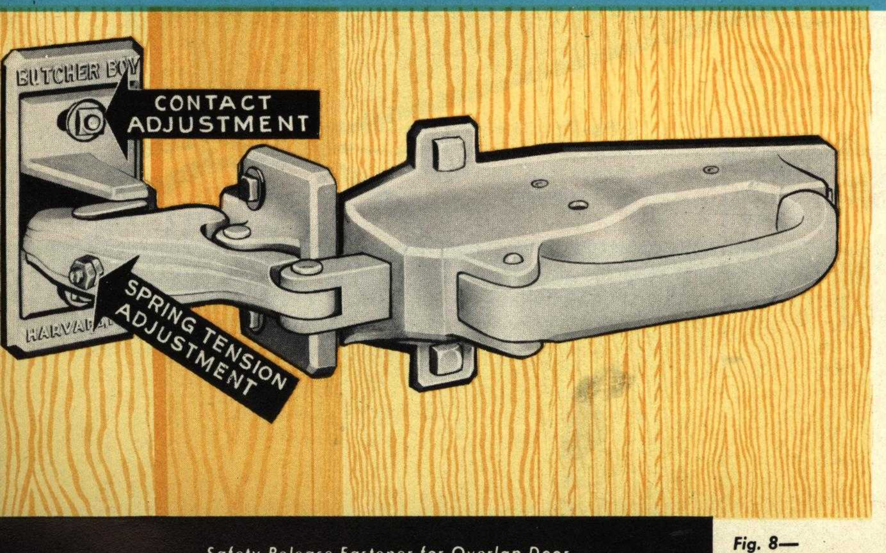
3. **EASY OPENING ACTION**—Built-in 15 to 1 first degree leverage action.

4. **INSIDE "RELEASING" ROD**—Made of ¾" solid round steel, strong enough to withstand any kind of a shock.

5. **LOCKING DEVICE**—Provisions for padlocking, without the use of a hasp and stable or pin and chain.

6. **MOUNTED WITH LAG SCREWS AND CARRIAGE BOLTS**—(not wood screws) for lasting service.

o. 12 SAFETY RELEASE FASTENER FOR SUPER FREEZER (OVERLAP TYPE) DOORS



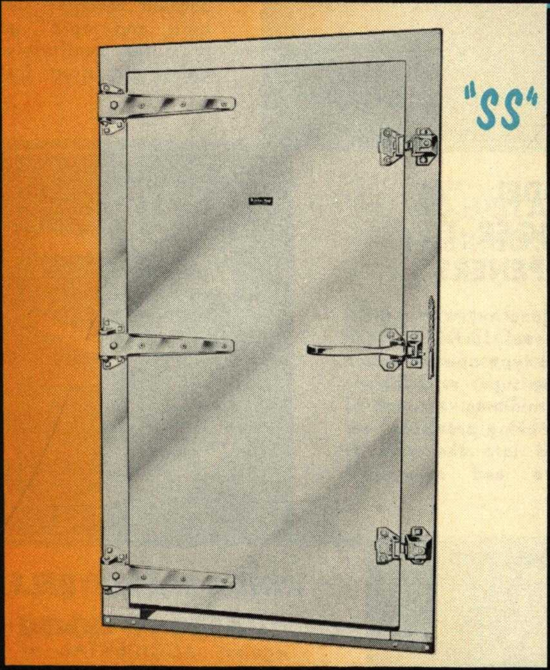
Safety Release Fastener for Overlap Door

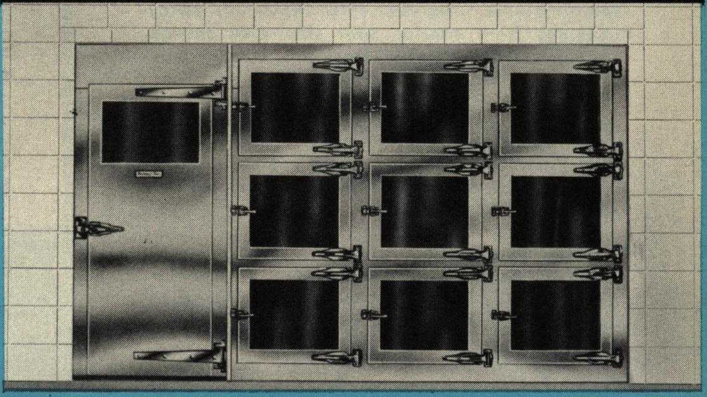
Fig. 8—

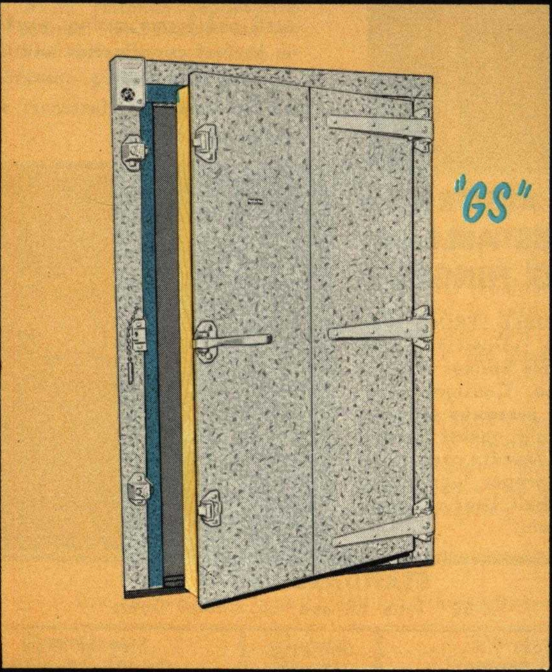
The No. 12 Safety Release Fastener incorporates the same safety release features as the No. 11 Safety Release Fastener. The primary difference between the No. 11 Safety Release Fastener and the No. 12 Safety Release Fastener is in the application to a specific type of door.

Whereas the No. 11 Safety Release Fastener is designed for use on (INFITTING TYPE) standard cooler and freezer doors (TYPE OF DOOR WHICH FITS WITHIN THE DOOR FRAME) see Fig. 7, the No. 12 Safety Release Fastener is specifically designed for use on Super Freezer (OVERLAP TYPE) doors (TYPE OF DOOR WHICH COMPLETELY OVERLAPS THE FACE CASING OF THE DOOR FRAME) see Fig. 8. See exclusive features for Safety Release Fasteners as noted above.

New!







"GS" and "SS"

COOLER — FREEZER

DOORS

Highly recommend for use in hospitals, institutions, restaurants, or at any other installations featuring food service.

"Butcher Boy"

QUALITY SINCE 1881

SPECIFICATIONS
BUTCHER BOY "X-52"
TYPE SS AND GS COOLER DOORS

LUMBER:

Front and back of door made of one piece plastic bonded marine plywood securely fastened to uprights. Exterior door panel is 7 ply and interior door panel of 5 ply materials. Frame casing and jambs of kiln dried Douglas Fir.

GASKETS:

½" x 1¼" "freeze-proof" sponge rubber low temperature gasket around the door perimeter; 1/16" x 1¾" rubber "sill" wiper gaskets installed at the sill line of the door.

HARDWARE:

One or two point contact "super seal' fasteners with "finger tip" opener handle releases and necessary adjustable spring type hinges. Walk-in size cooler doors are also equipped with inner safety release mechanisms to allow emergency openings from interior door side even though fasteners are padlocked from the exterior side of the door opening.

Type SS cooler doors equiped with chromium plated hardware.

Type GS cooler doors equipped with galvanized finish hardware.

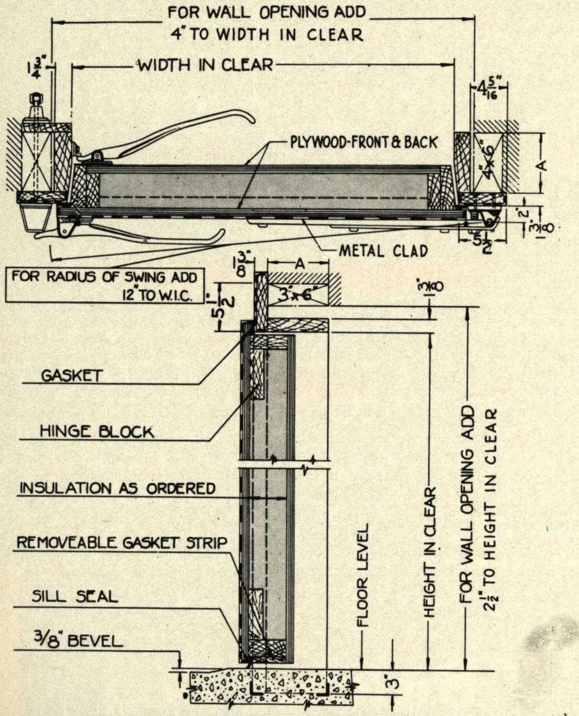
INSULATION:

4" of selected insulation for all cooler doors, usually of the same type as specified for the refrigerator wall construction.

METAL COVERING:

Type SS Cooler Doors - Front and edges of door and frame casing metal covered with No. 20 gauge stainless steel, type 302 in No. 4 finish, applied in full sheets, all joints are welded, ground and polished, and penetrating bolts sealed.

Type GS Cooler Doors - Front and edges of door and frame casing metal covered with No. 26 gauge galvanized steel with locked and soldered seams.



STEEL ANGLES FOR CONCRETE FLOORS
"A"-Standard 5⅝"-Special jambs to order.

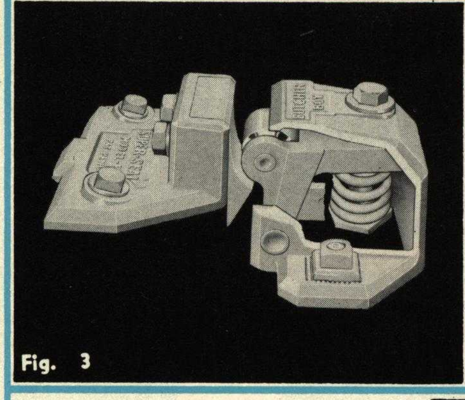


Fig. 3

MODEL "B" SUPER SEAL FASTENERS

Compact in design. Constant automatic spring pressures of the two point contact fasteners "distribute and hold" gasket pressures uniformly against the door frame.

MODEL "B" FINGER TIP OPENERS

Used inconjunction with Model "B" super seal fasteners, they are leverage type openers which pry open the super seal fasteners with a minimum amount of effort. Padlocking provisions are incorporated into the openers for positive and convenient locking.

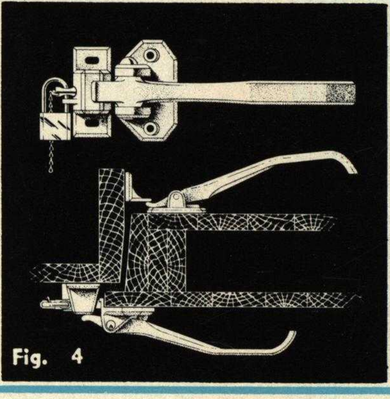

Fig. 4

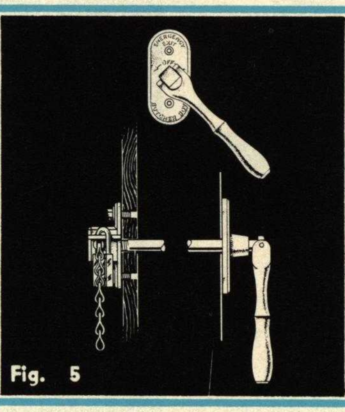

Fig. 5

INNER SAFETY RELEASE

Offers positive protection against ACCIDENTAL or INTENTIONAL locking of personnel within refrigerated area. Installation is accomplished from the interior side, through the wall and frame casing, working in perfect coordination with the opening and closing operations of the super seal fasteners and finger tip openers.

SHOCK ABSORBING ADJUSTABLE SPRING HINGES

The only DOUBLE SPRING type hinges in the refrigerator door industry. Double Springs develop double action. Constant automatic spring pressures regulate 100% air tight gasket sealing at all times. Alemite grease fittings insure proper lubrication. Thrust type ball bearings ease door operation.

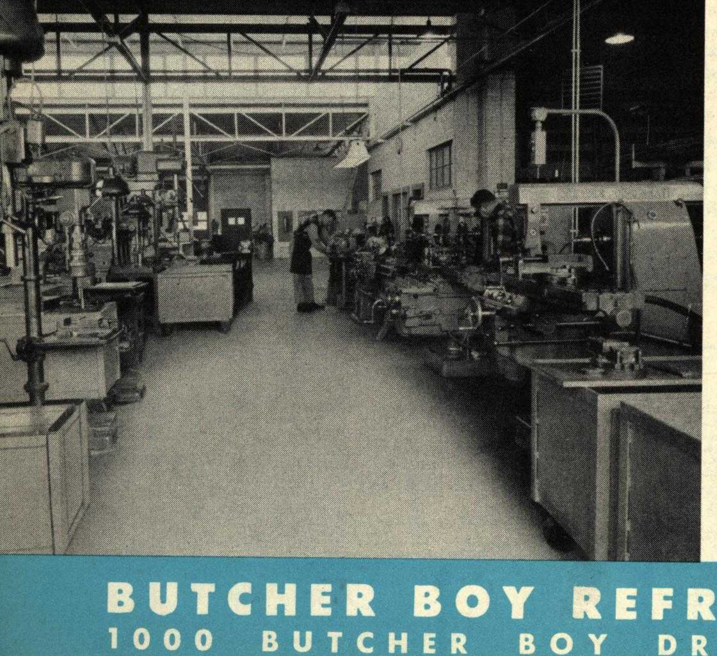
WORLD'S MOST MODERN PLANT DEVOTED EXCLUSIVELY TO THE MANUFACTURE OF REFRIGERATOR DOORS • HARDWARE • ACCESSORIES

(70 MILES NORTHWEST OF CHICAGO)

The CUSTOMER
is always right..

EXPANSIVE production facilities at the Butcher Boy Plant permit well organized production lines, facilitating the movement of raw materials into finished products in the least possible time. Hence, the long established reputation enjoyed by Butcher Boy, "to deliver the doors to the job promptly." Each and every door is subjected to close inspection, tested for quality, workmanship, and appearance, prior to shipment.

BUTCHER BOY'S ESTABLISHED LEADERSHIP—YEARS OF PIONEERING, YEARS OF RESEARCH, YEARS OF SPECIALIZED EXPERIENCE MODERN PLANT FACILITIES, MODERN MACHINERY, AND COMPETENT ENGINEERING STAFFS, combine to offer Butcher Boy Products which are unmatched for quality and workmanship. Visit our plant and manufacturing facilities . . . We invite comparisons, as this is the most direct means for selling you on BUTCHER BOY, the industry's finest refrigerator door and hardware products.



Leaders in Refrigerator Door Hardware

Modern precision machinery and equipment has made it possible to develop many exclusive patented hardware features. Outstanding items, such as Safety Release Fasteners, Shock Absorbing Adjustable Spring Type Hinges, Super Cam Gravity Type Closing Hinges (with and without spring compensators), Gravity Type Self Closing Track Operators, Sliding Door Hardware, are among the many firsts developed by our Engineering Staffs.

"FOAM-LITE"®

Lightweight DOORS

"Butcher Boy"
QUALITY SINCE 1885

NEW *Lightweight* FOAM-LITE DOORS

BUTCHER BOY LIGHTWEIGHT "FOAM-LITE" Doors are another important addition to the already impressive list of door classifications which are being manufactured for the ever growing needs of the refrigerator industry.

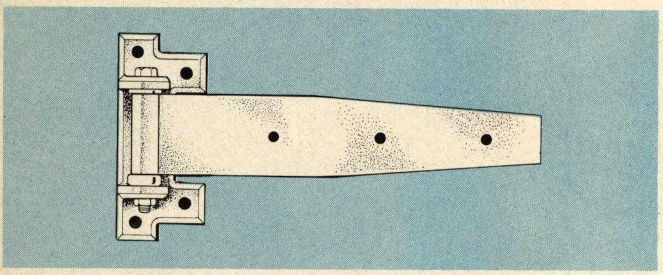
The LIGHTWEIGHT "FOAM-LITE" Door, as the name implies, explores the limits of lightweight door construction without the sacrifice of quality, workmanship, the insulating requirement or overall functional performance, **all this at no extra premium costs.**

We recommend their general use in meat packing plants, chain stores, food marts, or for any installation where the use of lightweight doors are feasible.

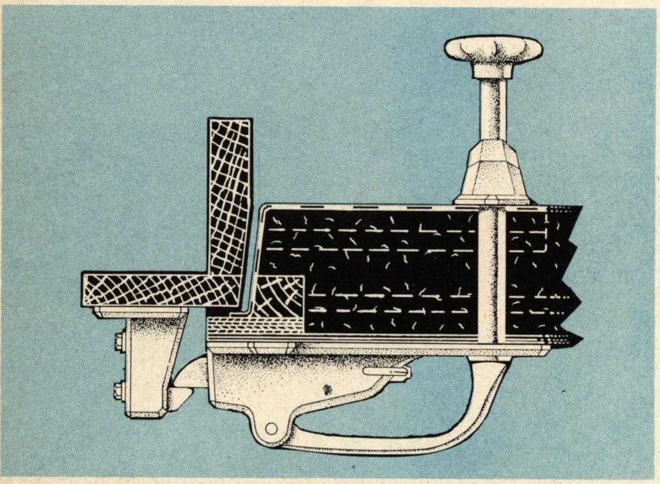
LIGHTWEIGHT "FOAM-LITE" Doors, when furnished with optional metal coverings of stainless steel, aluminum or galvanized steel, are also strongly recommended for use in hospitals, institutions and restaurants. In addition to the features of lightweight performance in opening and closing operations, stress is placed on **sanitation, cleanliness** and **outstanding appearance.**

Butcher Boy engineers have experimented with lightweight type doors for the several years past, taking into consideration the problems which have been confronted in the field. We confidently feel that we have now engineered a lightweight door which will perform with utmost efficiency, withstand the abuse of rugged normal use, manufactured in **all sizes and types without restrictions,** and at NO EXTRA PREMIUM COSTS.

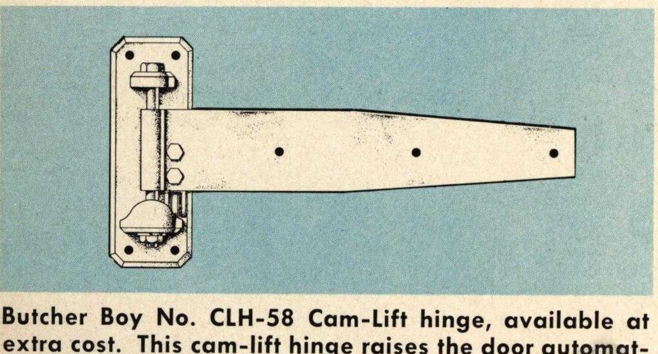
COOLER APPLICATION



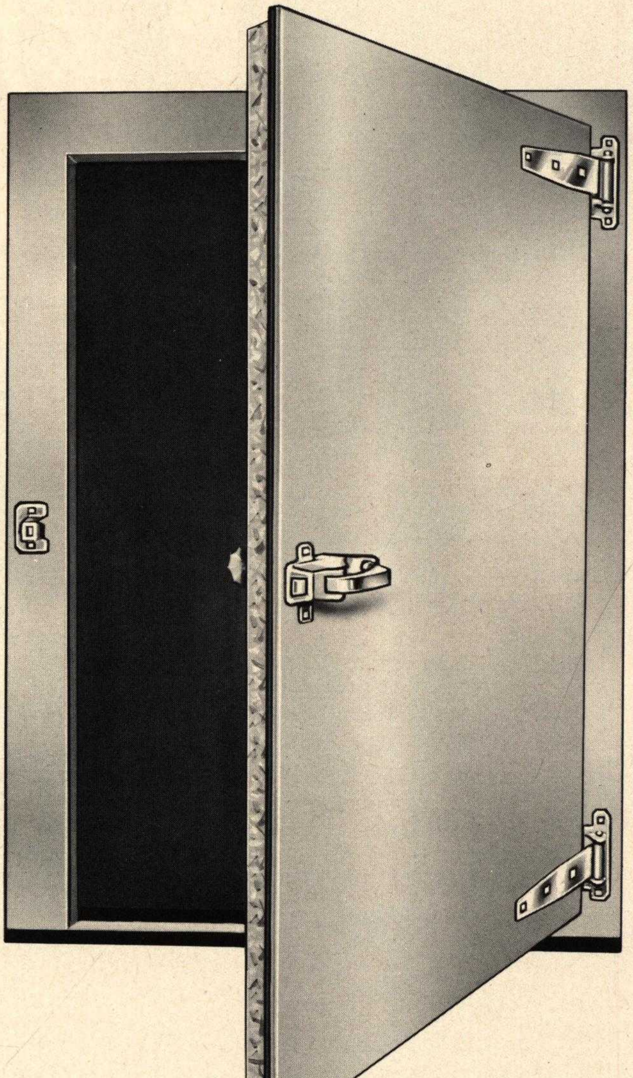
Butcher Boy No. 10 Ball Bearing Strap Type Hinge, galvanized finish.



Butcher Boy "wedge type" Fastener, galvanized finish.



Butcher Boy No. CLH-58 Cam-Lift hinge, available at extra cost. This cam-lift hinge raises the door automatically when opening, is self closing due to gravity action. Recommended for installation where irregular floors exist at door openings. Available in galvanized finish only.



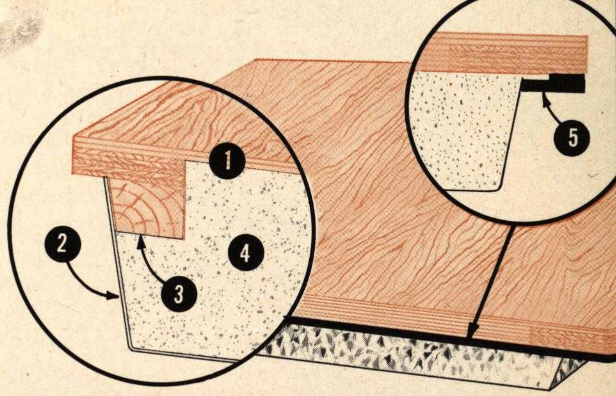
EXTERIOR METAL APPLICATION (Optional Extra)

Cooler Doors, insulated with optional thicknesses of Polystyrene insulation (customer's option). Recommended for use with rooms maintaining 60° F to 30° F temperatures.

Cooler Doors are available also in standard track, vestibule, or track vestibule types. See back cover.

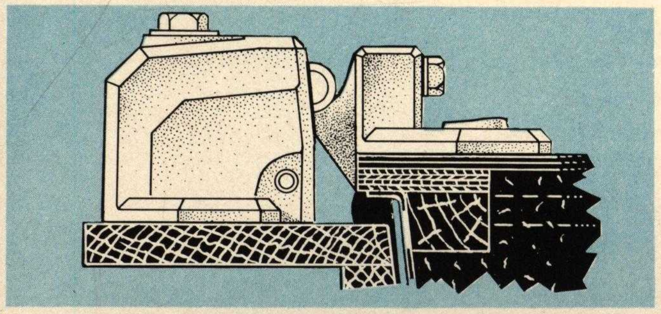
FOAM-LITE DOOR CONSTRUCTION

1. **EXTERIOR DOOR PANEL** is ¼" plastic bonded marine type fir plywood glued to ⅝" supporting plywood stripping, applied to entire periphery of door.
2. **INTERIOR PAN TYPE CONSTRUCTION** on back and edges of the door. Standard construction of No. 20 gauge galvanized steel with return flanges to back of face panel. (Optional in stainless steel or aluminum at extra cost). Return flanges serve dual purposes, acting as a means of securing metal into back of face panel, also as a base for "seal" gasket.
3. **FRAME STRUCTURE OF DOOR** is 1-13/32" x 2", 3", 4" or 6" (dependent upon door thickness) solid upper grade clear Douglas Fir for maximum rigidity in application of interior steel panel.
4. **PRIMARY INSULATION** is 2", 3", 4" or 6" of "foamed in place" Polystyrene type insulation, of lighter density for cooler doors, of heavier density for freezer door applications.
5. **GASKETS** — The "seal" gaskets applied to the doors are ½" x 1¼" freeze proof closed cellular rubber, made of extremely soft resilient material (nitrogen filled cell composition banded together by strong live rubber). A moulded removable type "sill" gasket (1/16" thick x 1¾" wide) is applied to the bottom of the door.

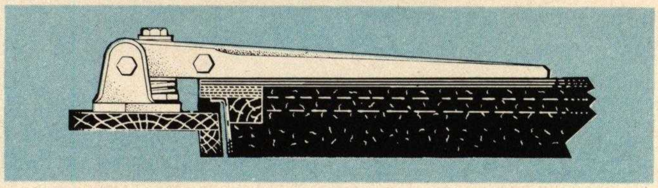


FREEZER APPLICATION

Butcher Boy No. 51 Automatic Electric Defrosters, thermostatically controlled, applied to frame casings and or sill areas, where door gaskets make their contacts. Their application prevents condensation forming upon the gaskets, thereby preventing freezing conditions at the door openings.

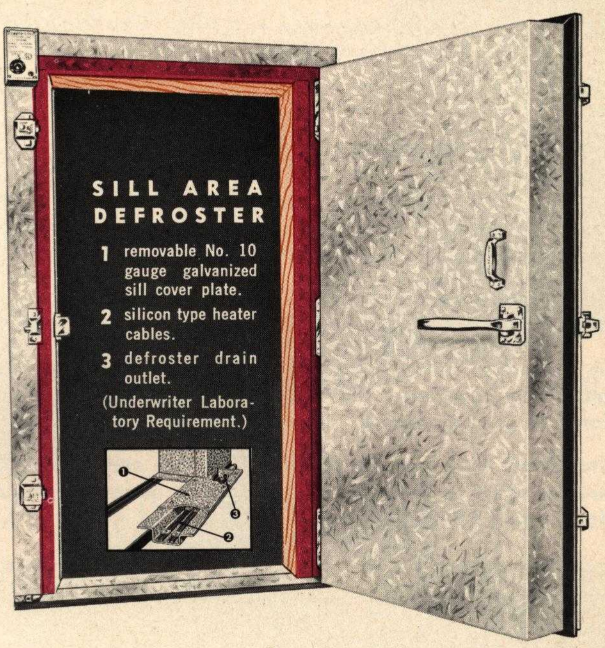


Butcher Boy Model "B" two point contact Super-Seal Fasteners, galvanized finish.



Butcher Boy No. 47 or No. 53 (application dependent upon door width) shock absorbing, adjustable spring type hinges, in galvanized finish.

FIRST AND ONLY UNDERWRITERS LABORATORY APPROVED



SILL AREA DEFROSTER

1 removable No. 10 gauge galvanized sill cover plate.
2 silicon type heater cables.
3 defroster drain outlet.

(Underwriter Laboratory Requirement.)

FREEZER DOOR (GALVANIZED METAL CLAD)

Freezer Doors, insulated with optional thicknesses of Polystyrene insulation (customer's option). Recommended for use in rooms maintaining below freezing temperatures, such as 30° F to 15° F below zero.

Freezer Doors are available in standard track, vestibule, or track vestibule types. See back cover.

FEATURES OF THE *Lightweight* "FOAM-LITE DOOR"

• PRACTICAL • MAINTENANCE OF STRENGTH • RIGIDITY •

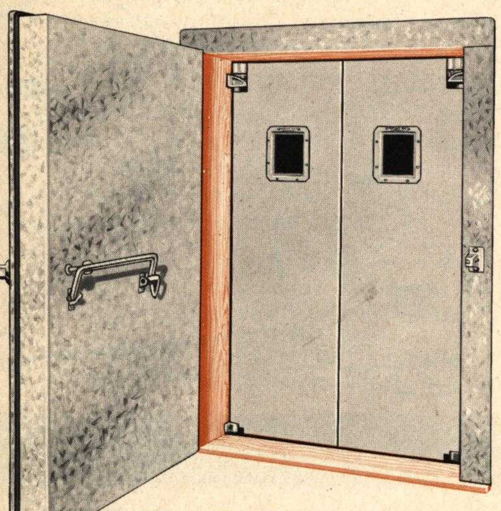
A. Poured-in (foamed type) insulation acts and is an adhesive which "bonds" the insulation to the back metal pan as well as to the face plywood. These "bonds", which foamed insulation makes possible, add the extra strength and rigidity to the lighter thickness of the face plywood as well as to the metal pan back (available in No. 20 gauge metals, galvanized - stainless - aluminum).

B. Poured-in (foamed type) insulation sets up as a solid mass over the entire area of the door structure including all corners, leaving no voids whatsoever. The very nature of the poured-in-type insulation eliminates the necessity of excessive internal bracing of any type since it forms a solid immovable mass, also permits maximum insulation fill within the door.

C. Frames used with lightweight doors are of the same exact standards as the frames furnished with other standard types of Butcher Boy refrigerator doors, because

1. The frame is, under all circumstances, the static part of the door. It does not move, hence the weight factor is not important.
2. After installation, the door frame becomes a part of the wall, and it has been a proven theory that a standard rugged frame will add to the rigidity of the installation.
3. Installation procedures are standardized. Hence no extra details or instructions to follow, no special space requirements, and no extra supervision.
4. Extra savings in buck opening provisions. Since the lightweight "FOAM-LITE" door weighs approximately 50% less than the conventional standard refrigerator door, 3" x 6" wood buck supports may be safely used.

NEW AUTO-PLY *Lightweight* VESTIBULE DOORS



STAINLESS STEEL BACK PAN
(OPTIONAL EXTRA)

This new lightweight vestibule consists of the lightweight FOAM-LITE insulated door hung into the same common frame with our AUTO-PLY double swinging auto close doors.

The new development of this vestibule unit is the result of a special demand by many chain and retail stores who are usually confronted with the problem of leaving the insulated door in an open position during the major portion of the business day.

AUTO-PLY double swinging auto close doors are approximately 45% lighter in weight than the conventional standard auto close doors, and have been especially designed for use by personnel going in and out of the openings. **Caution:** The AUTO-PLY double swinging auto close doors are not recommended for fork-lift truck operations.

CONSTRUCTION FEATURES

1. The inner cores of the auto close doors are made of two (2) pieces of ½" plywood, rabbetted for acceptance of three (3) inside steel mounting ribs which are welded to the rods actuating the hardware mechanisms.
2. Special type reinforced No. 20 gauge aluminum sheets are used to encase the plywood cores, adding to the appearance and utility.
3. In assembly, ¼" truss head rivets are used, the rivets extending through the aluminum coverings, the plywood cores, and the rib sections. This assembly forms a well designed, strong structure.
4. Standard, time proven Butcher Boy V-6 self closing gravity cam mechanisms are installed to the auto close doors to assure free and easy operations of the doors. NO SPRINGS.

CLARK DOOR COMPANY, INC. NEWARK 8, NEW JERSEY

AIA FILE 30-F-61

PREST-O-MATIC® *power operated* doors for freezers and coolers

Clark Prest-O-Matic Cold Storage Doors are self-contained complete automatic door assemblies. Each unit is furnished complete with door, frame, power operator, and pull cord switches or other types of control.

power supply

Prest-O-Matic doors can be supplied for operation on electric or compressed air power, selection of which depends largely upon local conditions.

types

Standard door units are available for freezer and cooler applications. Normally freezer doors incorporate 6″ insulation, and cooler doors 4″, but greater or lesser thicknesses of insulation can be obtained for specific applications. Freezer doors have built-in heating cables to prevent icing.

models

Two models are available in each of the cooler or freezer types.

Double Horizontal Sliding (Model DHS) consists of two door sections meeting in the center of opening and sliding on tracks above the doorway to each side. DHS models open or close at approximately two feet per second.

Single Horizontal Sliding (Model SHS) consists of a single door section sliding to right or left at option of buyer. SHS models open or close at one foot per second.

Where space does not permit installation of standard horizontal sliding models, Vertical Sliding or other specially constructed units are available.

WIC=WIDTH IN CLEAR

HIC=HEIGHT IN CLEAR

Note: Bucks (by Others) are not required if wall provides adequate support. In free standing walls bucks should run floor to ceiling with header cut between as shown.

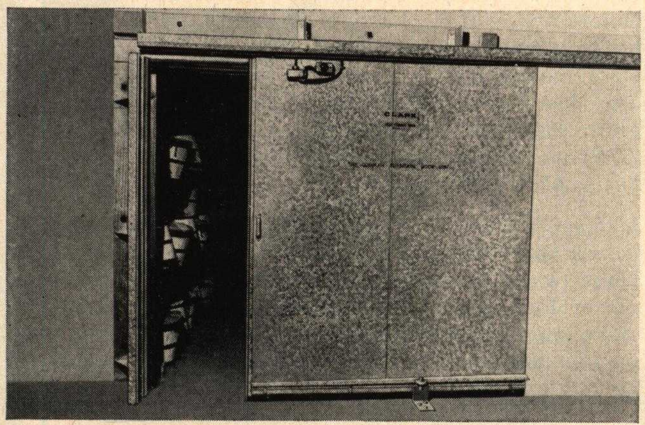
Detailed drawings of all Cold Storage Doors on request.

The right is reserved to change construction details and specifications without notice.

✳ CLARK *hand operated* cold storage doors

Clark Manual Sliding Cold Storage Doors offer a new concept in door design and operation. Sliding quickly and easily to one side or above the opening, these doors hug the wall and free valuable floor space for useful purposes. Four standard models are illustrated and briefly described below. Detailed drawings are available upon request. Like the power operated doors each Clark Manual Door Unit is supplied as a complete assembly of doors, frame, neoprene seals, galvanized track, ball bearing trolley trucks, handles and guide roller.

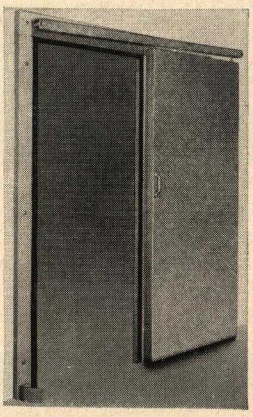
standard freezer and cooler doors

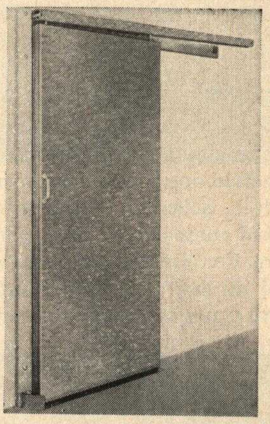


MODEL MF Horizontal Sliding Freezer Door provides 6″ or more insulation and is equipped with electric heating cables to prevent icing.

MODEL MC Cooler Door contains 4″ insulation without heating cables. Sizes: Standard units for all widths from 4′0″ to 8′0″ and heights from 5′0″ to 12′0″. Special sizes on request.

dairy door



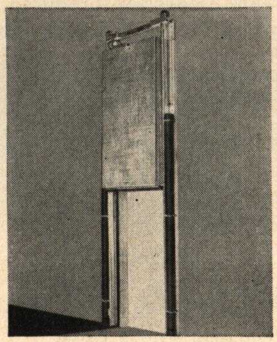


The MODEL DD Clark 3″ or 4″ Dairy Door is a light weight, compact, insulated door designed particularly for the dairy industry, but with a wide variety of uses.

Sizes: Standard sizes are 2′0″, 2′6″, 3′0″ width and 6′0″, 6′6″, 7′0″ height.

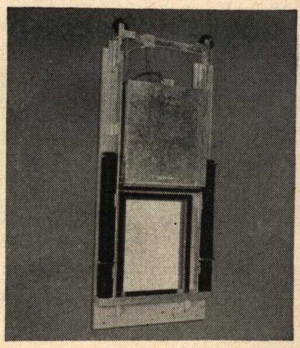
vertical sliding door

MODEL VS Vertical Sliding Traffic Doors are designed for use in practically all size cold storage doorways, and are particularly practicable where sufficient side room is not available for the installation of horizontal sliding doors. These doors are available for both coolers and freezers, and in varying thicknesses of insulation to suit specific requirements.



pass-thru doors

MODEL PD Clark Pass-Thru Doors meet the requirements of small openings where vertical lift doors are advantageous. They are used primarily for the passage of small crates and boxes from refrigerator rooms to outside areas. Door is counter balanced by concealed weights suspended on flexible steel cable.
Sizes: Standard sizes cover widths from 1′6″ to 3′, and heights from 2′ to 3′.



CLARK CONSTRUCTION FEATURES

doors

1. All Clark Cold Storage Doors slide on track slightly inclined both horizontally and vertically, thus providing a wedge-tight seal on all door edges.

2. Standard doors are covered both sides with 26 Ga. Galvanized steel. Heavier gauge steel, aluminum, and stainless steel covering are available.

3. Insulation is foamed-in-place Polyurethane which, in addition to its low k factor, possesses the important quality of structural rigidity, non-friability, moisture resistance and light weight.

4. Wedge-tight neoprene seals at top and bottom of door, together with pressure-tight seals on leading and trailing edges, insure a non-leaking tight closure at all door edges.

5. Freezer doors incorporate thermostatically controlled electric heating cables.

6. Optional safety locking device, for use with padlock, securely fastens door from outside, yet permits emergency exit from interior. On power-operated doors the control circuit is open when lock is in closed position.

7. Each door slides on sealed-in-grease precision ball bearing rollers moving in specially designed galvanized track rigidly supported on head member.

meat rail doors

1. All Clark manual and power operated Single or Double Horizontal Sliding doors are available with special meat rail provision. At loading platforms, or other confined areas, the advantages of sliding doors are obvious. Furthermore, products suspended on meat rails need not be stopped short of door, or moved back to avoid interference with arc of swing of hinged doors.

continued . . .

CONSTRUCTION FEATURES

continued from page 3

frame

1. Each Clark door unit is supplied with a wood frame consisting of vertical casings and a header on which the track or power operator is factory mounted. The header rests on the casings with a mortise-tenon joint.

2. Standard frames are painted two coats enamel or can be metal covered at extra cost.

power operation

1. *Power Operators* for Prest-O-Matic Cold Storage Doors can be supplied for either electric or compressed air supply. Electric operators incorporate ½ h.p. motor, geared limit switch, solenoid brake, safety adjustable clutch and pre-wired control box, with components of standard manufacture. Compressed air operators have piston of adequate size and stroke, and include lubricator, filter and water trap. Both types are ready for connection to available power supply. Air compressors can be supplied or obtained locally.

2. *Safety Edge* Each automatic door is equipped with a sensitive leading edge which automatically opens door upon striking an obstruction while closing.

3. *Manual Release* In the event of power failure doors can be operated manually by means of a simple release which disengages door from power operator.

4. *Power Source* Standard electric operators can be wired to 220V or 440V, 3P, 60C; or 110V or 220V, SP, 60C. Motors are ½ H.P., instantly reversible, and three phase power supply is recommended when available. Air operators require 65 lbs. minimum, with volume depending upon door size and frequency of operation. Regardless of power supply all doors containing heating cables require 110V; and all air-operated doors require 110V for connection to 6V transformer.

5. *Controls* The most common and generally accepted control is by means of pull cord switches or pushbuttons. These switches are placed in one or more locations on each side of door opening. Other controls such as photoelectric, radio, interlocking of airlock doors, time delays, and other specialized circuits for particular needs are available.

INSTALLATION

Simple complete instructions are supplied with each manual or power operated door, and installation is easily and quickly accomplished. The vertical casings and header are fastened with suitable bolts directly to wood and masonry walls, or to wood or steel bucks. Bucks must be provided in free standing insulation wall. Power supply is connected to electric or air terminal connection on operator. Pull cord switches or other controls can be placed as desired.

SPECIFICATIONS

"Doors shall be Clark Prest-O-Matic Electric (or Air) Powered Cold Storage Doors, or Manually-Operated Sliding Cold Storage Doors, as manufactured by Clark Door Company, Inc., 521 Hunterdon St., Newark 8, N.J."

Door schedule, plans or specifications should then show details in accordance with the following checklist:

1. In-clear dimensions of opening.
2. Type and Model desired.
3. Thickness of Insulation.
4. Direction of slide (Right or Left to open).
5. Type of metal covering if other than standard.
6. Locking Device, if desired.
7. For power-operated doors, available power supply, type and number of controls (pull switches, pushbuttons, photocells, etc.)

GUARANTEE

All Clark Door Company products are warranted against defective materials or workmanship for a period of one year after shipment.

CLARK SERVICES

Clark Door Company offers three generations of experience in specialized industrial door construction and application. Where special problems exist, to which standard units cannot be adapted, the services of Clark engineering staff are at your disposal. Your inquiry, containing full and complete details on a specific problem, will be given prompt expert attention.

PATENTS

Clark Doors are produced by an organization with a reputation for high quality products, covering a span of over 70 years. (Patent Numbers 2262451, 2472791, 222757, 2134397, 2412871, 2471197. Other patents pending.)

Eastern

Sanitary Metal Refrigerator and Cold Storage Equipment

Since its founding in 1928, the EASTERN STEEL RACK COMPANY has at all times manufactured the finest in standardized refrigerator, display, mobile service and storage equipment. Our continuous engineering and development program has resulted in equipment that is unexcelled in utility, efficiency, durability and economy.

Our representatives are located in principal cities throughout the country, as listed on the back cover, and they as well as our engineering staff, are available at all times for consultation without obligation.

For more complete product information, please write for our general catalogue.

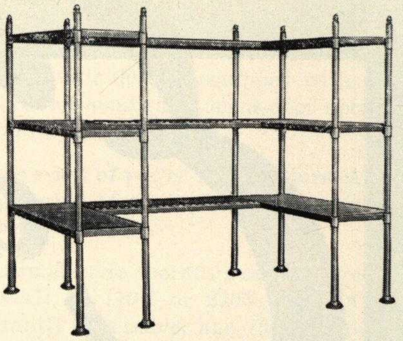
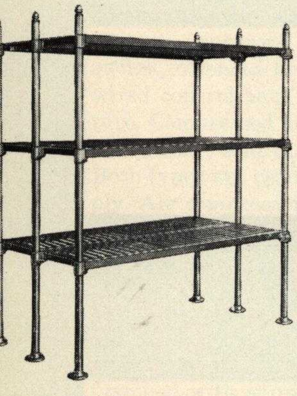
Self Supporting Rack



U Shape Rack



Double Section Rack

STANDARD SELF-SUPPORTING RACKS

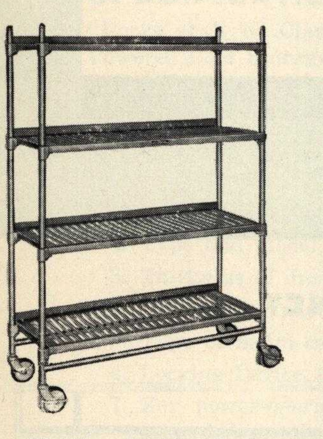
description

EASTERN Self-Supporting Racks are capable of carrying heavy loads without being fastened to the floor, wall or ceiling. They are furnished in a wide range of lengths, any number of tiers high, and in widths to the customer's specifications. The shelves are vertically adjustable and removable, and additional tiers and sections may be added at any time. The adjustability of the shelves eliminates the need for shims under the posts in cases where the floor slopes.

specifications

The Shelves shall be constructed of 1" wide, #12 gauge thick steel slats which are rounded and chamferred, spaced 1" aaprt, and flush riveted on 1½" x 1½" x ⅛" extra hard high carbon steel angle frames. For shelves 5'-6" long, or longer, the frames shall be made of 2" x 1½" x ⅛" angle. Each corner of the frame shall be welded and rigidly reinforced with a malleable iron wedge-type corner bracket. These corner brackets shall fit tightly in malleable iron wedge-type support brackets which are mounted on the posts, and locked in position by means of set screws. The posts shall be 1 5/16" o.d. high carbon steel tubing, fitted with cast semi-steel self-leveling floor flanges and ornamental acorn tops. The finish shall be hot dipped galvanized after fabrication. The shelves shall be vertically adjustable, and removable for easy cleaning. No bolts, nuts, or other fasteners shall be used for erection. For heavy duty construction it is recommended that 1 11/16" o.d. High Carbon steel posts be substituted for the 1 5/16" o.d. posts mentioned above.

Where shelves are two tiers high or less, or where overhead baffles are used it is recommended that the rear posts be expanded to the ceiling with Eastern Spring Expansion Fittings.



Rigidform Shelving Truck
Model 5501

MOBILE SHELF TRUCKS

Shelving on wheels and mobile display racks and trucks have been adapted to a variety of uses in food handling.

These racks are particularly popular because of:

1. Easy Cleaning — The entire rack can be easily rolled to the wash area for cleaning and with the racks out of the way, the refrigerator itself is easily cleaned.
2. Easy Loading Accessibility — The rack can be moved at will and loaded from all four sides.
3. Elimination of Secondary Loading — The rack can be loaded in the delivery area, stored in the refrigerator and then wheeled to the kitchen or other department for food processing. This saves double handlings.

The special ESR casters are specifically designed for the load requirements and give quiet travel with exceptional mobility.

All racks can be furnished either in stainless steel or in steel hot dipped galvanized after fabrication. These racks are also most suitable for use as pot and pan racks. Individual specification sheets, for various models, available on request.

MEAT RAIL RACKS

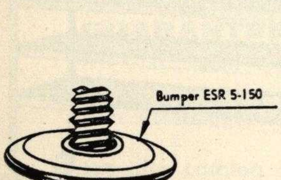
description

Meat Rail Racks are furnished with posts expanded to ceiling with EASTERN SRING EXPANSION FITTINGS and floor flanges. Brackets mounted on posts are vertically adjustable permitting any desired spacing. The standard bracket projections are Close, 3", 6", 9", 12".

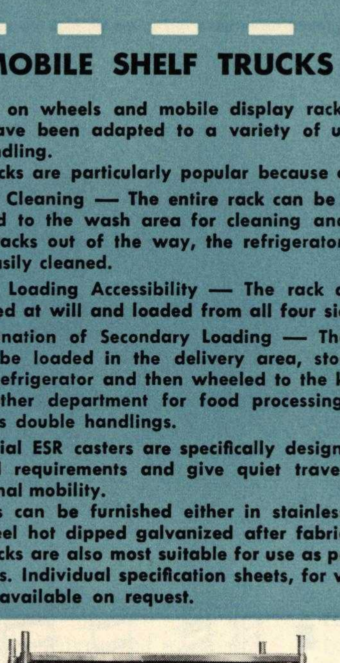
specifications

Meat Rail Racks (when not fastened directly to the wall) shall be furnished with posts expanded to ceiling with semi-steel dirt proof spring expansion fittings. Brackets shall be of pressed steel and shall be easily adjustable and removable. Rails shall be steel bar and Meat Hooks shall be steel with a tinned finish. Finish except for hooks shall be hot dipped galvanized after fabrication.

It is recommended for low ceilings and normal loads that 1 5/16" o.d. High Carbon steel posts and 1½" x ⅜" rails be used: for high ceilings and heavy loads 1 11/16" o.d. High Carbon steel posts and 2" x ⅜" rails should be used. Hooks are available in light (5/16"), medium (⅜"), heavy (7/16"), and extra heavy (½") sizes. Brackets are available in projections of close, 3", 6", 9", and 12".



Brake Caster No. 5-115-2
5" Dia. 2" Wide
500 Lbs. Load.
"No-Flex" Wheel.



"Rigidform" Shelving Truck

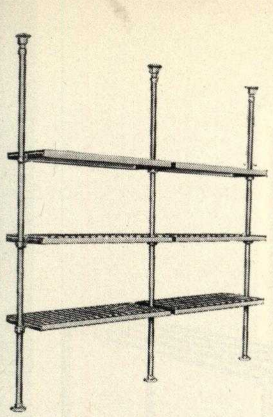
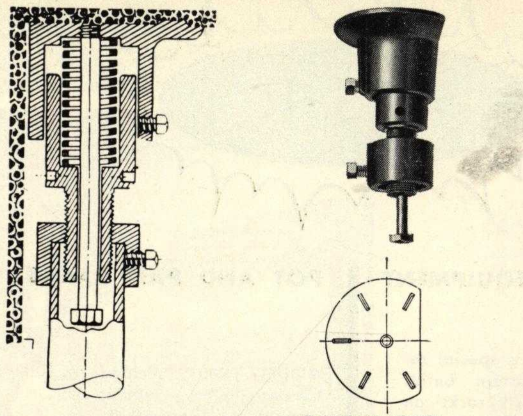
Rail Rack



Single Post Rack

EASTERN SPRING EXPANSION FITTING



Top view of flange showing 5 projecting gripper prongs

description:

Assembled complete in one unit — the working parts of the SPRING EXPANSION FITTING are fully enclosed and protected from dirt and dust. This Eastern fitting has been especially designed to be a true 2-way expansion joint. Its use permits the very economical construction of single post supported equipment. Posts expanded beween floor and ceiling require absolutely no bolts for fastening or lagging. The economy it affords in moving and reassembling rack structures with a minimum of labor is an important cost saving factor.

specifications:

Spring Expansion Fittings shall be of cast semi-steel single unit construction fully enclosed and dirt-proof. The fittings shall be fastened rigidly to posts by means of set-screws. This shall be a two way expansion fitting. All parts hot dipped galvanized finish.

SINGLE POST RACKS

description

Racks of single post construction find greatest use where narrow space limits shelving widths. Space economy and cost savings are the important factors in determining the use of single post construction. This construction requires supporting posts expanded and rigidly secured to the ceiling by means of Eastern Spring Expansion Fittings. The need for bolt fastening is eliminated. The shelving is set solidly on studded brackets, and is vertically adjustable and easily removable for cleaning without disturbing the supporting posts. Sectional lengths of shelving are constructed to suit load requirements. The single post construction lends itself readily to L and U shaped arrangements, as illustrated, allowing greater space savings where the shelving lines walls in very narrow areas.

specifications

The shelves shall be constructed of 1" wide, 12 gauge thick steel slats which are rounded and chamferred, spaced 1" apart, and flush riveted on 1½" x 1½" x ⅛" extra hard high carbon steel angle frames. For shelves 5'-6" long, or longer, the frames shall be made of 2" x 1½" x ⅛" angle. Each corner of the frame shall be welded. The shelf shall fit on studded brackets which are mounted on the posts, and locked in position by means of set screws. The posts shall be high carbon steel tubing, 1 5/16" o.d. for ceilings up to 7'-0" in height and 1 11/16" o.d. for greater ceiling heights. The posts shall be fitted with two-way cast semi-steel expansion fittings and cast semi-steel self-leveling floor flanges. The finish shall be hot dipped galvanized after fabrication. The shelves shall be vertically adjustable, and removable for easy cleaning. No bolts, nuts, or other fasteners shall be used for erection.

RIGIDFORM STAINLESS STEEL RACKS

description

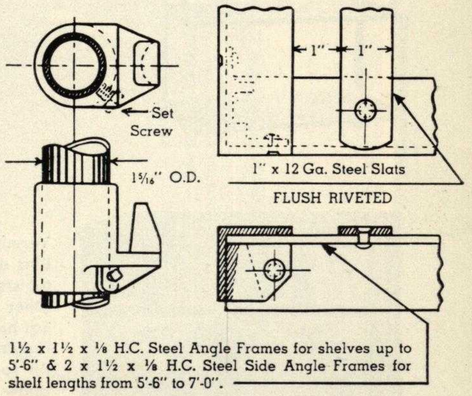
The standard self supporting racks and single post racks, as described on the opposite page, are also available in stainless steel. In addition Eastern now offers the Rigidform Stainless Steel Rack with pressed stainless steel shelves. The Eastern Rigidform Shelf is made of a single sheet of stainless steel, double flanged on all sides, rigidly embossed with no overlaps or obstructions to interfere with maintenance or cleaning. All shelves are vertically adjustable and removable for easy cleaning.

specifications

The Rigidform shelf shall be press formed from a single sheet of #14 ga., Type 18-8 stainless steel. The sheet shall be flanged down 1½" on all four sides and hemmed back full depth and ½" horizontally so that all flanges are double material thickness. The shelf shall be slotted 1¾" on centers, and the sides and ends of the slots shall be drawn down at an angle of 45° from the surface so as to give an equal depth of draw all around. Each corner of the shelf shall be welded, ground and polished, and rigidy reinforced with a CRM wedge-type corner bracket. These corner brackets shall fit tightly in stainless steel wedge-type support brackets which are mounted on the posts, and locked in position by means of stainless steel set screws. The posts shall be 1 5/16" o.d. stainless steel tubing, fitted with stainless steel self-leveling floor flanges and stainless steel ornamental tops. The shelves shall be vertically adjustable, and removable for easy cleaning. No bolts nuts or other fasteners shall be used for erection.

All shelves shall be shipped with a peelable coating to protect the polished finish. All post brackets shall be of stainless steel, die cast to meet ASTM Specification A296-49T-CF-8. All equipment shall be polished after fabrication.

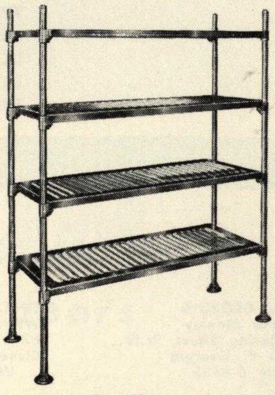
Standard Slatted Shelf and Support Construction Detail



1½ x 1½ x ⅛ H.C. Steel Angle Frames for shelves up to 5'-6" & 2 x 1½ x ⅛ H.C. Steel Side Angle Frames for shelf lengths from 5'-6" to 7'-0".

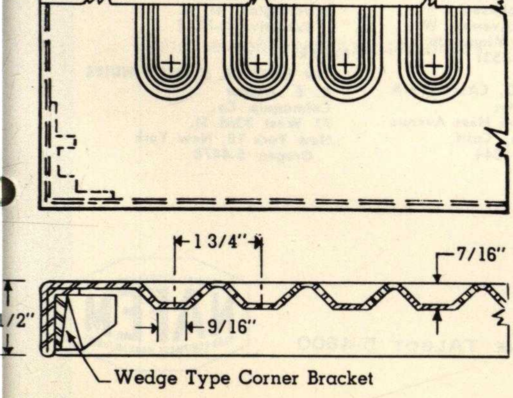
construction detail

This detail shows the shelf welded in the corners, the flush riveted slats, and the assembly of the wedge type malleable iron corner bracket. The tapered lug on the post bracket wedges into the corner bracket, locking the entire assembly sturdily in place.



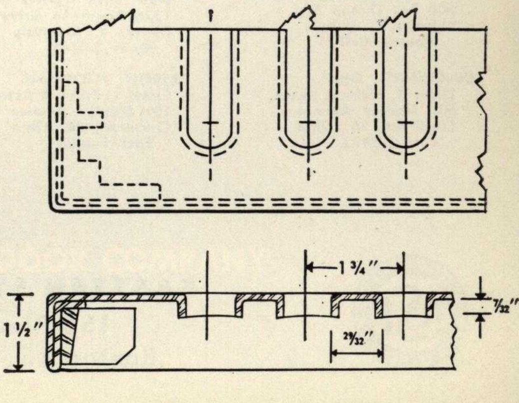
Rigidform Self Supporting Rack

Rigidform Shelf Construction Detail



This detail shows the 14 gauge metal flanged down 1½", and hemmed back full depth and ½" horizontally. It also shows the Rigidform slots, which are spaced 1¾" on centers. The corner of the shelf is rigidly reinforced with a wedge-type corner bracket into which the post bracket fits.

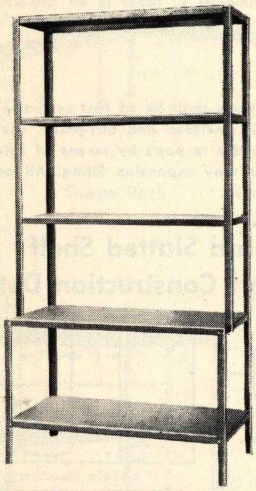
Rigidform F Shelf Construction Detail



This detail shows the #14 gauge metal flanged down 1½", and hemmed back full depth and ½" horizontally. It also shows the Rigidform-F slots, which are spaced 1¾" on centers, and the flat surface between slots. The corner of the shelf is rigidly reinforced with a wedge-type corner bracket into which the post bracket fits.

The specifications for Rigidform-F construction are the same as for the Rigidform construction except that "The shelf shall be slotted 1¾" on centers, and the sides and ends of the slots shall be drawn down at an angle of 90° from the surface so as to give an equal depth of draw all around. The surface between the slots shall be flat."

ESR



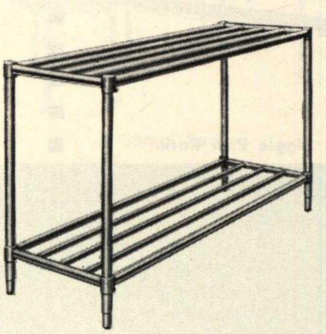
DRY STORAGE EQUIPMENT

Where there are special requirements, Eastern builds solid type shelf racks on angle iron uprights to specification. In the illustrated rack, the stepped construction provides a counter from which articles may be conveniently distributed.

Vermin Proof Dry Storage Bins are used extensively for the storage of vegetables and other loose items which cannot be conveniently stored on regular shelving. The bins tilt forward when opened to allow for easy access. Units can be supplied with bins of various sizes and in various arrangements.

POT AND PAN RACKS

MODEL PR631 Welded tubular shelves—tubular uprights — adjustable bullet feet.



MODEL PR641 Solid Marine Edge Shelf — tubular uprights — swivel casters.

Jamolite Doors—Special Purpose Doors 15

The Jamison Cold Storage Door Company reserves the right to change materials and construction without notice.

In this bulletin . . .

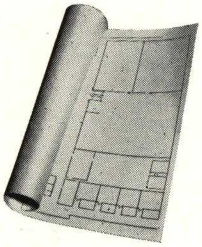
The doors shown in this catalog have been designed and built by Jamison to meet the specific conditions of use in Food Service installations. On the basis of many years of experience in this particular field, Jamison recommends these doors — plastic or stainless steel clad for cooler or freezer service — to solve most common problems in storage for food service in institutions, schools, hotels, hospitals, industrial cafeterias and similar establishments.

The purpose of this bulletin is to eliminate the necessity of designing special doors for Food Service installations and to save valuable time by facilitating specifying. Selection, therefore, becomes a matter of choosing between the new lighter weight Jamolite Plastic Doors or the FS metal clad doors, specifying cooler or freezer door depending on the temperature to be maintained in the storage area. Features and advantages of both types of doors are clearly detailed on following pages.

For applications beyond the scope of this bulletin, the services of Jamison representatives and Jamison's engineering department are available to help you solve your problem. Jamison manufactures a complete line of cold storage and engineered doors, some of which are shown on page 14.

JAMISON GIVES EXTRA SERVICE

Jamison assists architects in door selection and installation details

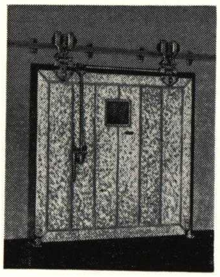


Jamison field representatives throughout the country are always available to work with architects in preparing layouts. They will help with the specifications to insure that the right door is used as well as the one most economical for the job.

Jamison helps contractors to quote on door specifications

Upon request, a Jamison representative will call upon the architect, and take off the door specifications the insulation contractor needs to quote on a job. He'll then help to interpret specifications and supply the contractor with quotations on the specified doors and any alternates that can be offered.

Jamison designs and builds all kinds of special doors



A full-time research and engineering staff enables Jamison to design and build doors for practically any special requirement. Many times, all that's needed is to modify a standard door. Whatever the need, Jamison is equipped and prepared to build any door to your order.

Jamison helps contractors on unusual service problems

Jamison representatives work with contractors to provide the user the best possible service. Advice and suggestions on installing doors can frequently save service cost and trouble. Help is also available on unusual service problems.

you can specify Jamison doors with confidence

In more than half a century of producing cold storage doors of all types, Jamison engineering has kept pace with the expanding use of refrigerated storage. New materials — stronger and lighter — combine with efficient design to provide dependable performance in cold storage doors with all the following qualities:

Maximum rigidity and strength with internal structural members held to a minimum in size and number to permit greatest possible insulation.

Highest quality lumber correctly seasoned for strength and stability.

Efficiency of insulating material to be equal to that installed in walls.

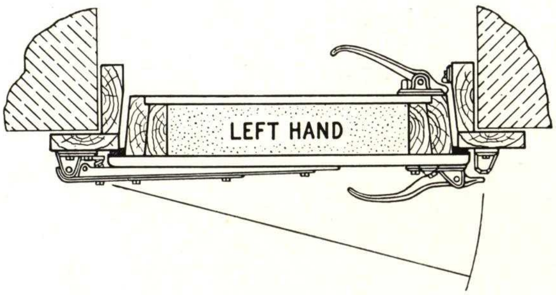
Protection of insulation by efficient vapor barrier on warm side.

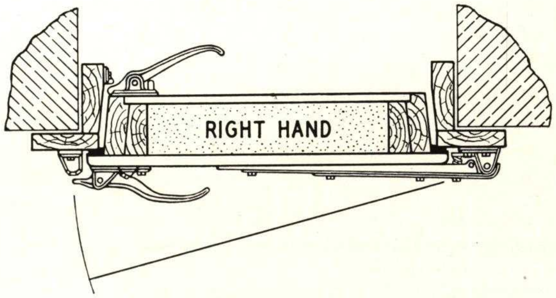
Gaskets to be soft and resilient to maintain adequate seal of door against casing.

Uniform compression of gasket. Hardware must be capable of compressing gasket uniformly around entire periphery of door.

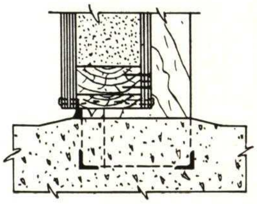
decide first on swing and type of sill

location of door—*right or left hand swing*

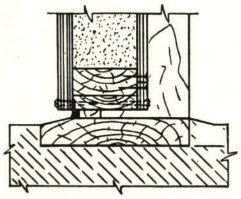




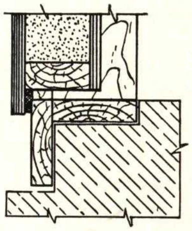
floor construction—*type of sill*



concrete sill



beveled wood sill



high sill

Concrete sills are most commonly used. The two sides of the frame are connected at the base with an angle iron spreader.

Beveled wood sills are supplied when specified at no additional charge. We recommend their use only when installed in wood floors.

High sills are supplied for step-up entrances and package passing doors.

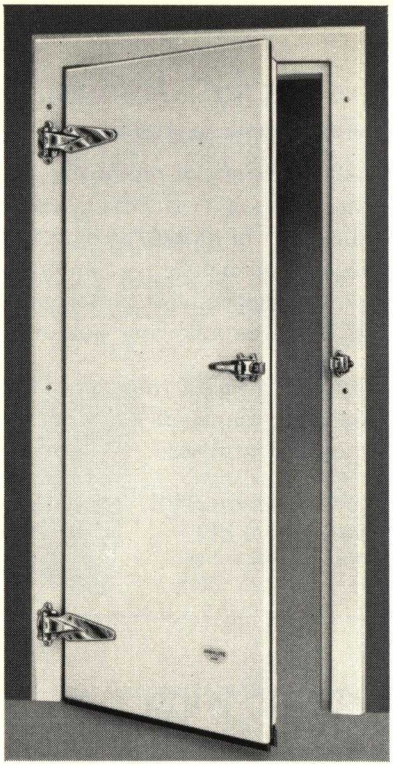
NEW LIGHTNESS AND COLOR

JAMOLITE* PLASTIC DOOR

FOR COOLER AND FREEZER ROOMS

The new JAMOLITE Plastic Door is a flush-fitting, lightweight cold storage door designed for better appearance and easier operation. It is a lower cost door made in the same sizes as heavier metal clad doors and can be mounted on the same bucks. However, buck requirements for the JAMOLITE Door can be the same as for household doors, and one man can install door and frame. Insulation thickness of 4″ is standard for both cooler and freezer doors, with 6″ insulation available for severe conditions.

Surfaces: Exterior surfaces are hard, smooth, impact resistant. Attractive appearance is easily maintained by wiping clean with soap and water.



Construction Features

The JAMOLITE Plastic Door is molded with front and back sections of fibre glass reinforced polyester resin. Insulation is foamed-in-place polyurethane plastic which adheres to the outer shell surfaces in a permanent bond, adding rigidity and strength to the over-all door structure.

specification JAMOLITE PLASTIC cooler door

Construction of door and frame shall be equal in all ways to the JAMOLITE Cold Storage Door as manufactured by the Jamison Cold Storage Door Co., Hagerstown, Md. Door construction shall consist of two pans bonded together with polyester resin. Each pan shall have an outer layer of polyester plastic with appropriate color pigment. (*Specify desired color — JD white, JD blue-green, JD blue, JD ivory, JD salmon.*) Balance of pan to consist of glass fibre reinforced polyester plastic. The pan shall have sufficient blocking to receive hardware, etc.

The bonded pans shall be filled with 4″ of foamed-in-place polyurethane insulation with a K factor of 0.15 at 75°F. This material shall adhere to the inner and outer pans to achieve maximum unit rigidity. Weight of door less frame and hardware about 4½ lbs. per square foot. Door will be gasketed with sweep gaskets on sill and soft compressible gasket on sides and head.

Frame components shall be similar to the door construction with the exception that the jamb shall be insulated with polystyrene insulation and back of casing and jamb shall be completely sealed with a coating of polyester plastic. Face of casing to be flush with face of door.

Hardware to be chrome plated, ball bearing hinges, spring activated wedge type fastener with adjustable keeper. Provision for padlocking to be provided.

specification JAMOLITE PLASTIC freezer door

JAMOLITE Plastic Freezer Door specifications to be same as JAMOLITE Cooler Door except for this addition: "Door to be equipped on two sides, head and sill with Frostop heater cable with adjustable thermostat. Unit to be assembled ready for connection to 110 volt AC line."

GLEAMING, SANITARY STAINLESS STEEL

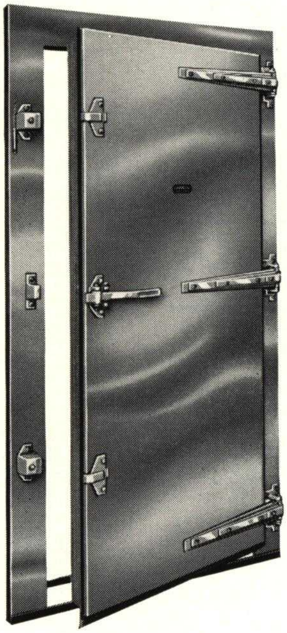
JAMISON SERIES "50"–FS DOOR

FOR COOLER ROOMS

The Jamison Series "50"-FS Door is designed for food service applications. The front and back panels are sheets of boat hull quality plastic-bonded plywood. This "box girder" design provides greater rigidity and overall strength, and also eliminates the need for internal bracing. Thus the entire space within the door has maximum unbroken insulation.

For the utmost in appearance and sanitation, stainless steel metal cladding with polished chrome hardware is specified. This door is also available with cladding of galvanized steel with hot dipped galvanized hardware.

Doors designed to swing into warm room.

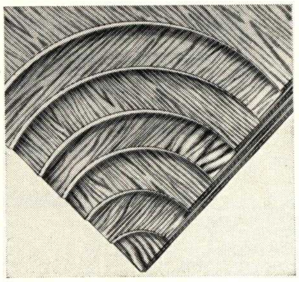


JAMISON SERIES "50"-FS WALK-IN DOOR
Stainless Steel Clad

SPECIFICATION FEATURES

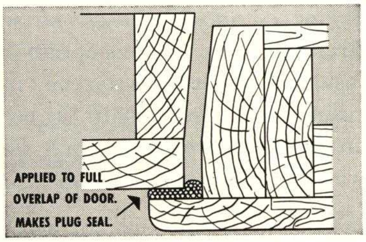
Boat Hull Plywood

Finest quality plywood, water-proof plastic bond. 7-ply front, 5-ply back. Rigid, box-girder construction eliminates internal bracing for maximum, unbroken insulation.



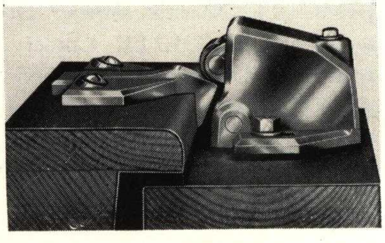
Lo-Temp Gasket

Soft, resilient. Impervious to grease and moisture. Forms perfect plug seal — expands into space between jambs.



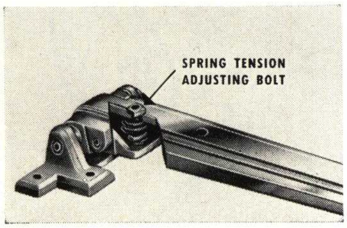
E-Z Open Two-Point Fastener

Adjustable tension assures tight seal, uniform pressure. Rugged cast construction. Patented heavy duty design.



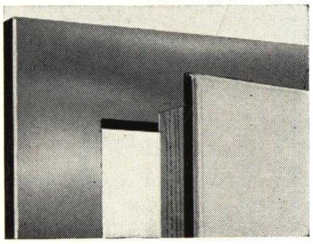
Adjustoflex Hinges

Automatic spring tension regulation, self and hand adjustable. Heavy cast construction, ball bearing equipped.



Metal Cladding

Application of metal cladding on door fronts and frames, and the sealing of all penetrating bolt holes, provides a vapor proof seal.



Sillseal Gasket

Flexible, abrasion and grease resistant, with no capillarity. Resilient, pliable, durable.

specification cooler door

Note: The following specification will provide a Jamison Series "50"-FS Cooler Door adequate for the majority of conditions to which a cooler door is subjected. However, it is recommended that the specification writer refer to Page 12 where variations in construction for special requirements are discussed. When necessary, the following specification may be easily revised.

cold storage door for cooler rooms

Refrigerator doors shall be equal to Jamison Series "50"-FS Cooler Door. Front and back panels shall be Boat Hull Plywood meeting Government Specification MIL-P-66A. Insulation shall be 4″ thick, same type as specified for refrigerator wall construction. Frame casings and jambs shall be kiln dried clear Douglas Fir.

Reach-In Doors shall have high sills. Walk-In Doors shall have angle iron sills for embedding in concrete floor. Swing of door to be as indicated on drawings.

Door to be hung in frame with Jamison heavy duty ball bearing hinges, self and hand adjustable. Each door to have adjustable, easy-opening, two-point fastener with inside and outside release handles. Provision to be made for padlocking, with inside safety release to open door from inside when padlocked on outside.

Gasket to be sponge rubber 1¼″ wide with grease-resistant skin. Sill gasket to be sweeper type, dense tough rubber, resistant to grease and moisture, with no capillarity.

Front of door and casing to be covered with No. 20 gauge stainless steel, type 302, #4 finish, applied in full sheets. All joints on front of door and casing of frame shall be welded, ground and polished. All penetrating bolts to be sealed. All hardware to be heavy cast construction, chrome plated.

If galvanized metal cladding and hot dipped galvanized hardware are desired, substitute the following for the paragraph in italics:

Front of door and casing to be covered with No. 26 gauge galvanized steel applied with locked and soldered seams. Metal on front of door in vertical panels. All penetrating bolts to be sealed vapor tight. All hardware to be heavy cast construction, hot dipped galvanized.

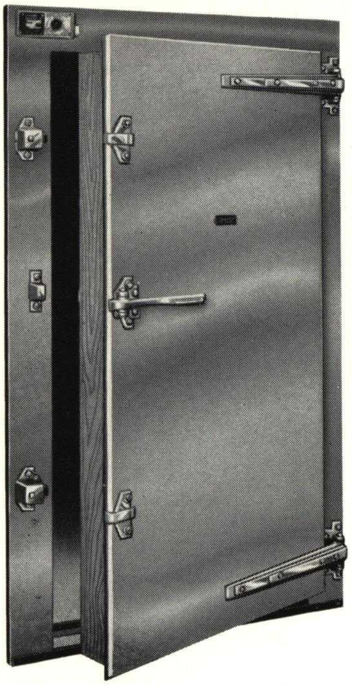
GLEAMING, SANITARY STAINLESS STEEL

JAMISON LO-TEMP FS DOOR

FOR FREEZER ROOMS

The Jamison Lo-Temp FS Door is specially designed for food service applications. It incorporates the basic features of the Jamison Lo-Temp Door and is of single seal infitting construction. To harmonize with the cooler room door, metal cladding is specified stainless steel and hardware is chrome plated. To protect against freezing shut, Frostop^{R} is specified. This door is also available in galvanized steel with hot dipped galvanized hardware.

Door designed to swing into warm room.

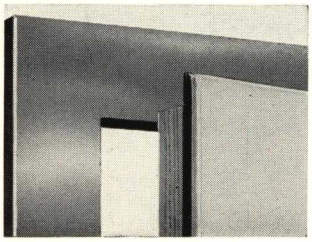


JAMISON LO-TEMP FS WALK-IN DOOR
Stainless Clad

SPECIFICATION FEATURES

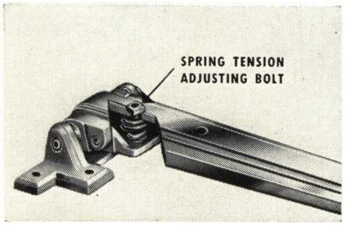
Metal Cladding

Application of metal cladding on door fronts and frames, which includes the sealing of all penetrating bolt holes, provides a vapor proof seal.



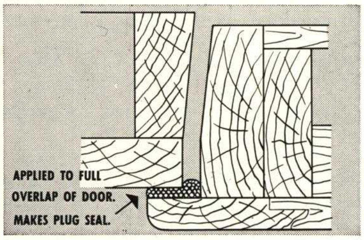
Adjustoflex Hinges

Automatic spring tension regulation, self and hand adjustable. Heavy cast construction, ball bearing equipped.



Lo-Temp Gasket

Soft, resilient, impervious to grease and moisture. Applied to full overlap of door. Forms perfect plug seal by expanding into space between jambs and door stiffeners.

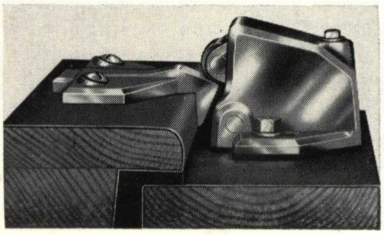


Jamison Frostop

Keeps doors from freezing shut with heater cables controlled by adjustable thermostat. Carries Underwriters' Laboratories label. Adjustable to meet service condition.

E-Z Open Two-Point Fastener

Adjustable tension assures tight seal, uniform pressure. Rugged, cast construction. Patented heavy duty design.



Sillseal Gasket

Flexible, abrasion and grease resistant, with no capillarity. Resilient, pliable, durable.

Note: The following specification will provide a Jamison Lo-Temp FS Door which meets with the majority of conditions to which a freezer door is subjected. However, it is recommended that the specification writer refer to page 12 where variations in construction for special requirements are discussed. When necessary, the following specification may be easily revised.

cold storage door for freezer rooms

Freezer room doors shall be equal to Jamison Lo-Temp Door. Insulation shall be 6″ thick, the same type as specified for freezer wall construction.

Reach-In Doors shall have high sills. Walk-In Doors shall have angle iron sills for embedding in concrete floor. Swing of door to be as indicated on drawings.

Door to be hung in frame with Jamison heavy duty ball bearing hinges, self and hand adjustable. Each door to have adjustable, easy-opening, two-point fastener with inside and outside release handles. Provision to be made for padlocking, with inside safety release to open door from inside when padlocked on outside.

Gasket to be sponge rubber 1¼″ wide with grease-resistant skin. Sill gasket to be sweeper type, dense tough rubber, resistant to grease and moisture, with no capillarity.

Doors shall be equipped with a Frostop heater cable on two sides, head and sill. Complete device to carry Underwriters' label and to be supplied assembled ready for connection to 110 Volt AC line.

Front of door and casing to be covered with No. 20 gauge stainless steel type 302, #4 finish, applied in full sheets. All joints shall be welded, ground and polished. All penetrating bolts to be sealed. All hardware to be heavy cast construction chrome plated.

If galvanized metal cladding and hot dipped galvanized hardware are desired, substitute the following for the paragraph in italics:

Front of door and casing to be covered with No. 26 gauge galvanized steel applied with locked and soldered seams. Metal on front of door in vertical panels. All penetrating bolts to be sealed vapor tight. All hardware to be heavy cast construction, hot dipped galvanized.

VESTIBULE UNITS

with Auto-Close Doors

Jamison Auto-Close Doors can be hung in the same frame with the cooler or freezer door to form a Vestibule Unit. This prevents excessive loss of refrigeration.

features

To withstand service under the most severe conditions, Auto-Close Doors are designed with special features that add strength and durability:

1¼" wood core enclosed in No. 14 gauge galvanized steel sheet, lower four feet; No. 20 gauge around remaining height. Metal riveted through heavy cold rolled steel shaft.

Jamison Two-Way Gravity Cams for automatic, positive closure.

JAMISON FROSTOP®

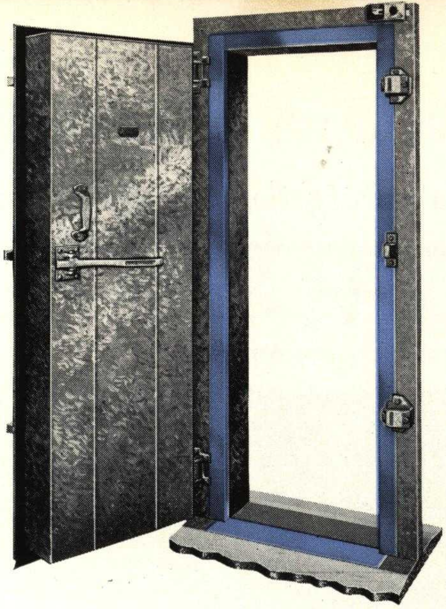
KEEPS DOOR FROM FREEZING SHUT

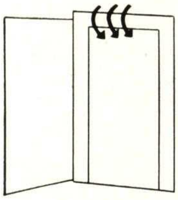
The operation of doors in low temperature service is often impaired by a build-up of ice on gasket contact areas of frames and sills. Jamison's practical solution to this severe problem is FROSTOP, an optional feature on Jamison doors of all types and sizes.

FROSTOP consists of thermostatically controlled heater cables embedded in the frames and sills where door gaskets make contact. FROSTOP prevents formation of frost or ice at gasket contact area even where temperatures are as low as —50°F.

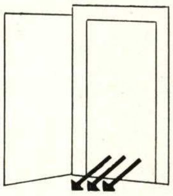
Jamison FROSTOP with terminal control box insures adjustable temperature settings, increasing effectiveness of FROSTOP for each particular installation. The new design provides a useful temperature range from 60°F to 120°F. High temperatures, which deteriorate gaskets, and low temperatures which would permit ice formation are thus avoided.

FROSTOP listed under Re-examination Service of Underwriters' Laboratories, Inc., available installed in casing of frame and sills of insulated doors from 1′6″ x 2′ to 8′ x 10′ for both swinging and horizontal sliding doors.

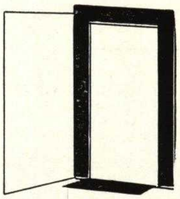




When door is opened, warm, moist air enters at top.



Cold, dry air rushes out at bottom.



FROSTOP prevents condensation at gasket contact area.

TYPICAL BUCK CONSTRUCTION

Jamison Cooler and Freezer Doors are shipped hung in the frame complete with all necessary hardware, ready to set in the wall.

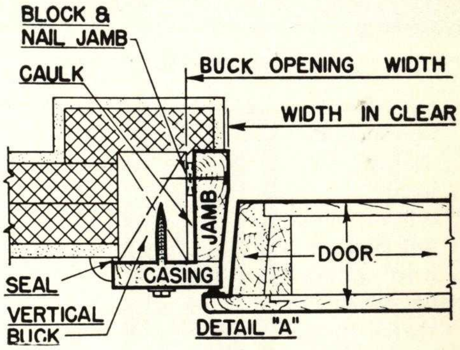
To determine the correct buck opening add to width and height dimensions—found in tables of sizes for cooler and freezer doors—the following dimensions:

	For buck opening width	*For buck opening height
	Add to width in clear	Add to height in clear
JAMOLITE DOORS		
Reach-In	4¼″	3½″
Walk-In	4¼″	2½″
COOLER DOOR SERIES "50"-FS		
Reach-In	4¼″	3½″
Walk-In	4¼″	2½″
FREEZER DOOR LO-TEMP FS		
Reach-In	4¼″	3½″
Walk-In	4¼″	2½″

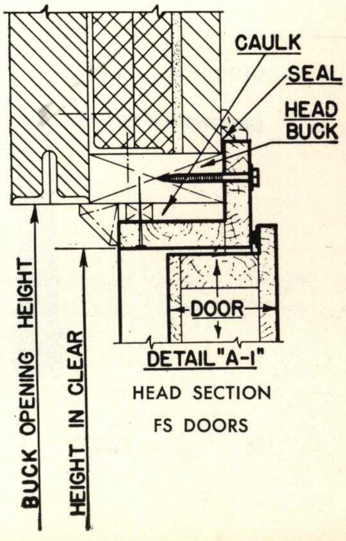
*Walk-in (angle iron sill) concrete floor
Reach-in (high sill)

The proper size of bucks is very important. Type of door, size and wall construction all affect selection of buck size. Wood or steel may be used. Wood bucks should never be less than 3″ x 4″ rough size for the smallest doors.

Complete and detailed information on buck construction will be furnished promptly by your Jamison representative.



JAMB SECTION
FS DOORS



HEAD SECTION
FS DOORS

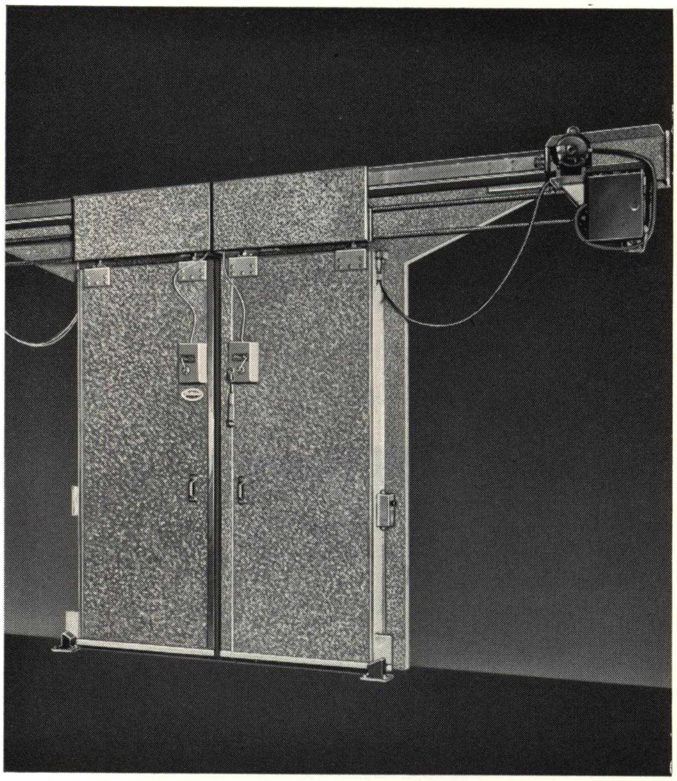
JAMISON COLD STORAGE DOORS

design and construction of FS doors to meet special conditions

feature	description	application
metal protection against abuse 	1. Kick plates 4′ high No. 10 gauge galvanized steel back, front and edges of door. 2. Frame protected 4′ high No. 10 gauge galvanized.	To protect against battering by trucks.
complete metal cladding 	All exposed portions of door and frame covered with stainless or galvanized sheet steel.	For doors exposed to severe conditions — weather, high humidity, condensation. Extreme conditions will require all seams be sealed Vap-r-tyt.
booted door 	1. 20 gauge galvanized metal cladding with soldered seams 30″ high. Boot completely encloses lower door and frame. 2. Full height protection applied in same manner.	1. For use in dairies, milk rooms or similar locations where wet floors are found. 2. For use where wash-downs are frequent.
automatic door closer 	Heavy duty mechanism consisting of specially wound steel spring fully enclosed. Galvanized or chrome plate.	Saves refrigeration by automatically closing door. Can be made inoperable during loading or unloading.

JAMISON

Electroglide®



ELECTRIC HORIZONTAL SLIDING DOORS

High volume traffic can now speed on its way in busy cooler and freezer operations with minimum loss of refrigeration. Electroglide is specifically designed to accelerate truck movement with its instant automatic opening and closing.

Rapid smooth opening — Spring suspension helps doors open easily and smoothly. Doors move "out" and "up", riding on level tracks with gaskets clear of sill and frame. Electroglide is made for both cooler and freezer use.

These other exclusive features mean dependable, smooth operation:

EXCLUSIVE CAM LOCK COMPRESSION SEAL—Cam lock cams doors "in" against frame and "down" against floor at all points.

SHOCK ABSORBER CHAIN LINK — reduces wear and tear.

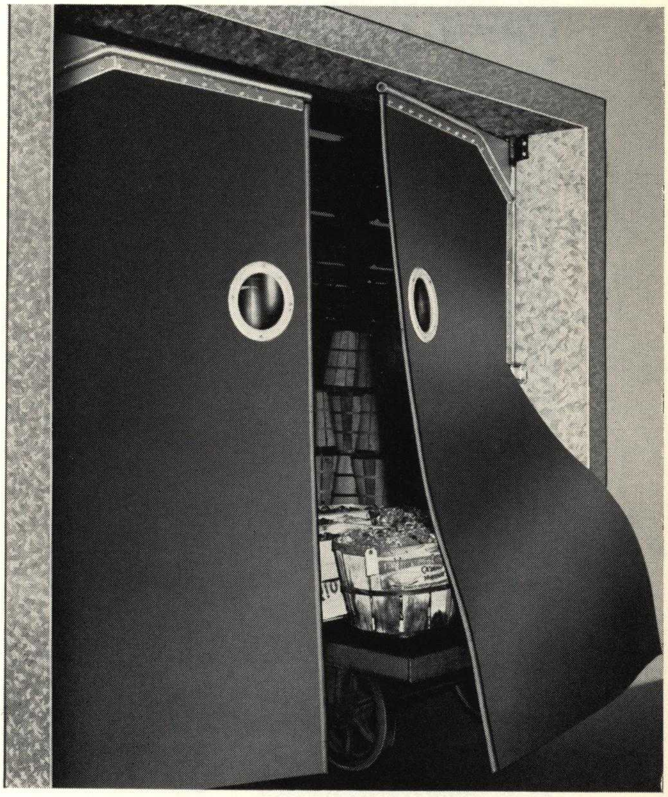
SPRING LOADED SUSPENSION — minimizes power requirements.

IMPROVED SAFETY EDGE — sensitive full height and full travel of door.

SEALED-IN-OIL REDUCTION GEAR — trouble-free operation, minimum maintenance.

JAMISON

flexidor®



RUBBER BATTEN DOORS

JAMISON Flexidor is designed to overcome the costly expense of door maintenance and damage caused by the use of fork lift trucks. Mechanization in warehousing and the necessity for more rapid handling of materials have resulted in the need for self closing doors that can withstand the constant battering of bump-open trucking, and at the same time provide adequate closure to maintain temperatures in refrigerated areas. Draft conditions through the doorway should be considered in selection of this type of door.

exclusive features

- Tough, "live" neoprene, ¼" thick
    - rip resistant
    - non-marking
    - resistant to grease and oils
    - flexible down to —40°F.
- Plastic peep holes
- Special Jamison hardware
- Door jamb guard
- Reinforced door noses
    - Special molded construction adds strength, assures good closure and fast opening, prevents wrap-around on impact.

NEW UNI-FORM SHELVES

STAINLESS STEEL TYPE SD OR GALVANIZED STEEL TYPE GD

Low initial cost plus the new sanitary NO-TIP FLAT SURFACES make this design in shelving outstanding. Excellent for storage of small containers as well as for bulky food stuffs, there's never a danger of spillage. This new shelving is unsurpassed for more productive, better organized storage in refrigerated spaces and storage rooms.

CONDENSED SPECIFICATIONS — UNI-FORM Shelves

- Self-Supporting Shelving. #16 gauge type #302 stainless steel with #4 mill finish or #16 gauge galvanized steel.
- 1" wide die-formed channel shaped slots with integral 5/16" vertical flange reinforcement.
- Widths from 12" to 2'6". Lengths from 2'6" to 7'6". (Normal width is 24").
- Entire shelf perimeter flanged and hemmed to provide double pressed thickness.
- Vertically adjustable brackets. All shelves readily removable. Self-leveling floor flanges.
- Posts of stainless steel or galvanized steel.
- All Shelving approved and listed by the National Sanitation Foundation.

MARKET FORGE MOBILE SHELVING

For sanitary and heavy duty use in the loading, transporting and storing of foods, utensils, pots and pans, racks and all general storage requirements in the institutional field. Combines all the features of Market Forge self-supporting shelving with quiet mobility. Facilitates fast clearing and cleaning of refrigerated spaces and expedites transporting of food from receiving to storage areas.

BASIC SPECIFICATIONS

- 3 shelf types available:

UNIFORM STAINLESS STEEL OR GALVANIZED UNITS

#16 gauge, one piece type 302 stainless steel or galvanized shelves. Perimeter flanged down, hemmed back full depth with horizontal flanged reinforcement. 1″ slots spaced 2″ on center with 5/16″ vertical flanges. Stainless steel (or galvanized) posts and wedge fit brackets at shelf corners.

SLATTED GALVANIZED UNITS

1½″ by 1½″ by ⅛″ high carbon angle frame. 1″ slats flush riveted 1″ apart. Malleable cast iron wedge fit brackets hot dipped galvanized. Galvanized posts.

- All mobile equipment bears the National Sanitation Foundation seal of approval.
- Tubular post construction. Easy bracket adjustment facilitates removal, addition or adjustment of shelves.
- Heavy duty special Market Forge casters — neoprene tired, 5″ dia. with roller bearing wheels and ball-bearing swivels. (Two casters equipped with brakes as standard equipment).
- Bottom shelf available in solid or slotted design.
- Wide range of models and sizes available, each of which is designed to meet the specific requirements of food service handling and storage. Consult the convenient reference table below. Three, four, and five shelf models available.

HOW TO ORDER MOBILE SHELVING

Order Mobile Shelving by combining the TYPE as shown in the left hand column with the MODEL NUMBER shown in the table below. For example, SDM-4821-4

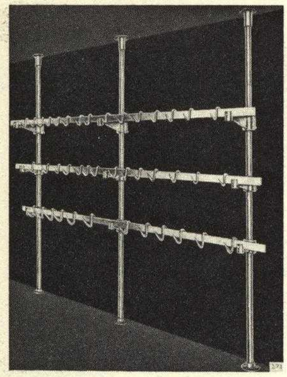
SDM - 48 21 - 4

TYPE LENGTH WIDTH SHELVES HIGH

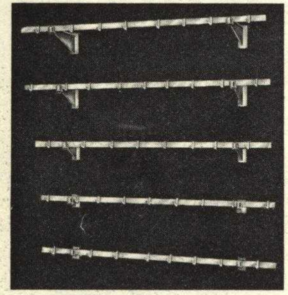
			MODEL NUMBERS		
LENGTH	WIDTH	HEIGHT	3 SHELVES HIGH	4 SHELVES HIGH	5 SHELVES HIGH
36″	21″	66″	3621-3	3621-4	3621-5
48″	21″	66″	4821-3	4821-4	4821-5
	27″	66″	4827-3	4827-4	4827-5
56″	21″	66″	5621-3	5621-4	5621-5
	27″	66″	5627-3	5627-4	5627-5

OPTIONAL ACCESSORIES shall be furnished if specified: • Back stop ledges. • Revolving bumper guards on casters, non-marking gray rubber, 5″ dia. steel discs with sloping upper surface. • Special length and widths available.

MARKET FORGE STORAGE RACK EQUIPMENT



EXPANSION TYPE POST-TO-CEILING
Type G-RC (Galv.) or Type S-RC (St. St.)



WALL MOUNTED
Type G-RW (Galv.) or Type S-RW (St. St.)

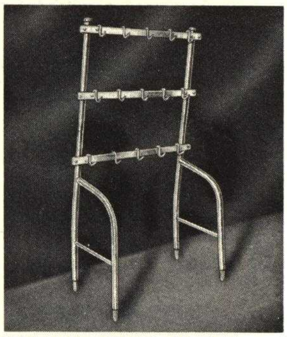
MEAT HOOK RACKS

RUGGEDLY BUILT TO HANDLE ALL LOADS Market Forge Meat Hook Racks are sturdily constructed of high carbon steel, hot dipped galvanized after fabrication. Also available in all stainless steel. Shipped knocked down, easily assembled.

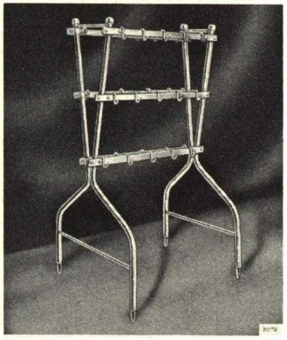
EXPANSION TYPE POST-TO-CEILING MODELS. Sturdy, tubular posts allow easy vertical adjustment and removal of brackets and rails to meet every changing need. With the spring-loaded expansion fittings, posts are rigidly and safely expanded between floor and ceiling. Rails are available for light or heavy duty use with four sizes of tinned or stainless steel hooks. Racks are furnished with standard components of three rails. Six sizes of projection type brackets are available from 1″ to 12″.

SELF-SUPPORTING SINGLE AND DOUBLE UNITS. Where ceiling construction will not permit use of post-to-ceiling rail racks, the self-supporting meat hook racks meet all the requirements for quality, low cost installation. Rails are vertically adjustable. Welded tubular post frames with adjustable bullet feet. Standard unit 4′ long with three rails and 15 hooks.

WALL MOUNTED. Wall Mounted Meat Hook Racks. Consisting of rails and projection type brackets. Easily fastened, for efficient space-saving installation.

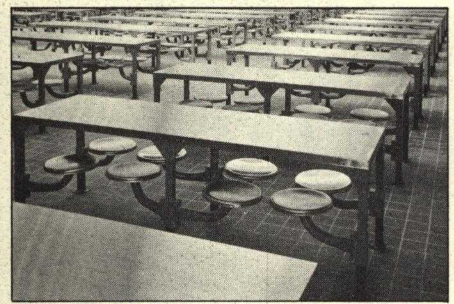


SELF-SUPPORTING SINGLE UNIT
Type G-R (Galv.) or Type S-R (St. St.)

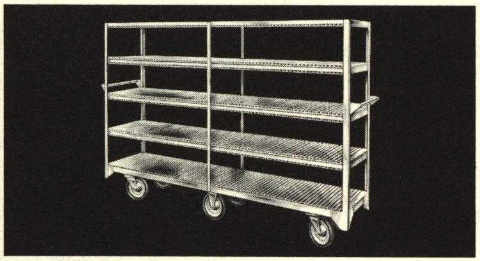


SELF-SUPPORTING DOUBLE UNIT
Type G-R (Galv.) or Type S-R (St. St.)

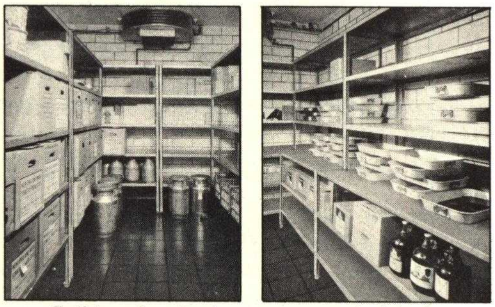
DETAILED SPECIFICATIONS ON FOLLOWING PRODUCTS AVAILABLE UPON REQUEST



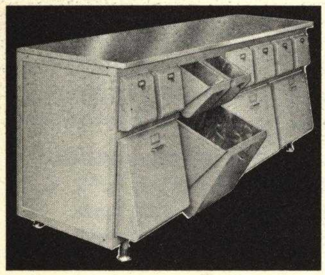
Mess Hall Tables with Swing-out seats —For heavy duty institutional use.



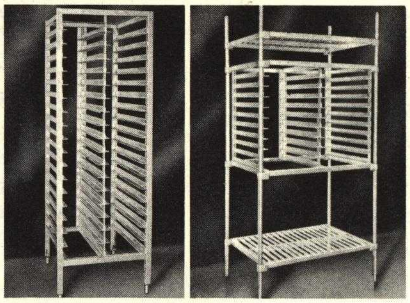
Stainless Steel Tray Truck. For ease in stacking and handling plastic and steel trays — wide range of sizes — 200 to 300 tray capacity.



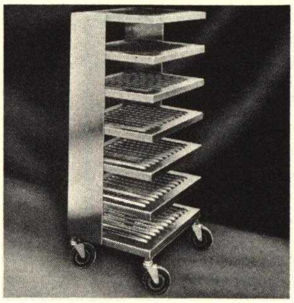
Solid galvanized storeroom shelving, upright and counter sections.



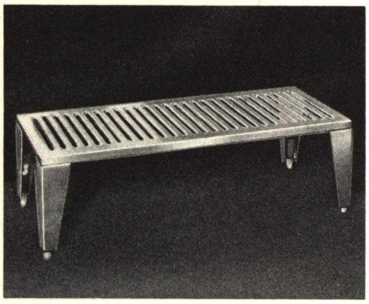
Bins and counters for dry and bulk storage. Heavy duty, vermin proof, galvanized or stainless steel.



Platter racks. Various sizes, galvanized and stainless steel.



Cantilever type trucks. Stainless steel die-formed shelves, sanitary, rugged design.



Dunnage Racks. For storage or root vegetables, various types and sizes.

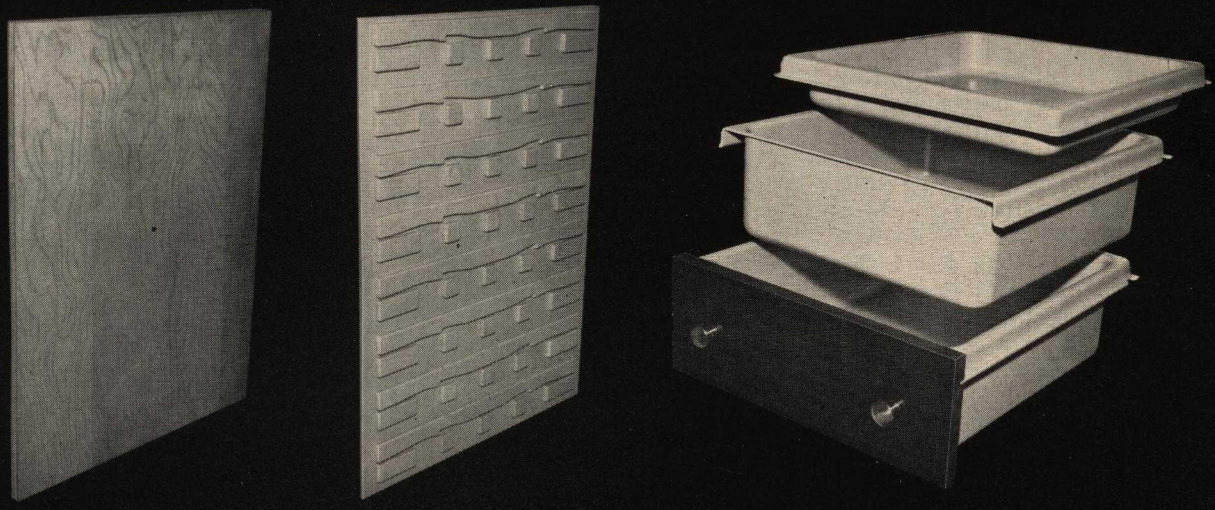
Stratapanel STORAGE SYSTEM

PLASTIC PANELS WITH FORMED-IN SLIDES SUPPORT MODULAR PLASTIC DRAWERS



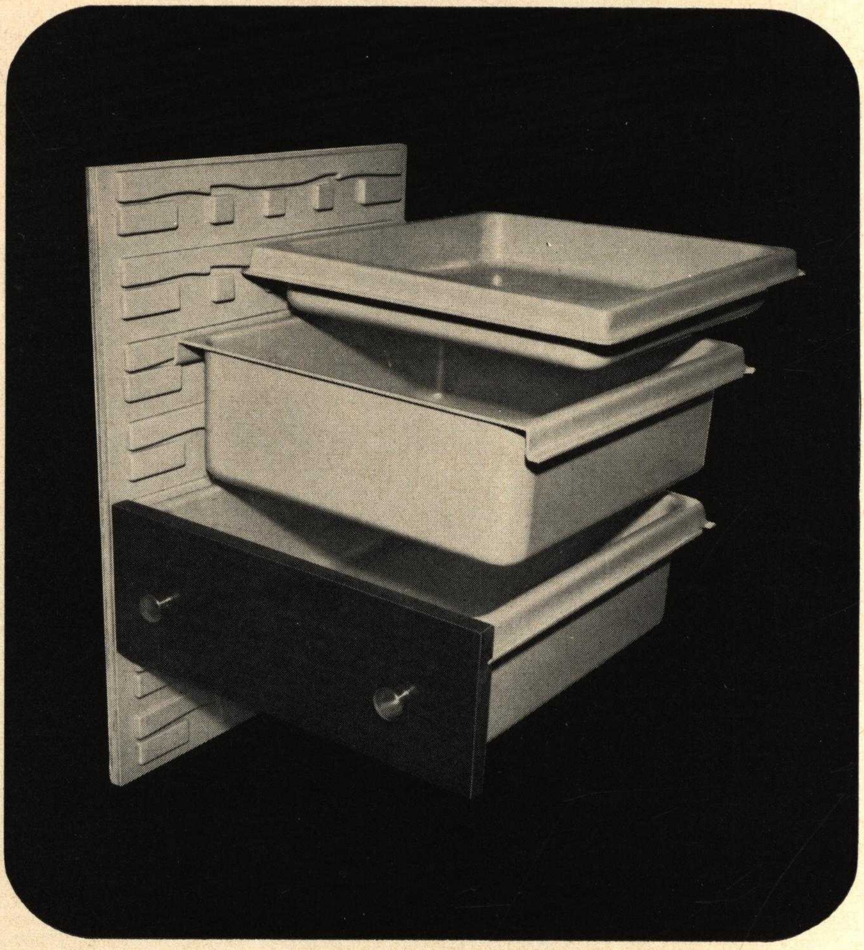
Robert A. Schless & Company, Inc., Elizabethtown, Essex County, New York

FOR ALL BUILT-IN STORAGE, THE STRATAPANEL STORAGE SYSTEM OFFERS SIMPLE, COST-SAVING INSTALLATION, LOW MAINTENANCE AND LIFETIME DURABILITY.

STRATAPANEL combines two essential parts:

THE SLIDE-PANEL, a thin, strong plastic panel with molded-in shelf supports, drawer slides and stops on a 3″ module.

MOLDED DRAWERS in ten modular sizes, from sixteen to forty-six inches wide, 3″ and 6″ high.



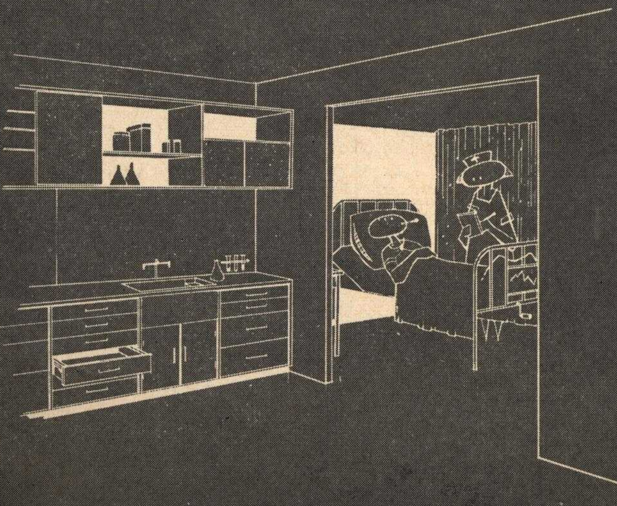
SHELVES MAY BE INSERTED IMMEDIATELY ABOVE DRAWERS, CREATING A FLEXIBLE, INTERCHANGEABLE SYSTEM OF CLOSED AND OPEN STORAGE THROUGHOUT THE BUILDING.

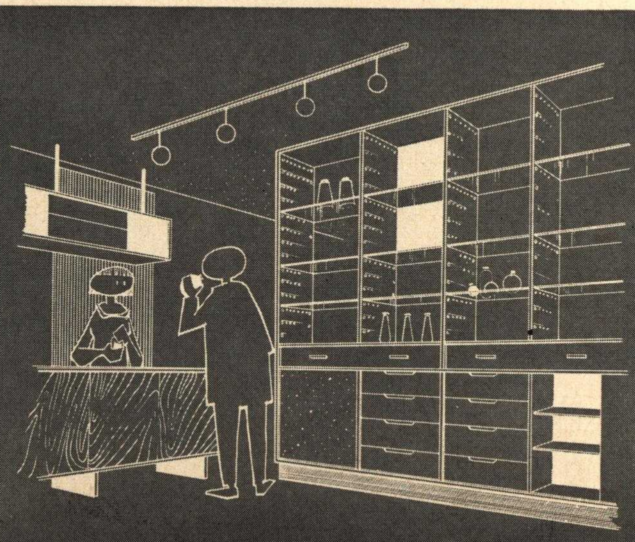
INSTALLATION is merely a matter of cementing the panels to any backing, then inserting drawers and shelves.

BECAUSE OF THEIR ENGINEERING, THE DRAWERS SLIDE ON THE PANELS EXTREMELY SMOOTHLY. THIS GLIDING ACTION WILL NOT PERMIT THE DRAWERS TO BIND, REGARDLESS OF HUMIDITY OR CLIMATE. THERE IS ABSOLUTELY NO NEED FOR CENTER-SLIDES, FRAMING OR METAL GUIDES.

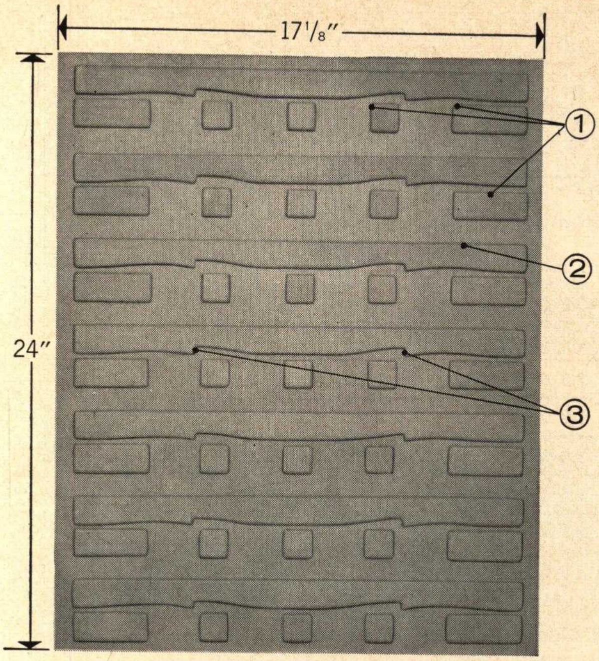
FOR BUILDERS Stratapanel offers labor-saving speed and adds the sales-appeal of smooth, snag-free storage. FOR INSTITUTIONS, it offers cleanliness, low maintenance and standardization. In THE FACTORY, the rugged durability permits drawers to double as tote-boxes for machinery parts. IN SHIPS, BATHROOMS AND CELLARS it results in a stable, moisture-free installation, free from rust, warpage or oxidization. In AIRLINERS and TRAILERS, it combines lightness with high impact strength. IN RETAIL STORES, drawers and shelves may be frequently interchanged to add a new flexibility to sales displays.

BECAUSE IT IS A VERSATILE, SIMPLE SYSTEM, STRATAPANEL BEST ANSWERS THE CONTEMPORARY DEMAND FOR LOW-COST, FLEXIBLE STORAGE. ITS MOLDED-IN ACCURACY HAS CHANGED THE BUILT-IN FROM A CUSTOM JOB TO AN INTEGRAL PART OF THE CONSTRUCTION PROCESS.





STORAGE UNITS



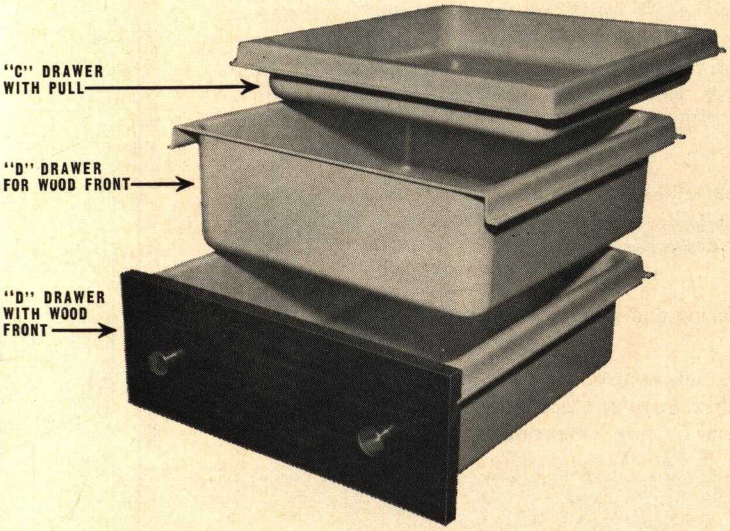
slide-panels

design: A molded plastic sheet 24″ high, 17⅛″ wide which is cemented to a case interior or plywood support. Its molded-in drawer-slides (1) and shelf-supports (2) permit shelves to be inserted just over drawers, creating complete interchangeability of drawers and shelves. Drawer-stops, (3) prevent complete removal of drawer; lifting front of drawer releases stop.

installation: Strong contact cement included with panel is spread on panel and any backing material such as wood, plywood, plaster, pressed board, plasterboard. The panel is pressed in place by hand, forming strong, permanent bond. Drawers and shelves are immediately inserted and loaded. Hiding its supports, the panel allows use of G1S or fir plywood backing.

data: The panel has eight drawer-slides on 3″ centers, and will take any arrangement of 3″ and 6″ drawers, and 3″, 6,″ 9″ and 12″ wood fronts. Panels are pre-marked in 3″ increments for cutting into smaller sizes. For added height, one panel is added above another; continuity of slide spacing is maintained. Panels are same soft beige as drawers. Material is biaxially oriented styrene on high-impact styrene-butadiene copolymer.

properties: Tension, 3200–4000 PSI: shear, 5700–7200 PSI: izod notched impact, −40 F. = 0.4–0.6, 0 F. = 0.5–0.8, 73 F. = 0.7–1.0: Rockwell, M20–M25: water absorption, 24 hrs. 0.12%: thermal coeff. of expans. IN/IN/DEG. F. = .00004: Sp. Gr. 1.05.



plastic drawers

design: Rugged one-piece molded construction of high-impact plastic with integral slides. All corners are rounded, all surfaces are completely smooth, without notches or grooves, for cleanliness and easy maintenance. Soft beige color.

two styles: "C" drawers have an integral pull, need no hardware. "D" drawers take wood fronts.

two heights: 3″ and 6″. 3″ drawer for clear leg room under desks, will hold inkwell. STRATAPANEL gives full use of vertical space, without the wasteage of a frame construction.

five coordinated widths: Drawers are 16″, 22″, 28″, 34″, 46″ wide. The wider drawers afford very economical bulk storage. Drawer widths allow economical use of stock plywood sizes and a variety of case detailing (see Page 4).

structure: Drawers are high-impact styrene-butadiene copolymer. Drawer body is prestressed (tension) in molding, and supported by stiffening beam sections of top edge for heavy loading. Corner radii control horizontal deflection to maintain smooth sliding on rough installations.

wood fronts are LC Birch or Walnut, unfinished. Widths are same as for drawers. Four heights: 3″, 6″, 9″, 12″. For economical storage of deep objects, 9″ and 12″ fronts are combined with 6″ drawers. Glue is supplied with each front for attaching to "D" drawer.

to order panels:

Each slide-panel is 24″ high, 17–1/8″ wide, 1/16″ thick. It holds eight 3″ drawers or four 6″ drawers or combinations totaling 24″. For one 24″ high case, two panels would be needed. For a 12″ high case, one panel, cut with shears along moldule line on panel. For a closet or installation over 24″ high, one panel is placed above another. Every panel is complete with one 2 oz. can of contact cement for immediate installation.

To figure number of panels needed:

ADD TOGETHER DRAWER HEIGHTS AND DIVIDE BY 12.

to order drawers:

For use in closets or behind doors, order "C" drawer with integral pull (FIG. 2). For use with wood fronts, order "D" style (FIG. 3). 6″ high "D" drawers combine with 9″ and 12″ high fronts for storage of objects up to 8–5/8″ and 11–5/8″. FROM WIDTH AND HEIGHTS ON "ORDERING DATA" CHART, FIND MODEL AND RETAIL PRICE.

to order fronts:

From width and height on chart, find Model Number and retail price. Specify Birch or Walnut. Fronts are L.C., 5 ply, select, unfinished, complete with cement for attaching to "D" drawers.

installation:

Spread panel-cement on backing and panels; press panels to backing; slide in drawers and shelves.

STRATAPANEL permits extremely simple, economical detailing, (FIG. 5, 6, 7). 3/4″ supports permit economical use of stock materials, allow 1/4″ machining, (see line 3, chart). Modular outside dimensions (line 4, chart) are obtained by sections shown in FIG. 8. Panels take shelves up to 3/4″ thick.

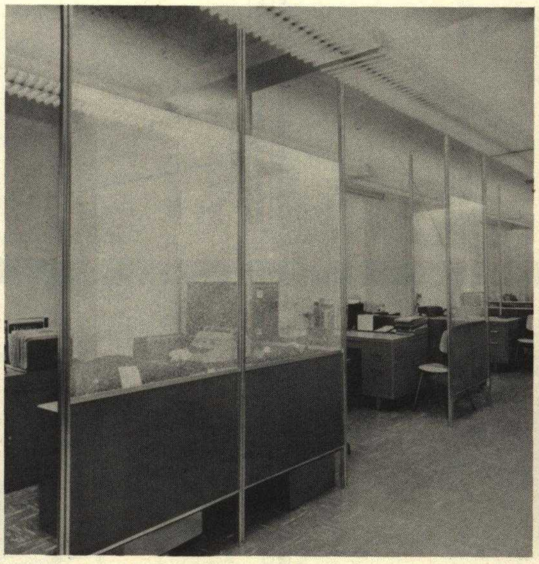
The **OMNI SYSTEM,** with its various accessories, forms flexible and easily installed units. Basic components are made of quality extruded aluminum, anodized to give a permanent finish in many colors.

Shelves, cabinets, lamps and other accessories are available in a variety of finishes.

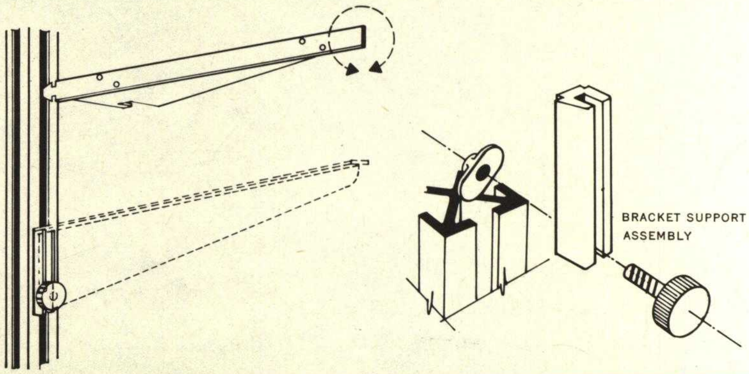
Omni units do not depend on walls for support, but rely on a simple pressure device between floor and ceiling, and can be modified or moved with a minimum of labor.



OMNI

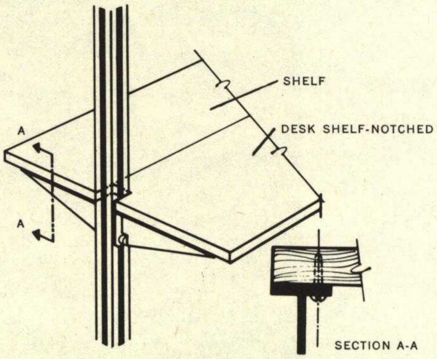
the universal space-maker system

Brackets may be located anywhere on the pole. Position bracket support assembly and secure. When properly assembled the special nut will turn and lock behind the flanges of the pole slot as the screw is tightened. Insert keyed end of bracket into pole, rotate as shown to engage slot and drop over bracket support assembly.



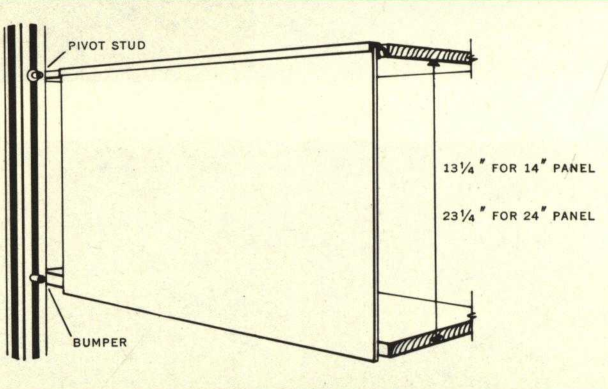
BRACKET SUPPORT ASSEMBLY

Shelves are positioned flush with edge of bracket flange, and secured with wood screws. Section A-A. Desk shelves are notched and assembled in the same manner.



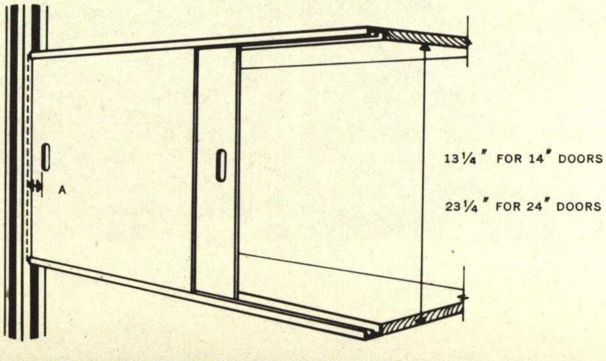
SHELF
DESK SHELF-NOTCHED
A
A
SECTION A-A

Flip doors are hung on pivot studs. Press panel downward to snap fit into position over pivots. Pivot studs and bumpers are assembled to sides of pole with lock nuts.



PIVOT STUD
13¼" FOR 14" PANEL
23¼" FOR 24" PANEL
BUMPER

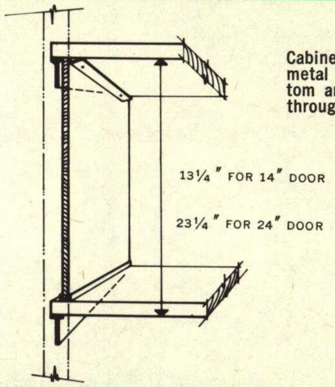
Sliding doors are installed between shelves. Fasten bottom track and set in both doors. Place door with wider space at "A" to left side of front track as shown. Slide both doors to one side. Locate top track and fasten screws. Slide both doors to opposite side and place remaining screws.



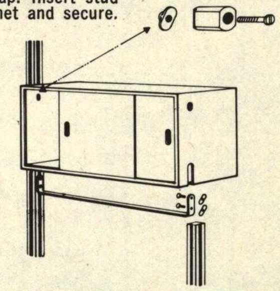
A
13¼" FOR 14" DOORS
23¼" FOR 24" DOORS

Structural Products, Inc.

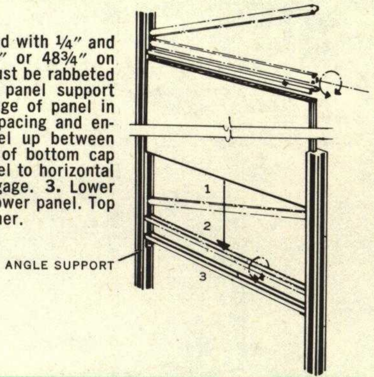
End panels are placed between shelves, usually in combination with flip or sliding doors. Locate and fasten channel to bottom shelf. Set-in panel and bring top edge against flange of bracket as shown. Fasten angle strip to top shelf.



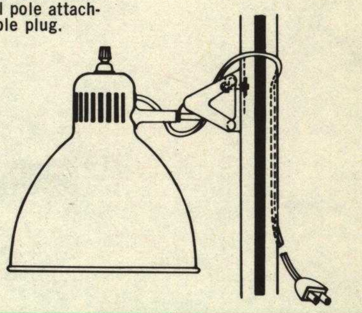
Cabinets are all installed in the same manner. Fasten metal strap between poles as shown. Groove in bottom and side of cabinet engages strap. Insert stud through slot in upper corner of cabinet and secure.



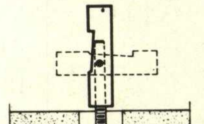
Panel cap and divider channels are used with ¼″ and ¾″ panels between poles spaced 32″ or 48¾″ on center. Vertical edges of ¾″ panels must be rabbeted to fit pole slots. Locate and fasten panel support angles and install pole. Insert one edge of panel in slot. Place next pole at proper o.c. spacing and engage other edge of panel. Slide panel up between poles and hold. **1.** Insert keyed end of bottom cap channel into pole slots. **2.** Move channel to horizontal position and rotate, as shown, to engage. **3.** Lower channel to top of support angles and lower panel. Top channel is installed in the same manner.



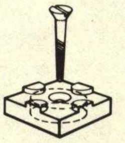
Lamps are positioned on pole and secured with lock nuts. Remove Academy plug and thread cord down slot at back of pole. Cord will by-pass all pole attachments. Cut cord to length and re-assemble plug.



Type 2 aluminum top adapter, toggle, and base pedestal are recommended for permanent and heavy load installations. Bore ⅝″ diameter hole in ceiling for adapter. Cut 1⁵⁄₁₆″ diameter hole in floor tile for aluminum ring with type 2 base pedestal without screw. Non-skid rubber ring and type 2 base pedestal may be fastened to finished floor surface with screw as shown.

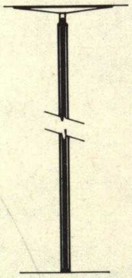


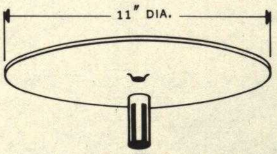
TYPE 2 ALUMINUM TOP CONNECTOR AND TOGGLE.



TYPE 2 ALUMINUM BASE PEDESTAL.

Ceiling discs are used with hung ceilings that cannot withstand the spring pressure of the standard pole assembly.





Drawers may be placed side by side on either plain or notched desk shelves. Turn shelf upside down and fasten mounting plate as shown in steps **1** and **2.** Slide drawer over ends of plate.

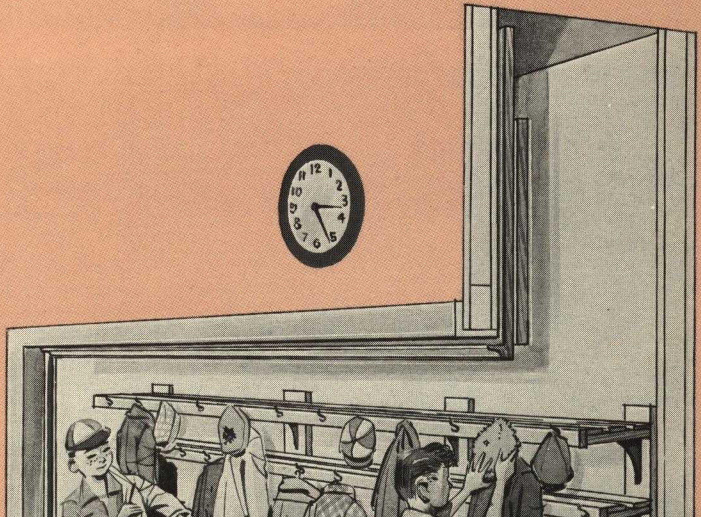
or tackboard, or regular wood surface.



OPEN ***IT'S A WARDROBE***

with any special storage features you desire.

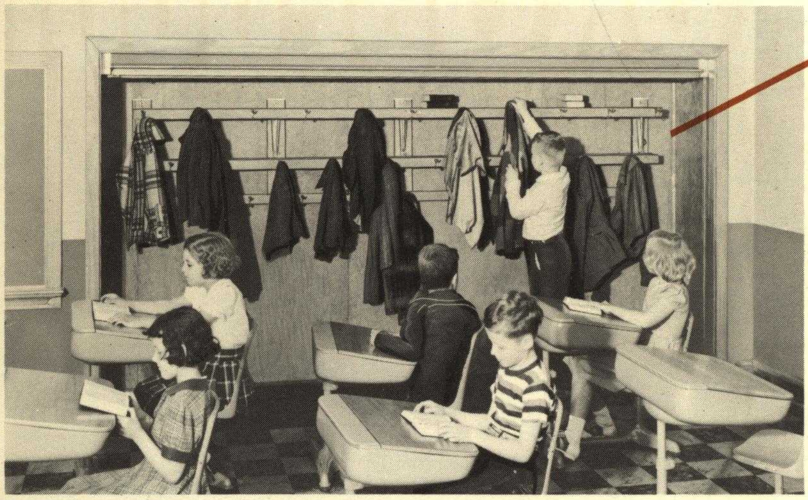
BARBER-COLMAN COMPANY • ROCKFORD, ILLINOIS

THE MARK OF QUALITY

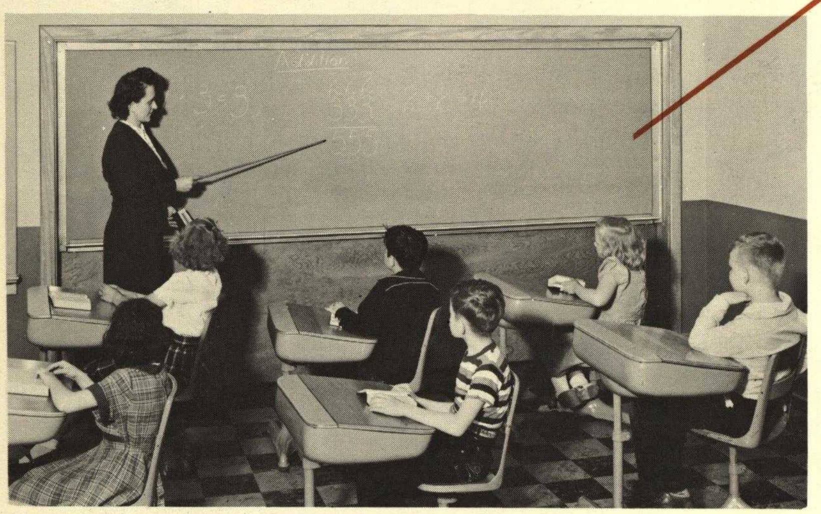
BARBER COLMAN

BARBER-COLMAN
WARDROBEdoor

it's all vertical! DESIGNED FOR FLEXIBLE CLASSROOMS



OPEN . . . . the Barber-Colman WARDROBEdoor allows the pupil plenty of "elbow room" in an opening completely free of pivots, hinges and other hardware. Students here at the St. Paul's Lutheran School, Rockford, Ill., have easy access to bookshelves and coatracks. And teacher has a full-view opening which affords complete control of the "coatroom rush". Door interference with clothing and rubber footwear is eliminated.



CLOSED . . . . the new Barber-Colman WARDROBEdoor offers a wide, unbroken chalkboard complete with chalk rail. Accurately counterbalanced, the WARDROBEdoor runs smoothly and quietly on nylon rollers — it's easy to operate for pupil and teacher alike. Architects Hubbard and Hyland needed no aisle in this classroom because the *all vertical* WARDROBEdoor does not take up aisle space or protrude into the wardrobe interior.

. . . suggested by architects and designed by Barber-Colman engineers, the upward opening WARDROBEdoor has solved the cloakroom problems in school planning with *all vertical* operation.

Saves floor space . . . the WARDROBEdoor opens straight up . . . saves an average 6" of horizontal depth. This space saving means extra room area or lower cost per classroom.

Adds working wall space . . . no wall space is wasted as in the case of non-vertical doors. The wide, unbroken flat surface can be equipped (by others) with chalkboard, tackboard, or a combination.

Ventilation . . . the WARDROBEdoor closes to within 4" of the floor, allowing an intake space for air currents. This space is adjustable depending on the ventilation problem.

Construction . . . standard WARDROBEdoor sections are flush with honeycomb core and retempered hardboard facing — results in a lightweight, rigid section with excellent paint holding qualities. Flush sections with birch or red oak veneers are available at extra cost. Hardwood shelving and brass finish coathooks are furnished and installed as standard with the WARDROBEdoor; they can be omitted and special storage arrangements with hangers or cubicles used.

Easy working . . . the *all vertical* WARDROBEdoor glides up smoothly and quietly on nylon rollers in continuous steel tracks. Counterbalancing is by torsion spring, carefully designed to the exact weight of each door for perfect "floating balance." Springs are engineered for durability and safety with a continuous shaft and a special spring lock device. Each section is suspended by two separate airplane type cables with high tensile strength. The bottom half of the door travels at twice the speed of the top so that the two sections clear the opening simultaneously.
Electric operation is available.

Maintenance . . . the Barber-Colman WARDROBEdoor makes the wardrobe the easiest part of the classroom to clean . . . the floor and corners are absolutely free of pivots, hinges or any hardware. Upkeep and adjustment cease to be problems as students can't swing on the door.

Requirements . . . standard 6' high WARDROBEdoor requires only 9'6" ceiling height and 6" sideroom. Door height may be increased to 6'8" max. or reduced to 5'0" min.; required ceiling height varies with door height. 24" backroom required full height. If chalkboard is used, max. weight is 2.5 pounds per sq. ft., max. thickness 1/4". Standard section thickness 1 3/4". For requirements other than standard, consult factory.

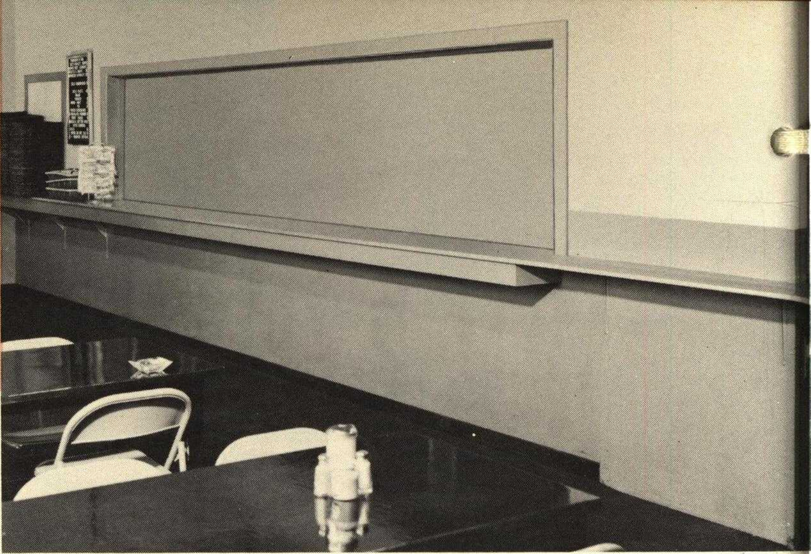
SPECIFICATIONS — All wardrobes shown on the plans shall be equipped with two piece vertically operated doors so designed that the lower section moves at approximately twice the speed of the upper section to arrive at the fully open position simultaneously, to minimize required headroom. Doors shall be spring counterbalanced, equipped with a positive safety device to hold door if required, and mounted on nylon rollers running in continuous steel tracks. Doors shall be Barber-Colman WARDROBEdoors. Chalkboard or tackboard by others.

OVERdoor Division of BARBER-COLMAN COMPANY

BARBER
COLMAN

COUNTERdoor



The Barber-Colman COUNTERdoor is a low cost all vertical, spring counterbalanced closure designed primarily for lunchroom and cafeteria serving counters. In design, operation, and construction it is similar to the WARDROBEdoor, however, it consists of only one vertical rising section. Standard flush sections are honeycomb core with hardboard facings.

it's all vertical!

When closed the door provides a good sound barrier between serving kitchen and adjoining dining or meeting areas. Standard sizes — up to 16′ wide and 4′ high. Headroom required above counter — twice door height plus ¼″. For additional information consult our representative.

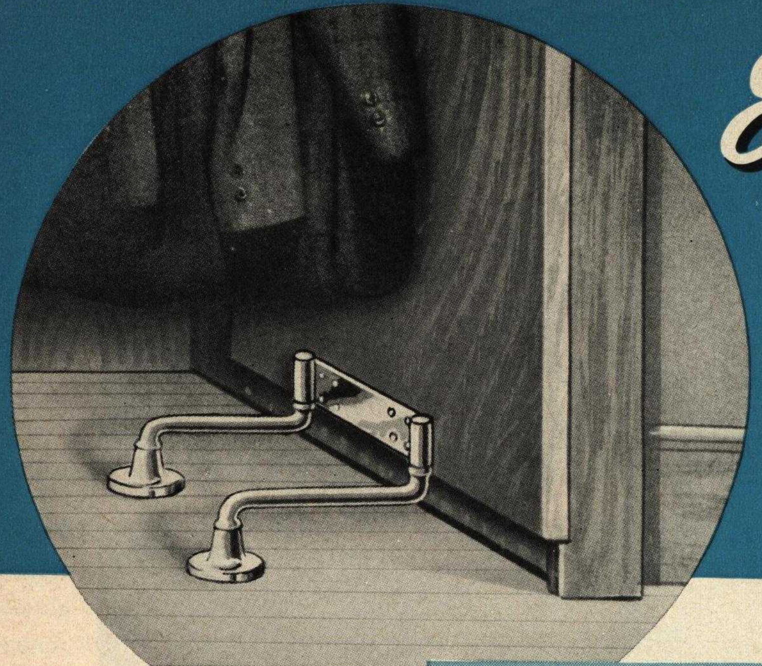
Evans HINGES

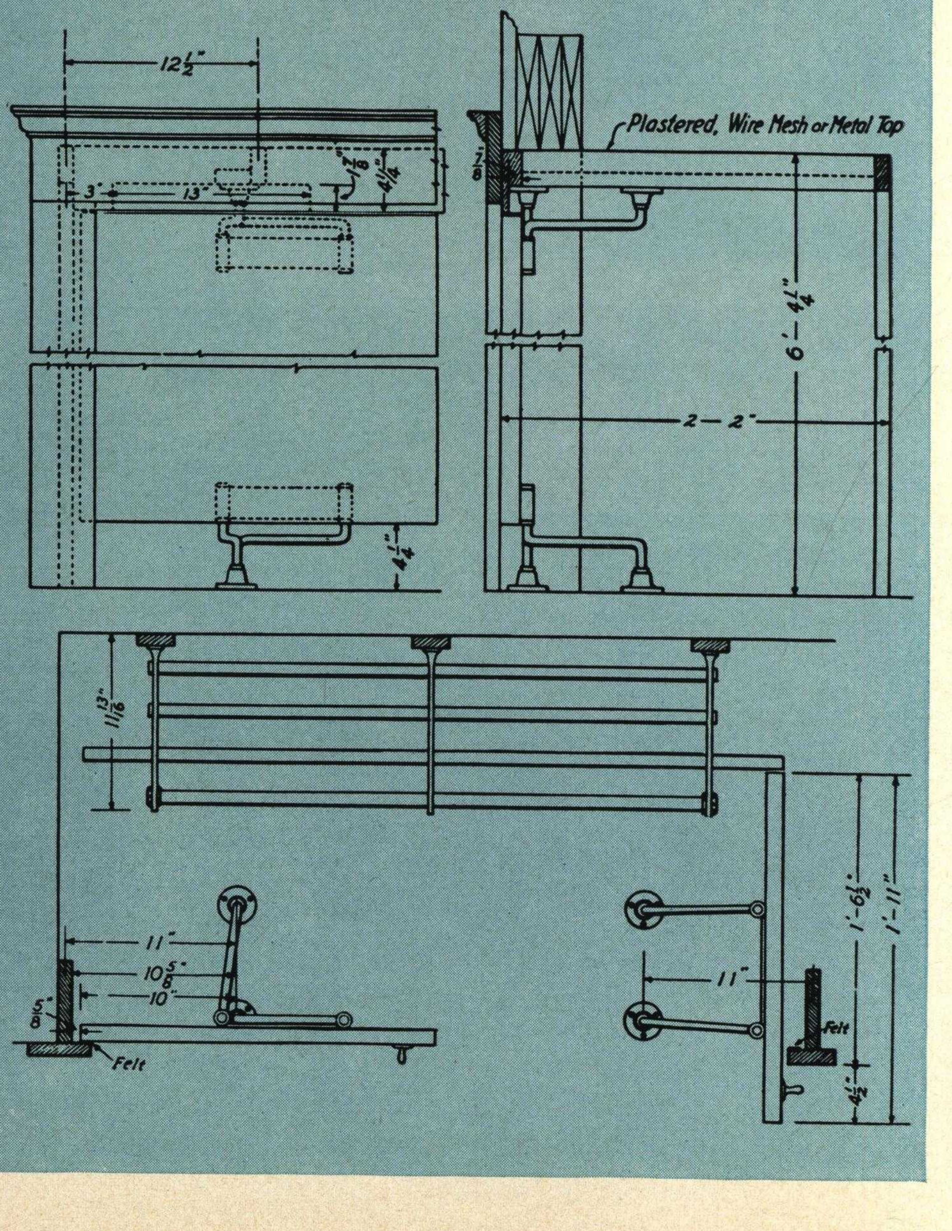
Architects in the United States and Canada have been specifying Evans Vanishing Door Wardrobe Hinges for over 40 years. This hardware is easily installed and maintained; is economical in original cost and needs no adjustments over a long period of time. It is designed and manufactured by a company having over 50 years of practical experience in the manufacture of complete millwork, cabinets, wardrobes and doors to architect's specifications. The standard coat and hat rack consists of steel brackets, 1 metal hanger rod and 7 wood rods. Garment hangers can be furnished with either removable or non-removable hooks.



FLOOR TYPE CB-7

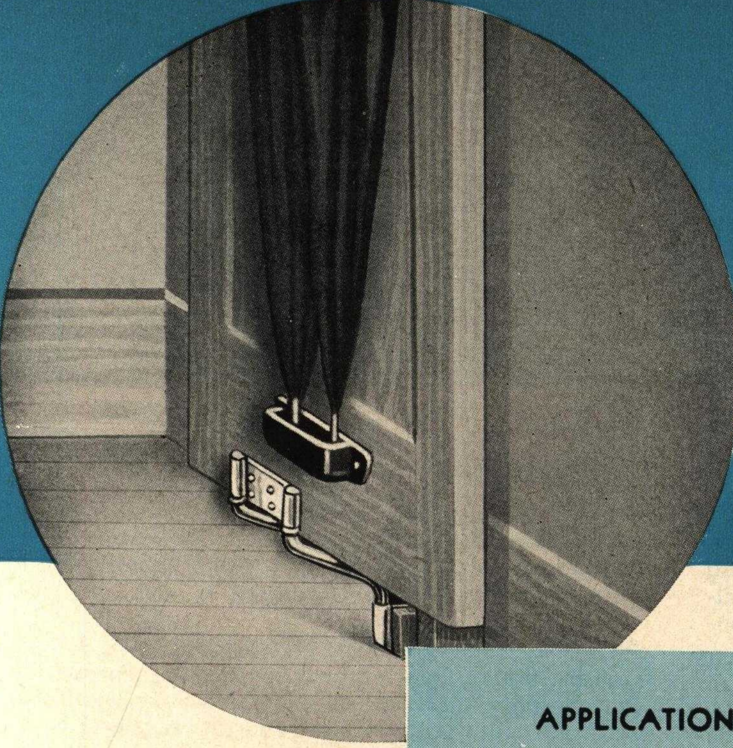
Floor Type CB-7 hinges are designed for individually operated, floor mounted, receding wardrobe doors. Doors can be set with a floor clearance up to 4¼″. The CB-7 hinge swings the door, when opened, back into the wardrobe 18½″, thus leaving but 4½″ of the door projecting past the trim on 2′0″ doors, which is necessary for door pulls. Wider doors will have correspondingly greater projections.

APPLICATION OF TYPE CB-7 (FLOOR TYPE) HINGE



Evans

WARDROBE HARDWARE



SPECIFICATIONS

Note: Words or phrases in parentheses are selective.

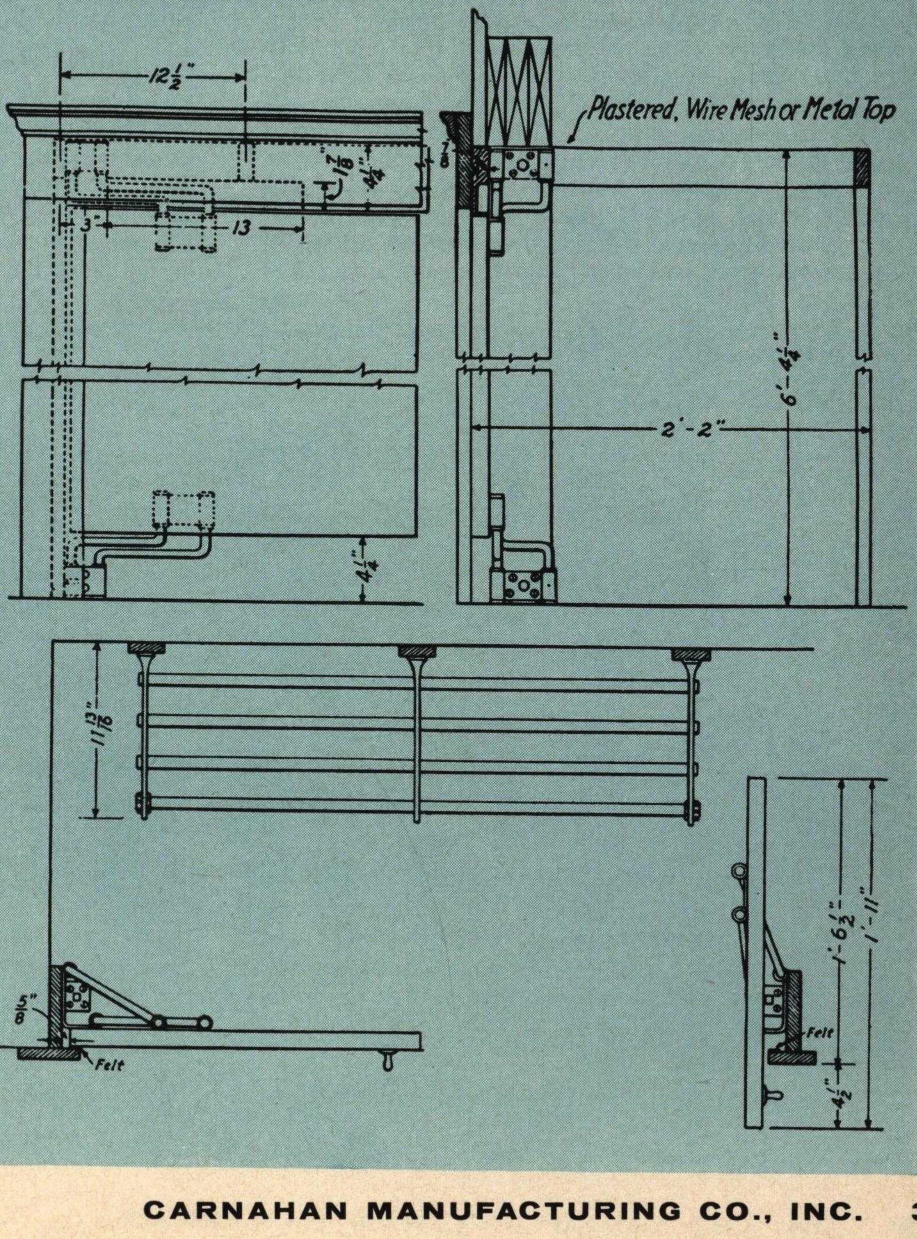
Wardrobe hinges shall be Evans Vanishing Door Wardrobe Hinges (Type CB-7) (Type W), dull black finish, complete with screws, felt strip-type door bumper and steel stop for top of doors, as manufactured by Carnahan Manufacturing Company, Inc., Loogootee 1, Indiana.

Coat and hat racks shall be Evans Sanitary Racks (3'0" long for 4'0" wardrobe sections) (4'0" long for 5'0" wardrobe sections) consisting of 3 steel brackets with bolts, 1 metal hanger rod and 7 wood rods. Garment hangers shall be 15" wood hangers with (open removable) (closed non-removable) hooks. Eighteen garment hangers required for 4'0" wardrobe sections, twenty-four for 5'0" sections.

JAMB TYPE W

Jamb Type W hinges are designed for individually operated, jamb mounted, receding wardrobe doors. Doors can be set with a floor clearance of 4¼" MINIMUM up to any height desired. This hinge swings the door, when opened, back into the wardrobe 18½", thus leaving but 4½" of the door projecting past the trim on 2'0" doors, which is necessary for door pulls. Wider doors will have correspondingly greater projections.

APPLICATION OF TYPE W (JAMB TYPE) HINGE



Evans

VANISHING DOOR WARDROBES

Architects everywhere specify EVANS wardrobes, hinges and equipment. The thousands of installations throughout the United States and Canada testify to the practicability of EVANS wardrobes.

DESCRIPTION

ventilation

Ventilation is ordinarily provided by setting the doors up off the floor so that the air from the room is drawn into the wardrobes under the doors, passes upward through the wardrobes and through the vent mesh ceiling into the space above the wardrobes which is connected to the vent stacks.

simplicity

Simplicity was the predominant idea in designing the hinges; hence a hinge consisting of double pivoted arms, with no tracks, guides, rollers, or other intricate mechanism that might cause the doors to stick or bind, or to require repairs or adjustments from time to time.

There is no adjustment provided for the hinges, as once they are properly installed (which is easily accomplished) there is no way for them to get out of adjustment.

Each door is opened independently of the others and with such quietness and ease that simultaneous operation of all doors from a master door, through the use of complicated rods and levers, is unnecessary.

arrangement

Wardrobes illustrated in this catalog are all standard 12′0″ wardrobes consisting of three 4′0″ units; however, any number of any size units may be arranged in a single wardrobe.

standardized construction

Construction of the wardrobes has been standardized so that the same space is required whether the wardrobes are made with wood backs and ends or for plaster backs and ends, and whether the "Floor" or "Jamb" type hinges are used.

vanishing door hinges

Vanishing Door Hinges, Racks and Garment Hangers can be furnished separately.

Vanishing Door Hinges are made in two types, Floor Type CB-7 which is secured to the floor and the ceiling, and the Jamb Type W which is secured to the jamb.

All hinges are substantially made of high grade steel in dull black finish only.

ADVANTAGES

1. **it is a space saver**
   Requires only 30% of space needed for a cloakroom. Doors swing back into wardrobe and do not interfere with use of aisles.
2. **it is simple**
   Every part of the Evans Vanishing Door Wardrobe has been planned for simple operation, easy, silent opening and closing.
3. **it is practical**
   The Evans Vanishing Door Wardrobe is made to set flush with wall, with or without mullions between pairs of doors. Each door opens independently.
4. **it is trouble free**
   No hardware like the Evans Hinge. Gives trouble free operation for the life of the building. No tracks, rollers, or other intricate parts.
5. **it is low in cost**
   The amazing simplicity of the Evans Wardrobe, with all woodwork cut to size and no complicated hardware, results in a surprisingly low price.
6. **it is easy to install**
   Delivered, knock-down cut to size, with an ample number of sizes to choose from, the Evans Vanishing Door Wardrobe is quickly, easily installed.
7. **it is designed right**
   Even such details as provision for ventilation to dry wet or damp clothing are included. Thousands of successful installations attest Evans' merits.

Evans

WARDROBES

EVANS VANISHING DOOR wardrobes combine the three features that are generally considered all important in school or public building equipment; simple, practical, economical. EVANS hinges or equipment can be purchased separately.

doors

Doors are 1⅜″ thick made for openings 6′-0″ high (the doors setting 4¼″ above the floor unless otherwise specified). Flush doors are Carnahan Hollow Core flush door made with special rails for application of EVANS WARDROBE hinges. Panel doors can be furnished to match the type of doors used in the building.

racks and garment hangers

Racks and garment hangers are standard arrangement for the pupils' units. The racks for a double-door unit consist of three metal brackets, each provided with four holes at the top and four at the bottom to receive rods 13/16″ in diameter. The lower front rod is metal and the other seven rods are wood. The racks for a single-door unit require but two brackets. Brackets are finished dull black. The garment hangers are manufactured especially for this purpose and are substantially made of hard wood, finished with wax, and provided with a hook that holds these securely on the rod, yet permits of easy removal. The number of hangers furnished for the various size units are: 4′0″ unit—18; 2′0″ unit—9; 5′0″ unit—24; and 2′6″ unit—12.

shelves and coat hooks

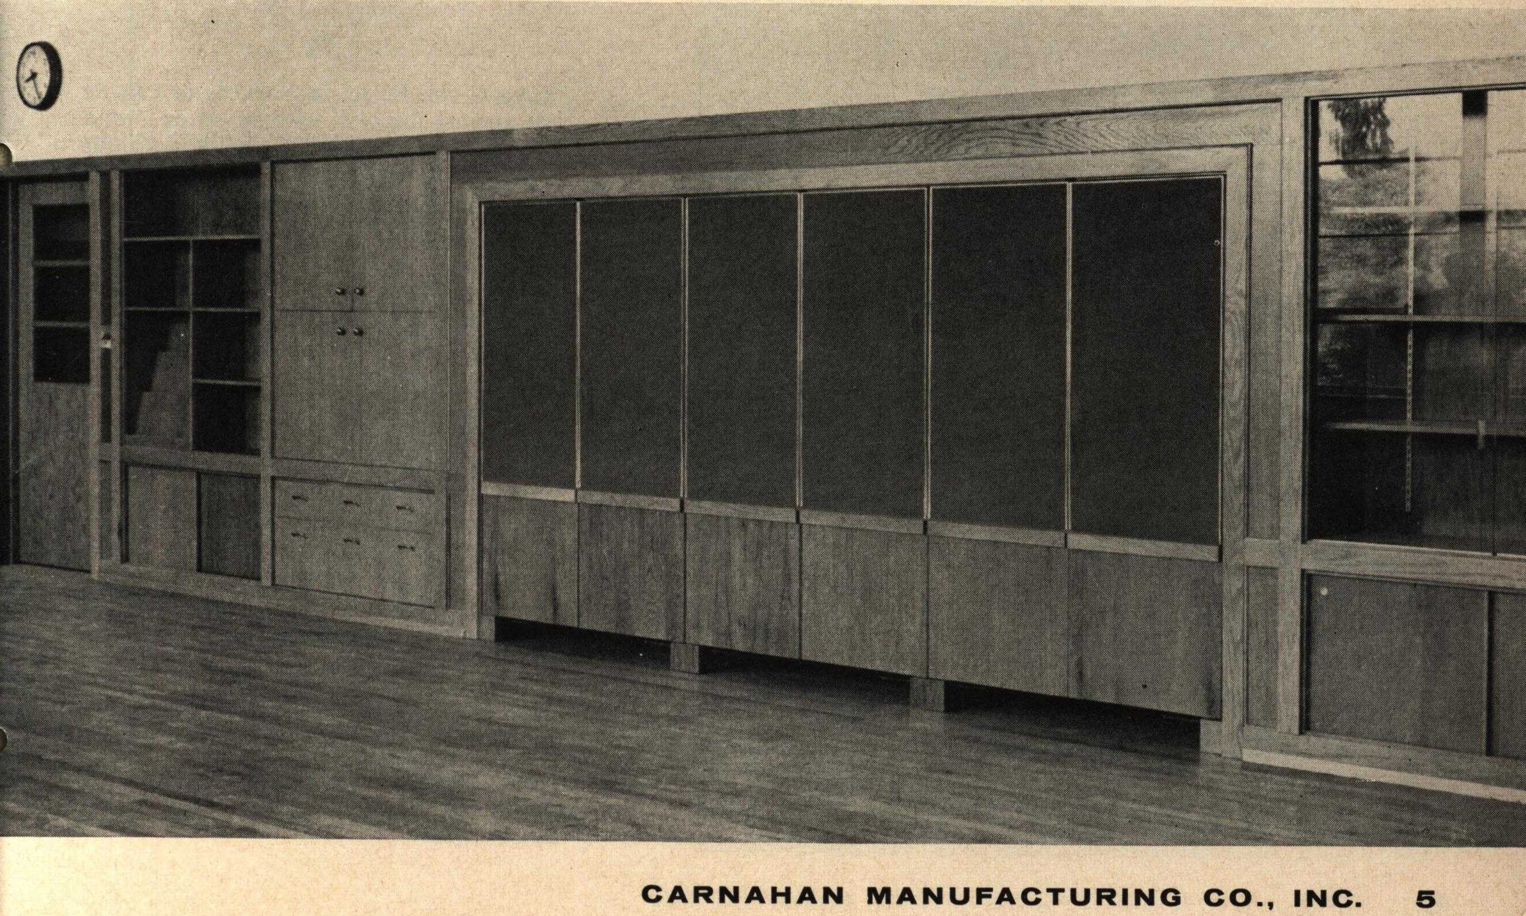
Shelves and coat hooks can be furnished instead of racks and garment hangers at the same price. This arrangement consists of a 12″ top shelf and a 10″ bottom shelf, each supported by three brackets for a double door unit. A hook strip is provided for each of these shelves and also one to set below the bottom shelf. Sixteen two-prong, dull black finish hooks are furnished for a 4′0″ unit and a proportional number for other units.

umbrella racks

Umbrella racks as shown on the backs of the doors in illustration on page 2, are furnished as extras. The umbrella racks are made with a heavy rail and a brass drip pan.

blackboards

It is recommended that "non-continuous" blackboards be planted on the doors with a mould around all four edges. Wood chalk trough and wood blackboard moulding can be supplied at extra charge. Note, we do not furnish blackboard or tack board.

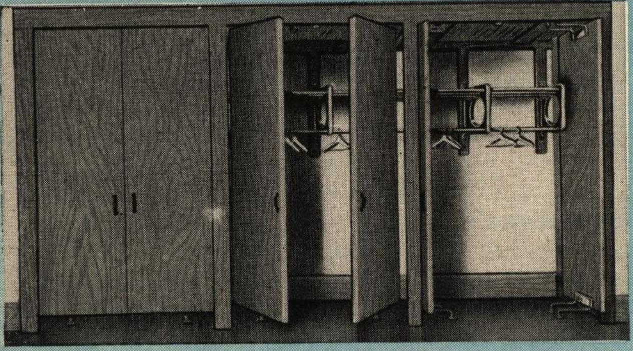


Evans

VANISHING DOOR WARDROBES

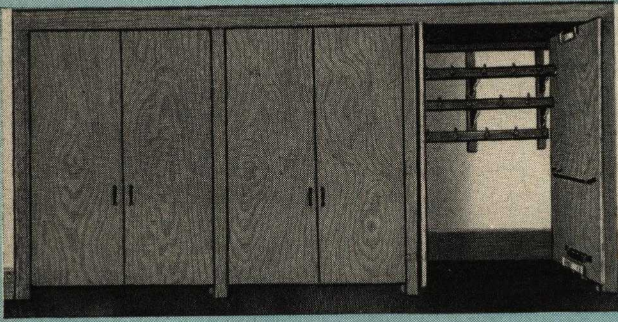
Evans Vanishing Door Wardrobes are adaptable to any special conditions of the building or to the requirements of the school. These can be furnished in practically any size, used in connection with teachers' closets, bookcases, storage closets, etc. The sizes most generally specified are in multiples of 4′-0″ and the Type P is the most widely used. Either the Jamb Type W Evans Wardrobe Hinge or the Floor Type CB-7 can be used.

TYPE "P" WITH FLUSH DOORS



Type P wardrobe is made to set in recess flush with wall, for plaster back, ends and ceiling, and can be furnished with EVANS Floor Type CB-7 hinges illustrated, or Jamb Type hinge W shown on page 3. Wardrobes can be in any multiple of 4′0″ sections.

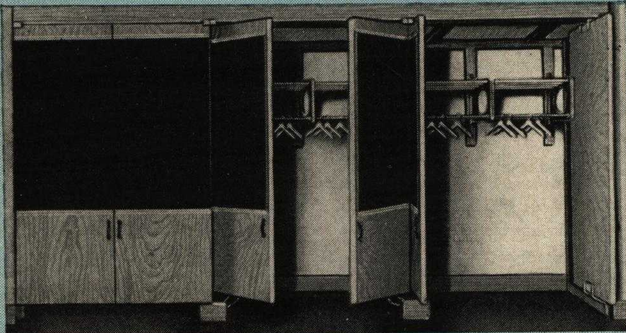
TYPE "C" WARDROBE



Type C can be set in a recess or can be set against the wall with wood ends and top; or can be furnished with divisions and back if required.

Wood shelves, back strips and hooks, or the regular rod racks can be furnished.

TYPE "B" WARDROBE



Type B wardrobe is made for continuous doors without dividing mullion.

These can be equipped with Jamb Type W hinge as illustrated or Floor Type hinge CB-7.

When CB-7 Floor Type hinges are used plinths are unnecessary.

We do not furnish blackboards.

Note: Wood panel doors can be furnished on any of the above types of wardrobes upon request.

Evans

WARDROBES

AVAILABILITY

Evans Vanishing Door Wardrobes are available from lumber dealers, school specialty representatives and direct from factory and sales office of Carnahan Manufacturing Company, Inc., Loogootee 1, Indiana.

general

Wardrobes as shown on drawings shall be Evans Vanishing Door Wardrobes as manufactured by the Carnahan Manufacturing Co., Inc., Loogootee, Indiana. Wardrobes shall be complete with all panels, casings, frames, trim, doors, hardware and accessories.

wardrobes

Wardrobes shall be Type _____ made to set (in recess flush with walls) (against wall with exposed tops and ends) with all exposed parts to be of_____ (species of wood). Ends and backs shall be (wood) plaster, (with) (without) partitions. Mullions (shall) (shall not) be placed between pairs of doors.

hardware

Hardware shall consist of Evans (Floor Type CB-7) (Jamb Type W) hinges, constructed of steel and finished in dull black.

doors

Doors shall be Carnahan Hollow Core flush type* with special rail construction as manufactured by Carnahan Manufacturing Co., Inc. Doors shall be 6'0" high and 1⅜" thick with face veneers of ________ (species of wood).

accessories

Wardrobes shall be equipped with (racks and garment hangers) (shelves and coat hooks).

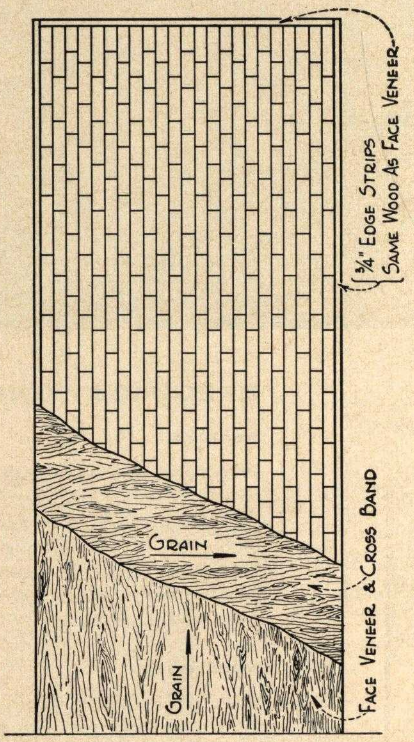
shipment

Wardrobes shall be shipped to the job site knocked down in the white and shall be installed and finished on the job by others.

*Panel doors available upon request.

CARNAHAN flush veneer door construction

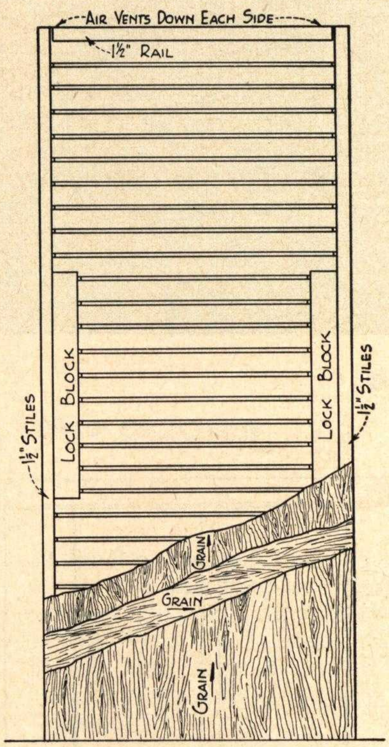
solid core doors



3/4" Edge Strips
Same Wood As Face Veneer
Grain
Face Veneer & Cross Band
Grain

Solid Core Flush Doors are made by using a flat joint core block construction, thoroughly kiln dried. The core is banded four edges with 3/4″ wood matching the faces. After sanding the core to even thickness cross bands and face veneers are glued to both sides in a hot plate press, using Type 1 Waterproof glue forming 2 waterproof films on each side of the core. We recommend thin face veneers and cross bands, thus bringing the waterproof glue line closer to the face of the door.

hollow core doors



Air Vents Down Each Side
1½" Rail

Lock Block
Lock Block
1½" Stiles
Grain
Grain
Grain

Our Flush Hollow Core Doors are made with a rigid softwood core on which a three ply panel is applied. The outer frame is 1½″ finished width around the entire door. Lock blocks are placed on both edges 27″ long so that there is ample anchorage for locks on either edge. Horizontal wood ribs are tenoned and glued to stiles. Additional blocking may be added to take care of any special hardware or glass openings.

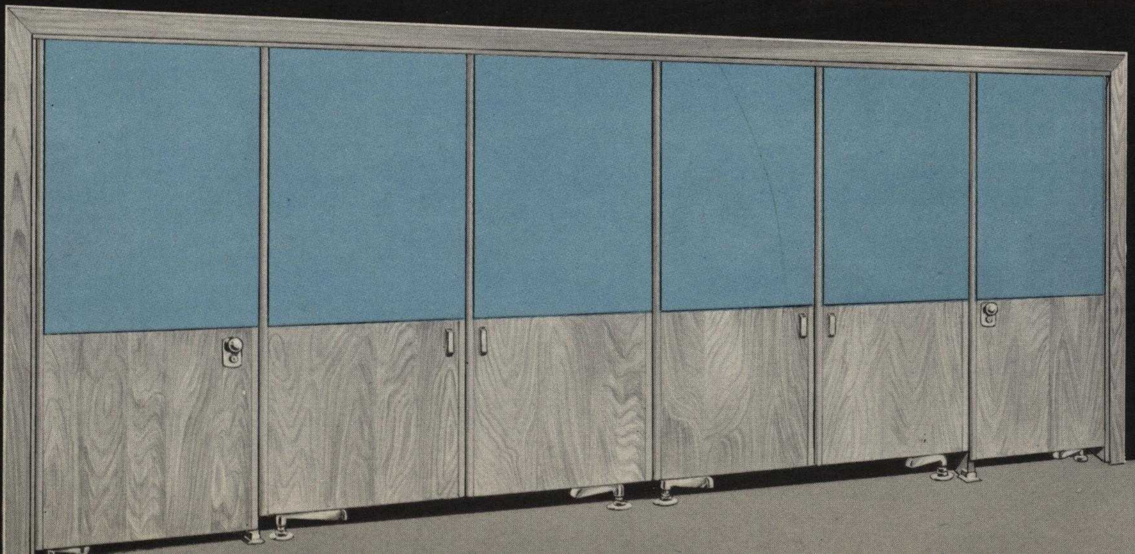
classroom wardrobes

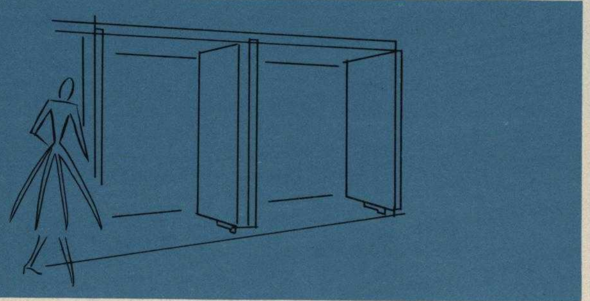
The *safe* receding door wardrobe in multiple or individual door operation

SAF-T-DOR



SINCE
EMCO
1932

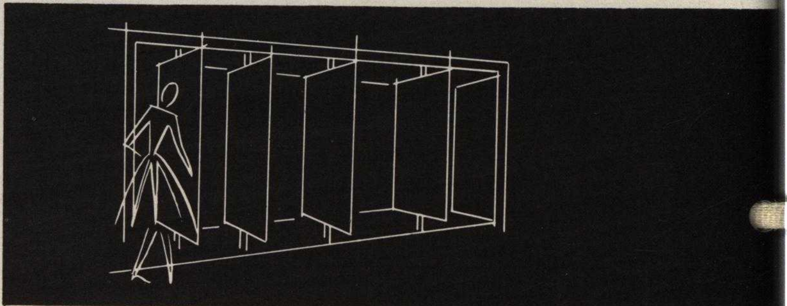
THE IMPORTANCE OF EMCO DESIGN—An EMCO wardrobe system provides a safe, well-ventilated, sanitary and convenient method of storing children's wraps under the supervision of the teacher. This system is the result of many years study of wardrobe needs and performance. Nothing takes the place of an EMCO wardrobe for wrap storage. They have proved themselves in many thousands of schools to be not only the best system but also the most economical method. EMCO wardrobes are not expensive—they will last the life of the school. EMCO wardrobes are designed with ideas of safety and sanitation foremost, but they are also space savers—an important factor in both remodeling and planning new buildings. Both Receder and Pivot models available.



RECEDER WARDROBE—EMCO is a true receder—not just a folding door. Doors open in opposite directions giving the width of two doors for passage in and out to the wraps. Over three-fourths of the door recedes back into the recess leaving more free usable cube in the classroom. Both individual (Model 400) and multiple (Model 100) operating doors available.

HARDWARE—offset arm type. Both lateral and vertical adjustments provided to compensate for settling that might occur in lintel or floor. Shaft connecting upper and lower arms is of cold rolled steel. Upper arm and interior assembly of certified malleable iron finished in dead black, brown or aluminum lacquer (color optional). Lower arm and assembly of solid cast bronze finished to match building hardware. The weight of door is carried by pivot arm assembly which is, in turn, transferred to a ball bearing floor plate at floor.

DOORS—thickness 1⅜″ or 1¾″—any width between 2′0″ and 3′0″—solid core *standard* unless otherwise specified. Any veneer desired. (All models EMCO wardrobes.)

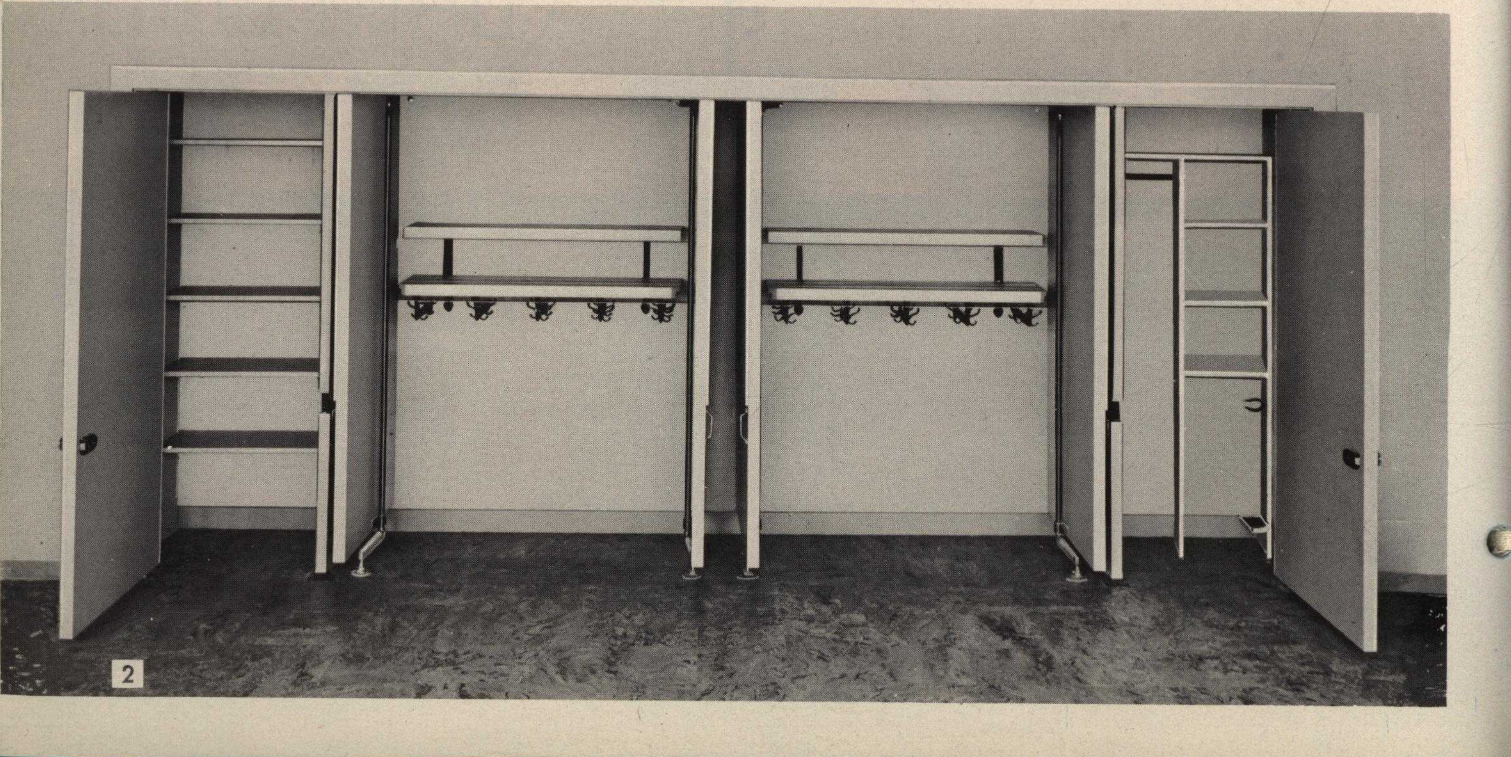


PIVOT WARDROBE—Doors open all in one direction with half of door protruding into room. Multiple operation only with doors latching in both opened and closed positions. Lower in cost than receder models.

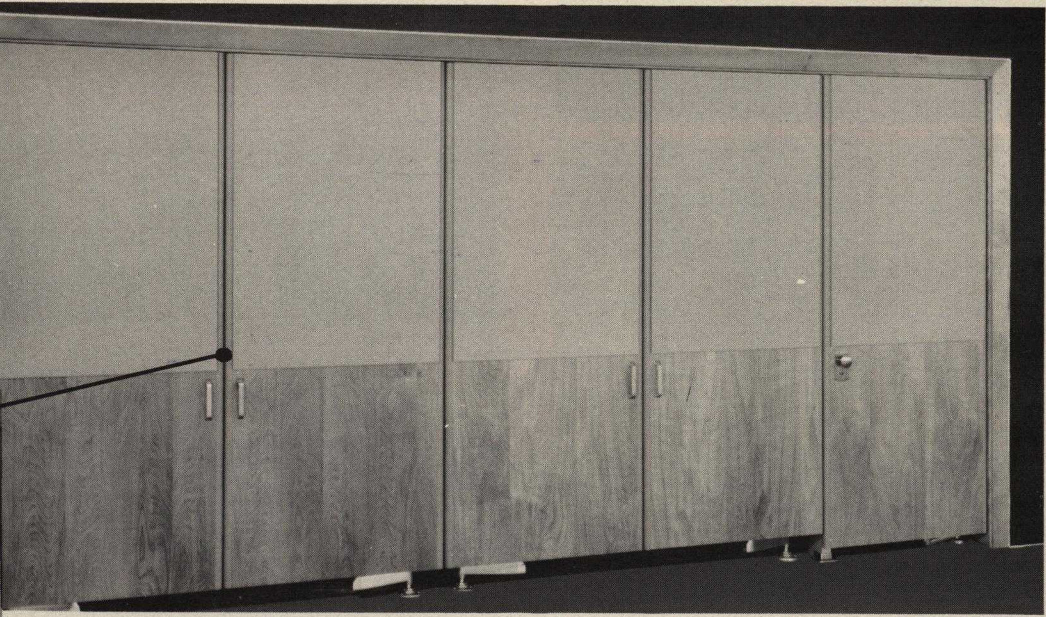
HARDWARE is built to same high specifications as for receder models with same colors and finishes available. Door works as own connecting shaft between upper and lower pivots. All operating hardware is of solid cast bronze. Vertical and lateral adjustments provided to maintain door alignment.

PUPIL CAPACITY—8 pupils per door in cold climates, 10 per door in warmer climates suggested; however EMCO will accommodate as many hooks as any wardrobe.

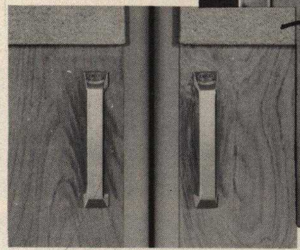
CLOSETS – Teacher, Supply, Book Cases – advantageous price wise to add to wardrobe, and will present a continuous surface without dividing mullions, and door may be hung to recede or with pivot or butt hinges.



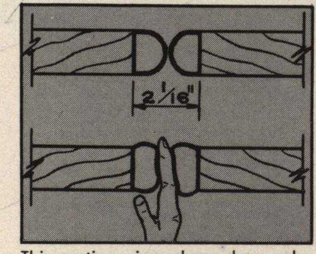
NEW SAF-T-DOR WARDROBE



Pictured is Model 400 Single operating receder and teacher closet—all with Saf-T-Dor application.



Rubber molding is firmly mounted on door edges. Neutral finish blends with door.



This section view shows how rubber moldings cushion hands and fingers against injury if caught between doors.

NOW DOUBLE SAFE WARDROBE DOORS

Rubber Door Moldings Safeguard Children's Fingers and Hands Completely. Now there's *double* door safety in EMCO wardrobes. They open safely—can't pinch fingers in opening . . . and they close safely—with the new Saf-T-Dor *Rounded Rubber Molding* on each door closing edge.

EMCO is now super safe in every way—smoothly finished woods, rubber cushioned edges, no dangling overhead weights, no obstacles in the recess—and each door on its own hardware prevents bumping of door against door to pinch fingers, etc.

So play it safe with EMCO. Specify EMCO Saf-T-Dor Wardrobes when you build or improve school rooms . . . *insist on wardrobes built by the safety pioneer in the field* . . . and you'll get quality wardrobes installed by factory trained experts with the protection features that are priceless.

TO SPECIFY SAF-T-DOR

Select model wardrobe desired by referring to pages showing descriptions and details as listed below, add the letter "R" to model number (i.e. 400R), then refer to specifications on back cover and add to specifications for model selected the following: "Doors to be EMCO SAF-T-DOR with special extruded rounded Koroseal astragals to exactly fit edges of doors"

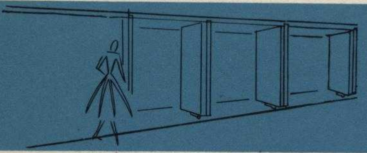
SAF-T-DOR is optional on all model EMCO wardrobes at slight extra cost. To make model selection refer to following pages this catalog.

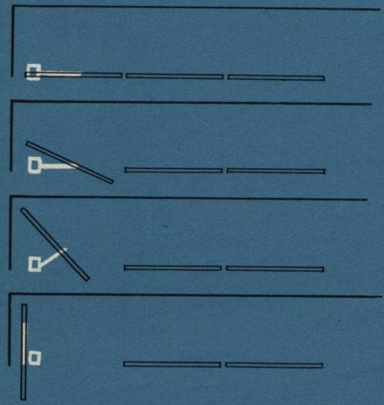
Model 400 (Single Operating Receder Door) Page 4 & 5
Model 100 (Multiple Operating Receder Door) Page 4 & 6
Model 200 (Multiple Operating Pivot Door) Page 4 & 7

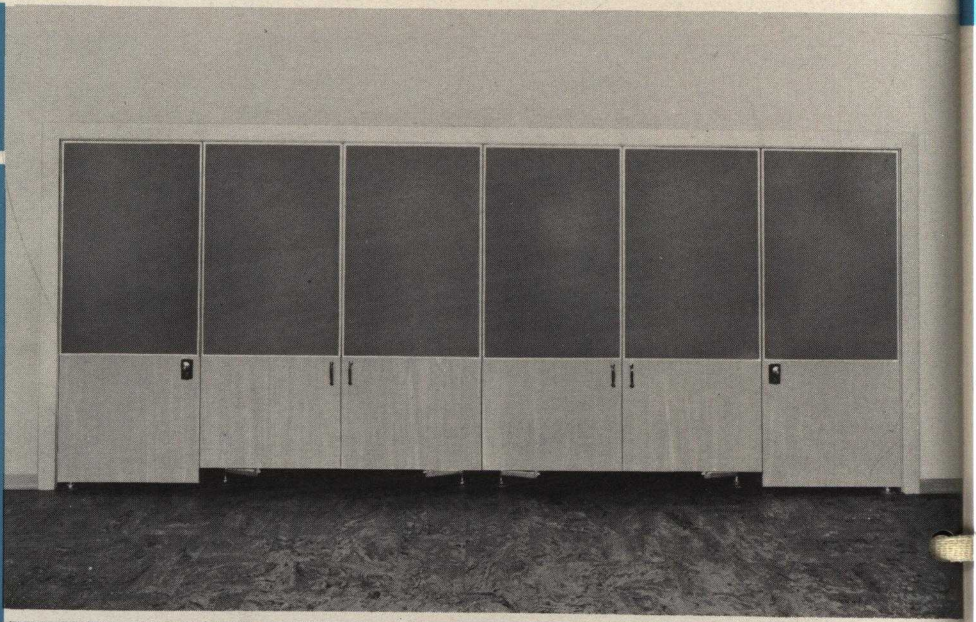
SAF-T-DOR
OPTIONAL ON ALL MODELS
EMCO WARDROBES

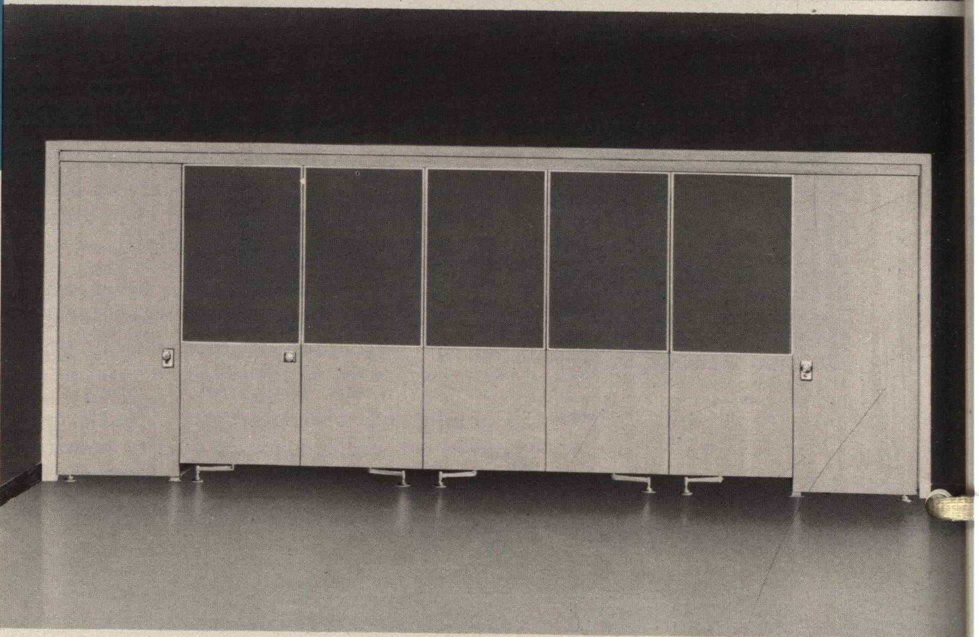
SAF-T-DOR

IN CLASSROOM WARDROBES — IT ALWAYS PAYS TO SPECIFY — THEN INSIST ON EMCO





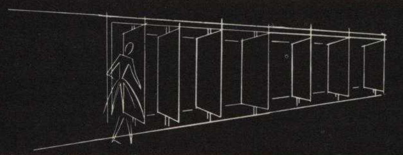


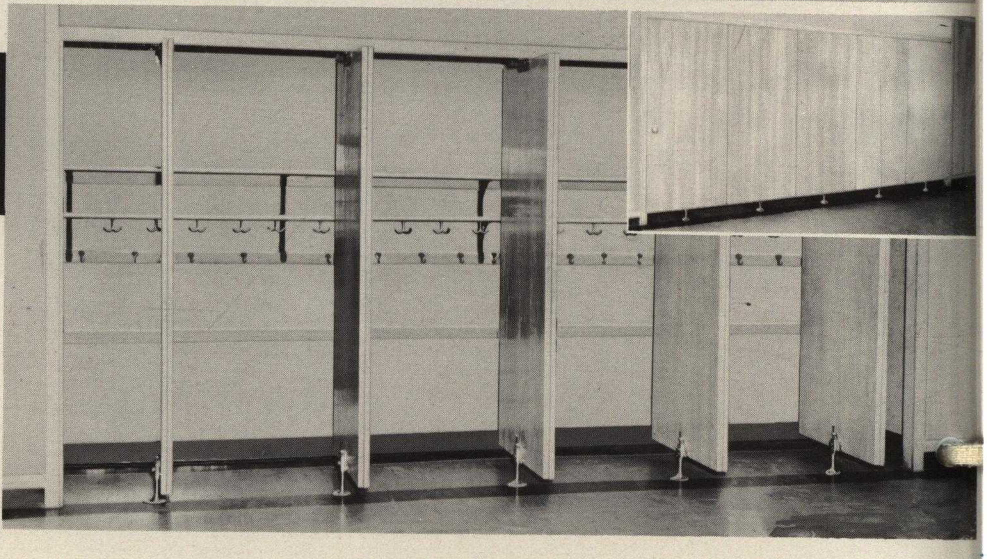


RECEDING

Single Operating (Model 400)—Doors operate individually, as shown above, on an offset pivot which turns door and recedes it into recess. Door immediately adjacent swings in opposite direction giving width of two doors for entrance to wraps. Doors latch both in opened and closed positions. This model pictured at top of this page and bottom of Page 2. (Details Page 5—Specifications back cover)

Multiple Operating (Model 100)—Same as above except all doors operate simultaneously when first door is opened. Pictured at center right and at bottom of Page 2. (Details Page 6—Specifications back cover)





PIVOT

Multiple Operating Only (Model 200)—All doors open simultaneously when first door is opened. Each door pivoted in center with all doors opening in same direction. One half of door recedes into recess—other half protrudes into room. Positive latch in both opened and closed positions to avoid accidental closure of doors. Pictured at right. (Details Page 7—Specifications back cover)

SPECIFICATIONS

RECEDER—MODEL 400 (Individual Operation)

MODEL 100 (Multiple Operation)

The classroom wardrobes where indicated in the plans shall be EMCO Spacemaster Model 400 individually operated, (Design details page 5) or Model 100 multiple operated, (Design details page 6), (architect to designate model desired) with doors latching in both the opened and closed position as manufactured by the Equipment Manufacturing Company, Inc., Kansas City, Missouri; the doors to open in opposite directions and mounted on rigid offset pivots extending from the floor to the top of the wardrobe. Hardware to incorporate both lateral and vertical adjustments for door alignment. Doors must not be hinged together; each door to operate on its own hardware.

Doors shall be . . . (specify veneer, slate, cork, etc., by referring to General Information and Optional Equipment opposite column) and furnished by wardrobe manufacturer. The wardrobe jambs, shelves, and coat hooks to be furnished and installed by the wardrobe manufacturer. The finished recess, rough bucks, grounds, vent grills, finish trim and painting to be furnished and installed by others.

Teacher Closet, Supply Closet, and/or Book Case to be a part of the wardrobe contract, and this manufacturer to supply doors, hardware, dividing partitions, shelving, hanger rod, and umbrella racks. Doors to be hung with pivot hinges and to be in continuous line with wardrobe doors with no mullions or casings dividing.

Installation to be by manufacturer or his authorized agents and to have written guarantee for period of one year.

PIVOT—MODEL 200 (Multiple Operation)

The classroom wardrobes, where indicated on the plans, shall be EMCO pivot type Model 200 as manufactured by the Equipment Manufacturing Company, Inc., Kansas City, Missouri. The doors to operate in multiple and be equipped with a latching device that will hold them securely in either open or closed position.

Doors shall be . . . (specify kind of door and optional equipment, slate, cork, etc., by referring to General Information and Optional Equipment Schedule, see below) and furnished by wardrobe manufacturer. The wardrobe jambs, and single shelf (or double shelf) including coat hooks are to be furnished and installed by the wardrobe manufacturer. The finished recesses, rough bucks, grounds, vent grilles, finish trim and painting to be furnished and installed by others.

Installation to be by manufacturer or his authorized agents and to have written guarantee for period of one year.

GENERAL INFORMATION AND OPTIONAL EQUIPMENT

DOOR CONSTRUCTION—1⅜″ or 1¾″ flush type in any veneer desired. Doors manufactured by one of the largest mills, and carry standard guarantee. Solid core suggested, but grid core construction available if desired.

CHALKBOARDS—(Optional all models.) Doors to be equipped with composition board in color desired, or natural slate. Slate mounted on coil springs. Chalk troughs included. (Specify wood or aluminum.)

TACKBOARDS—(Optional all models.) Genuine cork to be applied to upper portion of doors and molded with either aluminum mold or wood mold matching the doors. ¼″ cork only. State color desired.

UMBRELLA RACKS—(Optional all models.) Umbrella racks and cast metal drip pan in each two-door section. Rack can fold against wall or door when not in use. State if wanted on door or in rear of recess. (Standard equipment in teacher's closet.)

TEACHER'S CLOSETS—(Optional all models.) Doors and wood divisions to be furnished and installed by wardrobe manufacturer, including hardware, keyed lock, shelf arrangement, hanger rod and umbrella rack.

BOOK CASES AND/OR SUPPLY CASES—(Optional all models.) Doors and dividing partitions to be furnished and installed by wardrobe manufacturer, including hardware, keyed lock and five adjustable shelves.

KEY LOCKS—(Optional for wardrobe models 100-200 and closets on all models.) All wardrobes may use keyed lock, with master key furnished for wardrobes, teacher's closet, supply closet and book case.

Fairhurst type F.A.W. hardware has been proved by test to be the strongest wardrobe hardware made. Each arm will support a live load of 400 pounds without springing

JOHN T. FAIRHURST CO., INC.

Fairhurst school wardrobes

The Fairhurst (patented) school wardrobe is an efficient, practical unit specifically designed to occupy less space and at the same time to provide more storage than any other type of wardrobe. Each four-foot unit accommodates 15 pupils.

types

All Fairhurst wardrobe units are made in two types: the dual and the single. In the dual type, most popular with school authorities, the doors of each section are interconnected so that the opening and closing of the right-hand door automatically operates the left-hand door simultaneously. In the single type, the doors operate individually.

construction

Each unit is 2' 0" deep, the width varying to meet specific requirements. In open position, the doors are completely out of the way at the ends of each compartment. The doors pivot by means of a shaft connecting the ceiling and floor of the wardrobe to which are connected two pivot arms which carry the door. Due to the design of this unit, no floor guides or tracks are necessary to steady the door. When hardware is installed, it is seldom necessary to adjust it. Adjustments can be made, however, in case of settling floors or other construction difficulties, without removing the doors.

No pilasters or divisions are necessary between sections. The doors may present an appearance of panels or a continuous blackboard may be installed on the face of the doors, with chalk rails. When blackboards are installed on the face of the doors, a latch is provided to keep them rigid and steady when closed.

advantages

The upright from floor to ceiling is behind the upper hook rail and slightly in front of the lower, so that no obstruction is presented in entering or leaving the wardrobe.

A 3-section Fairhurst wardrobe permits the accommodation of garments of 45 pupils in a space 2' 0" deep and 12' 0" wide, materially reducing the cubage of the building.

Regardless of the type installed, dual or single, the doors never extend more than 8" into the aisle space when opening or closing. The open doors do not project more than 1½" beyond the face of the wardrobe if standard recess dimensions are conformed to.

New York 36, N.Y.

Dear Sirs:-

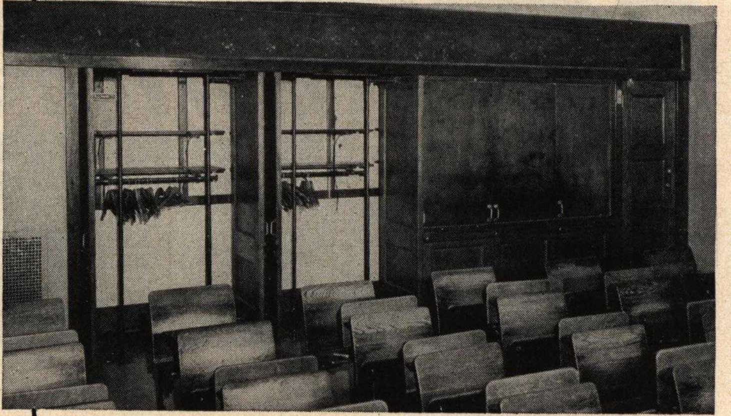
Your company installed the wardrobes in our school in 1931. They have been in use since that time and are as good today as the day you installed them.

Our parish has expanded so that it will be necessary to open additional classrooms this Fall. Considering the fact that Fairhurst Wardrobes were installed when the school first opened in 1931 and have given such fine service, we intend to have your company install these extra wardrobes this Summer.

Very sincerely yours,

Rev Albert Heuring O.S.B.

Rev. Albert Heuring, O.S.B.
Pastor



26 years of constant service

Fairhurst Wardrobe installed in 1931 at St. Benedict's School, Bronx, N. Y. There are 24 Fairhurst Wardrobes in this school.
Gustave Steinback, architect.

school wardrobes . . . specifications

type

Wardrobes are to be type F.A.W. as manufactured by John T. Fairhurst Company, Inc., New York 36, New York. All wardrobes to be installed by the manufacturer and fully guaranteed as to material and operation. This contractor is hereby notified that this construction is specified to set a standard quality for this item.

operating hardware

Operating hardware to consist of a vertical hollow tube, pivoting on a cone bearing on upright steel stud threaded into a cast iron adjustable shoe. The stud is to fit into a bronze bushing inside of the upright tube. Cold rolled steel channels are to be provided at the top to guide doors to the proper position inside of wardrobe. Malleable cast iron lateral arms are to be secured at top and bottom of a vertical shaft attached to bronze brackets with ¼" pins. Brackets to be screwed to inside of doors allowing the arms to pivot to proper position.

Operating hardware must support a weight of not less than 400 lbs. without springing or permanent set. All parts are to be adjustable vertically and horizontally. All exposed or finished hardware is to be standard polished bronze. Operating hardware to be standard black enamel finish.

doors

Doors to be 1⅜" or 1¾" thick (specify veneer). Doors to be veneered on built-up cores with best quality waterproof glue. Doors must not project more than 1½" from the face of the wardrobe when the wardrobe is open, if recesses are of standard dimensions. Each door is to operate independently, and to latch in both the open and closed positions.

jambs

Wood jambs and casings to be as detailed. Wardrobes to have head frames with cross supports for operating hardware and to be continuous around plaster backs and ends and to be of wood as specified and detailed.

interiors

Interior equipment of wardrobe shall include standard hat and coat rack, coathooks with single prong hooks and hook strips.

dual operation (optional)

Wardrobes are to be equipped with mechanism for dual operation if specified.

chalkboards or corkboards (optional)

Doors for pupils' units shall include chalkboards or corkboards with framing as specified. Doors equipped with chalkboard to have spring latches assuring a rigid writing surface.

Teachers closets to consist of interior cabinets with two drawers, two shelves between divisions and one hat shelf extending full width of closet; also one hanger rod indicated.

Supply closets to have six adjustable shelves faced with type of wood as specified.

work by others

All plastering, rough bucks, headers, grounds, baseboards, flooring inside the recess shall be furnished and installed by others in accordance with Fairhurst details.

specifications for locking device if required

All wardrobes to have a gang lock set in such manner that each series of doors can be locked with one key. The master locking hardware to be on the left hand door or next to teacher's locker. This lock must operate in such a manner that if master door is locked when any door is left open, the door or doors will lock automatically into place by closing said door or doors. Teacher's locker doors and other cabinet doors to operate on offset bronze pivots at top and bottom. Provide pin cylinder locks for teacher's lockers, supply closets and book cabinets; three keys to each lock. Each door of wardrobe to be equipped with a spring latch to hold doors in rigid position when closed. Handles to be of polished solid bronze.

Details for type F.C.W. sent on request.

lockers

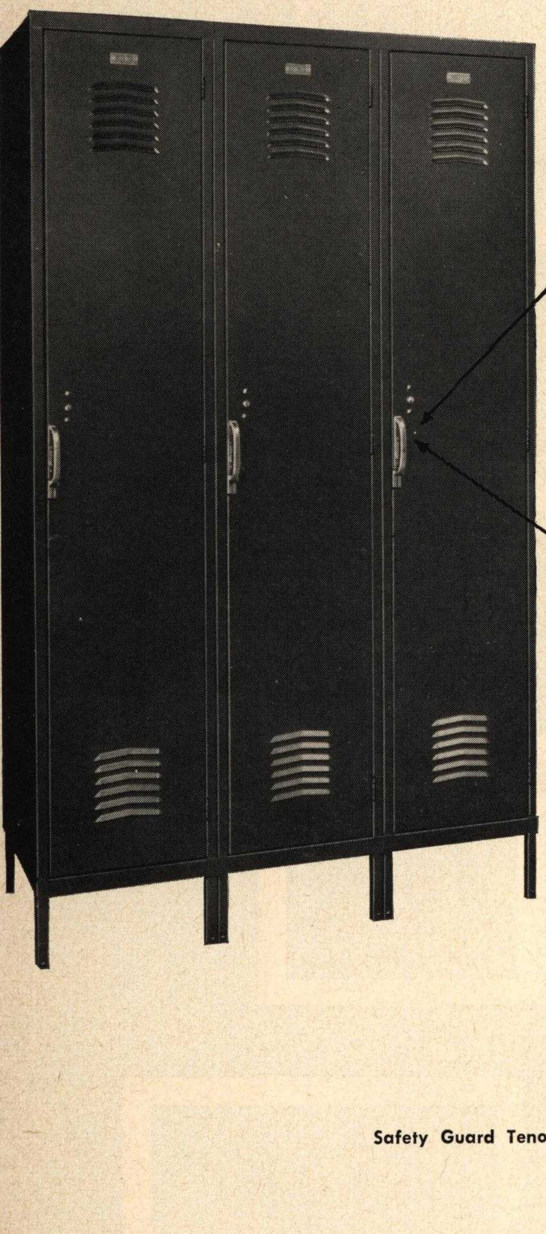
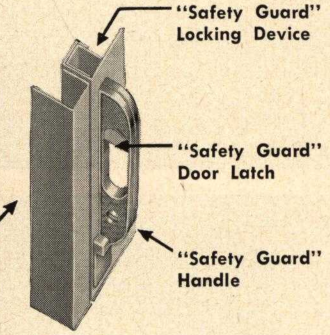
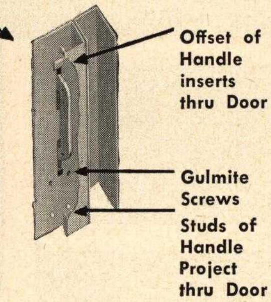
WITH EXCLUSIVE FEATURES THAT PROTECT!

Interior Steel lockers lead in value of structural and operating requirements. Designed and built to withstand hard and rough usage, and to give long, continuous satisfaction. A comparison of all lockers will convince you of the outstanding points of superiority found only in Interior Steel lockers. The list of consumers of Interior Steel lockers includes the most prominent educational and industrial institutions. Our engineering and estimating facilities are offered to architects and school boards for information and assistance in preparing plans, layouts, and specifications on installations of locker equipment.







Offset of Handle inserts thru Door
Gulmite Screws
Studs of Handle Project thru Door

"Safety Guard" handles

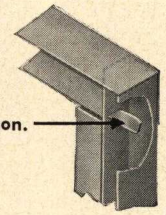
The "Safety Guard," door handle is used exclusively on Interior Steel lockers. This stationary handle has 5 points of contact with a 16 gauge door, giving maximum protection from kicking, hammering and other abusive damage. The "Safety Guard," door handle as illustrated, is offset and inserts through the door for rigid fastening with gulmite screws and reinforcing studs. The handle with integral padlock attachment completely encloses and protects the operating door latch. The locking device is entirely enclosed in a steel box formation of the door to prevent lock tampering and add structural strength.

body construction

The body of Interior Steel lockers are 24 gauge with flush ends and bottoms. Tops and bottoms are flanged all four sides with fronts formed to fit snug inside of the frame cross channels and are bolted to the center of channel giving double strength. Backs and ends are flanged on both sides to give double thickness of metal at corners. Hat shelf is flanged on all sides with channel formation at front and is full depth. Clothes hooks are cadmium plated with ball points and are attached with two bolts. Rear legs of lockers are adjustable with front legs having adjustable feet.

doors

Interior Steel locker doors are 16 gauge steel flanged at top and bottom with channel formation at hinge side. The locking side of the door is formed into a box formation. This feature adds maximum strength to the front flange of the door and encloses the locking device. Doors are constructed so that they are flexible and may be sprung and distorted without taking any permanent set. Doors and frames are factory assembled.



door frames

Door frame members are formed into channel shapes from 16 gauge full pickled steel. Corners are tenoned and electrically welded, making a solid and rigid one piece structure, free from weave and twist and preventing doors from binding, regardless of the position of the locker. Sides of the frames are bolted to locker body on 9" centers, and at the center of tops and bottoms. This added feature of strength provides a solid and rigid construction. No exposed bolt or rivet heads on front of frame or locker.

hinges

Interior Steel lockers have semi-concealed five knuckle tight pin hinges, positively eliminating sagging doors. Proof of this statement is the fact that this type hinge has been standard in all building hardware for years. Hinges are mortised into door frame and welded. Hinges are bolted into the inside channel formation of doors with two bolts.

Interior's "SEALTEX" Phosphate Coating

Pre-paint conditioning is Interior Steel's key to everlasting beautiful finishes. A carefully controlled undercoating of insoluble metallic phosphates prior to the applied baked on enamel finish, on Interior's complete line of equipment; stops rust and corrosion —improves paint bond; resists cracking and chipping —keeps new look longer.

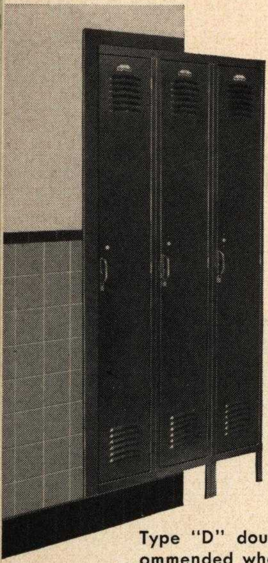
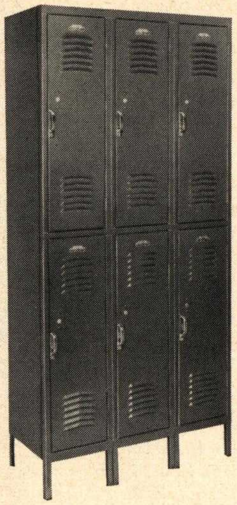
types and sizes



type S

The Type "S" single tier locker is the most popular style for every requirement, providing ample individual full length storage. Standard equipment for single tier lockers consist of 3 point locking device, number plate, padlock attachment, hat shelf, coat hooks and 6" legs.

Lockers may be obtained with closed bases and sloping tops, or recessed in walls with finishing strips. Various types of locks may be applied.



type D

Type "D" double tier lockers are recommended where floor space is limited and a large number of people are to be accommodated. In this manner two people are provided for, in the same floor space as required for one.

Each compartment is considered as one locker and two compartments are required for one double tier unit.

Standard equipment for double tier lockers consist of 2 point locking device, number plate, padlock attachment, coat hooks and 6" legs.

Double tier lockers can be recessed or supplied with closed base, slope top shelves and partitions. Various types of locks may be used.

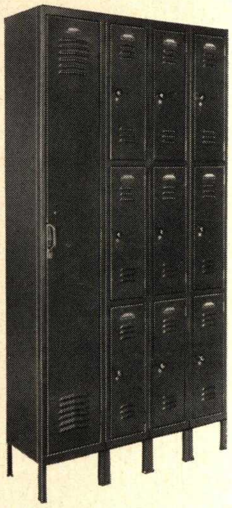
type B

Type "B" box lockers are particularly desirable for the storage of books, small articles, gym suits, bowling balls, shoes, etc., in classrooms, gymnasiums, and bowling alleys.

Each compartment is considered as one locker and 3, 4, 5 or 6, compartments are required for one box locker unit.

Standard equipment consists of one point locking device, number plates, and padlock attachment.

Box lockers can be recessed or supplied with closed bases, slope tops, and various types of locks.



type G

Type "G" gymnasium lockers are arranged by grouping a single tier locker, type "S" with any number of double tier, Type "D", or multiple tier, Type "B" lockers.

This method provides a private compartment for gym suit storage, while the large locker is shared by several persons at different times for street clothes storage, while in the gymnasium. Padlocks are recommended for each gym locker opening.

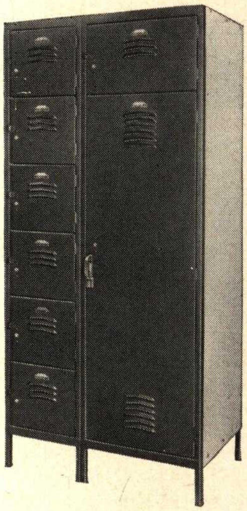
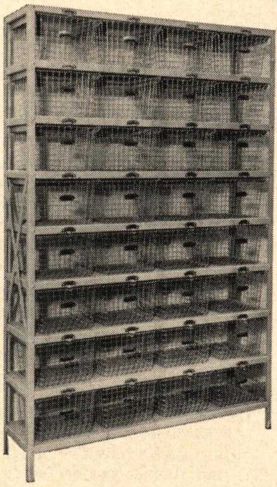
1 Large Compartment	21"	21"	60"	



type C

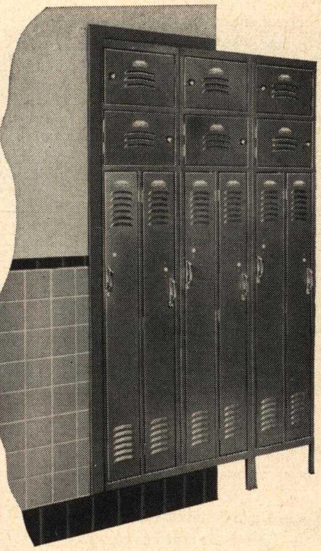
Type "C" combination lockers are designed for group storage. Small private compartments are for hats and small articles. Coats and long wraps are hung in the large compartment, which contains a coat rod.

Lockers are designed for various types of keyed locks with group locking arrangement. The lock of each small compartment is keyed differently, but each key provides access to the coat compartment.



basket racks

Interior Steel Basket Racks are ideally suited for gymnasium or swimming pool. Racks are built of 13 gauge angle uprights, 18 gauge shelves with back flange formed into a basket stop, 20 gauge dividers form individual basket openings. Racks are equipped with sway braces and 6″ legs, with each opening having a number plate and padlock attachment. Closed ends may be added to racks if desired. For complete information request catalog #63.



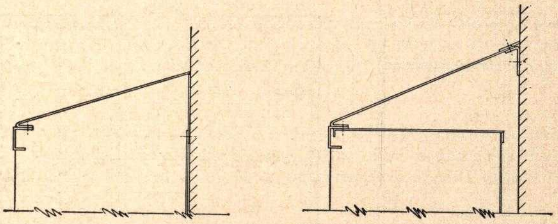
type T

Two Person lockers are used where floor space is at a Premium and individual private lockers are desired.

Lockers consist of two individual small compartments and two coat compartments. Standard equipment consists of padlock attachment and number plate for each compartment. Built in locks may be applied to coat compartment doors. Locking device of coat compartment controls the locking of the hat compartment. No Locks are required for the hat compartment.

INTERIOR STEEL equipment is available in three standard (#28 Gray, #53 Tan, and Olive Green) and five optional (#59 Green, #33 Sea Mist, #34 Gray, #80 Gray and #49 Brown) baked on enamel color finishes.
These beautiful decorator colors will blend in with pratically any color scheme. Color chart sent upon request.

sloping top



Lockers may be furnished with the top sloping toward the front. The degree of slope is sufficient to prevent articles being placed on top of lockers. The height of the slope being ⅓ the depth of the locker.

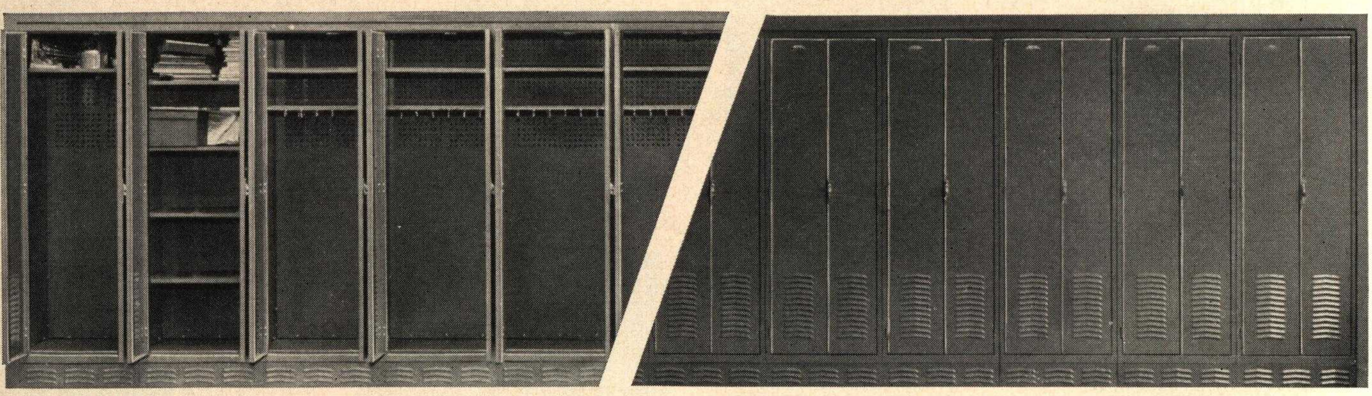
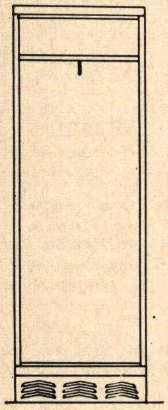
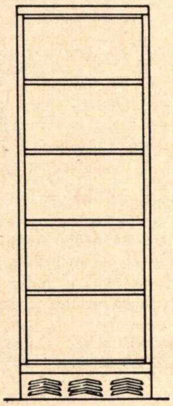
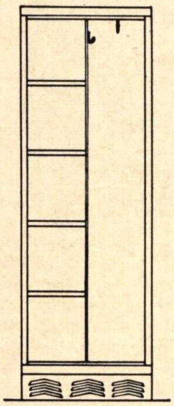
wardrobe lockers see also page 8



wide selection of interior arrangements







A Teacher's Wardrobe. Contains one hat compartment, double prong ceiling hook. Doors equipped with or without built in flat key lock.

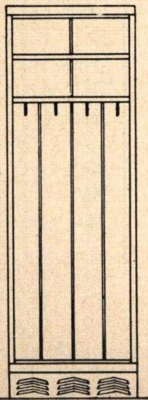
B Bookcase. Contains four shelves adjustable on 2″ centers. Doors equipped with or without built in flat key lock.

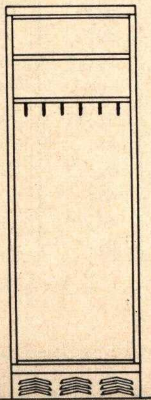
C Combination Bookcase and Wardrobe. May be used as a substitute for types A and B. Contains 4 shelves adjustable on 2″ centers and 1 wall hook and 1 double prong ceiling hook. Doors equipped with or without built in flat key lock.

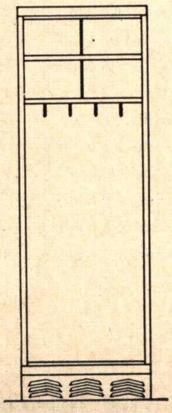
E Wardrobe. Contains 4 individual book and hat compartments and 4 coat compartments with 1 ceiling hook each. Accommodates 4 pupils.

F Wardrobe. Contains 2 full width shelves and 6 ceiling hooks. Accommodates 6 pupils.

G Wardrobe. Contains 4 individual book and hat compartments and 4 ceiling hooks. Accommodates 4 pupils.







Interior Steel Locker Wardrobes are ideal for elementary schools in either corridors or classrooms. Complete supervision of every wardrobe is provided by group lock control.

A group may consist of any desired number of units controlled by a cylinder type lock, in sections usually up to ten units. Types A, B and C have individual locks but may be included in the group control, if desired. By locking the group control, the double doors of each unit which are closed will be locked, and, any doors left open will, upon closing be automatically locked. When the group control is unlocked the doors of any unit may be opened separately. This feature permits independent door operation and reduces theft, from having contents exposed by all doors being open simultaneously.

Wardrobe units are 22″ wide, 15″ deep and 61½″ high, above a 4½″ base.

The gauges and construction of wardrobes are similar to lockers with 16 gauge door and frame, 24 gauge body, three point locking device, number plates and equipped as shown in the various types. Doors are louvered at bottom only, with the bases provided with louvers, backs and shelves perforated to admit passage of air current. Wardrobes are available with or without closed base.

Entire group of standard lockers can be locked or unlocked by operating control lever mechanism in masterlocker. This masterlocker can be locked with a built in cylinder type lock.

Group control mechanism can be made inoperative, so that lockers may be locked individually, if desired.

Ideal for corridor, classroom, or locker room installation. Gives teacher absolute control of every locker.

SUGGESTED LOCKER SPECIFICATIONS

Information Required for Accurate Locker Quotation

1. Total lockers required, based on number of locker openings, regardless of whether single tier, double tier or multiple tier, exceptions are two person and combination lockers.
2. Type of locker and whether with or without legs.
3. Size of locker width, depth and height.
4. Color (See Specs. below).
5. Sequence of Numbering.
6. Number of groups and number of each group.
7. Single or double row groups.
8. Type of locks required.
9. Give floor plan and elevation, if possible.
10. Specify if fillers, recess trim or slope tops are required.

CONSTRUCTION—Built on the unit principle of construction, each having its individual door and frame manufactured in accordance with Federal Specifications AA-L-486 and amendments.

MATERIAL—Material is the best of its respective kind, free from buckle, scale and imperfections. Specially treated to give a high grade enamel finish.

DOOR FRAME—Door frame members are formed into channel shapes from 16 gauge full pickled steel. Corners are tenoned and electrically welded, making a solid and rigid one-piece structure. Frames are punched for attaching to the body on nine inch centers. No exposed bolt or rivet heads on front of frame or locker.

DOOR—Doors are made of 16 gauge patent level, pickled metal furniture steel. Doors are reinforced with angle bend at top and bottom and a channel formation at hinge side. Doors are further reinforced with box formation on locking side. Construction of door prevents springing and closes quietly against rubber cushions. Doors 18" wide and wider have a reinforcing panel.

HINGES—Five knuckle, tight pin hinges having concealed fastenings welded to the door frame and bolted to side flange of door with two bolts. Doors 42" high or less have two hinges and doors over 42" have three hinges.

HANDLE—Operating door latch for locking device is lift type, enclosed in and protected by a stationary handle made of unbreakable alloy, die cast and chromium finish. Handle attached to door with four or more points of contact. Designed to provide, padlock attachment with padlock strike as an integral part of handle.

LOCKING DEVICE—Quiet, positive automatic, by means of a spring actuated locking channel enclosed on four sides, with a box formation on the door engaging with the door jamb opposite hinges. Device is prelocking, permitting self-latching without manipulating door latch. Locking device is tamper-proof, pick-proof and equipped with rubber silencers. Rubber cushions are riveted to lock bar catches on door frame. Single tier lockers have a three joint contact and double tier lockers have a two point contact. Triple tier and multiple tier have one point contact.

LOCKS—All lockers may be furnished with built-in flat key locks, with two keys per lock (grooved key or combination locks can be furnished if desired). Padlocks may be specified.

BODY—Body of locker including tops, bottoms, backs, ends and shelves are made of 24 gauge steel. Sides are flanged to give double thickness of metal at connections. Tops, bottoms and shelves are flanged all four sides with channel formations at front of shelves. Shelves are full depth and bottoms are flush with the frame.

VENTILATION—Single tier, 36" and 42" double tier lockers have six louvers at top and bottom of door. Double tier lockers, 30" and triple tier lockers have three louvers at top and bottom. Lockers less than 20" high have three louvers per door.

LEGS—Front legs are a continuation of the vertical frame members and by means of locker shoes are adjustable to take up unevenness in the floor. Rear legs are adjustable. Legs add 6 inches to the height of lockers.

NUMBER PLATES—All lockers are furnished with aluminum number plates attached to the top of the door. Characters are filled with black enamel. Unless otherwise specified lockers are numbered consecutively from one up.

EQUIPMENT—Single tier lockers have one hat-shelf 10" below the top of locker. Hat shelf is omitted in double tier lockers. Double and single tier lockers 12" and less in width have one double prong ceiling hook and three single prong wall hooks. Triple tier lockers 12" and less in width have one wall hook on back and one double prong ceiling hook. Lockers over 12" in width have an additional wall hook on the back. Single tier lockers 18" or more in depth have galvanized coat hanger rod instead of ceiling hook. Hooks are ¼" round steel cadmium plated with ball points and are attached with two bolts.

FINISH — All steel parts are to be thoroughly cleaned, treated with a phosphate solution, dried and then finished with a heavy dip coat of #28 Gray enamel (No. 53 Tan, Olive Green, #59 Green, #33 Sea Mist, #34 Gray, #80 Gray and #49 Brown, enamel may be specified). Locker fronts to have an additional coat of baked enamel sprayed on. Enamel shall be baked on at 300 degrees. Special plain finish can be matched with accuracy.

RECESS TOP AND END TRIM—Lockers which require trim are to be placed in recesses provided by the General Building Contractor and the Locker Contractor is to furnish steel recessing strips 2½" wide to cover opening at the ends and across the top of each locker recess opening. Recess strips are 18 gauge, finished to match lockers. Trim to be secured to lockers by means of fastening clips.

Suggested Specification Clause For Work Done By Others:

Lockers to be installed in recesses provided as shown on plans. Recesses will be furnished complete, ready for lockers, with wood furring stips furnished and set in place by the General Contractor. Locker Contractor shall anchor lockers and shall provide and attach steel recess finishing strips at ends and across top of all recesses, to form a neat, smooth finish.

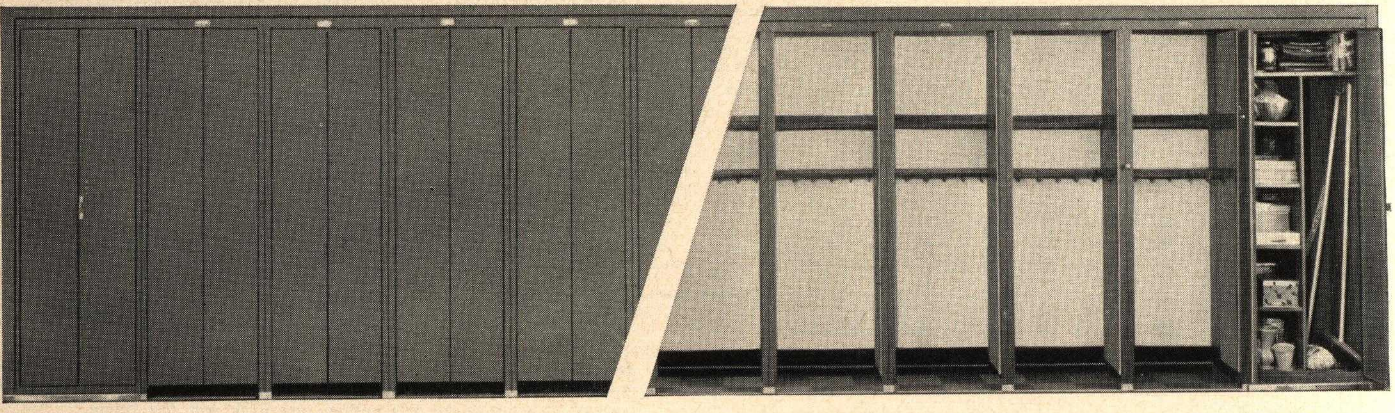
improved classroom wardrobes

with disappearing doors



Interior Steel "Disappearing Door" Pupils Wardrobes offer the practical solution to architects and school officials for an efficient safe and sanitary method of housing the clothing of elementary school pupils.

These wardrobes are designed to afford maximum utility in units 24" wide, to accommodate up to six pupils in each unit.

SAFETY FEATURE—"Disappearing Doors" become dividing partitions between pupils units when doors are in opened position, leaving aisles free of obstruction. The confusion and injury hazard caused by many doors swinging outward is definitely eliminated.

VENTILATION—Ample space is provided for pupils clothing, with 3" opening below doors to permit free circulation of air about garments, either by gravity or by a mechanical system. No closed uprights between units to obstruct this flow of air, when doors are closed.

AUTOMATIC DOOR CLOSING DEVICE—Each pupils wardrobe covered by double doors that are pivoted top and bottom. Doors open individually and are self-closing, by means of ball bearing rollers, operating on pivot hinges fitted with gravity action devices.

GROUP DOOR CONTROL—When specified, all pupils's units can be equipped with a mechanism, permitting all doors in a group to be held in open position and simultaneously closing all open doors.

MASTER LOCK—If desired the Group Door Control can be equipped with a grooved key locking device to lock all doors in the group.

APPEARANCE—Interior Steel Wardrobes will satisfy the demands for a neat, flush cabinet appearance, with no projecting hardware.

SUGGESTED SPECIFICATIONS

CONSTRUCTION—Posts shall be two #14 gauge steel channels spotwelded back to back, full height of Wardrobe. Bottoms of posts to be fitted with #16 gauge stainless steel shoes for fastening to floor, through a continuous stainless steel threshold. Top frame assembly to consist of a #12 gauge steel ceiling angle spotwelded to a #16 gauge steel front trim in one integral part, to run full length of units. This assembly to be provided with holes for bolting to posts and fastening to wood or metal header. Ends of recess shall be closed to furnish a neat, finished trim to the entire opening.

DOORS—Each pupils unit to be covered by double doors which disappear into the wardrobes and become dividing partitions when in open position. Wardrobe doors shall be of #20 gauge steel, flush pan type, one inch thick with vertical tube reinforcement at pivots, other vertical edge channeled and flat folded. Doors must be square and free from buckle and must close against rubber bumpers.

HARDWARE—Doors of all pupils wardrobes to be hung to posts by specially designed top and bottom pivot hinges. Bottom pivot hinge swivels on a ball bearing roller with a gravity action that automatically closes doors.

COAT AND HAT ASSEMBLY—For each pupil's wardrobe a hat and coat rack 11" deep shall be provided. The assembly to consist of two #20 gauge steel shelves, spaced 10" apart with #20 gauge beaded partitions between each unit. Underside of lower shelf fitted with six double prong hooks per unit. The entire assembly to be fastened to wall at desired height through stiffening flanges at rear.

TEACHERS CLOSET AND BOOKCASE—Cabinet shall be 24" wide with double doors which swing out. These units are individually operated and have their own back and sides. The doors are equipped with a three point locking device with a flat key lock which operates independently of the pupil's units. Cabinets to consist of one full width shelf, a vertical partition and one side fitted with four adjustable half-shelves, the other compartment with three single prong wall hooks, and one ceiling hook.

SUPPLY CABINET—To be same size and construction as teachers closet and interchangeable with same. Contains five full width adjustable shelves.

FINISH — All steel parts to be thoroughly cleaned before enameling and to be finished with two coats of mar-proof enamel, baked on at not less than 300 degrees of standard colors known as #53 Tan, #28 Gray and Olive Green or optional colors known, as #59 Green, #33 Sea Mist, #34 Gray, #80 Gray and #49 Brown.

NON-RECESSED TYPE NF (Optional)—Same as recessed type R.F. except that overhead furring or recessed openings are omitted and units supplied with flat tops or sloping tops and with fillers at ends or end panels as required. General Contractor to finish walls and floor.

AUXILIARY EQUIPMENT (When Specified)—The automatic door closing device shall be equipped with a group door control permitting all doors of the pupils units to be held in open position by spring latches at top of door which engage into the group door control rod. This group door control is operated by a release lever located on one wardrobe unit, which automatically releases the spring latches and allows doors to close.

Group door control (if desired) to be furnished with a grooved key locking system to lock all doors controlled by the group release lever.

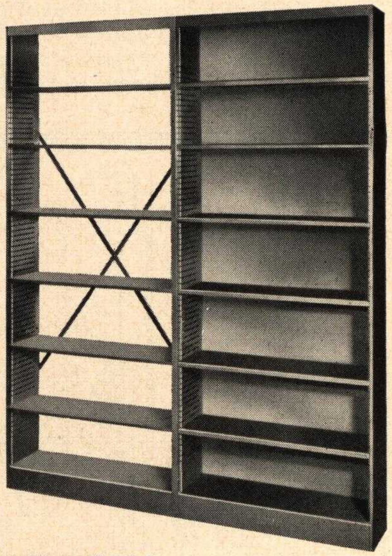
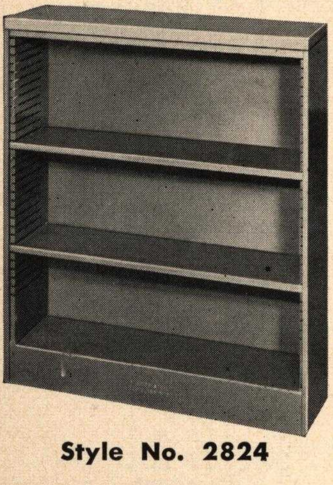
library shelving

bookshelf unit



Style No. 2813 Style No. 2802



bookcase unit

Style No. 2824

Interior Steel Bookshelf Units are attractive, yet are practical and well constructed. It will meet your needs, whether for the office, home or library.

Slotted type uprights with slots on one inch centers are used to provide quick adjustment of shelves. Each individual book problem can be met, with a minimum of space being used. Shelves are designed to prevent accidental removal, as they are provided with locking lugs which engage the slots. By raising the front of the shelves slightly it disengages the lock, thus there are no bolts to unfasten when it becomes necessary to rearrange the shelves. With Interior Steel construction, there is no difficulty in removing the end books.

Units are supplied with backs or sway braces. When units are placed back to back a common back or sway brace is used.

When several units are placed side by side, detachable finished end panels should be used on extreme ends only. Connecting pilasters are furnished for use between units. Two single faced finished end panels are required at the extreme end of each double faced stack.

Interior Steel Bookshelf Units are available in two heights either 84" or 90" high. The outside dimensions of Book shelf units are 36" wide by 9½" deep.

shelf descriptions

Interior Steel Bookshelf Units are furnished with six shelves as standard on both 84" and 90" high.

Shelves of 18 gauge are flanged down, back and then up, giving a triple flange for maximum strength and eliminating all raw and sharp edges which might injure hands or books.

counter high bookshelf unit

Interior Steel Counter High Bookshelf Units are 42" high, 36" wide and 9½" deep with a 9/16" overhang or projection at front of top, making the overall depth of top 10 1/16". These counter high units are electro-welded assemblies. Shipped set-up.

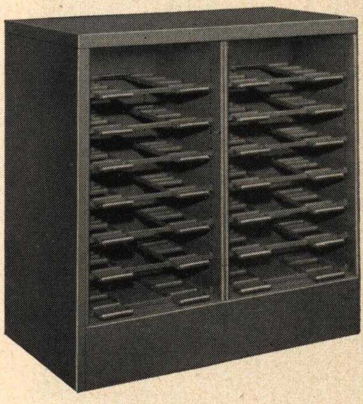
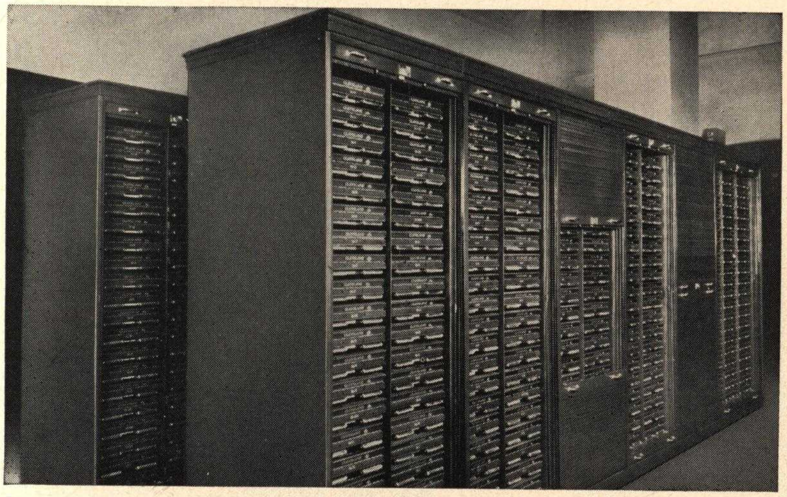
Roller Bookshelf Installation

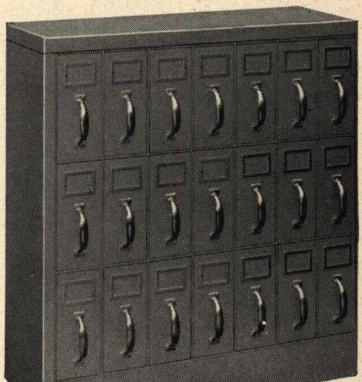


Style No. 2290

Interior Steel Roller Book Shelf Cases are fabricated from heavy furniture grade steel. Large formed beads on the vertical partitions together with rollers on the shelf insures ease of handling and protects books from excessive wear. Each shelf is provided with 8 rollers: Bottom of each unit is provided with a removable dust plate to facilitate cleaning. For complete information on Interior's Roller Book Shelf Cases, request catalog #37.



Curtain Case Installation



Style No. 2255

Interior Steel Document Files are of durable construction which will assure many years of trouble free service. All parts are die formed providing interchangeability of drawers. Each drawer is equipped with toggle type compressor. Pulls and label holders are satin finished aluminum. Document Files are shipped set up and can be assembled together so that they present the appearance of a single case. For complete specifications and other complete information request Interior Steel catalog #37.

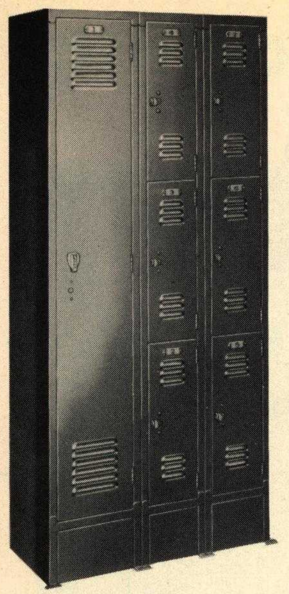
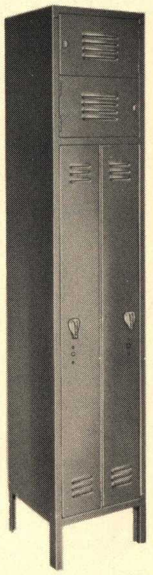
FACTORIES: Aurora, Ill. • York, Pa.



GYMNASIUM LOCKERS

Gymnasium Lockers are made up by combining one single tier locker with multiple tier lockers to obtain required openings. Combinations are made up to meet individual requirements. Illustration shows one single tier locker as it appears combined with two 3-high multiple tier lockers where school has six gym periods. Each student has permanent use of one multiple tier locker for his gym equipment and uses single tier locker only during gym period to store his regular clothes.

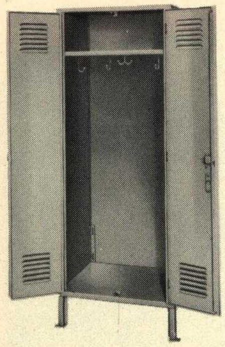


TWO PERSON LOCKERS

Two Person Lockers provide ample private storage for two persons in a space only 15″ wide. Each person has a full length coat compartment with three single prong coat hooks and a wide small compartment above for storage of hats, lunches, books, etc. Large coat compartment doors have finger-tip handles with padlock attachment.

THREE SIZES

15″ wide, 15″ deep, 72″ high—plus 6″ legs
15″ wide, 18″ deep, 72″ high—plus 6″ legs
15″ wide, 21″ deep, 72″ high—plus 6″ legs

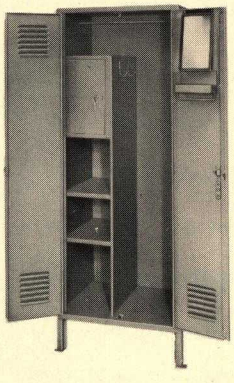


DOUBLE DOOR LOCKERS

General construction of the Double Door Locker is the same as the single tier locker except that it is wider and has two doors. Finger-tip handle is on right hand door which must be opened before left-hand door will open.

FOUR SIZES

24″ wide, 18″ deep, 60″ high
24″ wide, 21″ deep, 60″ high
24″ wide, 18″ deep, 72″ high
24″ wide, 21″ deep, 72″ high
Add 6″ to height for legs

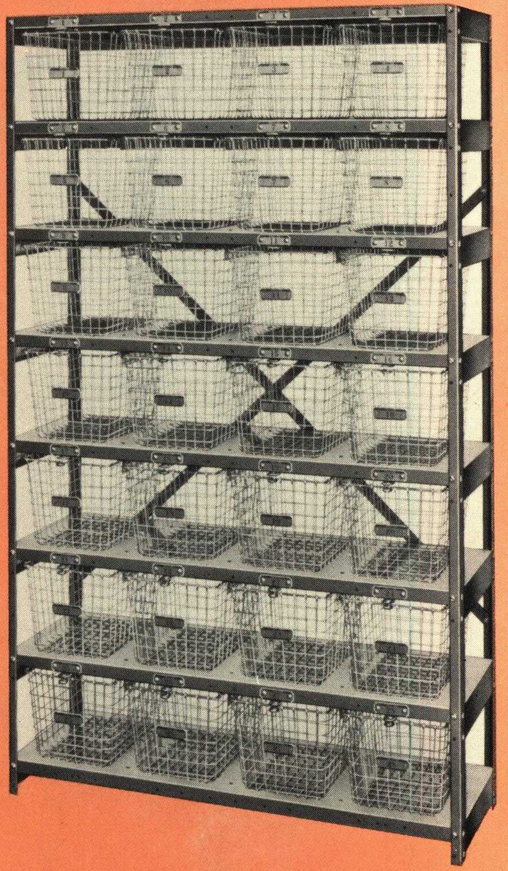


GOLF LOCKERS

The Golf Locker provides each golfer with complete storage facilities. There is ample space for all golf equipment, clothing and miscellaneous items. Lock-up compartment above three shelf openings may be fitted with built-in lock.

24″ wide, 21″ deep, 60″ high
(plus 6″ legs).

BASKET RACKS



Economical clothing storage for gymnasiums, swimming pools, etc. Number plates furnished—one required for each basket and each basket opening in rack. Basket Rack legs punched for attachment of casters where portable racks are required. Racks may be bolted together to form double face unit. Baskets are hot-dip tinned after fabrication.

Rack illustrated is 40¼″ wide, 13¼″ deep, 68⅝″ high, equipped with 28 baskets, 9″ x 13″ x 8″, four wide per shelf.

Same rack also available with 21 baskets, 12″ x 13″ x 8″, three wide per shelf.

2 SIZES of BASKETS

Sturdy, wire baskets, 1″ square mesh. Ends of vertical side wires wrapped around and welded to top rim.

SUGGESTED LOCKER SPECIFICATIONS

MATERIAL—Steel to be mild annealed, cold rolled, free from any sufarce imperfections.

All bolts to be cadmium plated or subjected to other approved rust-proofing process.

FINISH—Steel parts shall be thorougly cleaned before painting and given a bonding and rust inhibitive phosphate treatment followed by the application of a heavy coat of quality enamel by electrostatic spraying. Enamel shall be baked at 300 degrees minimum and must stand a rigid hammer test without flaking or chipping.

DOOR FRAME—Door frames shall be 16 gauge formed steel channels. Vertical members shall have an additional flange to form a continuous door strike. Corners shall be lapped and projection welded into a rigid assembly to resist strains. Top and bottom cross members shall provide a support for the front edge of the locker top and locker bottom.

DOORS—Doors shall be of one piece 16 gauge steel—on single and double tier both vertical edges formed into channel shaped reinforcements—on multiple tier hinge side formed into channel shaped reinforcement, other three sides flanged at right angle. Top and bottom of single and double tier doors shall be flanged at right angles to the plane of the face of the door.

HINGES—Hinges shall be not less than 2″ high, .050-inch steel, five knuckles, full loop forming a double thickness on each leaf. Hinge shall be set in slot in door and frame and projection welded to frame. Hinge pin shall be spun over at ends to prevent removal. Doors on single tier lockers shall have three (3) hinges and doors on multiple tier lockers shall have two (2) hinges attached to right hand side of door.

LOCKING DEVICE—Doors shall have a locking device engaging the door frame at three (3) points on single tier lockers and at two (2) points on double tier lockers. The device to consist of channel shaped steel operating within the channel reinforcement on the doors. Locking device shall be prelocking so that locking mechanism can be locked in open position—door automatically locking when closed.

HANDLES—Handle shall be chrome plated and of die-cast zinc alloy having tensile strength of not less than 40,000 P.S.I. Latching lift shall be cadmium plated 12 gauge steel operating within and completely protected by handle so that no moving parts operate over outside surface of locker door. Latching lift shall attach directly to locking bar and padlock attachment shall be an integral part of the lift.

DOOR JAMBS—Single tier lockers shall have three (3) door jambs, and double tier lockers two (2) door jambs welded to side of door frames, to engage locking device.

Design and steel gauge of door jambs shall prevent freeing of locking device by prying. Each jamb shall be equipped with soft rubber silencers designed so that they may be readily replaced.

BODY—All body parts shall be #24 gauge steel flanged to give double thickness of metal at back vertical corners.

HAT SHELVES—Single tier lockers shall have one (1) hat shelf located approximately 9″ below top, flanged on sides and back—channel formation on front flange and attached at not less than two points through each side flange. Multiple tier lockers are not furnished with hat shelf.

COAT HOOKS—Single tier lockers shall have three (3) single prong hooks, below hat shelves, in lockers under 15″ wide and four (4) single prong hooks in lockers 15″ wide and over. One (1) double prong ceiling hook attached to hat shelf. Double and triple tier lockers shall have three (3) single prong hooks for lockers under 15″ wide and four (4) single prong hooks for lockers 15″ wide and over and one (1) double prong ceiling hook in each opening. Side hooks and ceiling hooks made of steel rod stock with ball points and rust-proofed. Each hook attached to lockers with two bolts.

VENTILATION—Louvers shall be provided as follows on each type locker door:

Single tier lockers—9″ wide—Six 3½″ louvers at top and bottom.

Single tier lockers—Over 9″ wide—Six 6″ louvers at top and bottom.

Double tier lockers—Four 6″ wide louvers at top and bottom.

Triple tier lockers—Three 3½″ wide louvers at top and bottom.

15″ wide multiple tier—Four 6″ wide louvers per door.

All other multiple tier lockers—Three 3½″ wide louvers per door.

NUMBER PLATES—Aluminum number plates with figures at least ⅜″ high (embossed or etched). All lockers shall have number plates attached near top of doors.

ANCHORING—Lockers where specified shall be properly anchored with proper fittings to assure neat, rigid workmanship.

FREE STANDING LOCKERS—Lockers available with 6″ high legs. Front and end bases available for making closed locker base.

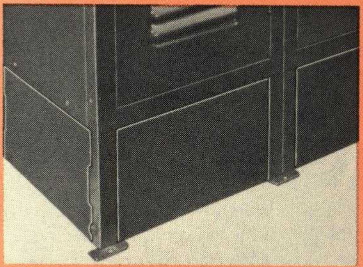
RECESSING AND FINISHING STRIPS—Lyon lockers may be secured for placing in wall recesses, provided by the builder. Finishing strips for recessed lockers shall be #18 U.S.S. gauge steel, with a three inch (3″) wide face. Finishing strips to lap frame of locker approximately ⅛″ and to project beyond face of locker approximately ⅜″.

End finishing strips bolted to sides of locker frame. Top finishing strips attached to lockers with channel formed clips, on approximately 24″ centers.

End and top finishing strips at corners shall be covered with a formed corner cap. All intermediate joints covered with a formed splice cap and clip designed to keep finishing strips in alignment.

WIRE BASKETS—Wire baskets shall be all welded with 16 gauge horizontal wires, 13 gauge vertical wires, top frame reinforced with #6 ga. wire or equal. Tinned after fabrication. Baskets provided with padlock loop and number plate. Size 9″ x 13″ x 8″ or 12″ x 13″ x 8″ with 1″ square mesh. Numbered as directed.

STANDARD FINISHES — LYON GRAY, GREEN OR TAUPE



CLOSED BASES

Closed bases are available to provide attractive, flush-front appearance. Make locker rooms easy to clean. Easily attached without tools.

NUMBER PLATES

Same plates are used on all Lyon Lockers. Fit pre-punched holes. Etched black figures on aluminum plate. 2¾″ wide, 1″ high.

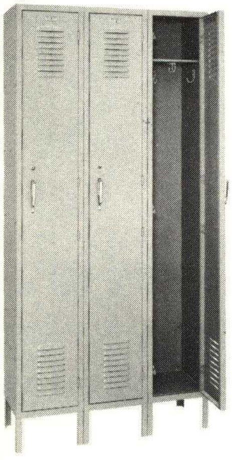
CHOICE OF SEVEN MEDART STANDARD COLORS AT NO EXTRA COST

Baked-Enamel Finish Electrostatically Applied On Bonderized Steel

All Medart lockers are thoroughly cleaned before painting by a hot-spray washing process and protected with an insoluble phosphate conversion coating (Bonderized) to give maximum corrosion resistance and to provide an excellent base for the finish. Specially formulated enamel is applied by the newest electrostatic method to provide a uniform, drip-free coating which is thoroughly cured in a baking oven to give high abrasion resistance and superior adhesion. School-approved Medart colors are: Colonial Blue, Desert Sand, Surf Green, French Grey, Coral Rose, Medium Grey and Olive Green. Color chart sent on request.



SINGLE-TIER LOCKERS

Three-point locking: 60″ or 72″ height. 6″ legs or closed bases optional. 9″ shelf space at top. 12″ and 15″ deep lockers have one 2-prong shelf hook and 3 single-prong wall hooks. 18″ deep lockers have coat rod and 5 single-prong wall hooks.

STANDARD SIZES

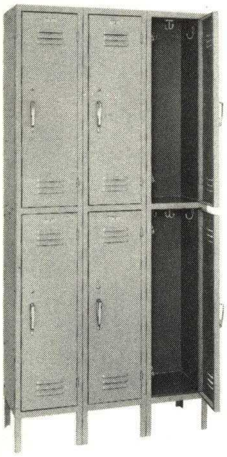
WIDTH	DEPTH	HEIGHT
9″	12″	60″ or 72″
12″	12″	60″ or 72″
12″	15″	60″ or 72″
12″	18″	60″ or 72″
15″	15″	60″ or 72″
15″	18″	60″ or 72″
18″	18″	60″ or 72″
18″	21″	60″ or 72″

BOX LOCKERS

These units provide protection against pilferage often experienced with the use of wire baskets. Ideal for limited storage requirements in gym dressing rooms, bowling alleys, etc. Choice of 4, 5 or 6-tiers to match 60″ or 72″ single-tier units. Padlock hasp serves as door handle.

STANDARD SIZES

WIDTH	DEPTH	HEIGHT	TIERS
12″	12″	15″	4
15″	15″	15″	4
12″	12″	12″	5 or 6
12″	15″	12″	5 or 6
15″	15″	12″	5 or 6
15″	18″	12″	5 or 6

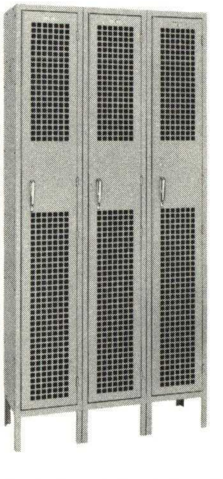


DOUBLE-TIER LOCKERS

60″ or 72″ overall height exclusive of optional 6″ legs or closed bases. Each locker fitted with 3 ball-point single-prong wall hooks, one double-prong ceiling hook. Doors are two-point locking. Shelves can be furnished at extra cost, if desired.

STANDARD SIZES

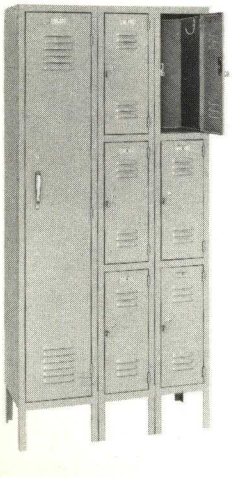
WIDTH	DEPTH	HEIGHT
9″	12″	30″
12″	12″	30″
12″	15″	30″
12″	12″	36″
12″	15″	36″
12″	18″	36″
15″	15″	36″



PERFORATED-DOOR VARSITY LOCKERS

Same design, construction and equipment as standard single and double-tier lockers, except doors have square perforations for maximum ventilation and to facilitate locker inspection. Available in 12″ and 15″ widths only, single or double-tier sizes.

All Medart lockers are available with sloping tops, with 6″ legs or closed metal bases, or without legs for installation on pre-built bases. Attractive metal trim is supplied for recessed installations.

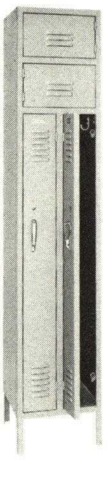


GYMNASIUM COMBINATION LOCKERS

Illustration shows 6 triple-tier gym suit lockers in combination with a single-tier dressing locker. Gym suit lockers are of box locker construction in 3 or 4 tiers to match height of 60″ or 72″ single-tier units. Sturdy padlock hasp serves as door pull.

STANDARD SIZES

WIDTH	DEPTH	HEIGHT	TIERS
9″	12″	18″	4
9″	12″	20″	3
12″	12″	20″	3
9″	12″	24″	3
12″	12″	24″	3
12″	15″	24″	3



SPACE-SAVING TWO-PERSON LOCKERS

For convenient accommodation of two persons where each may be assigned an individual hat compartment 15″ wide by 9″ high, and an individually locking coat compartment 7½″ wide by 54″ high. Hat compartment latch is controlled from within coat locker. Available in 15″, 18″ and 21″ depths. Height, exclusive of optional legs, is 72″.

Illustrations shown on this page and sizes listed represent only a few of the many sizes and combinations available. We invite you to contact the nearest Medart Locker sales agent or to write direct concerning your individual requirements.

GENERAL CONSTRUCTION DETAILS for all Medart Lockers . . .

DOORS—Formed from one sheet not less than 16-gauge steel (free from buckle, loose scale, pits and other imperfections). Reinforced by flanging top and bottom edges; side edges channeled to provide proper rigidity and strength.

FRAMES—Made of sheet steel formed channel shape, with return bend having smooth rounded edge to provide additional strength. Uprights and cross members electrically welded together to form a permanent, true, square and rigid frame.

BODY—Backs, sides, shelves, tops and bottoms are made of 24-gauge steel, properly formed to assure rigidity. Bottoms and shelves flanged or otherwise shaped to provide additional strength.

LOCKING DEVICE—Three-point in single-tier; two-point in double-tier lockers. Roller type, positive pre-locking arrangement, concealed in channel-shaped lockrod confined in door channel. Operation of lockrod is rubber silenced.

DOOR HANDLE—Lift type, die cast of high tensile, non-rust alloy with polished chrome finish. Padlock strike is integral part of handle. Concealed padlock hasp.

HINGES—Heavy five-knuckled type of 14-gauge steel with semi-recessed 3/16" diameter fast pin. Hinges securely projection welded to frame and attached to side flange of door with two bolts. Designed for full opening of door without strain or sag. Locker doors 36" high or less have two hinges; 60" high have three hinges; 72" high have four hinges.

LEGS—Front legs are a continuation of channel door frame. Rear legs of 14-gauge angle steel, bolted to sides and backs of lockers. Front and rear legs have adjustable shoes with provision for bolting to floor (lockers can also be furnished without legs).

VENTILATION—All standard locker doors are louvered top and bottom—three louvers top and bottom for 30" and 36" lockers, six louvers top and bottom for 60" lockers, and nine for 72" lockers. Box lockers, three louvers.

FINISH—(See heading on opposite page).

GROUPING—May be arranged in any grouping desired.

HOOKS—Lockers 12" and 15" deep have three single-prong wall hooks and 1 double-prong ceiling hook; lockers 18" or more in depth have 5 single-prong wall hooks. All hooks ball pointed and cadmium plated.

COAT RODS—Standard equipment on all lockers 18" or more in depth. Rod is of 3/8" diameter and bolted to sides of locker by cadmium plated flanges.

SHELVES—Single-tier lockers have one shelf extending the full width and depth of the locker, spaced 9" from top. Shelves have rolled front edge and are bolted to sides. Extra shelves can be furnished at additional cost.

BOTTOMS—Set flush and fit tight to the frame. The front edge has return flange which rests solidly on lower cross member of the frame.

TOPS—All lockers have individual flat tops. Sloping tops or continuous sloping hoods can be supplied at extra cost.

NUMBERING—All lockers are furnished with aluminum numberplates with black numerals. Plates are bolted in place. Unless otherwise specified, lockers are numbred from "one" up.

LOCKS—Any standard key-type or combination locker lock or suitable padlock can be furnished at extra cost.

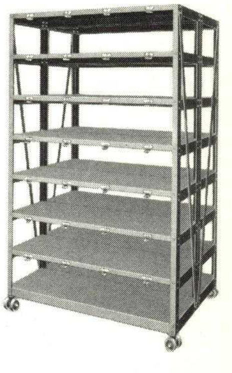
GYM SUIT AND BOX LOCKERS—Frames are channel shape with 1/4" return flange on left-hand upright which acts as continuous door strike. All door edges are flanged with double thickness on locking side for additional strength. Locking catch of 13-gauge steel welded to frame; 16-gauge padlock hasp, to the door. Door and lock catch also designed for built-in lock. Padlock hasp serves as door handle.

LOCKER ROOM EQUIPMENT

WIRE BASKET RACKS

7 baskets high (6'-0") with dividers, number plates and padlocking arrangement. Sections 8 baskets high (6'-9") or 9 baskets high (7'-6") also available. Each section 40" long, 13¾" deep; 4 small or 3 large baskets to each shelf. Sections may be bolted back to back, or end to end. Finished in any of Medart standard colors. Capacity: 13" x 9" x 8" basket—No. 1307 holds 28; No. 1308 holds 32; No. 1309 holds 36. 13" x 12" x 8" basket—No. 1317 holds 21; No. 1318 holds 24; No. 1319 holds 27.

PORTABLE WIRE BASKET TRUCKS ▶

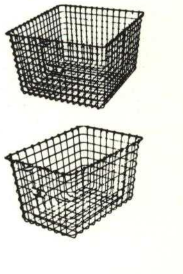


Made of 2 steel sections bolted back to back. Rigidly cross-braced. Anti-friction steel rollers or rubber tired rollers. 7 or 8 baskets high. Capacity: 13" x 9" x 8" basket—No. 1327 holds 56; No. 1328 holds 64. 13" x 12" x 8" basket—No. 1337 holds 42; No. 1338 holds 48.

LOCKER BENCHES

Seat 7½" or 9½" wide; 1⅝" thick. Natural finish. Furnished in lengths as required; max. 16' softwood top; max. 12' hardwood top. Steel pedestals as shown or pipe and flange type 6' apart.

WIRE BASKETS ▶



13-gauge vertical and bottom wires; 15-gauge horizontal. 6-gauge top rim with padlock eye. Electrically welded at intersections. Aluminum number plate. Specify finish: Hot-dip tinned after fabrication (HDT), or galvanized, green enamel finish (GWP).

1" MESH: No. 1301—13" x 9" x 8";
No. 1303—13" x 12" x 8".
¾" MESH: No. 1302—13" x 9" x 8";
No. 1304—13" x 12" x 8".

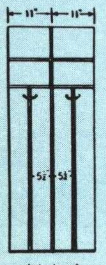
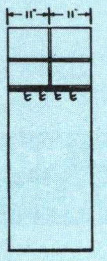
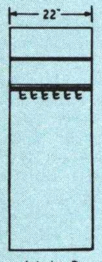
INTERIOR ARRANGEMENTS



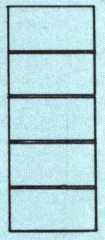
Interior A



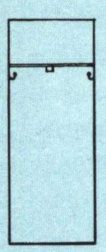
Interior C



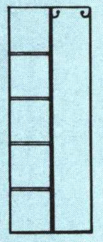
Interior D



Bookcase



Teacher's Wardrobe



Combination Bookcase and Teacher's Wardrobe

FOR PUPILS

Accommodate 4 to 6 children. Interior "A" for 4 pupils has 4 fixed partitions, 4 spaces for hats and books. Coat hooks are single-prong type. Interior "C" for 4 pupils has same 4 hat spaces, 4 sliding double-prong coat hooks. Interior "D" for 6 pupils has 2 hat shelves; 6 double-prong hooks.

TEACHER UNITS

May be added at either or both ends of pupil units. Bookcase shelves are adjustable. Teacher's wardrobe has hat shelf, coat rod, 2 single-prong coat hooks. Combination unit has adjustable shelves and 2 single-prong hooks.

grade-robes provide more room in less space . . . have automatic group locking control . . .

This arrangement makes possible 1-person control for an entire group of Grade-Robes. The teacher can lock or unlock all doors at the master control with one turn of a single key. Only when the master control is unlocked can each set of Grade-Robe doors be individually opened. Locks or keys that young pupils may lose are entirely eliminated. Classrooms stay neater, cleaner and much more quiet.

POSITIVE PRE-LATCHING . . . Roller-type latching devices at top and bottom are always smooth, positive, yet quiet in action whether doors are slammed or gently closed. When master control is in locked position, doors of individual units can be closed and will lock automatically.

DIMENSION TABLE FOR RECESSED INSTALLATIONS

Number of Grade-Robe units required	2	3	4	5	6	7	8	9	10
Over-all length of assembly	3′8″	5′6″	7′4″	9′2″	11′0″	12′10″	14′8″	16′6″	18′4″
Length of recess required	3′11″	5′9″	7′7″	9′5″	11′3″	13′1″	14′11″	16′9″	18′7″

Construction details for Grade-Robes are generally the same as those for Lockers described on the preceding page.

Dimensions of all Grade-Robe units, pupils or auxiliary types, are identical; 22″ wide, 60″ high, 15″ deep. If recessed, and no built-in base is provided, 6″ legs and removable steel base panels are furnished, bringing the total height to 66″. Front legs are a continuation of the frame, but rear legs are steel angles bolted to sides and backs.

Recessed installation requires only a rough unfinished recess 16″ deep, which allows for ventilation (where required) behind the Grade-Robe units. No plaster, tile, overhead framing or finished flooring are necessary. Attractive molding for top and sides is supplied for all recessed installations. Air circulation through the Grade-Robes adequately provided for through louvers at top and bottom of doors. If Grade-Robe assembly is installed as an integral part of the ventilation system, perforated backs, tops, shelves and bases are available at extra cost. Flat tops are standard, but if sloping tops are desired, they may be specified as an extra at small additional cost.

The sectional view above illustrates recessed Grade-Robe units equipped with legs and steel bases. Grade-Robes installed free-standing (placed against a wall) are similarly equipped. However, legs and steel bases are eliminated on both types if built-in bases (such as terrazzo, concrete or wood) are used. The latter, of course, are not part of the Medart assembly. With built-in bases, the Grade-Robes rest on the bottom frame member. In recessed installations (when built-in bases are not provided), finished flooring should run into recess about 2″ and a strip of finished flooring should also be placed under the rear legs.

MEDART LOCKEROBES with SIMULTANEOUS OPENING MASTER DOOR CONTROL

Similar in construction and offering the same fine features as Grade-Robes. However, with Lockerobes, operation of all doors is in the hands of one person who has absolute control of the simultaneous OPENING AND CLOSING as well as the locking of all doors . . . an exclusive Medart feature!

Right-hand doors are opened or closed by the operation of the right-hand control door; left-hand doors by operation of left-hand control door. Doors open on a 90° angle and the operating mechanism keeps all right doors open until left doors are first closed. A door handle is required only for the right hand control door. Endorsed by many leading architects and school authorities as the ultimate in safety and convenience for elementary school use.

Medart lockers offer the finest design, quality and craftmanship the industry affords. Their serviceability and durability have been proved through years of continuous use. Medart engineers are available for consultation and experienced advice at any time, without obligation. Write for general catalog and name of nearest Medart sales agent.

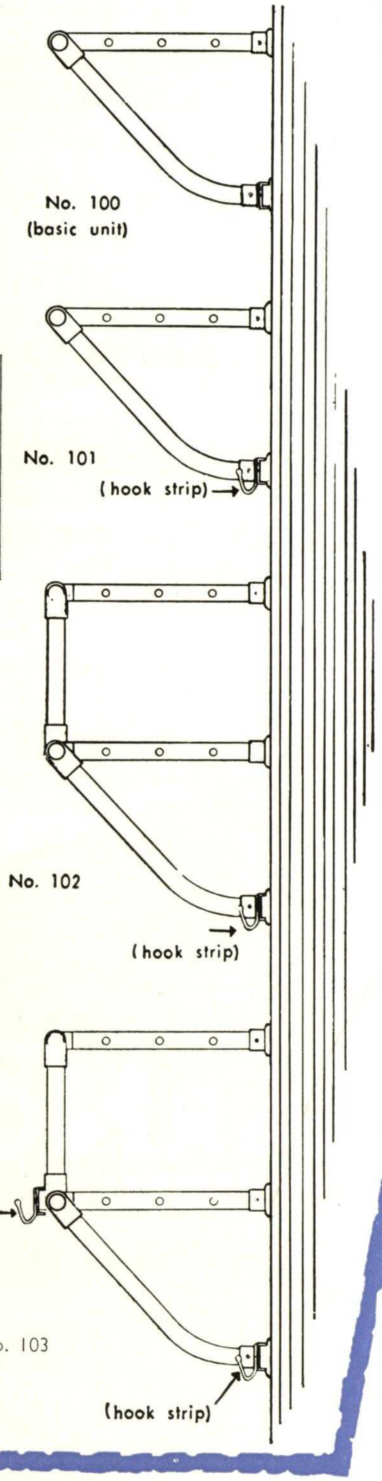
The aluminum shelf, coat and hat racks are smartly designed, not only light, strong and rigid, but include sanitary self ventilating features with beauty. Styles No. 101 and No. 102 are equipped with double-prong hooks 6″ on center. Style No. 103 has single prong hooks 9″ on center staggered. An additional coat rod for Styles No. 100, 101 and 102 can be applied when required.

Shelves up to 6′0″ long furnished with two brackets. Over 6′0″ three or more brackets are supplied. Shelves are shipped assembled. Hooks are applied to strips. All fittings drop forged aluminum. The finish of the entire assembly is alumilited and will not darken or peel. Coat hangers are not furnished.

ANY DESIRED LENGTH UP TO 16 FEET

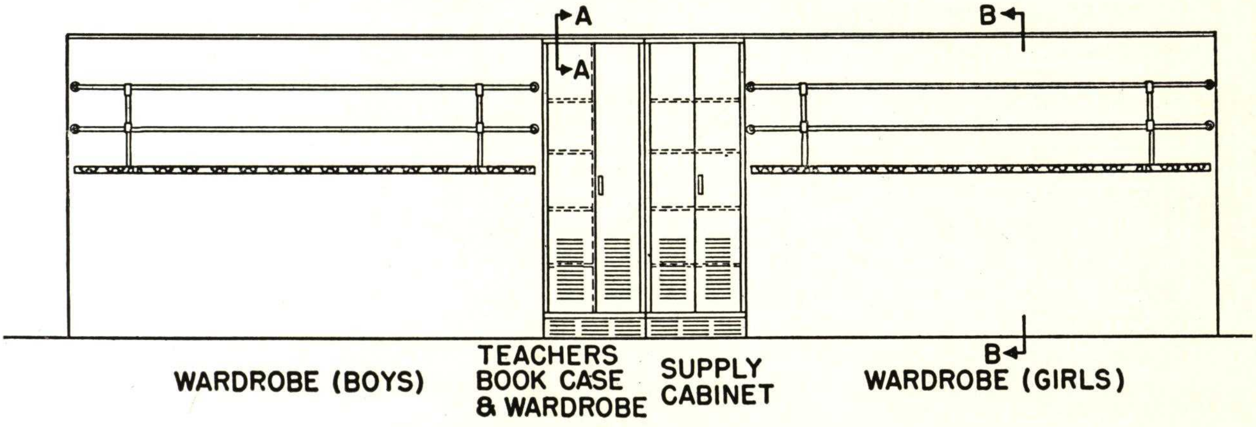
WRITE FOR CUBICLE CIRCULAR FOR DRESSING AND PATIENT ROOM ENCLOSURES.

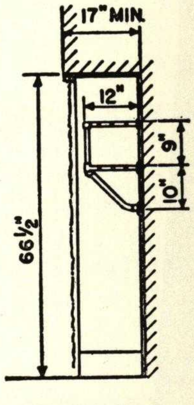


Shelves on Style No. 102 and No. 103, as well as multiple shelves, are spaced 9″ on center.

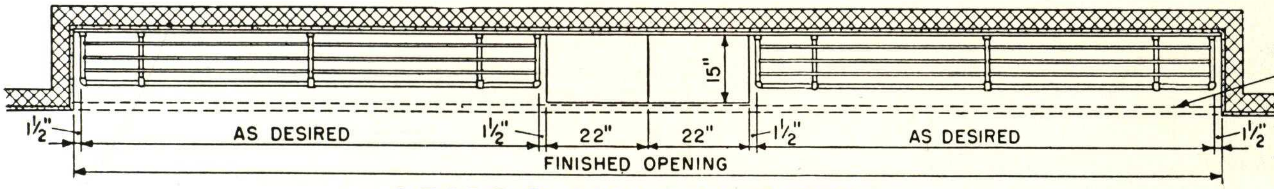
Where shelves are required to fit into prepared recesses or between walls, allow 1½″ at each end for flanges.

CURTAIN CLASSROOM WARDROBES



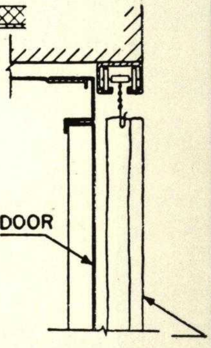


SECT. B-B



ARNCO WARDROBES

Arnco curtain classroom wardrobes offer economical yet efficient wardrobe equipment. Both arrangement and capacity are entirely flexible. Aluminum shelves and hook strips may be divided as shown, for boys on one side, girls on the other, or continuous with cabinets located at ends. Cabinets may be eliminated if desired. Track and curtains are optional but provide an attractive, flame-proof means of screening clothing. Curtains are 4" from floor to provide necessary ventilation.



SECT. A-A

SPECIFICATIONS

general • Wardrobes shall be Arnco curtain classroom wardrobes installed by contractor in recesses as shown on plans. Wardrobes to consist of aluminum coat and hat racks, steel supply cabinet, combination teacher's cabinet, aluminum track with carriers and vinyl coated fiberglas curtains.

coat and hat racks • To be constructed of 1" O.D. x .065 aluminum tubing frame, with forged aluminum fittings, ½" O.D. x .065 intermediate stringers, and 1½" x ½" x ⅛" extruded aluminum channel hook strip having double-prong hooks applied 6" on center.

teacher's closet • Cabinet to consist of 16 ga. door and frame, with three-point locking device and flat key lock; assembled to a 24 ga. body by means of slotless head bolts. Bottom of doors and base to have louvres; backs to be perforated. Cabinet to have center divider, one compartment having wall and ceiling hooks, the other four adjustable shelves. Available also in wood.

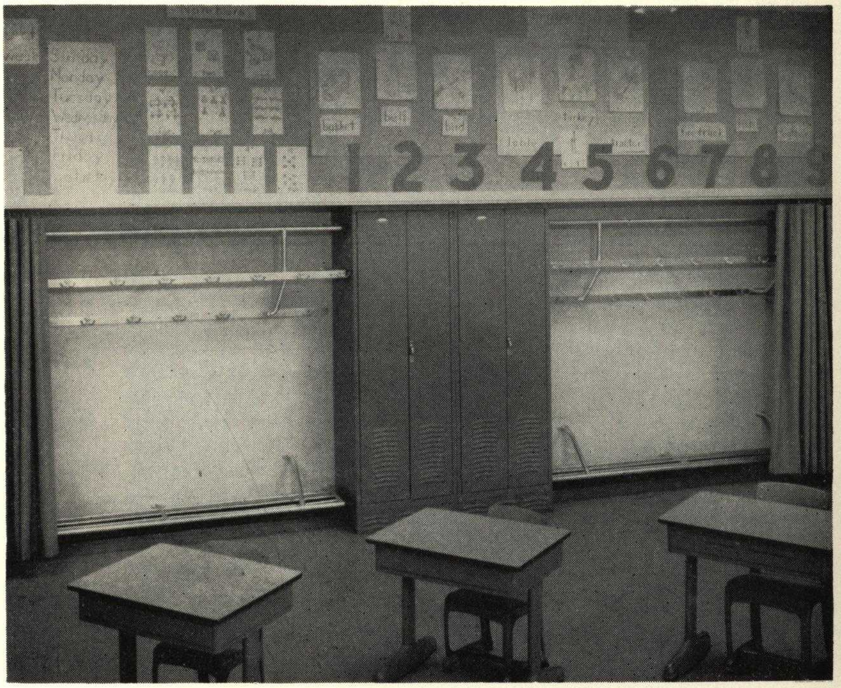
supply cabinets • To be as described above except to have one full width compartment with four adjustable shelves. Available also in wood.

track • To be specially designed extruded aluminum with raceways for two-wheel carriers.

curtains • To be vinyl coated fiberglas, flameproof, mildew proof, color fast, with rustproof grommets approximately 6" on center starting 2" from each end to provide overlap at meeting point. Color of curtains to be standard pastel shade as selected.

carriers • To consist of specially designed nylon axle and "non-contact" rollers, bead chain and hook; and to operate freely without drag or locking.

finish • All aluminum parts to be alumilited to provide permanent finish. Steel cabinets to have baked enamel finish in standard color as selected.



Curtain wardrobe showing optional overshoe rack, inverted style #100 with horizontal braces not more than 2 feet on centers.

SPECIFICATIONS

Coat and hat racks to be ARNCO Style #.. as manufactured by A. R. Nelson Co., Inc., Long Island City, N. Y. Shelves to be 12" deep and of length as shown on plan. Shelves over 16'-0" in length to be supplied as two (or more) complete units to suit requirement. Shelves to be constructed of 1" O.D. x .065 6063-T832 aluminum tubular frame with three intermediate stringers of ½" x 0.58, reenforced with steel rod. Front corners to be formed by forged 90° aluminum elbows connecting tubing by means of concealed threads and presenting neat, smooth appearance. Wall fastenings to be concealed through forged oval flanges. Intermediate supports for ½" tubing to be 1" tubing spaced not more than 3'-0" on center. Intermediate supports to be connected to front member by means of forged, aluminum slip tees, and secured with oval head Phillips head screws.

Hook strips to be aluminum channel ½" x 1½" x ½" x ⅛" and to have single or double-prong hooks of durable Tenzaloy secured with screws 6" on center (9" staggered where two hook strips occur).

Hook strips used separately (without hat racks) furnished if desired, with coat and hat type hooks of Tenzaloy.

Brackets for all styles to be of same material as frame, to be secured to shelves with forged slip tees, and to hook strip or wall with oval flanges.

Adjustable double prong snap-on hooks to provide additional capacity, or used in place of hook strips.

Vertical supports for multiple shelf styles to be 1" tubing connected to lower shelf and bracket with forged four-way aluminum fitting pesenting continuous vertical line.

Optional coat rod, adaptable to styles #100, #101 and #102, to be 1" O.D. x .065 tubing with closed ends and mounted on forged aluminum fittings to shelf brackets.

Finish to be permanent Alumilite over high polish.

ERECTION

Installation is simple and accomplished with ordinary tools. Apply wall flanges with 1/4" toggle bolts or rawl plugs and wood screws, depending on wall construction. Insert tubular parts and secure with Philips head screws (furnished) using #31 drill.

LOCKER EQUIPMENT

PENCO'S CREDENTIALS TO ARCHITECTS • ENGINEERS • BUILDERS

Manufacturer of quality metal products since 1869 • Specializing in industrial and institutional storage equipment • National sales and service • New automated multi-million dollar plant using latest improved techniques and processes • Dependable supply of quality steels furnished by parent company

OTHER STANDARD PENCO LOCKERS

DUAL LOCKER: Single-tier type with divider in clothing section.

16-PERSON LOCKER UNIT: Inverted "U" arrangement with external coat-hanging space. Minimum floor space. Individual flat key locks.

7-PERSON LOCKER UNIT: Seven box lockers and one coat locker. Individual flat key locks. All have access to coat locker.

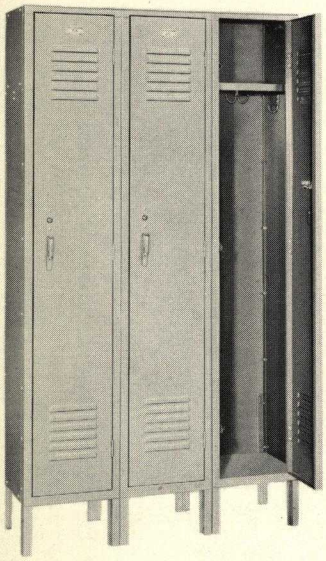
8-PERSON LOCKER UNIT: Eight box-type lockers and two coat lockers. Individual flat key locks, all with access to one coat locker.

GOLF LOCKER: Complete double-doored sportsman's locker for the golfer.

PACKING HOUSE LOCKER: Variation of single-tier locker to meet standards established by Bureau of Animal Industries.

SHIP LOCKERS: Made to U. S. Navy and Maritime Commission standards.

AIR-CONDITIONED LOCKERS: Forced air flow for continuous ventilation.



SINGLE TIER LOCKERS

Dimensions over-all in inches

Width	Depth	HEIGHT Flat Top No Legs	HEIGHT Sloping Top with 6'' Legs Front	HEIGHT Sloping Top with 6'' Legs Back	HEIGHT Flat Top with 6'' Legs

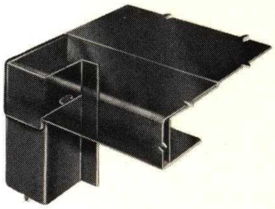
Keeps sports equipment, lunches, books, etc., safe. Specify 3 to 6 units high—any number wide. Can be used in battery with single or double-tier lockers.

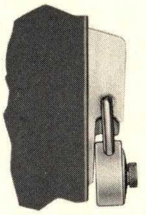
DOOR FRAME

Intermembering of top and sides of frame maintains true rectangular door shape—resists twisting, provides full strength for the life of the unit.



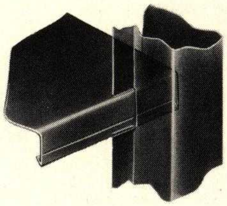
DOOR HANDLE

Internal lifting piece operates latching bar. Fixed handle acts as guard—provides opening for padlock which loops through handle and lifting piece. Handle guards locker finish.



INTERMEDIATE TIER HEAD

Intermediate tier head (horizontal shelf) between multiple-tier locker openings extends through vertical frame members for maximum strength. Single line door joint adds beauty.



PENCO
PHOSPHATIZED

PHOSPHATE UNDERCOAT

Penco's complete pre-enameling phosphating process protects against rust, stops spread of corrosion, grips paint for durable finish.

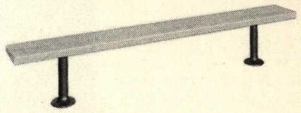
LOCKER ROOM BENCH



Hardwood seat 9½″ wide x 1¼″ thick. Maximum length 12′. Pedestals finished to match lockers. Overall height 18″.

PENCO STEEL LOCKER SPECIFICATIONS

MATERIAL—Locker body parts to be made from mild cold rolled sheet steel free from surface imperfections and capable of taking a high-grade enamel finish.

FINISH—All parts to be thoroughly cleaned before painting and given a bonding and rust resisting phosphate undercoat followed by one coat of high-grade enamel sprayed on by electrostatic method. Enamel to be baked on with the proper temperature-time relationship to insure thorough curing and a tough durable finish. Color to be selected by the architect. Hardware to be cadmium plated.

DOOR FRAME—All door frame members to be not less than 16 gauge formed to a channel shape. Vertical members to have an additional flange to provide a continuous door strike. Intermembering parts to be electrically welded together in a rigid assembly capable of resisting strains.

DOORS—To be of one piece 16 gauge suitably flanged on all four edges to provide adequate strength and stiffness. Single-tier and double-tier locker doors to have channel formation on vertical edges.

LOCKING DEVICE—Doors to have locking device engaging the door frame at three points on single-tier, two points on double-tier, and single point only on multiple-tier lockers. Locking device to be positive automatic type, whereby locker door may be locked when open, then closed without unlocking. Rubber bumpers to be securely attached to door strike and top and bottom of latching bar to provide for quiet operation of door.

Multiple-tier locker doors to have suitable provision for locking by means of padlock or built-in spring bolt lock as required.

VENTILATION—Louvers to be provided at top and bottom of doors in groups of 6 louvers for single-tier, 4 louvers for double-tier, and 3 louvers for triple-tier lockers. Multiple-tier lockers to have one group of 3 louvers at center of door.

DOOR HANDLE—To be a zinc alloy die casting, chromium plated. Handle to have internal lifting piece operated by finger pressure to release locking bar. Padlock eye to be an integral part of handle and to be so located that extension of handle forms a padlock strike to prevent marring face of locker.

NUMBER PLATES—Each locker opening to be supplied with polished aluminum number plate 2¼″ wide x 1″ high, with black etched numerals not less than ⅜″ high. Plates to be attached to front of door with split rivets.

HINGES—.050″ thick full loop tight pin five knuckle hinges 2″ high, projection welded to door frame and bolted to door with two bolts to each hinge. Single-tier locker doors to have 3 hinges. Double-tier and multiple-tier doors to have 2 hinges.

BODY—Locker sides, backs, tops, bottoms, and shelves to be 24 gauge with edges suitably formed to provide a rigid assembly when bolted together. Spacing of bolts in locker body construction not to exceed 9″.

INTERIOR EQUIPMENT—Single-tier lockers to have hat shelf located approximately 9″ below top of locker. Double-tier lockers to be furnished without hat shelf. Single-tier lockers less than 18″ deep to have 3 single-prong wall hooks and one double-prong ceiling hook. Single-tier lockers 18″ or more in depth to have coat hanger rod instead of ceiling hook. Double-tier lockers to have 3 single-prong wall hooks and one double-prong ceiling hook. Hooks to be round tip, cadmium plated, attached with two bolts per hook.

RECESS TRIM—For recessed lockers where shown on drawings or schedules, or specified elsewhere, provide 18 gauge trim to close space between tops and sides of lockers and adjacent walls. Trim to be 3″ wide suitably formed to provide for attachment to lockers and to scribe to wall in concealed manner. All necessary clips, splice plates and hardware to be furnished as required.

LOCKS

Penco lockers may be equipped with standard master keyed built-in locks, key operated or combination, or with padlocks. Specifications should state type of lock required. Lockers are furnished without locks unless otherwise specified.

COLOR

For lockers furnished in new school construction, architects may choose from a wide variety of cheerful and attractive colors . . . each a full quality baked enamel finish over Penco's rust-resistant phosphate base. Ask for color chart SF. No obligation.

15″	21″	72″	78″	78″	88½″
18″	21″	72″	78″	78″	88½″

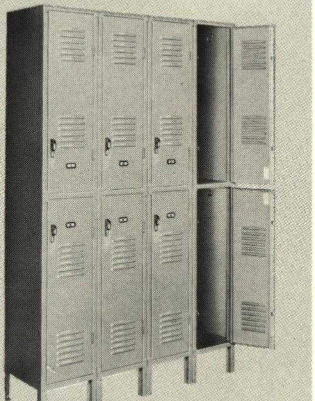
Type VLS . . . VisuaLocker, Single Tier—Provides good visibility of locker contents, excellent ventilation, and adequate security. VisuaLocker Door can be furnished with any standard type of Republic Steel Locker.

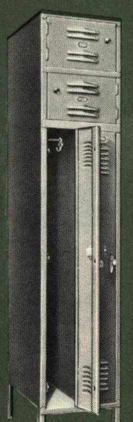
Type SS . . . Single Tier Locker, Standard Louvers—This popular locker has ample height for street-clothes storage, roomy hat shelf, coat hooks, number plate and padlock attachment. May be equipped with padlock, built-in key or combination lock, or "Republic Key Control".

Type FS . . . Single Tier Locker, Full-Louvered Door—Louvers all the way down door provide extra ventilation. Otherwise, identical with Type SS.



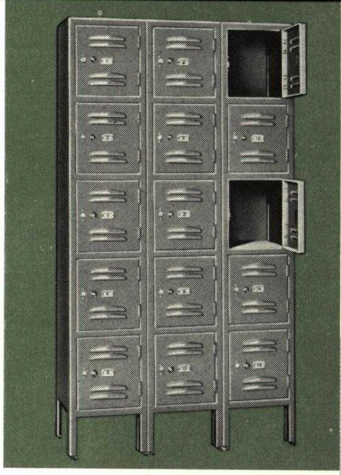
Type SD . . . Double Tier Locker, Standard Louvers—Recommended for locations where locker space is limited. Doubles lockers per square foot when compared with Type SS. Has coat hooks, number plate, padlock attachment. May be equipped with padlock, built-in key or combination lock, or "Republic Key Control".

Type FD . . . Double Tier Locker, Full-Louvered Door — Louvers all the way down doors provide extra ventilation. Otherwise identical with type SD.



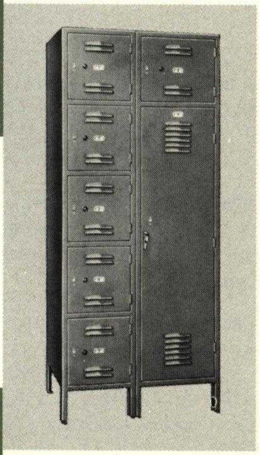
Type TPL . . . Two Person Locker—Private compartments for two persons, in floor area required for one single tier Type SS locker. Large doors lock individually. Lower doors control locking of individual hat compartments. Equipped with either coat-hanger rod or coat hooks.

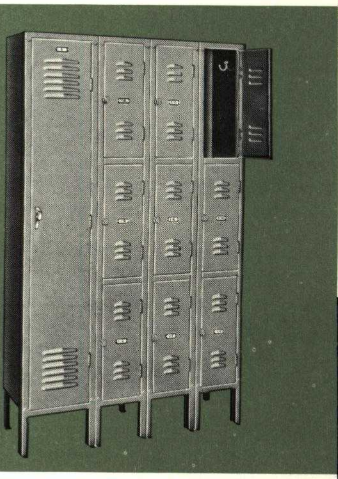
. . Preferred by Architects, Builders, and Owners for 70 Years



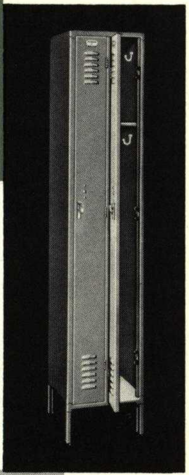
Type S . . . Box Locker—Each locker section contains five storage compartments. Popular in warmer climates where street-clothing storage is seldom needed. Available with padlock clips, built-in flat key lock or combination lock.

Type G . . . Combination Locker—Gives most lockers per square foot. Small compartments for personal belongings. Large compartment for joint use. Two different sizes provide locker space for six or seven persons.

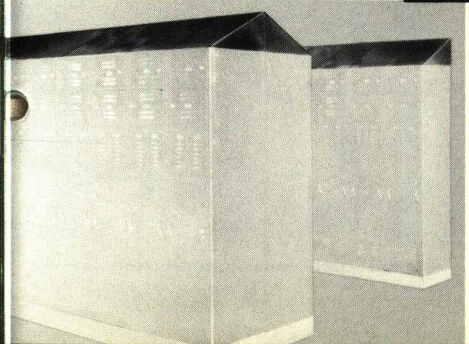




Type GL . . . Gymnasium Locker—One single tier locker and three, six, nine or twelve triple tier lockers. Small locker permanently assigned to each person. Large locker for joint use.



Type DL . . . Duplex Locker—Designed to conserve floor space. Contains two full-length lockers in a 15-inch-wide frame. Each locker is 7½ inches wide.



Sloping Tops . . . help keep locker rooms neat and orderly, are easy to clean, and eliminate clutter of odds and ends stored on tops. Available on all Republic Steel Lockers.

Standard Finishes—Neutral Green, Gray or Beige Enamel.

Legs are furnished with all lockers for free-standing installations. For recessed installations, lockers are furnished without legs.

Locker Groups to Meet Your Needs—Standard steel lockers may be grouped in various ways to meet your *exact requirements*. Republic's locker planning and engineering service includes recommendation of the right lockers for your needs, and assistance with installation details. Let Republic help solve your locker problems.

SPECIFICATIONS

Republic Steel Lockers

MATERIAL—Doors and door frames shall be made of cold rolled and leveled sheet steel. Other parts shall be made from mild cold rolled steel. All steel to be free from imperfections and capable of taking a high grade enamel finish.

DOORS—Shall be 16 gage steel, adequately flanged. Formations shall consist of two right angles at lock side of door; two right angles at hinge side, and one right angle formation at top and bottom. Triple tier lockers and box lockers shall have one right angle formation on all four sides. All flanges of single tier lockers shall be welded together at corners.

DOOR FRAMES—Shall be not less than 16 gage steel capable of taking high grade finish as balance of locker. All parts to be channel formation securely welded together. On double tier, triple tier and box locker construction a horizontal channel frame member shall be placed between all doors and securely welded to the upright channel frame member.

LOCKING DEVICE—Shall be a positive automatic type locking device of the pre-locking type, on all single tier and double tier lockers, whereby locker may be locked while door is open, then closed without unlocking and without damaging locking mechanism. Rubber silencers shall be provided at each latching lug and at top and bottom of latching bar. The silencers on the latching lugs shall be securely attached with rivets having the heads molded into the rubber. Latching bar shall be of channel formation and tamperproof. Handle shall be of the straight lift type, of unbreakable alloy, chromium plated. Handles shall have padlock attachment so that handle or latching device cannot be operated when padlock is affixed (unless hereinafter specified, locks are not included in these specifications). Handles shall be so designed to provide a padlock strike to prevent padlock marring finish on locker door. There shall be three locking points on single tier lockers, and two locking points on double tier lockers. Triple tier and box lockers shall not have pre-locking device or latching bar or handle.

NOTE: A spring actuated, one point, positive latching device is available when specified for all box lockers 3, 4, 5 and 6 tiers high. For this device the specifications should include the following description: "A spring actuated, one point, positive latching device shall be provided consisting of a latching keeper made of 12 gage steel, properly formed, and welded to the door frame. The latching mechanism shall be silenced with a live rubber silencer. The exposed portion of this mechanism shall have a padlock attachment. (Provision for built-in lock instead of padlock attachment can be made. If both padlock attachment and provision for built-in lock are required specifications should so state.)"

LOCKS—All lockers may be furnished with built-in master keyed flat key (grooved key or combination locks may be specified if desired) locks of standard manufacture with two keys for each lock. (Padlocks, either of flat key type or combination type may be specified.)

HINGES—Shall be at least 2″ wide of the full-loop, tight pin style, to be securely welded to frame and bolted to door with two bolts to each hinge. Locker doors 42″ high and less shall have two hinges. Doors over 42″ high shall have three hinges.

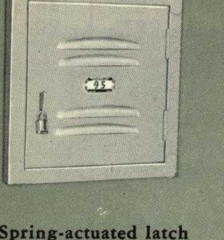
BODY—Body of locker shall be of 24 gage steel with necessary formations to make rigid locker and to insure tight joints between bolts. All bolts and nuts shall be zinc plated.

FINISH—Before enamel is applied, the surface of the steel shall be Bonderized to inhibit corrosion and increase the durability of the applied enamel. All parts shall then be finished with a heavy coat of No. 5 Willow Green enamel (No. 50 gray or No. 9 beige may be specified). Enamel shall be baked-on. Bolts and nuts shall be zinc plated.

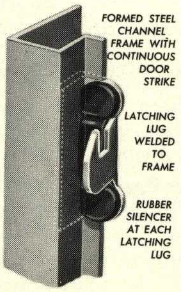
NUMBER PLATES—Each locker shall have a polished aluminum number plate with black background and etched aluminum numerals not less than ½″ high. Plates to be attached with split rivets.

EQUIPMENT—Single tier lockers shall have one hat shelf with rolled front, approximately 9″ below top of locker. Double tier lockers have no hat shelf. All single and double tier lockers shall have one double prong ceiling hook and at least one single prong wall hook on each side and back. All hooks shall have ball points, and shall be made of aluminum. All hooks shall be attached with two bolts.

VENTILATION—Doors shall be louvered at top and bottom for ventilation. Single tier and double tier lockers shall have 6 louvers at top and bottom; triple tier three louvers at top and bottom, and box lockers two louvers at top and bottom of doors.



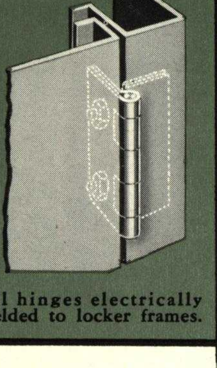
Spring-actuated latch available on box lockers.



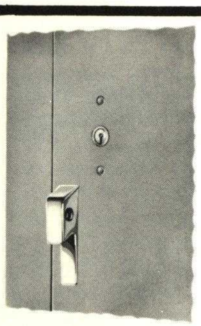
FORMED STEEL CHANNEL FRAME WITH CONTINUOUS DOOR STRIKE
LATCHING LUG WELDED TO FRAME
RUBBER SILENCER AT EACH LATCHING LUG

Sturdy latching lugs have tough, rubber silencers.

Padlock strike keeps lock from marring door finish.



All hinges electrically welded to locker frames.



Sturdy chrome-plated alloy handles.

How To Recess Lockers In Corridor Walls

Lockers are recessed in corridor walls in most new school buildings, so that only the faces of the lockers are visible . . . providing neater appearance, more usable floor space and preventing theft of entire locker.

Opening Height for recessed lockers should be at least 1 inch greater than the over-all height of the locker without legs.

Recess Depth is to be 1 inch greater than locker depth.

Recess Width should be 2 inches greater than the over-all width of the total number of lockers in each group up to and including 32 lockers. For example, for six lockers which are 12″ wide by 12″ deep by 60″ high recessed in one group, the opening should be 74″ wide by 13″ deep by 61″ high.

Recess Width — more than 32 lockers — When groups are more than 32 lockers wide, the recess width should be 3 inches greater than the over-all width of the total number of lockers.

Specifications — Metal Top and End Strips — Lockers are to be placed in recesses provided for them, and the locker contractor is to furnish steel recessing strips 3″ wide, to cover the gap at the ends and across the top of each locker section. Recessing strips to be not less than 18-gage finished to match lockers and with joint clips where top strips join, and caps where top and end strips join.

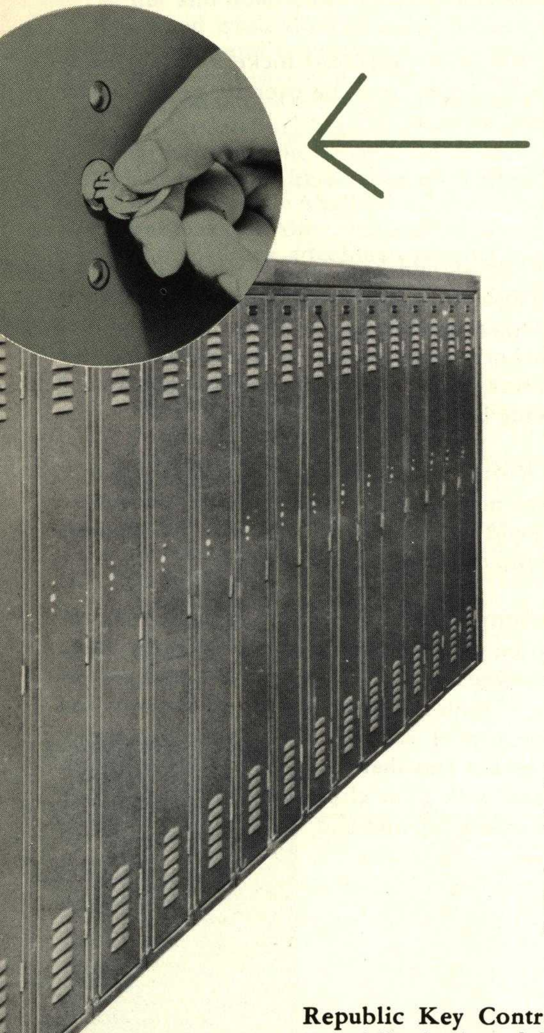
Republic Steel Double-Door Classroom Wardrobes by BERGER...



Republic Key Control Door Opens With A Key

. . . Locks Automatically When Closed!

No handle needed on a Republic Key Control Locker. To open door, just insert and turn key. Door pre-locks when key is removed . . . locks automatically when closed. A full-length, three-point latching bar assures positive, pry-proof locking.

- **Provides Neat Flush Fronts** . . . by eliminating projecting handles on long lines of lockers.
- **Assures Full-Time Protection** . . . doors lock automatically when closed . . . no danger of people forgetting to lock them.
- **Eliminates Handle Maintenance** . . . that's both bothersome and costly.

Republic Key Control is available on all Republic single and double tier lockers. Just include the phrase: "Republic Key Control" in your specifications, along with regular locker numbers.

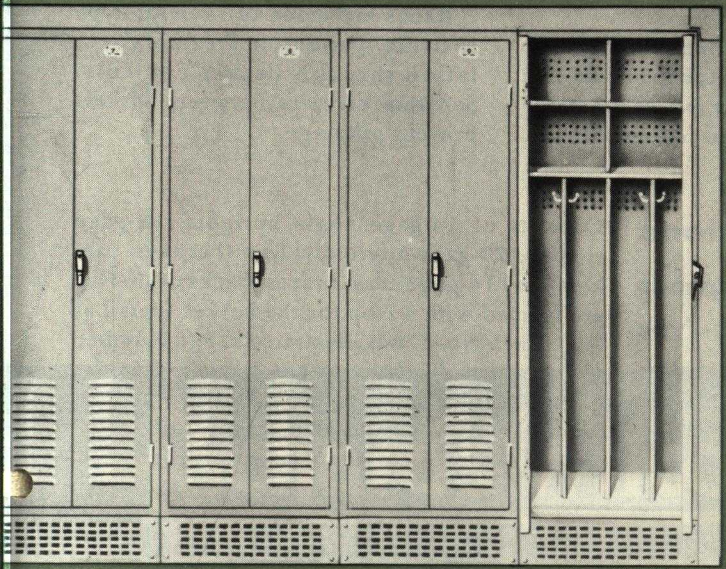
. . for Elementary Schools



Double-Door Classroom Wardrobes provide ample clothing space, free circulation of air, and teacher control of doors.

A wardrobe installation consists of a series of steel units each 22″ wide by 15″ deep by 66″ high. Any number of units may be erected in one assembly and controlled with one lock. The usual assembly consists of ten units, to accommodate a total of 40 pupils, plus a teacher's cabinet, teacher's wardrobe or bookcase, if desired. Different interior arrangements are shown on lower left page.

Double-Door Wardrobes are ventilated by door louvers. Perforating for forced system of ventilation will be furnished, unless otherwise specified. Grill bases are removable. If ventilation is not forced, doors can be louvered near top and bottom; no other perforated parts are required.

When teachers' wardrobes, cabinets or bookcases are wanted, they are furnished as shown below. Teacher units are the same dimensions as student units.

SPECIFICATIONS • REPUBLIC STEEL CLASSROOM WARDROBES

Furnish and install steel classroom wardrobes as shown on drawings, and of the following specifications. Each pupil's wardrobe, teacher's closet, bookcase, etc., shall be approximately 22″ wide, 15″ deep and 66″ high overall, with interior equipment consisting of (. . . here describe interior arrangement desired). Construction of wardrobes shall be on the unit principle, with all parts interchangeable.

DOORS—Shall be of 16-gage steel adequately flanged, formations consisting of two right angles at sides of door and one right angle at top and bottom. All flanges shall be welded together at corners.

DOOR FRAMES—Shall be 16-gage channels securely welded together.

LOCKING DEVICE—The opening and closing of wardrobe doors shall be individually accomplished. The control of the opening of the doors shall be in the hands of the teacher by means of a group locking device, operated by a control handle on the vertical frame member at the extreme end of the wardrobe assembly. Control handle shall be designed with padlock strike and equipped with padlock attachment (if desired, control mechanism can be equipped with built-in grooved key lock with two keys for each lock). Wardrobe doors shall have three latching points with latching mechanism of pre-locking type so that group locking device can be set with doors open, and doors closed without injury to latching mechanism, doors being automatically locked when closed. Rubber silencers shall be placed at each latching point and at top and bottom of latch bars.

HINGES—Shall be at least 2″ wide, of the full loop, tight pin style, to be securely welded to frame and bolted to doors. Each door shall have three hinges.

BODY—Of wardrobes shall be 24-gage steel with necessary formations for rigidity and tight joints between bolts. Bolts which hold sides to frame member and back flanges shall be spaced not over 9″ on centers. All bolts and nuts shall be zinc plated.

FINISH—Before enamel is applied, the surfaces of the steel shall be Bonderized to inhibit corrosion and increase the durability of the applied enamel. All parts shall then be finished with a heavy coat of No. 5 Willow Green enamel (No. 50 gray or No. 9 beige may be specified). Enamel shall be baked-on. Bolts and nuts shall be zinc plated.

NUMBER PLATES—Each wardrobe shall have a polished aluminum number plate with aluminum background and etched black numerals. Plates to be attached with split rivets.

VENTILATION—Forced ventilation, specify 12 louvers at bottom of door, grill bases—P. W. perforated backs, shelves and tops—T. C. perforated back and top right side only—T. W. perforated hat shelf and top—B. C. not perforated.

INSTALLATION DIMENSIONS—CLASSROOM WARDROBES

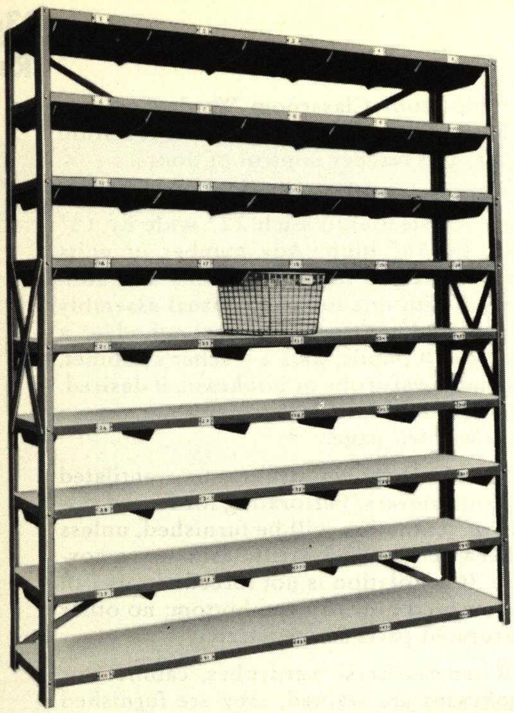
Add for teacher's cabinet—1′ 10″ to over-all clear of recessed opening given above.
Add for bookcase—1′ 10″ to over-all clear of recessed opening given above.



Republic Basket Racks

The Republic Basket System provides a convenient and economical way to store gymnasium clothing in schools and clubs.

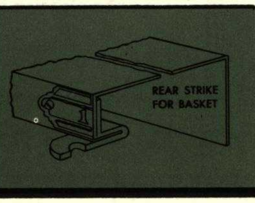
Each person is given a small basket just large enough for gym suit and shoes. Large locker is used for street clothing only when individual is in the gymnasium. Either self-service or attendant service may be used with Republic Basket Systems.

Racks are made of skeleton-type shelving, permitting free air circulation through basket contents. Separate dividers between baskets prevent pilferage.

Specifications

Republic Basket-Rack-Type Shelving

Consists of 14-gage angle uprights, 18-gage shelves, 20-gage angle dividers (between baskets) and 14-gage cross braces. Backs of shelves are formed with a stop for the basket (detail at left). Rack No. 478 is illustrated at left. Number plates and padlock loops are furnished on the face of each shelf. Republic Racks are built in sections which may be placed back to back or end to end to form any desired arrangement.



Rack No.	Size			Basket Capacity			Basket Size		
	Width	Depth	Height	Horiz.	Vert.	Total	Width	Depth	Height
478	63⅝″	13⅜″	77½″	5	8	40	12″	13″	8″

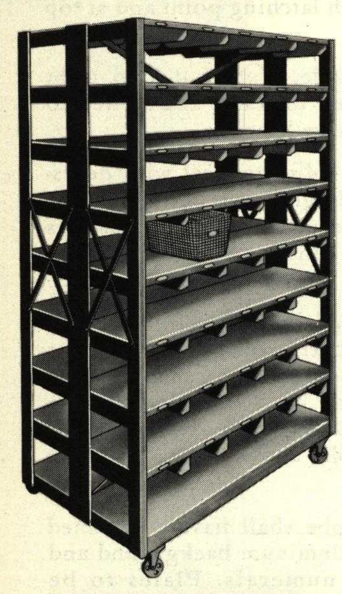
481	51⅜″	13⅜″	77½″	4	8	32	12″	13″	8″

Republic Basket Trucks



Two standard basket rack sections bolted together and mounted on caster base with 3″ wheels, to expedite handling of wire baskets. Cross braced for extra rigidity.

Number Plates and dividers are furnished . . . also padlock loops if desired.

Standard Finishes: Neutral Green, Gray or Beige.

Baskets to fit Republic Racks are made of 16-gage wire, welded at all intersections in 1″ square mesh. Number plates and padlock loops are furnished.

Truck No.	Rack No.	Basket Capacity	Basket Size		
			Width	Depth	Height
646	480 Double Faced	80	9″	13″	8″
636	481 Double Faced	64	12″	13″	8″

Republic Baskets

Reinforced Corners—14-gage steel wire, cadmium plated. 6-gage top frame. Corners reinforced with steel stampings. 1″ square mesh welded at all intersections. Number plates can be riveted below padlock loop.

Non-Reinforced Corners—Bottom and vertical sides made of No. 13 wire; horizontal sides of No. 15. Ends of wires are wrapped around and electrically welded to top rim of No. 6 wire. Hot-dip tinned finish with aluminum number plates.

available in 3 standard colors

New steel classroom wardrobes can harmonize with surrounding interior decorations. Wardrobes are available in three standard baked enamel colors . . . . mist gray, desert sand and sea shell green. For individual painting on the job a prime coat is furnished. This prime coat (No. 101) is a neutral shade, providing a good base for modern pastel colors. Facilities for factory painting of other colors are also available at slight extra cost.

DOORS OPERATE INDIVIDUALLY

The Richards-Wilcox "In-A-Wall" wardrobe is designed and engineered to give functional beauty, modern color harmony and flexibility of arrangement. A single pupil's wardrobe may be provided with 3, 4, 5, or 6 individually operated doors.

Each door is supported on a single heavy duty, full height ball bearing floor pivot assembly, with 1″ solid steel connecting rod extending from floor to head jamb. Standard operating equipment includes floor pivot assembly, top guide and track, with bow handles.

Since no floor tracks or protruding arms are required, the entire entryway is unobstructed, permitting ready accessibility to the hat and coat racks.

A standard single-door teacher's wardrobe will be furnished whenever required, and is regularly equipped with pivots, locks, handles, and a single shelf with hanger rod. Whenever specified, a bookcase and supply cabinet will be furnished complete with pivots, locks, handles, and five adjustable shelves.

operating hardware The design of the floor pivot assembly permits a simplified adjustment in 6 directions so that the pupils' wardrobe doors can be maintained in perfect alignment. The floor pivot assembly is especially heavy in construction, and designed to successfully withstand abuse and operate smoothly and efficiently.

doors—steel Standard steel doors are constructed of top quality, cold rolled steel, will never warp and are fire and vermin proof. They are flush, insulated, 1 ¾″ thick, 2′6″ wide. Narrower or wider doors will be furnished if specified. Steel construction assures many extra years of lasting beauty, dependable performance and quiet easy operation . . . even under years of harder than average use.

doors—wood Standard equipment includes 1 ¾″ flush solid or hollow core doors 2′6″ wide. Narrower or wider doors will be furnished if specified. Standard doors are available with any wood veneer.

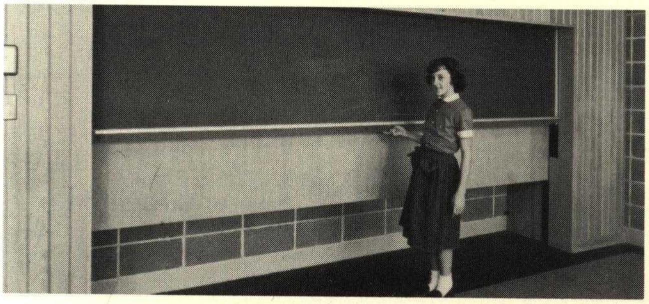
head and jamb Head and side jamb may be of wood or steel to comply with the type of doors used.

hat and coat rack The In-A-Wall wardrobe features a sturdy steel hat and coat rack. Each four foot rack will efficiently accommodate 20 pupils. Racks are painted to match the In-A-Wall units for complete modern color harmony.

chalkboard and corkboard In-A-Wall wardrobes may be equipped with either Cork Bulletin Boards or Chalkboards and Chalk Rails as desired. Corkboard and Chalkboard are available in various sizes and colors . . . for complete color harmony pick a color to complement the wardrobe units and surrounding interior decorations.

chalkboard

Doors for pupils' unit, supply cabinet, and teacher's closet shall be equipped with chalkboard as specified. Chalkboard shall be complete with aluminum trim and metal chalk-trough, if required. To fully utilize valuable wall area it is recommended that all wardrobe doors be equipped with chalkboards. Chalkboards are usually ¼″ thick, however Richards-Wilcox Wardrobe hardware is designed to accommodate any normal thickness chalkboard.



corkboard

Doors for pupils' units, supply cabinets, and teacher's closet shall be equipped with corkboards as specified. Corkboard shall be complete with aluminum trim as required. To fully utilize valuable wall area it is recommended that all wardrobe doors be equipped with corkboards. Corkboards are usually ¼″ thick, however Richards-Wilcox Wardrobe Hardware is designed to accommodate any normal thickness cork.

781

DOORS OPERATE IN PAIRS

A complete and economical "In-A-Wall" pupils' wardrobe designed to fit any classroom recess. A single wardrobe may be provided with a series of 2, 4, or 6 doors that operate in pairs. The hat and coat racks are continuous across the entire pupils' section accommodating 20 pupils per pair of doors.

Each pair of pupils' wardrobe doors is supported on a single heavy duty ball bearing floor pivot. Standard operating equipment for a pair of doors includes top and bottom pivots, top guide track with hanger, one pair of offset hinges, and a handle.

Since no floor tracks or protruding arms are required, the entire entryway is unobstructed, permitting ready accessibility to the hat and coat racks.

Through this principle of operation the doors fold together allowing chalkboards to face each other thus protecting any written work so it cannot be rubbed off when pupils enter wardrobe.

A standard single-door teacher's wardrobe will be furnished whenever required, and is regularly equipped with pivots, locks, handles and a single shelf with hanger rod. Whenever specified, a bookcase and supply cabinet will be furnished complete with pivots, locks, handles and five adjustable shelves.

operating hardware	All interior operating hardware is cadmium plated.
doors—wood	Standard equipment includes 1¾" flush solid or hollow core doors 2'6" wide. Narrower or wider doors will be furnished if specified. Standard doors are available with any wood veneer.
doors—steel	Standard steel doors are constructed of top quality, cold rolled steel. They are flush hollow metal, reinforced and insulated, 1¾" thick, 2'6" wide. Narrower or wider doors will be furnished if specified.
head and jamb	Head and side jambs may be wood or steel to comply with doors.

These arrangements of R-W No. 785 Wardrobes offer custom built advantages at production prices. Order or specify by plan number.

883

MULTIPLE OPERATING DOORS

A complete and economical "In-a-Wall" wardrobe designed to fit any classroom recess. A single wardrobe may be provided with a series of 3, 4, 5 or 6 multiple operated pupils' wardrobe doors as required, or a combination of pupils' sections, bookcases, supply cabinets and teacher's wardrobe. The hat and coat racks are continuous across the entire pupils' section, accommodating 10 pupils per door.

A standard single-door teacher's wardrobe will be furnished whenever required, and is regularly equipped with pivots, locks, handles and a single shelf with hanger rod. Whenever specified a bookcase and supply cabinet will be furnished complete with pivots, locks, handles and five adjustable shelves. These units are not controlled from the master door of the pupils' section.

operating hardware

Standard operating hardware will be furnished in solid bronze, lacquered.

The design of top and bottom pivots permits a simplified adjustment in all directions so that the pupils' wardrobe doors can be maintained in perfect alignment.

The top and bottom pivot units are especially heavy in construction, and designed to successfully withstand abuse and operate smoothly and efficiently.

The multiple control arm at the top of the opening securely holds all pupils' doors in their correct open, closed and intermediate positions without the use of any floor tracks or top tracks. Silent effortless operation is assured.

Standard equipment includes a latch for the master door, but in those instances where it is desirable to lock the entire pupils' wardrobe, the master door is equipped with a cylinder lock.

doors-wood

Standard equipment includes 1 ¾″ flush solid or hollow core doors 2′6″ wide. Narrower or wider doors will be furnished if specified. Standard doors are available with any wood veneer.

doors-steel

Standard steel doors are constructed of top quality cold rolled steel. They are flush, insulated, 1 ¾″ thick, 2′6″ wide. Narrower or wider doors will be furnished if specified.

head and jamb

Head and side jambs may be of wood or steel to comply with doors.

775

VERTICAL LIFT

The Richards-Wilcox Vertical Lift "In-a-Wall" Wardrobe eliminates the need for wide aisles since the doors slide overhead out of the way. Each door section operates on a system of counterweights. Due to its simplicity through engineering, the No. 775 offers ease of action for both opening and closing.

Wardrobes are available 8′, 10′, or 12′ wide accommodating 32, 40, or 48 pupils respectively. The hat and coat racks with two shelves and three hook strips are continuous across the wardrobe. They are available in steel or wood.

operating hardware

The synchronized two-speed design hardware assures smooth easy operation. The side tracks at both jambs are continuous steel and the guide rollers are nylon. The counterweights, roller chain drive, and interconnecting roller chain hold the doors in perfect alignment and prevent buckling.

aluminum doors

Standard equipment includes 1 ⅜″ or 1 ¾″ flush aluminum doors with honeycomb core.

wood doors

Standard equipment includes 1 ⅜″ or 1 ¾″ hollow core design with veneers as specified.

chalkboard and corkboard

R-W vertical lift wardrobes provide wide surfaces that can be used for either a continuous chalkboard or corkboard. Both are available in various colors . . . select a color to complement the surrounding interior decorations.

SPECIFICATIONS

785 doors operate individually

TYPE—The classroom wardrobes shall be R-W No. 785 "In-a-wall" steel (or wood) Receding Door Type as manufactured, installed and guaranteed by Richards-Wilcox Mfg. Co., Aurora, Ill.

OPERATING HARDWARE—Each pupils' wardrobe door shall operate independently on a single heavy duty pivot-arm of the full adjustment offset unit type extending from the top of the wardrobe to the floor. All weight shall be carried on the floor and the construction of the pivot-arm shall be such as to hold the doors rigid and in perfect alignment. No floor tracks shall be used.

HARDWARE FINISH—All interior operating hardware shall be finished in aluminum enamel.

STEEL DOORS—Doors shall be flush, hollow metal, reinforced and insulated, 1¾" thick, baked enamel finish in standard color as selected.

JAMBS—Head and side jambs and divisions shall be of steel (or wood) as detailed, finished to match doors.

WOOD DOORS—Doors shall be flush, solid vertical core construction, 5-ply, 1¾" thick with 1/12" cross-banding and 1/20" Rotary Cut veneer of .... (state kind of wood).

INTERIORS—Interior equipment for pupils' wardrobe shall include individual 5 foot sectioned standard steel (or wood) hat and coat racks with two shelves, three hook strips and double prong hooks.

781 doors operate in pairs

TYPE—The classroom wardrobes shall be R-W No. 781 "In-a-wall" wood (or steel) as manufactured, installed and guaranteed by Richards-Wilcox Mfg. Co., Aurora, Ill.

OPERATING HARDWARE—The doors shall be hinged together in two-door units to operate as shown. Each pair of doors shall be equipped with an adjustable ball bearing floor pivot, top pivot, top guide track with hanger, and one pair of heavy offset hinges all supplied in cadmium plated finish. The left hand door of each pair shall be provided with a handle. No mullions, divisions, floor tracks or protruding arms shall be used.

WOOD DOORS—Doors shall be flush, solid vertical core construction, 5-ply, 1¾" thick with 1/12" cross-banding and 1/20" Rotary Cut veneer of .... (state kind of wood).

STEEL DOORS—Doors shall be flush, hollow metal, reinforced and insulated, 1¾" thick, baked enamel finish in standard color as selected.

JAMBS—Head and side jambs shall be of wood (or steel) as detailed, finished to match doors.

INTERIORS—Interior equipment for pupils' wardrobe shall include continuous standard R-W wood (or steel) hat and coat racks with two shelves, three hook strips and double prong hooks.

883 multiple operating doors

TYPE—The classroom wardrobes shall be R-W No. 883 "In-a-wall" wood (or steel) multiple operation as manufactured, installed and guaranteed by Richards-Wilcox Mfg. Co., Aurora, Ill.

OPERATING HARDWARE—Each pupils' wardrobe door shall be supported on a single heavy-duty ball-point bearing with vertical and lateral adjustments. The top pivot shall be vertically self-adjusting.

Top and bottom door attachments shall be provided with adjustment features by which all of the doors in the wardrobe can be brought into perfect facial alignment. All top pivots shall be connected by a multiple control bar attached to each of the top pivots in a flexible manner to prevent binding and so arranged that when the master door is open or closed, all other doors will open or close simultaneously. The master door shall be provided with a knob and latch set.

HARDWARE FINISH—All interior operating hardware shall be of solid bronze, lacquered.

WOOD DOORS—Doors shall be flush, solid vertical core construction, 5-ply, 1¾" thick with 1/12" cross-banding and 1/20" Rotary Cut veneer of .... (state kind of wood).

STEEL DOORS—Doors shall be flush, hollow metal, reinforced and insulated, 1¾" thick, baked enamel finish in standard color as selected.

JAMBS—Head and side jambs shall be of wood (or steel) as detailed, finished to match doors.

INTERIORS—Interior equipment for pupils' wardrobe shall include continuous wood (or steel) hat and coat racks with two shelves, three hook strips and double prong hooks.

775 vertical lift doors

TYPE—The classroom wardrobes shall be R-W No. 775 "In-a-wall" aluminum (or wood veneer) vertical lif type, as manufactured, installed and guaranteed by Richards-Wilcox Mfg. Co., Aurora, Ill.

OPERATING HARDWARE—The hardware shall be of synchronized two-speed design provided with continuous steel tracks at both side jambs, silent guide rollers, counterweights, roller drive chain, interconnecting roller chain to hold doors in perfect alignment, and double sprocket assemblies.

ALUMINUM DOORS—Doors shall be 1⅜" or 1¾" flush aluminum design with honeycomb core.

WOOD VENEER DOORS—Doors shall be 1⅜" or 1¾" flush hollow core design with exposed veneer of .... (state kind of wood)

INTERIORS—Interior equipment shall include standard steel (or wood) R-W hat and coat racks with two shelves, three hook strips, brackets, and double prong aluminum hooks.

WORK BY OTHERS

All plastering, rough bucks, headers, grounds, vent grilles, baseboards, back bands, casing and flooring inside the recess shall be furnished and installed by others in accordance with R-W details approved by the architect. For No. 775 Vertical Lift Wardrobes the jambs and weight enclosure panels shall also be furnished and installed by others. (For wood wardrobes—filling, painting and staining shall also be done by others.)

OPTIONAL EQUIPMENT

Chalkboards—Doors for pupils' units, supply cabinets, and teacher's closet shall be equipped with continuous chalkboards, the color to be .... Include chalk trough. (Maximum recommended weight of chalkboard for Vertical Lift Wardrobes is 1.5 pounds per square foot.)

Corkboards—Doors for pupils' units, supply cabinets, and teacher's closet shall be equipped with continuous corkboards, the color to be ....

Umbrella Racks—Include one umbrella rack with drip pan in each 2-door pupils' section and single-door teacher's closet. (Include two umbrella racks with drip pan in each vertical lift pupils' wardrobe).

Teacher's Wardrobe—The recess shall be provided with a single-door teacher's wardrobe complete with pivots, lock, handle, division, shelf, and hanger rod.

Bookcase—The installation shall include a bookcase complete with pivots, lock, handle, division, and five shelves.

Supply Closet—The installation shall include a supply closet complete with pivots, lock, handle, division, and five shelves.

In the interest of progress and improvement these specifications may be changed without notice.

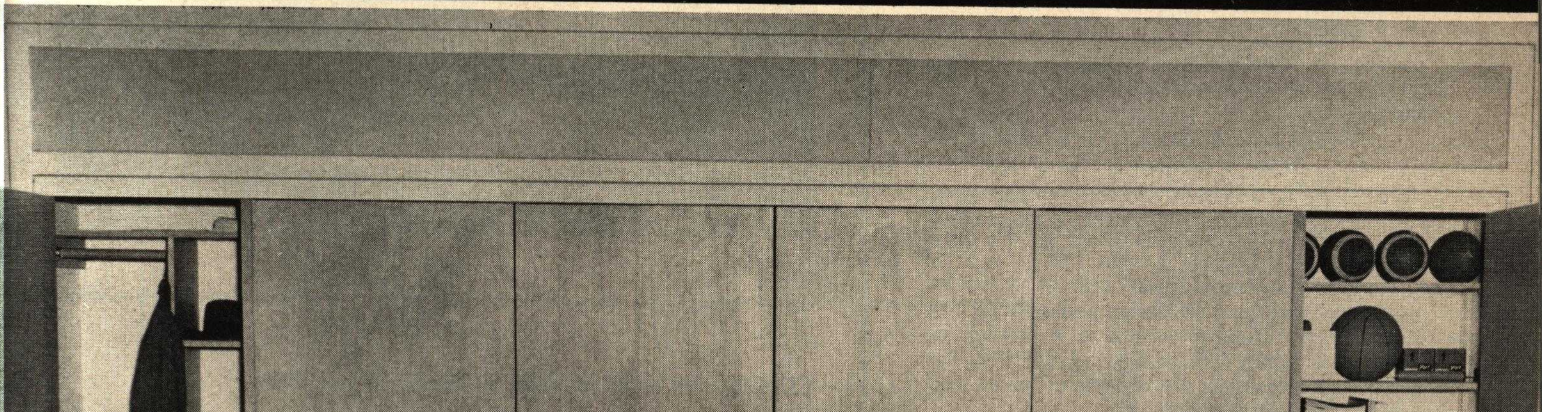
THESSCO

BUILT-IN CLASSROOM
wardrobes



SCHOOL SUPPLY COMPANY
KANSAS CITY 30, MISSOURI

THESSCO

THESSCO built-in wardrobes and accessories are manufactured by School Supply Company and installed by the manufacturer or his authorized agents thus insuring the user of quality products properly installed for maximum performance and satisfaction. School Supply Company fully guarantees all of its materials and workmanship against any defects for a period of one year.

Advantages

- *Maximum usable classroom space*—can be obtained only from use of built-in wardrobes. Chalkboards and tackboards can be mounted on face of doors.
- *Ventilation of clothing*—Wardrobes are ventilated by means of a continuous flow of warm classroom air introduced from space below wardrobe doors. Air then rises by means of gravity displacement and passes through ceiling grilles into plenum above wardrobes and is carried off by means of roof ventilators.
- *Easily cleaned and maintained*—no bulky floor mountings or unaccessible corners.
- *Each door mounted and operated on its own set of hardware*—offers individual door adjustment and alignment.
- *Lifetime hardware*—Simple rugged design and construction offers a lifetime of trouble-free operation.
- *Factory installed*—All THESSCO wardrobes installed by competent factory representatives.
- *Teacher supervision*—Being located in classrooms, wardrobes are under direct control of the teacher.

Quality Control

Over 25 years experience in the field of classroom wardrobes has gone into the design and manufacture of THESSCO wardrobes resulting in a product of maximum quality of workmanship and materials. All wardrobes and accessories are thoroughly tested and inspected.

Doors

All doors are top quality flush type, manufactured by nationally known door manufacturers furnished by THESSCO. Doors are furnished in either hollow or solid core construction, 1⅜″ or 1¾″ thicknesses, and in any standard facing veneer species or thickness.

Hardware

All exposed operating hardware is of solid cast Amalloy* or bronze, satin finished. Platings and other finishes may be so specified. All concealed hardware is of Amalloy casting. Operating hardware is adjustable both horizontally and vertically for perfect door alignment. Weight of door is carried on a single ball bearing floor pivot support. Special built-in mechanism holds door in either "open" or "closed" position.

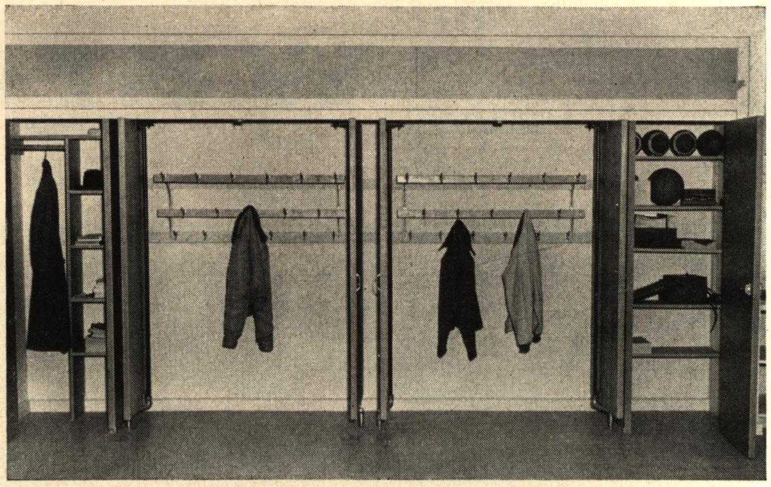
Interior Equipment

Each wardrobe is equipped with two wood shelves and hook strips, supported on cast amalloy shelf brackets. Hook strips contain double-pronged aluminum coat and hat brackets. It is recommended that ceiling of wardrobes contain two or three 12″ x 12″ vent grilles for proper ventilation. See page 4 for optional equipment.

* Amalloy is an aluminum alloy consisting of aluminum, magnesium and titanium, having a tensile strength of 38,000 p.s.i. and possessing high resistance to corrosion and high maintenance of luster without protective coatings.

RECEDER WARDROBES Type R22

Individually operated, doors are mounted on top and bottom pivots with guide arms so as to recess doors into the wardrobe when open for minimum obstruction. Pivots designed so that no offset arms or pivot supports extend into wardrobe floor space when door is open. No guide tracks, slides or rollers are used. Head pivots for both top arm and guide arm are incorporated in a single casting attached to head member. Top pivot arm bearing and second guide arm pivot are also incorporated in a single casting attached to top door rail. Top and bottom arms connected with ⅞″ steel rod extending from top to bottom of door. Each door is mounted on its own set of hardware and is individually operated. Any number of doors can be used. Any size doors up to 3′-0″ in width.



CENTER PIVOT WARDROBES Type CP11

Simultaneously operated, doors are mounted on individual sets of hardware and open and close in unison with master door. Each door is pivot mounted with top pivot and bushings set in factory drilled steel channel extending across entire head of wardrobe. Doors can easily be operated by the smallest child. Any number of doors can be used. Recommended individual door width is 2′6″.

Specifications

General—All built-in classroom (wardrobe units/teacher's closets/storage closets) as shown on the Drawings shall be those manufactured by School Supply Company, 4215 Michigan Ave., Kansas City 30, Missouri. Wardrobe units shall be THESSCO Type____, complete with frames, doors, hardware and accessories. Units shall be installed by the wardrobe manufacturer or his authorized agent. All units shall be guaranteed against defective materials and workmanship for a period of one year from the time of installation.

Doors—Wardrobe doors shall be flush panel type, (hollow/solid) core construction, (1⅜"/1¾") thick and____wide. Face veneers shall be of________wood with a total veneer thickness of____ inches.

Frames—Frames, consisting of head and jamb members, shall be constructed of same wood species as heretofore specified for wardrobe door face veneers.

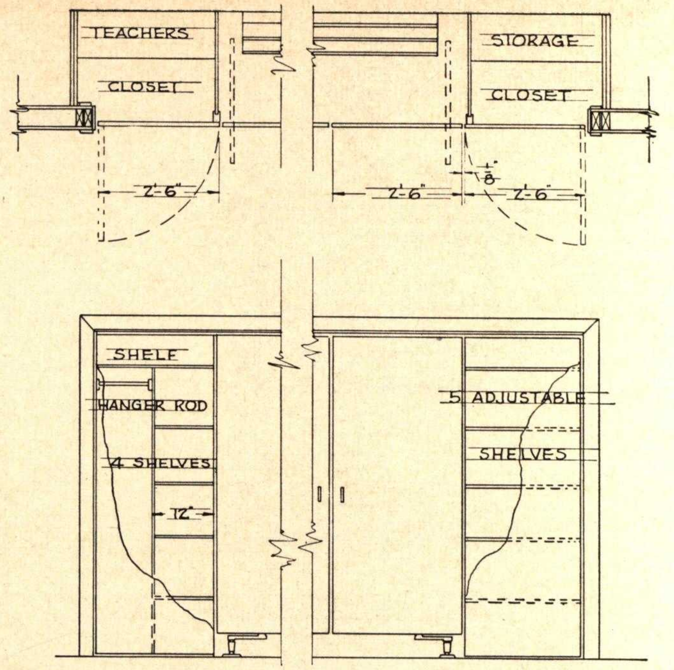
Hardware—All wardrobe units shall be equipped with hardware as required. Exposed hardware shall be solid (Amalloy/cast bronze), satin finished. Concealed hardware shall be of cast Amalloy. Each door shall be mounted on its own set of hardware for proper alignment and adjustment. All hardware shall be installed for proper operation.

Interior Equipment—All wardrobe units shall be equipped with two wood shelves and hook strips, supported on cast Amalloy shelf brackets attached to rear wall of wardrobe. Hook strips shall contain an adequate number of two-pronged coat and hat brackets. All wood members shall be of either Fir or Pine. (For additional available equipment see page 4)

Work Performed by Others—All recesses for wardrobes, including back and end walls, floors and ceilings, rough bucks and lintels, finish trim and painting shall be provided for and performed by others in accordance with detailed drawings and instructions supplied by the wardrobe manufacturer.

TEACHER'S CLOSET AND STORAGE

Can be used with either type of wardrobe. Wood divider provided between wardrobe and closet. Butt hinged doors match wardrobe doors and are hung with no exposed mullion so as to harmonize with wardrobe doors. Available for either right- or left-hand installation.



Specifications

General—same as wardrobe specifications

Doors—same as wardrobe specifications

Frames—same as wardrobe specifications

Hardware—All hardware shall be finished to match wardrobe hardware. Each closet door shall be equipped with 1 pr. butt type hinges, 1 pull, and 1 master-keyed cylinder lock.

Interior Equipment—Teacher's Closets shall be equipped with 5 shelves and 1 hanger rod. Storage Closets shall be equipped with 5 adjustable shelves. (For additional available equipment see p. 4)

OPTIONAL EQUIPMENT

Chalkboards and Cork Tackboards

Mounted on upper portion of wardrobe doors. Furnished with aluminum or wood mould.

Umbrella Racks and Drip Pans

Overshoe Racks

Various Shelf Arrangements

Including shelves with hanger rod and non-removable coat hangers can be supplied if so desired.

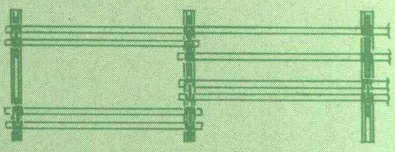
CUSTOM-LINE

Aluminum

WALL MOUNT COAT and HAT RACKS

These beautifully styled anodized heavy duty aluminum wall mount units are what their name "Custom" implies. They are built to your exact length and multiple shelf requirements. Not only are these racks furnished to your exact length requirements, but they meet your exacting need as to height from hook or hanger rail to the floor, as well as spacing between shelves. Easy spacing adjustment is made possible by our unique "E" extruded slide mounts detailed below.

TAILORED TO FIT...



models are furnished in any desired length to fit into recesses, between pilasters and in some cases can be worked across wall irregularities and obstructions. Are available in any combination of multiple shelf units or for two tier garment hanging requirements such as is sometimes needed for band and orchestra coats and jackets or blouses and shirts for home closets. These racks are adaptable to a wide variety of special applications.

Our heavy cast aluminum brackets are normally spaced on centers of from 27 to 38 inches, depending upon the length of the rack and specific usage.

Heavy cast double prong hooks come with Model 300 shelves and are spaced staggered on the 2nd and 4th tubes to allow ample coat space. Where desired such as for clothes closets in homes, hotels, motels, etc., model 200 shelves can be supplied with hooks for the back tube. Hooks do not interfere with garment hangers.

The maximum number of staggered hooks between brackets on the 300 series is determined by the bracket spacing used. With the staggered hook arrangement this will average a little over 2½ hooks or 5 plus coats per foot.

COLORS

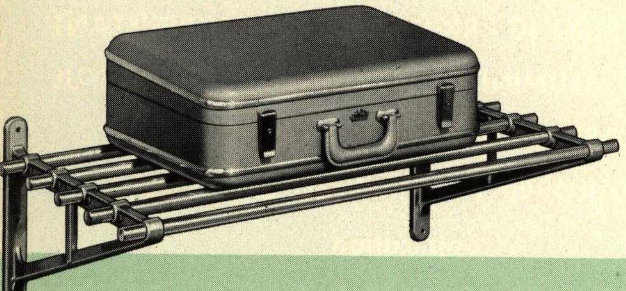
Aluminum Tubing—clear or gold deep etched non-peeling, non-corroding anodized finish.

Aluminum Die-Cast Brackets and Hooks—silver lustre, gold hammertone or black hard non-peeling, non-corroding finish.

Aluminum Extrusion Mountings—Same top quality clear or gold anodized finish as the Aluminum tubing.

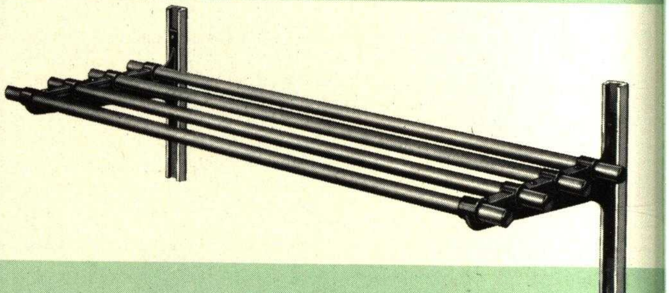
Suggested Color Combinations

1. Clear anodized tubing with silver lustre brackets and hooks.
2. Gold anodized tubing with gold hammertone brackets and hooks.
3. Gold anodized tubing with black brackets and hooks.
4. Extrusion mountings should match the color of tubing selected.



CLR - Luggage Racks

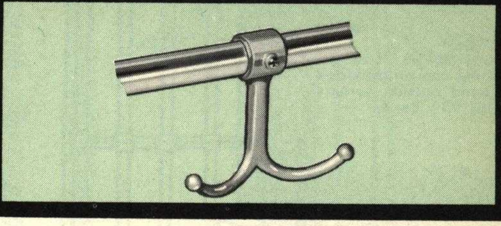
For Hotels, Motel and Dormitory rooms or closets. A full size wall mounted all aluminum luggage rack designed to match other custom-line wardrobe units. These sturdy units with strong cast brackets and capped end heavy gauge tubing are made in standard 24"-30"-36 and 42" lengths, or to your exact needs. They are a full 20" in depth and are made to withstand extremely heavy loads.

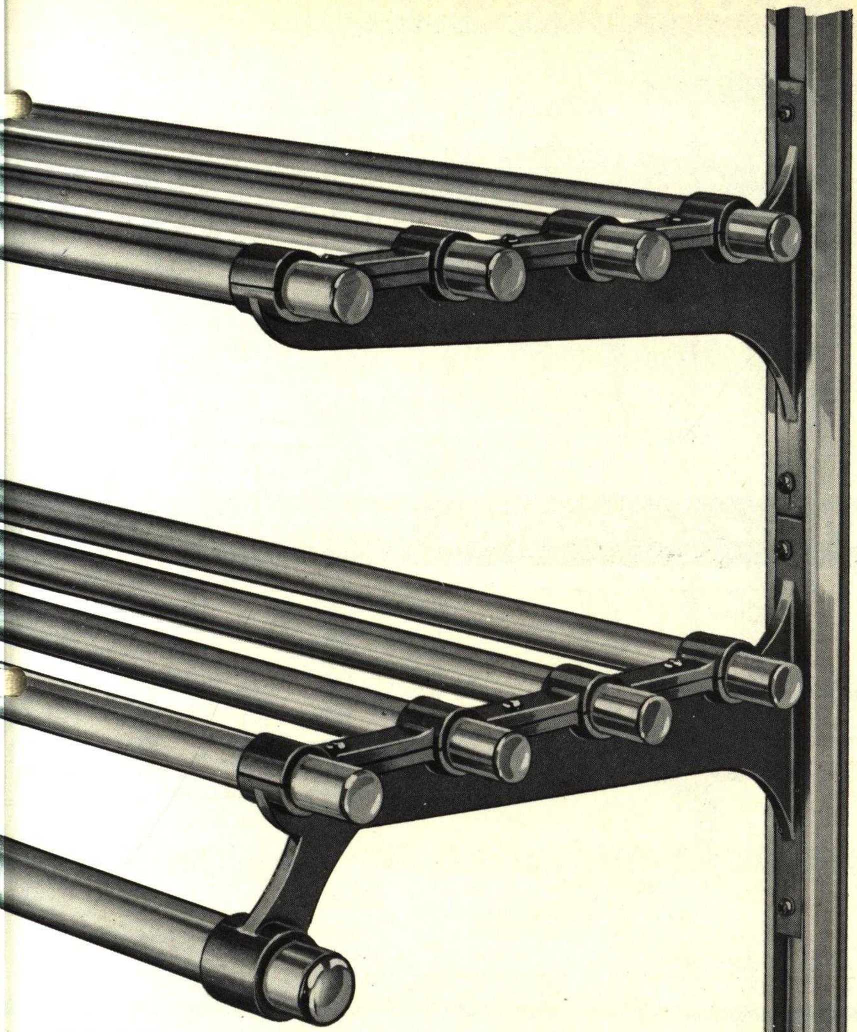


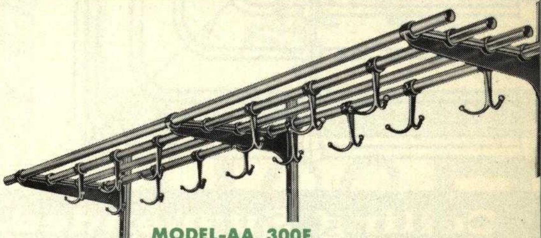
General Utility Shelf AA 100E

Matching all-purpose shelf can be used as added hat shelf to increase capacity of other units.—as a general purpose shelf for closets or storage. Mounted 6" off floor makes an excellent boot and shoe shelf. In short lengths makes an ideal towel rack for Hotels, motels, institutions and homes.

Hook Style RACKS

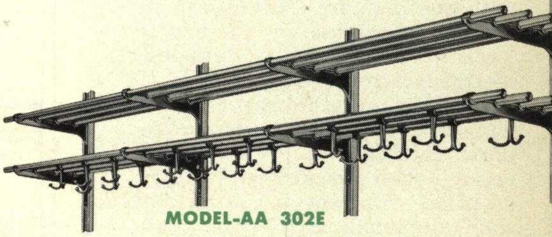






MODEL-AA 300E

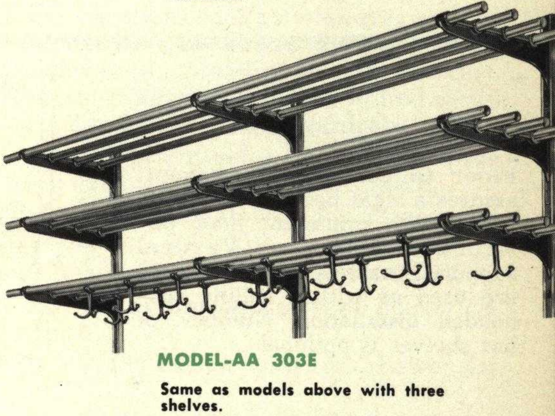
Single shelf unit with double anchor style aluminum coat hooks staggered on 2nd and 4th tube. Furnished in any length.



MODEL-AA 302E

Same as Model-AA 300E with one additional hat shelf.

For appearance and for easier access to hooks, we suggest the staggered hook arrangements illustrated.



MODEL-AA 303E

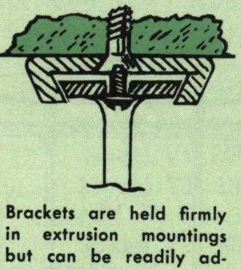
Same as models above with three shelves.

All Custom-Line racks are tailored to any required length.

"E" EXTRUSION MOUNTINGS

Anodized Aluminum extrusion mountings are furnished with all Custom-Line racks. The use of extruded mountings with our racks provide the following advantages.

1. Added beauty in multiple shelf units.
2. Ease of adjustment where racks are to be used for growing children and alternate use between children and adults.
3. Perfect alignment of multiple shelf units.
4. Add strength to cast brackets and for firmer wall anchoring.
5. Extrusions available up to 84" in length.



Brackets are held firmly in extrusion mountings but can be readily adjusted vertically to meet any height requirement such as in elementary schools.

Write to us on any special application that you may have.

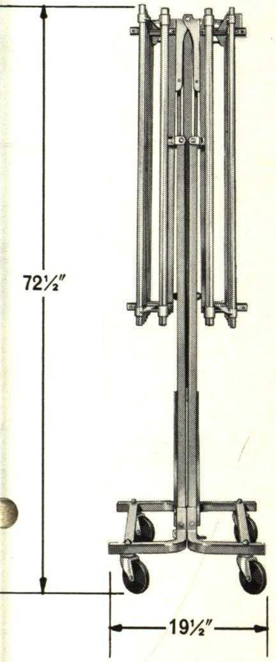
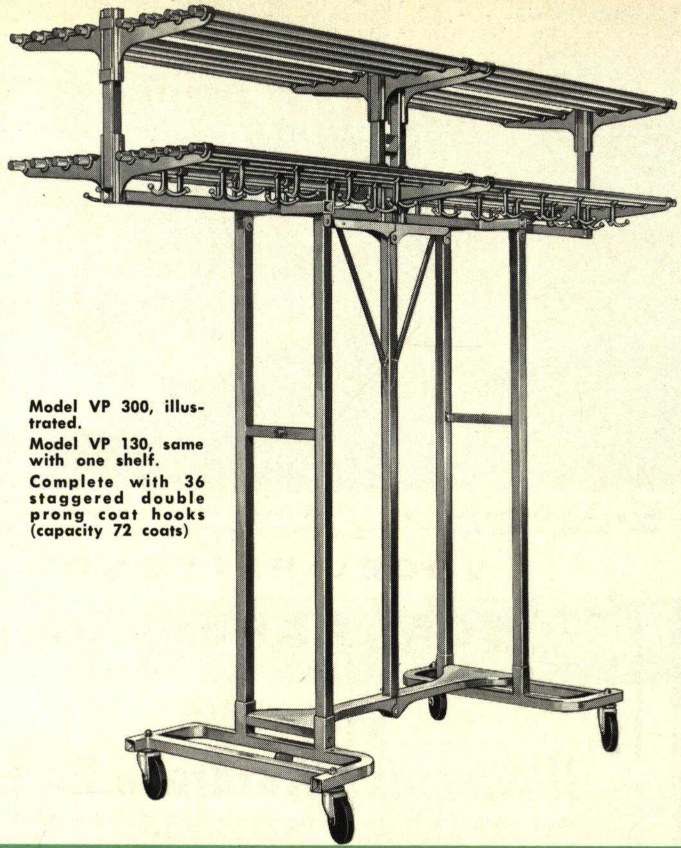
All models fold into compact portable and storable units. Ten Veeps that can handle 720 coats can be stored away into a floor space of only 4 ft. x 8 ft.

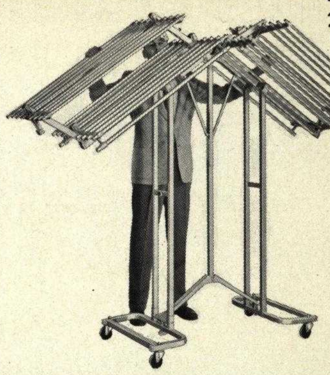




Model VP 300, illustrated.

Model VP 130, same with one shelf.

Complete with 36 staggered double prong coat hooks (capacity 72 coats)

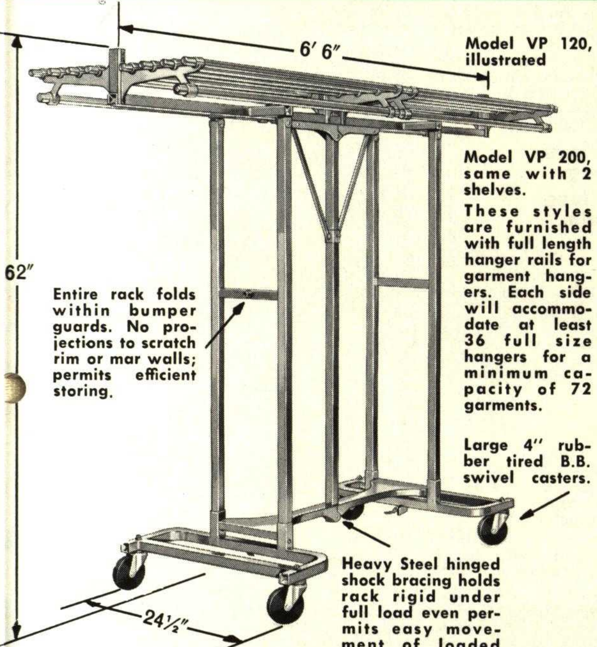


VOGEL-PETERSON

Veep®

Quick Folding

PORTABLE
Coat and Hat Racks



Model VP 120, illustrated

Model VP 200, same with 2 shelves.

These styles are furnished with full length hanger rails for garment hangers. Each side will accommodate at least 36 full size hangers for a minimum capacity of 72 garments.

Entire rack folds within bumper guards. No projections to scratch rim or mar walls; permits efficient storing.

Large 4″ rubber tired B.B. swivel casters.

Heavy Steel hinged shock bracing holds rack rigid under full load even permits easy movement of loaded racks.

Here is the complete answer to the ever changing wraps problem, Veep folding coat and hat racks that go wherever needed on large 4″ rubber tired casters . . . pass through ordinary doorways, ride ordinary elevators as readily as a service cart. Engineered and self-balanced so cleverly that they unfold easily with one movement into a big capacity, rigid wardrobe rack.

Strongly built bases of plated square tubular steel support wide hat shelves of smart closed end anodized aluminum tubing.

Four types: Model VP 120 with hanger bars for 72 garment hangers and one shelf for hats.

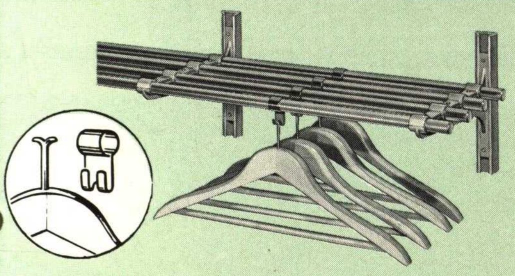
Model VP 200 same as above with two shelves for hats.

Model VP 130 with cast aluminum anchor coat hooks, capacity 72. One shelf for hats.

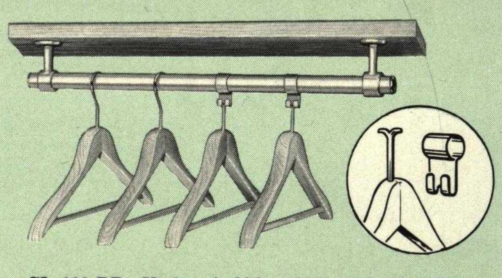
Model VP 300 same as VP 130 except with two shelves for hats.

One man can set up a Veep Folding Wardrobe Rack in 3 seconds. These racks are so carefully balanced that unfolding and snap-locking them rigid ready for use requires only raising ones arms in an upward sweep.

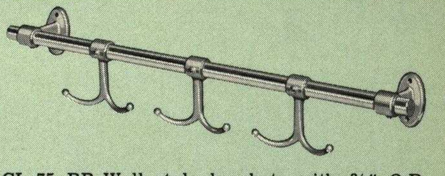
CLOSET ACCESSORIES



Illustrated is the use of Y75 receptacles and Y18P. (Parallel to Wall) garment hangers on AA100E Utility Shelf. This arrangement ideal for shallow closets or where hangers should not extend beyond face of hat shelf. For added groups of 4 garment hangers receptacles are spaced approx. 24″ O.C.



CL-100 BR—Under shelf brackets with 1″ O.D. anodized aluminum tubing comes in any length required with brackets properly spaced to assure maximum rigidity. Illustrated with 2 WS18 conventional hangers (left) and 2 Y18X special hangers with Y receptacles (right). Y style hangers can be used only with Y receptacles reducing hanger loss to minimum.



CL-75 BR-Wall style brackets with ¾″ O.D. Anodized Aluminum tubing are furnished any length with sufficient number of brackets for maximum support. Illustrated as wall hook strip using Anchor Type Cast Aluminum hooks. Illustrated below CL-75 BR utility rod can be used as towel bar—hand rail, etc.

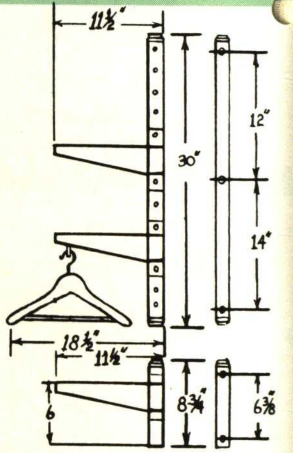
* VOGEL-PETERSON TRADE MARK

Adjustable *Wallmount** Wardrobe Racks

These efficient coat and hat racks come in 3′-2″ and 4′-2″ length units which mount directly on any wall, independently or interlocked to make continuous racks of any length—fit in any available space. They have large capacity. AWHR Models hold 3 or 4 Coat Hangers per running foot—AWHK Models hold 5 or 6 Hooks per running foot. Specify desired capacity of hangers or hooks per foot.

With supporting columns permanently attached to the wall, the shelves are adjustable for height from floor, or distance apart, in 2″ steps over a 30″ range. Hench shelves can be adjusted at any time to serve any age group. Strongly welded of heavy gauge steel they will stand up under years of hard use.

AW3HR (HANGER STYLE) — 3′-2″ long.
AW3HK (HOOK STYLE) — 3′-2″ long.
AW4HR (HANGER STYLE) — 4′-2″ long.
AW4HK (HOOK STYLE) — 4′-2″ long.

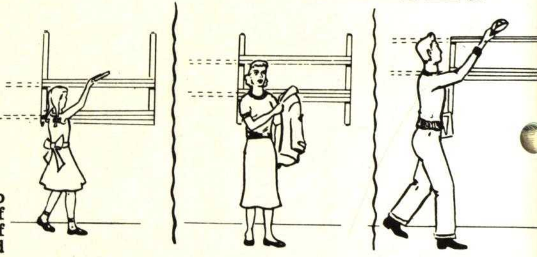


*Wallmount** Overshoe Racks

Designed for use in combination with Wallmount Wardrobe Racks.

Easily mounted on any available wall these sturdy racks keep overshoes etc., off the floor, in a safe orderly manner. Built of heavy gauge, welded steel U-forms they are strong, fire proof and vermin proof. They are so designed that basic 3′2″ and 4′2″ units can interlock to make a continuous rack of any length.

No. B-3 Wallmount Overshoe Rack is 3′2″ long.
No. B-4 Wallmount Overshoe Rack is 4′2″ long.



Shelves are adjustable for height to fit every age group without detaching from wall.

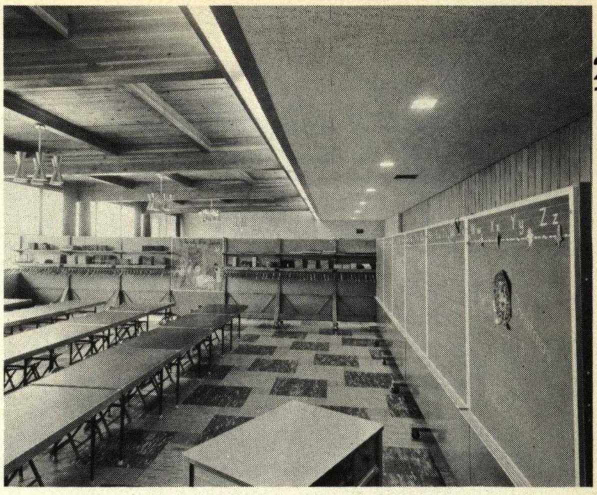
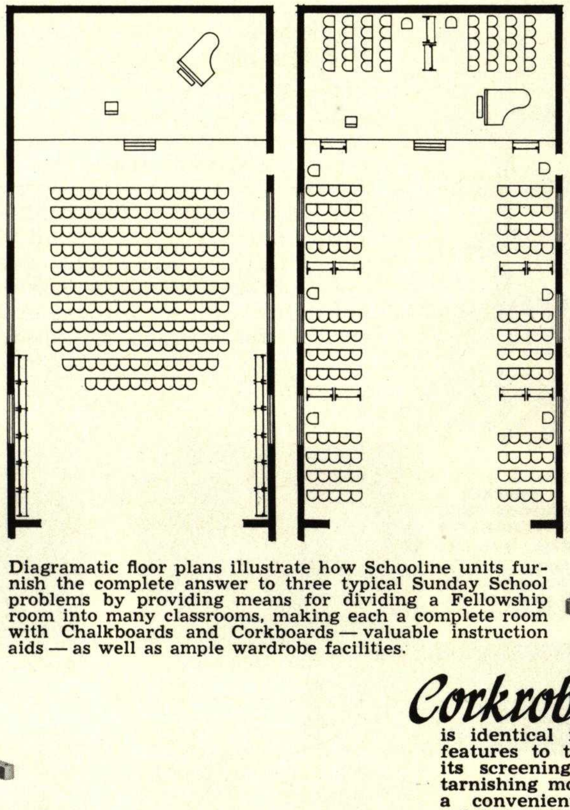
Paneled Units double as "Movable Walls"

All Schooline Chalkrobes and Corkrobes come drilled to receive base enclosure panels which can come as original equipment or added at any time. With panels installed, these units provide not only wardrobe facilities but movable wall units that extend from above the floor to a height of 6'4". They permit complete flexibility in dividing rooms, for screening out distractions or for adapting temporary space for classroom needs. See illustration, right, where Chalkrobes and Corkrobes have formed two separated rooms and provided an entry corridor.

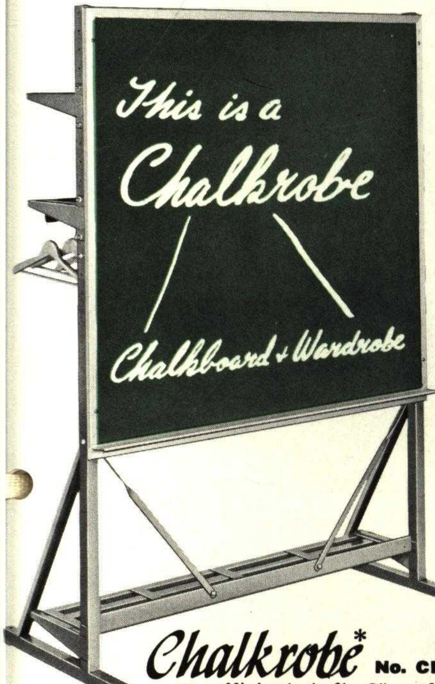


Our Lady, Star of the Sea, Church School, Detroit, Michigan

Robert L. Svoboda, Archt.
Rev. Ralph Barton, Pastor



Diagramatic floor plans illustrate how Schooline units furnish the complete answer to three typical Sunday School problems by providing means for dividing a Fellowship room into many classrooms, making each a complete room with Chalkboards and Corkboards — valuable instruction aids — as well as ample wardrobe facilities.

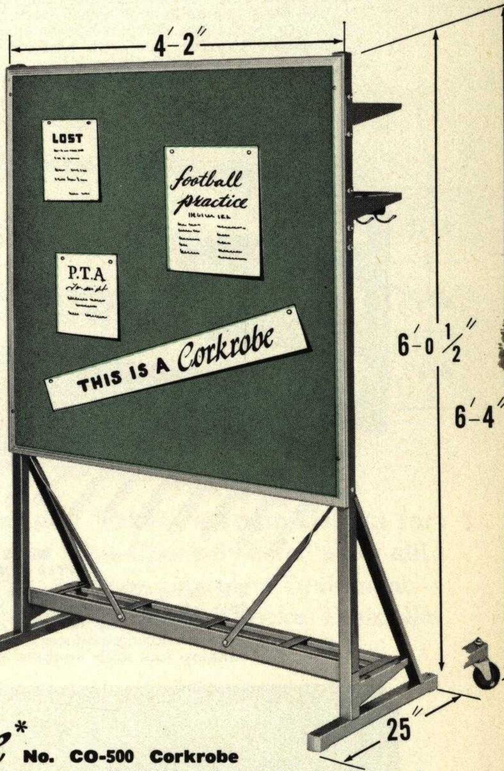


*Chalkrobe** (illustrated left) No. CH-400 Chalkrobe

an efficient 4 ft. 2" welded steel wardrobe rack unit that permits absolute flexibility in school design. It has large capacity, goes anywhere, can be used singly or in groups and provides a movable chalkboard.

Hat shelves with coat rails are adjustable for height to accommodate different age groups. They provide pupils with a ventilated shelf space, a coat hook or coat hanger and an off-the-floor rack for overshoes. They come on glides, on ballbearing casters or can be anchored to the floor. Built for lifetime service of heavy gauge welded steel, they are permanently beautiful in modern Desert Sage baked enamel.

Chalkrobes are backed with quality chalkboards—are dual purpose units.



*Corkrobe** No. CO-500 Corkrobe

is identical in frame, adjustable shelves, capacity and features to the **Chalkrobe** described above, except that its screening back is a cork board. Framed in non-tarnishing moulding this 4'-2" x 4'-0" cork board provides a convenient surface for mounting maps, pictures, exhibits and announcements, etc. Not only as a compact efficient wardrobe but as a flexible teaching tool these units adapt themselves to any floor plan.

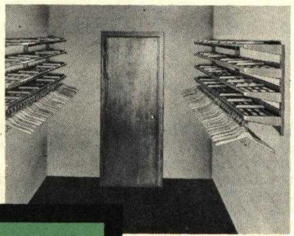
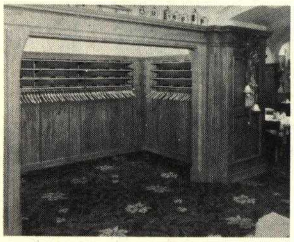
CHECKER — WALL MOUNTED RACK STYLE WM-4—ILLUSTRATED

4'2" Long—11½" Deep—22" High. Extends 18½" from wall including hangers. WM Series come in any length 3'2" and longer by the foot. Accommodates 4 coats and hats per running foot with hangers spaced 3" o. c.

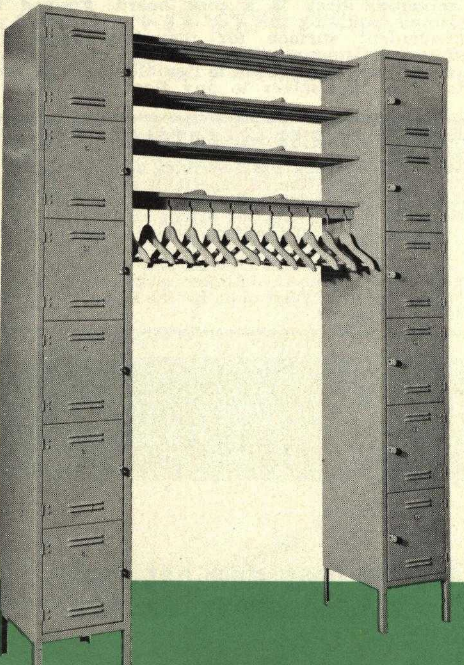
STYLE: WM
CHECKER WALL RACKS

These efficient coat and hat units mount rigidly on walls, accommodate 4 persons per running foot providing for each his individual (numbered) ventilated hat space and coat hanger. Come in any length by the foot, fit in anywhere. Hat shelves extend only 11½ inches from wall. Can be mounted at any height—to accommodate different age groups. Ideal for school cloak rooms, etc. Give cabinet wardrobes and closets check room efficiency. Available with or without numbers. Lifetime welded steel construction, finished in baked enamel.





Locker Racks



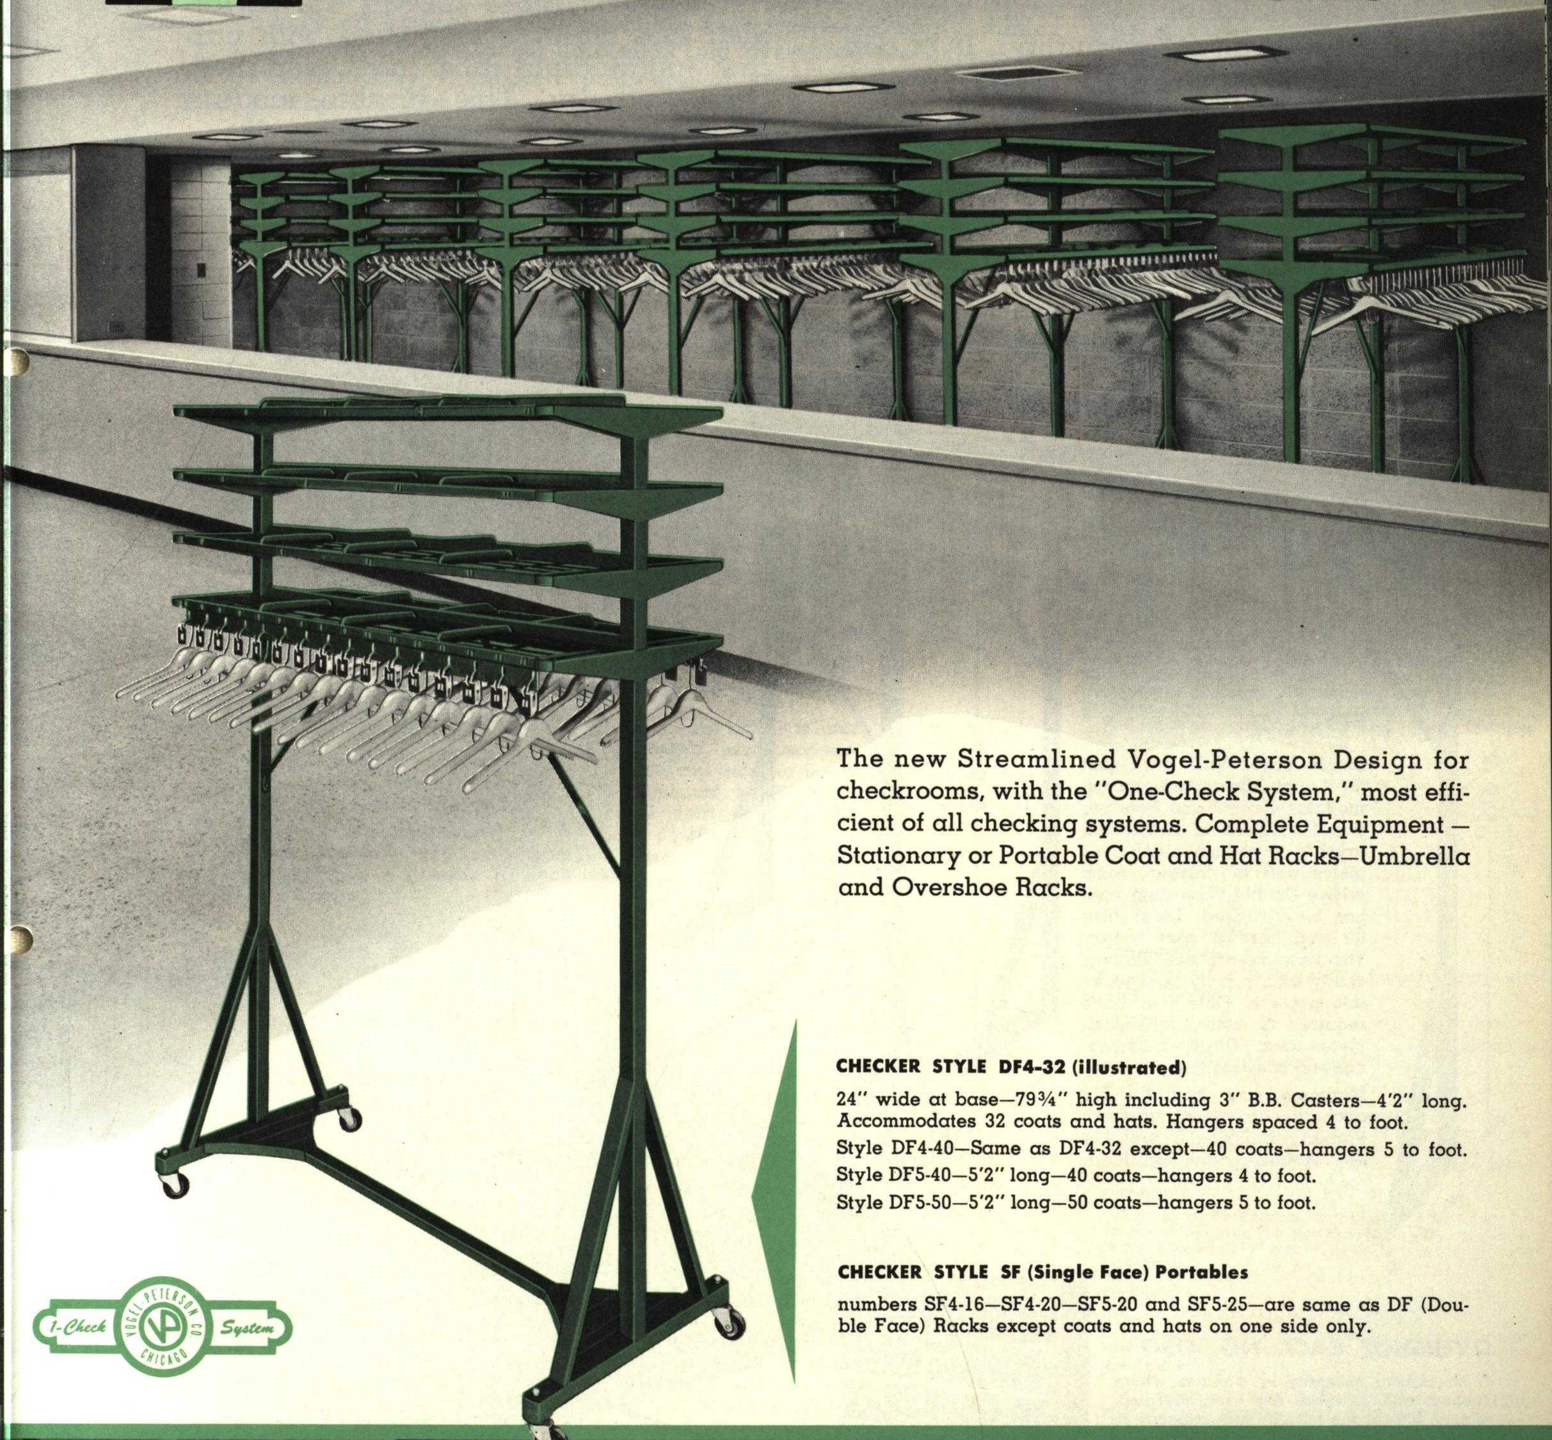
NO. LR-3B LOCKER RACKS

Combine the best features of both lockers and wardrobe racks. Keep clothing dry, aired and "in press." Accommodate 12 people in 5'0"x15" floorspace. Height 6'7½". Provide each with ventilated hat space, coat hanger and 12"x12"x15" Lock Box (6 to each pedestal). Doors open left and right have "stay shut" hasp. (Built-in flat master keyed locks available.) Keep wet clothing away from lunches, drawing instruments, micrometers and such personal effects. Improve health and morale.

Durable steel construction, baked-on enamel finish—green, brown or gray. Leg adjustments compensate for irregularities in floor. Portable and space saving, can be installed near point of work to end locker-room evils.

Checker® Coat Room Equipment
Manufactured only by VOGEL-PETERSON CO.

Checker® COAT and HAT RACKS



The new Streamlined Vogel-Peterson Design for checkrooms, with the "One-Check System," most efficient of all checking systems. Complete Equipment — Stationary or Portable Coat and Hat Racks—Umbrella and Overshoe Racks.

CHECKER STYLE DF4-32 (illustrated)

24" wide at base—79¾" high including 3" B.B. Casters—4'2" long. Accommodates 32 coats and hats. Hangers spaced 4 to foot.
Style DF4-40—Same as DF4-32 except—40 coats—hangers 5 to foot.
Style DF5-40—5'2" long—40 coats—hangers 4 to foot.
Style DF5-50—5'2" long—50 coats—hangers 5 to foot.

CHECKER STYLE SF (Single Face) Portables

numbers SF4-16—SF4-20—SF5-20 and SF5-25—are same as DF (Double Face) Racks except coats and hats on one side only.

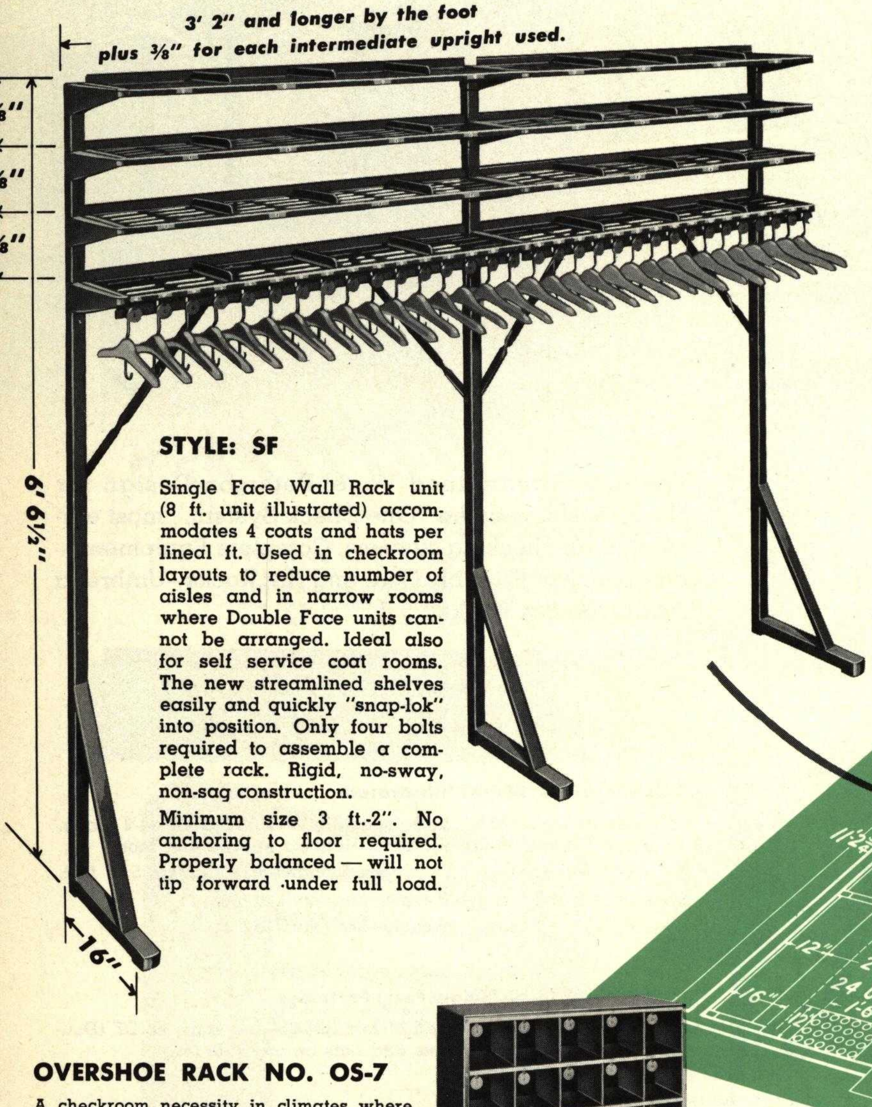
COAT and HAT RACKS

Vogel-Peterson checkroom equipment is the finest available, correctly designed and unequalled in quality. It is constructed of electrically welded heavy gauge steel, with square tubular posts. Available in standard units 3, 4 and 5 ft. long that interlock to make any length. Vogel-Peterson High Relief, "Dust Free" Hat Shelves. These shelves are perforated and multiple embossed with narrow longitudinal ribs that keep hats clean and dry. This durable, modern shelving is built for lifetime service.

The hanger rail shelves will support at least 100 lbs. per running foot.



3' 2" and longer by the foot
plus 3/8" for each intermediate upright used.
6' 6½"
16"

STYLE: SF

Single Face Wall Rack unit (8 ft. unit illustrated) accommodates 4 coats and hats per lineal ft. Used in checkroom layouts to reduce number of aisles and in narrow rooms where Double Face units cannot be arranged. Ideal also for self service coat rooms. The new streamlined shelves easily and quickly "snap-lok" into position. Only four bolts required to assemble a complete rack. Rigid, no-sway, non-sag construction.

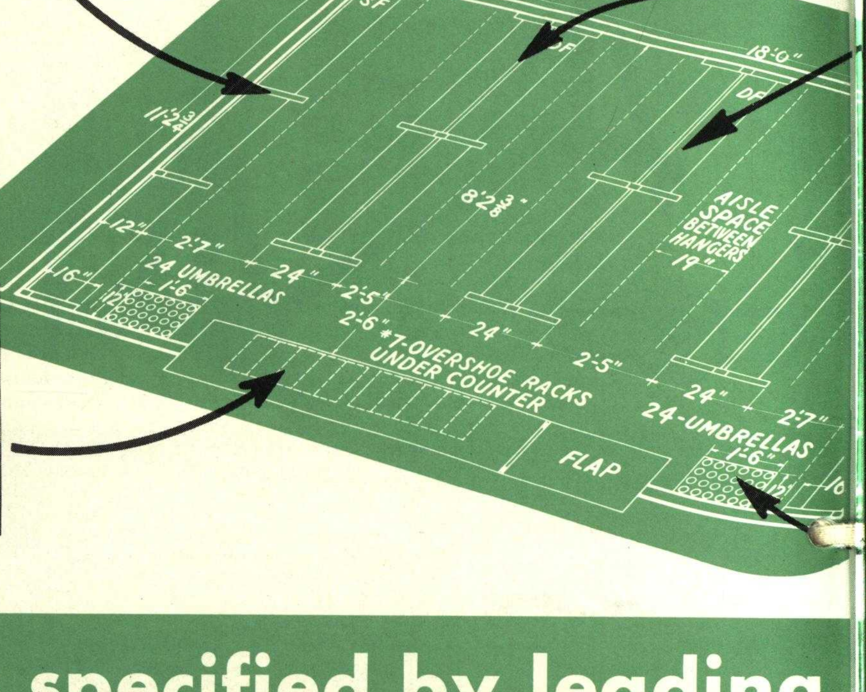
Minimum size 3 ft.-2". No anchoring to floor required. Properly balanced — will not tip forward under full load.

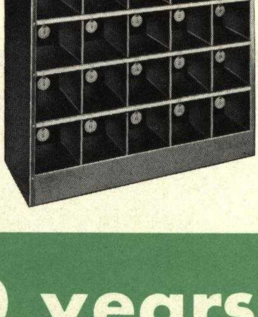
Planning an Efficient Checkroom

Recommended factor ¾ sq. ft. per hanger capacity. This will permit a complete checking service for coats and hats — umbrella and overshoe requirements.
Minimum ceiling height—7 ft.
Standard spacing of coat hangers is on 3" centers (4 to the lineal ft.). Capacity can be increased 25% by spacing hangers 2½" on center (5 to the ft.). Layout service is offered to architects and building owners without charge.
Send

1. Floor Plan (indicate door and window openings, radiators, pipes, etc.)
2. Capacity to be accommodated
3. Type of installation—permanent, portable or combination of permanent and portable.

Avail yourself of our 30 years' experience and practical knowledge of checkroom requirements.





OVERSHOE RACK NO. OS-7

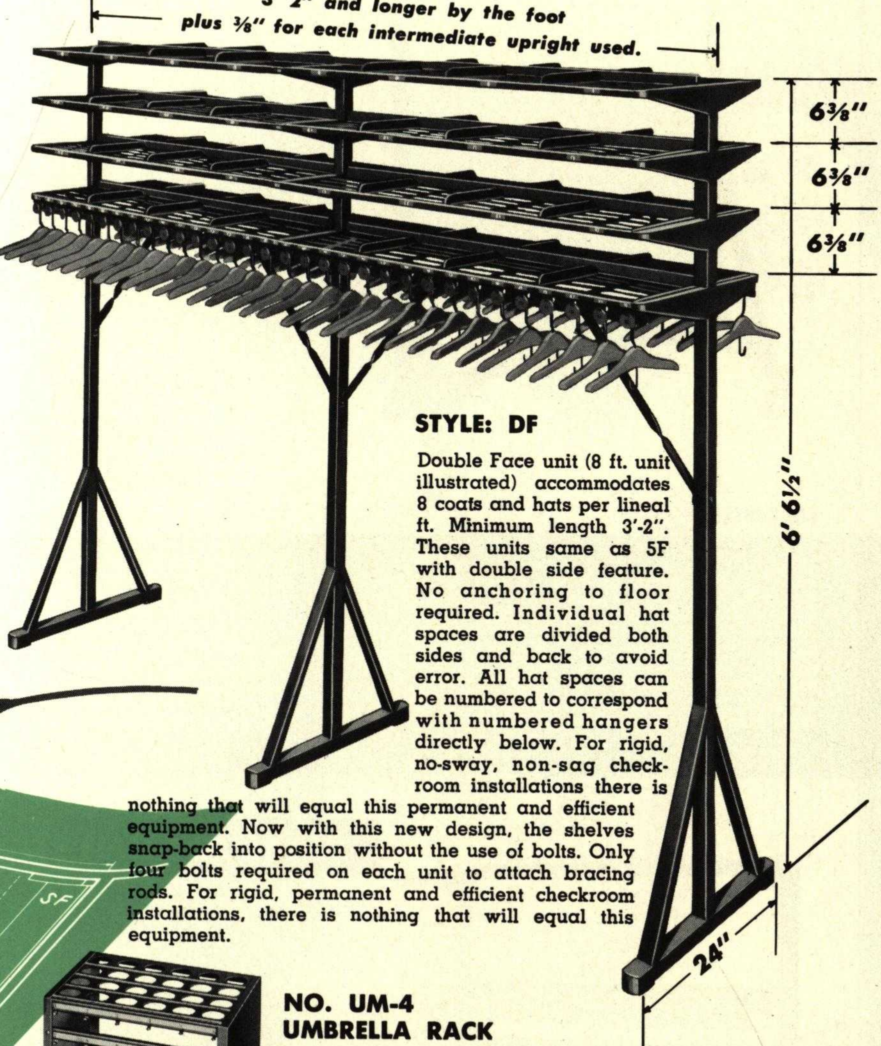
A checkroom necessity in climates where rubbers and galoshes are used. Approximately 20% of the total hanger capacity is usually a sufficient amount. Compartments measure 6" x 6" x 13" deep. These units become an integral part of the 1-check system when used with checkroom coat and hat racks. Furnished in standard size units of 25 capacity 31" wide, 13⅜" deep x 33" high.

For over 30 years specified by leading

SPEED UP CHECKING SERVICE WITH THE *One-Check System*

1-Check VOGEL-PETERSON CO. CHICAGO System

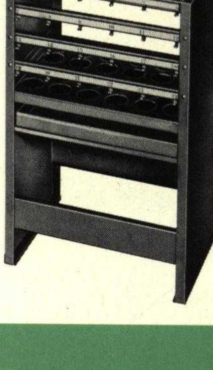
With this system a single check identifies all items checked, whether it be one or several. Each coat on a numbered hanger space—each hat in a correspondingly numbered hat space. Canes, umbrellas and overshoes are placed in systematically numbered umbrella or overshoe racks. Cross checks from overshoe and umbrella racks may differ—still are immediately keyed to master guest check. There is no lost time, no errors, confusion, delays nor complaints, because guests need carry only one check, which ends necessity of multiple handling by attendants.



3' 2" and longer by the foot plus 3/8" for each intermediate upright used.
6⅜"
6⅜"
6⅜"
6' 6½"
24"

STYLE: DF

Double Face unit (8 ft. unit illustrated) accommodates 8 coats and hats per lineal ft. Minimum length 3'-2". These units same as 5F with double side feature. No anchoring to floor required. Individual hat spaces are divided both sides and back to avoid error. All hat spaces can be numbered to correspond with numbered hangers directly below. For rigid, no-sway, non-sag checkroom installations there is nothing that will equal this permanent and efficient equipment. Now with this new design, the shelves snap-back into position without the use of bolts. Only four bolts required on each unit to attach bracing rods. For rigid, permanent and efficient checkroom installations, there is nothing that will equal this equipment.



NO. UM-4 UMBRELLA RACK

A very important checkroom accessory which answers the "what to do with wet umbrellas" question. Racks are systematically numbered. Round umbrella dividers are hemmed to give a smooth no-tear edge. Come in standard units of 16 and 24 capacity sizes. Height, 28"; depth, 13"; width, 16 capacity, 12¼"; width, 24 capacity, 17¾". These units also an integral part of "One-check system." Approximately 20% of hanger capacity meet overall requirements.

Specifications and Construction Details

UPRIGHT FRAME

Welded into one rigid unit. Posts 1½" x 1½" 18-gauge welded square tubing. Shelf arms—tapered U-channel 20-gauge punched out to engage 1½" sq. post and welded thereto. Arms ar reinforced with inserted U-Channel—ends cappe with round formed stamping. Hat shelves engag into slots in arms by means of integral self-locking clips.

Bases #16 gauge 1⅝" wide x 1¼" high anc punched out to engage post and welded thereto Box inserts raise base member at extreme enc ¼" from floor. Base ends are capped with rounc formed stamping welded into ends. Diagona brace of one-piece channel #18 gauge weldec post to base.

SHELVES

One-piece design perforated and embossed sheets of 24-gauge steel welded into rigid channel angle and T frame.

Front channel $\frac{9}{16}$" x $\frac{13}{16}$" x $\frac{9}{16}$" x 16 gauge.

Back Angle 1" x ½" x 16 gauge.

Ends are T-shaped 1¼" x ¾" x 16 gauge with two self-locking clips welded under each end.

Narrow longitudinal embossed ribs between perforations hold hats free of dust. Hat dividers embossed 1" high across shelves 12" on center.

Hanger rail is 1¾" flange extension of front channel of lower shelf only. Bottom of flange is hemmed to give smooth edge and reinforce V-punched notches that receive garment hangers.

V-punched notches are on pre-determined-centers.

Sway Braces—$\frac{3}{16}$" x ¾" round edge steel.

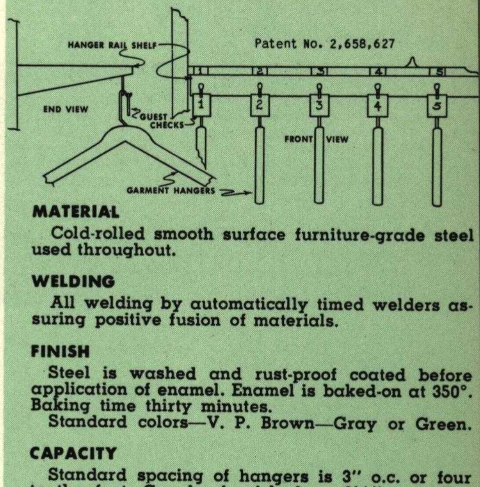
GARMENT HANGERS

Hardwood hangers. No. 10 hard steel rustless wire hook formed to receive guest checks on top (locks hanger on rail preventing knocking off accidentally) and with auxiliary hook beneath shoe bags, umbrellas, etc.

NUMBERING AND CHECKS

Hanger and hat spaces numbered with large clear cut white numerals hot-stamped into clear extruded plastic clips that snap over front shelf channels—furnished only if specified.

Plastic checks 1½" x 1$\frac{11}{16}$" with large clear hot-stamped numbers. Furnished only if specified. Checks furnished in three colors—Black—Gray—Red. Printed with name of user when specified.



MATERIAL

Cold-rolled smooth surface furniture-grade steel used throughout.

WELDING

All welding by automatically timed welders assuring positive fusion of materials.

FINISH

Steel is washed and rust-proof coated before application of enamel. Enamel is baked-on at 350°. Baking time thirty minutes.

Standard colors—V. P. Brown—Gray or Green.

CAPACITY

Standard spacing of hangers is 3" o.c. or four to the foot. Can be furnished on 2½" o.c.—five to the foot — or 4" o.c. — three to the foot — when specified.

CASTERS

3-inch Ball-bearing Swivel Casters.

Furnished only when specified. It is not recommended that casters be used on racks exceeding ten feet in length.

All racks ordered with casters are furnished with bottom bracing and gussets extending between base sections of uprights. (See Page 1.)

NOTE: Wall-mounted units are same construction as shelf portion of rack SF with holes punched through tubing for wall mounting. Screws — toggles or expansion bolts for wall fastening are not furnished.

SPECIAL: All units can be ordered with special spacing between shelving or with fewer than four shelves, which is standard.

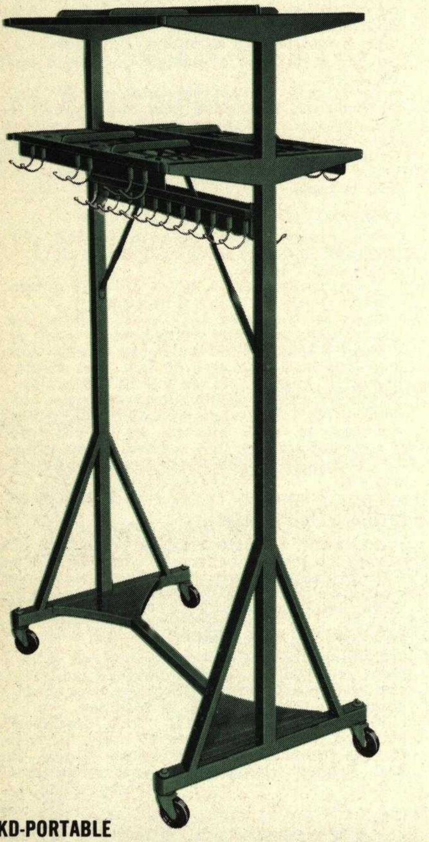
Checker®

HOOK TYPE
COAT AND HAT RACKS

DOUBLE FACE



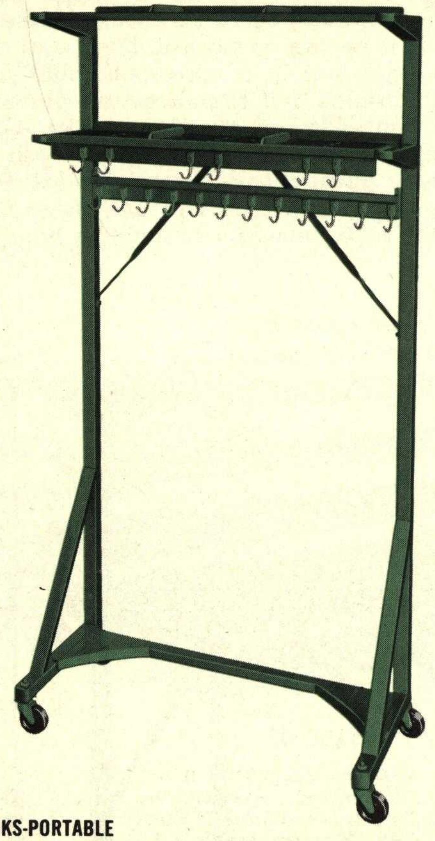
HKD-PORTABLE

These 2-sided (island) racks give maximum capacity for size — accommodate 12 persons per foot of length. Go wherever needed on large 3″ ball-bearing swivel casters. Ideal for private dining rooms, luncheon groups and general use. HKD Portables come in following sizes:

No. HKD-3-36	3′2″ long	76¾″ high	36 coats and hats
No. HKD-4-48	4′2″ long	76¾″ high	48 coats and hats
No. HKD-5-60	5′2″ long	76¾″ high	60 coats and hats

All sizes available without casters or bottom shock bracing for stationary installation.

SINGLE FACE



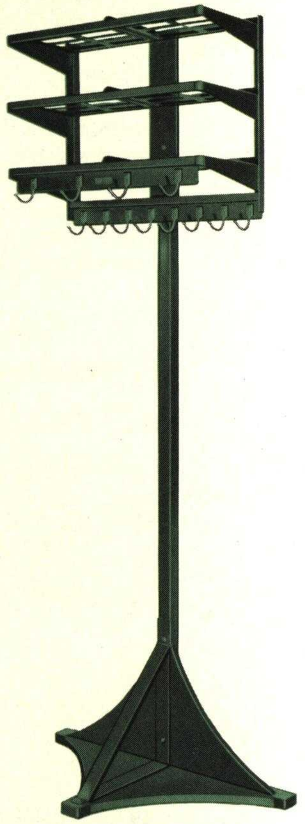
HKS-PORTABLE

These extra capacity racks come on large 3″ ball-bearing swivel casters — stand rigidly and snugly against the wall or roll to any place needed. Have 2 full-length rails with staggered hooks and ample hat space. HKS Portables come in following sizes:

No. HKS-3-18	3′2″ long	76¾″ high	18 coats and hats
No. HKS-4-24	4′2″ long	76¾″ high	24 coats and hats
No. HKS-5-30	5′2″ long	76¾″ high	30 coats and hats

All above sizes available without casters or bottom shock bracing for stationary installations.

SINGLE PEDESTAL



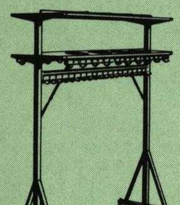
RS-12

Designed especially for restaurant use, this space saving rack will accommodate patrons of from 3 to 6 four-place tables. Use against any wall partition or post. All wraps face out — no reaching around or in back for wraps.

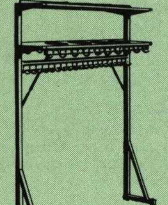
Capacity: 12 coats with ample hat space.

Dimensions: Base 30″ wide, 16″ deep, 76″ high, less than 3½ sq. ft. of floor space. Set on 3 heavy vacuum-cup rubber shoes.

Top Section: 24″ wide — 12″ deep.

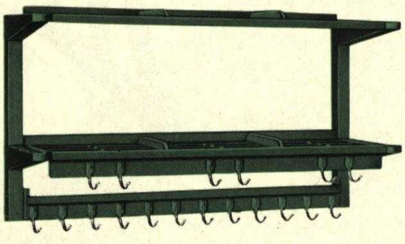


HKD



HKS

Checker Hook Type comes in Single-Face—Double-Face Floor Models—as well as Wall-Mounted units—and in multiple interlocked sections to fit almost any area.



HKW WALL MOUNTS

WALL MOUNTED RACKS

This large-capacity space saving Checker hook style Wall Rack mounts on any available wall space. Extending but 12″ from the wall, each carries two full length rails with staggered hooks and two widely spaced hat shelves. Accommodates 6 patrons per running foot of length.

	Length	Capacity
No. HKW-3	3 ft. 2 in.	18
No. HKW-4	4 ft. 2 in.	24
No. HKW-5	5 ft. 2 in.	30

Combinations of the above units can be interlocked to make a continuous wall rack of any length or desired capacity.

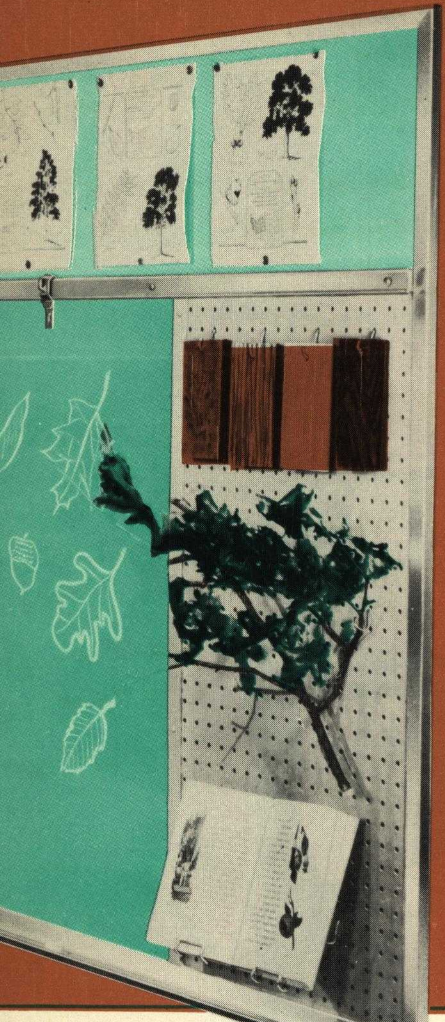
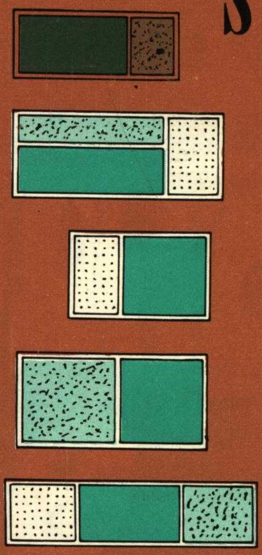
- **Chalkboard Installations for Every Specification**



FOR SIMPLIFIED PLANNING

SIMPLEX *Ready to hang, Custom Made Units*

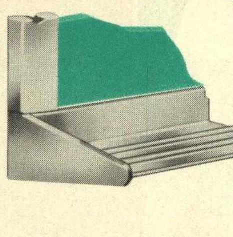


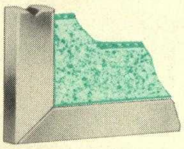
A FEW OF HUNDREDS
OF POSSIBLE VARIATIONS

YOU PLAN—WE CONSTRUCT TO YOUR SPECS

Custom-built units solve classroom visual board installation problems completely. The new Simplex units are designed to reduce on-the-job construction. Framed and readied for installation before leaving the factory, they are easily put up in designated areas. One inch aluminum trim is lightweight, neat, expertly fitted. Satin-smooth anodized finish never requires painting or refinishing. New type hangers make units simple to hang and re-hang as teaching requirements change. Variations in sizes and material are made to specifications as submitted.

Choose these materials





MAP RAIL

Optional. Choose with or without cork insert. Molded nylon hooks slide freely on rail.

ALUMINUM TRIM

Neat, anodized aluminum trim finishes all pre-fab units.

CHALK TROUGH

Reinforced anodized aluminum chalk trough at base of chalkboard or entire unit.

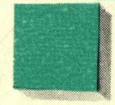
VIDEOPLATE CHALKBOARD

Excellent writing surface. Lightweight, shockproof, moistureproof chalkboard base of laminated wood fiber. Velvety black or Litegreen. ½ inch thick in lengths up to 12 feet, widths up to 4 feet.

Two Types of Tack Boards

DUPLEX CORK

Finest quality, linen finish compressed cork, ¼ inch thick on ¼ inch backing. Choose modern Litegreen, gray, or tan. Lengths up to 12 feet, widths up to 4 feet.

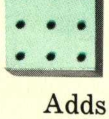


***New* COLORTAK**

Supported vinyl textured fabric on ½ inch thick homasote tackboard backing. Choose gold, ivory, turquoise. Lengths up to 12 feet, widths up to 4 feet.

SLATOSTEEL CHALKBOARD

New tougher-than-porcelain finish on 20-gauge steel base. Magnetized devices triple its service as chalkboard, bulletin board, and teaching aid. ½ inch thick in lengths up to 10 feet, widths up to 4 feet. Litegreen surface only.



PEGBOARD

Adds versatility to display areas. Holes are 9/32 inch diameter on 1 inch straight centers. Neutral light green finish. ¼ inch thick, lengths to 8 feet, widths to 4 feet.

FURNISH PLANS AND MEASUREMENTS

PEGBOARD			

SlatoSteel

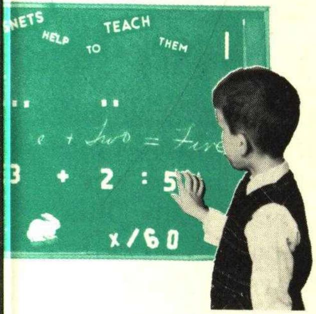
With the revolutionary new porcelain writing surface

Revolutionary in every way! Tough porcelain—rugged as steel can make it—exceeding P.E.I. standards. SlatoSteel's color is permanent—writing shows clearly, erases easily.

NO CHALK TRAPS

SMOOTH WRITING

Carefully prepared porcelain coating plus substantial steel mean a chalkboard that's easy to write on—easy to keep clean. Carefully controlled spraying assures SlatoSteel a uniform surface with just the right bite for chalk. Washing will not affect the fired matte finish.



NETS HELP TO TEACH THEM
3 + 2 : 5
x/60

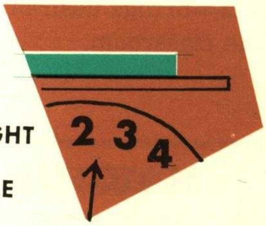
DOUBLES AS A BULLETIN BOARD

VERSATILE

SlatoSteel gives the added advantages of "touch and see" learning to the classroom when used with magnetized letters or figures. This feature also facilitates posting papers, as on bulletin boards, when used with magnetized posting devices.

MORE DURABLE

Guaranteed for the life of the building, SlatoSteel has a porcelain coating that produces a velvety looking, yet flint-hard surface. To prove its abrasion resistance, test it with a coin. The coin flecks without injury to the writing surface. A special adhesive holds absolute bond between the steel face and the backing sheet.



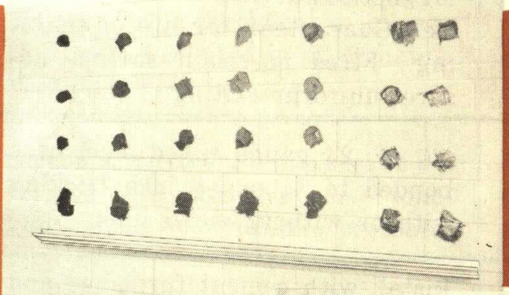
LIGHTWEIGHT EASIER TO HANDLE

LESS EXPENSIVE

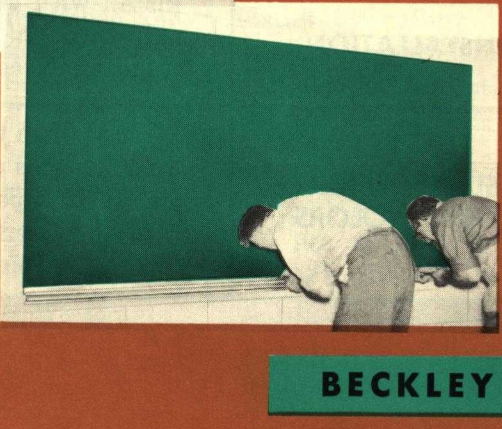
Because SlatoSteel needs only a 20 or 24 ga. cold rolled steel base, a 32 square foot piece of SlatoSteel may be 40 to 48 lbs. lighter than porcelain enamel boards which require a heavy gauge, expensive metal sheet. Yet, because SlatoSteel is fired at 20% lower temperature than ordinary enamelled chalkboards, there are no warpage or buckling conditions set up in the steel. SlatoSteel can be sawed and drilled on the job and can be installed without expensive wall construction.

See Complete Specifications Next Page

SlatoSteel is Easy to Install



ABOVE—Shows spotting cement on the block wall and chalk trough in place.



RIGHT—Chalkboard in place. Workmen attaching Simplex Aluminum molding.

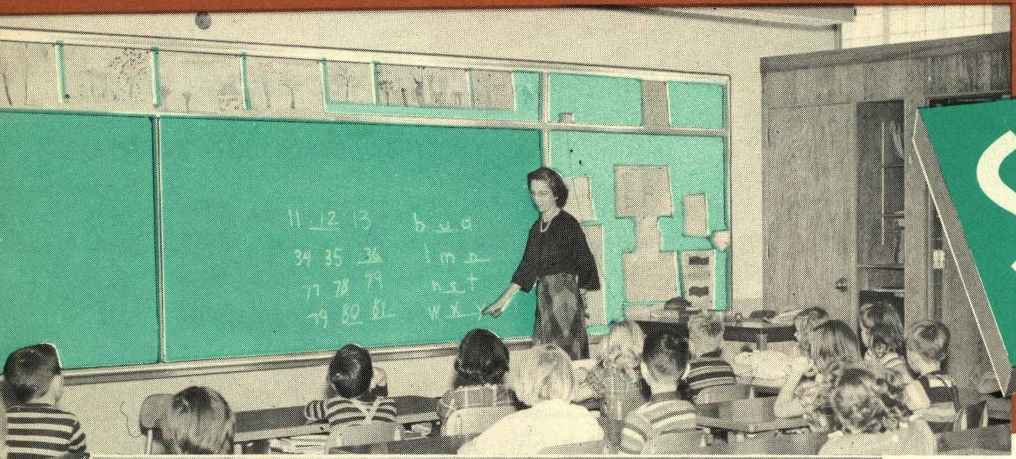
4 TYPES OF SLATOSTEEL

UNMOUNTED SLATOSTEEL
Ideal for mounting on present chalkboards or for laminating to own backing.

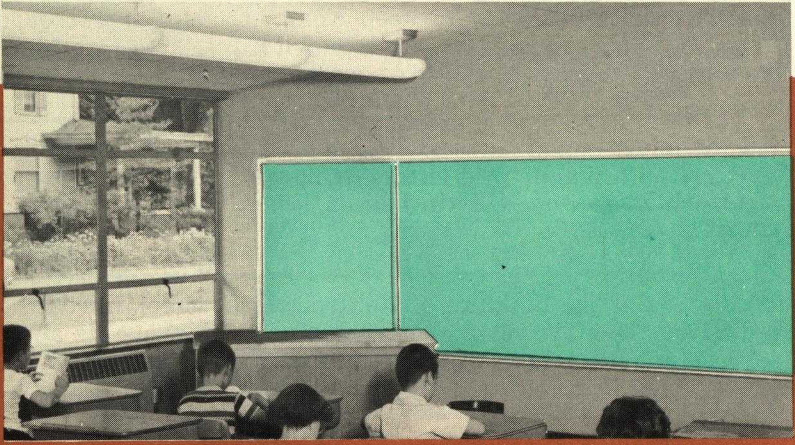
¼ INCH BACKING
The most popular and dependable backing for all types of chalkboard installations. Choice of
- ¼ inch hardboard with foil liner or
- ¼ inch hardboard or plywood with 26 gauge galvanealed liner

½ INCH BACKING
An alternative backing for permanent installations—½ inch wood fiber panel

BECKLEY-CARDY CHALKBOARDS MEET EVERY



SlatoSteel



SLATOSTEEL

with the new porcelain surface:

Carefully controlled spraying assures uniform surface with just the right bite for chalk—makes writing show clearly, erase easily. SlatoSteel allows important space to be used for displays or for touch-and-feel devices with the use of magnets—brings desired flexibility into the classroom.

TESTS OF WRITING SURFACE QUALITY BY INDEPENDENT LABORATORIES

These comparative tests by an independent laboratory show why you are right to specify Beckley-Cardy chalkboards:

1. Writing and erasing qualities proved with both white and colored chalks.
Clear writing, clean erasing, better visibility are assured.

2. Resistance to discoloration by light and by cleaning plus resistance to abrasion under severe conditions.
For years of wear without costly care.

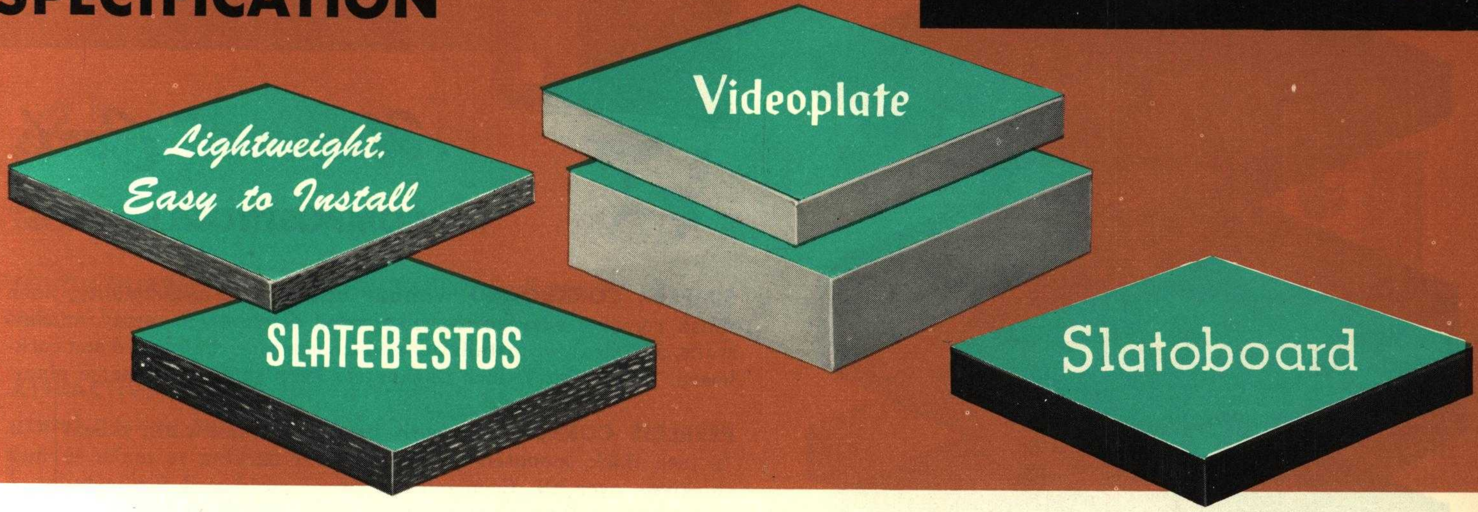
3. Resistance to cracking and checking under physical and mechanical conditions tested.
Proved safe against exploding or pitting and peeling of the writing surface.

4. Light reflection, glare, and uniformity of color compared.
Approved reflectance factor for restful, more cheerful classroom atmosphere.

Additional tests continue to show that Beckley-Cardy chalkboards meet school needs and guarantee years of service under all conditions.

	SLATOSTEEL
DISTINCTIVE FEATURES	Tough porcelain surface on steel. Magnetized devices double its service. Guaranteed for life of building. Fired porcelain surface assures uniform writing.
BACKING	20 or 24 gauge rolled steel base bonded to ¼ or ½ inch backing with or without metal liner.
INSTALLATION	Install with cement furnished and nail through board into wall or studding. Needs no special grounds.
SIZES, WEIGHTS AND COLORS	¼ or ½ inch thick. Widths 3, 3½, 4 ft.; lengths of 4, 5, 6, 7, 7½, 8, 9 and 10 ft. Special sizes on request. Medium green, dark green, brown, blue, gray, black. Sq. ft. 2½ lbs.

SPECIFICATION



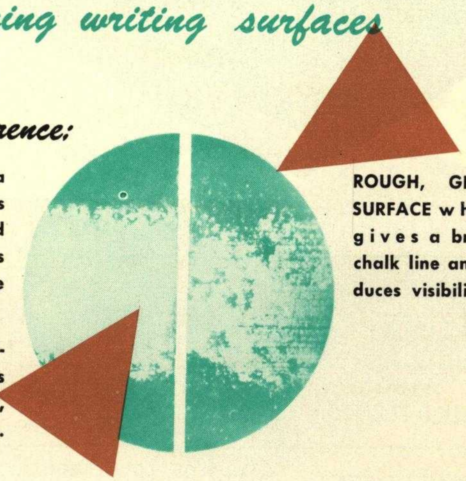
EXCELLENT CHALKBOARDS

With harder, thicker and longer wearing writing surfaces

Careful, experienced Beckley-Cardy manufacturing processes consistently produce a uniform close-grained writing surface that is harder and thicker. The long wearing washable writing surface marks easier and erases cleaner. Various types of backing to which the surface is applied are available to meet regional requirements.

See the difference:

Microscopic view of a chalk mark on two types of chalkboard magnified 40 times. Chalkboards were set edge to edge for a continuous mark.



THE SMOOTH, BECKLEY-CARDY surface assures an unbroken chalk line, clear, but easy to erase.

ROUGH, GRITTY SURFACE which gives a broken chalk line and reduces visibility.

SLATEBESTOS	VIDEOPLATE	SLATOBOARD
Indestructible and fire-resistant. Practically no coefficient of expansion, so can be used in all climates. Wear like slate.	A versatile new chalkboard—light weight, shockproof, moisture-proofed. Simplex ALUMINUM MOLDINGS

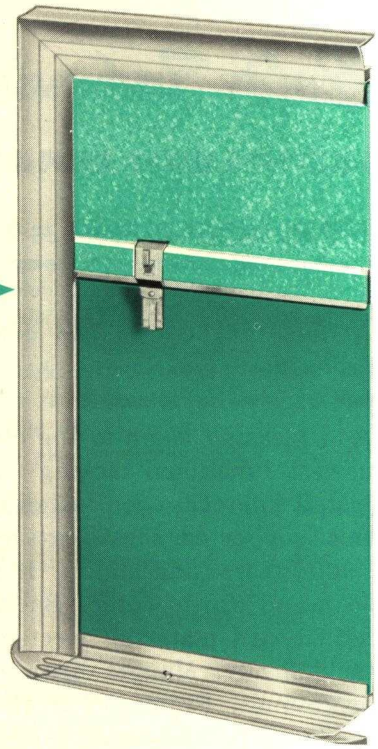
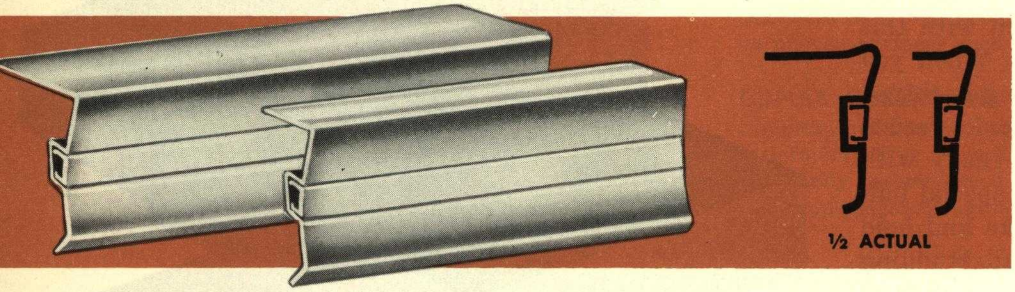
These modern-design aluminum moldings are recommended for their ease of installation. They are extremely lightweight, durable and sanitary. No special wall construction is required and any carpenter can install them. The anodized aluminum finish will not tarnish and stays new looking for the life of the building. No further finishing is required. All pieces are furnished ready to drill at time of installation to insure a perfect fit.

SIMPLEX CLIP-IN CHANNEL TRIM

The open channel face allows fast, visible fastening to any wall, then a cover strip snaps in place to conceal all screws.



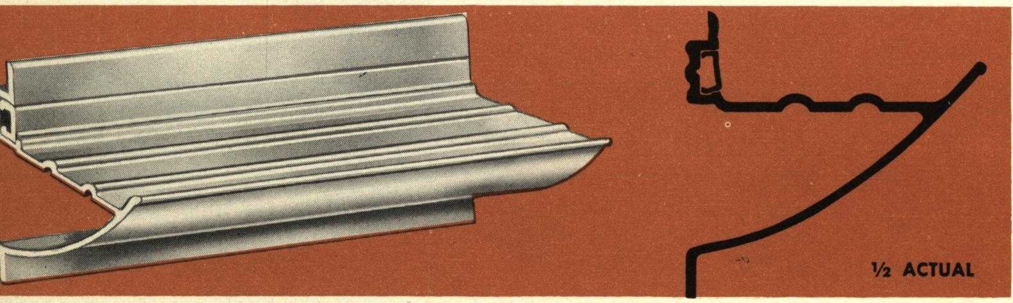


No. 52. SIMPLEX CLIP-IN ALUMINUM TRIM WITH 1 1/4 INCH RETURN. For ½ inch chalkboard top and ends and ½ inch corkboard. 1¾ inches wide, 1¼ inches deep. With clip-in strip. Weight: 2 lineal feet equal 1 lb.

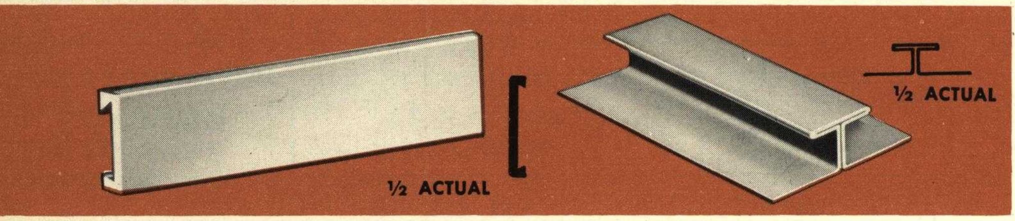
No. 52A. Trim as above without clip-in strip.

No. 54. SIMPLEX CLIP-IN ALUMINUM TRIM WITH 5/8 INCH RETURN. For ¼ inch chalkboard top and ends and ¼ inch corkboard. 1¾ inches wide, ⅝ inch deep. With clip-in strip. Weight: 2 lineal feet equal 1 lb.

No. 54A. Trim as above without clip-in strip.

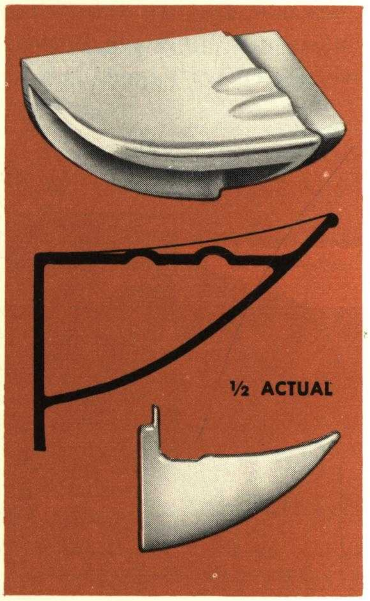


No. 66. SIMPLEX CLIP-IN ALUMINUM CHALK TROUGH. For use with all types of trim. Molded ridges trap chalk dust. Weight: 1 lineal foot equals 1 lb.



No. 58. SIMPLEX ALUMINUM MULLION. 1 inch wide for covering joints between chalkboard and bulletin board. Weight: 3 lineal feet equal 1 lb.

No. 30. STANDARD JOINING STRIP. For ¼ inch board. "H"' shaped wings cover chalkboard joints. Finished to match board. 3, 3½, and 4 ft. lengths. Weight: Per length 1 lb.

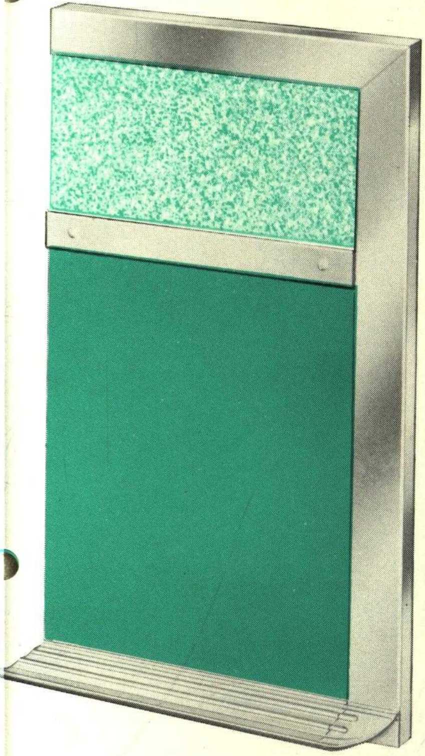


No. 69L. LEFT CLOSURE for No. 66 Chalk Trough. Wt. 12 oz.

No. 69R. RIGHT CLOSURE for No. 66 Chalk Trough. Wt. 12 oz.

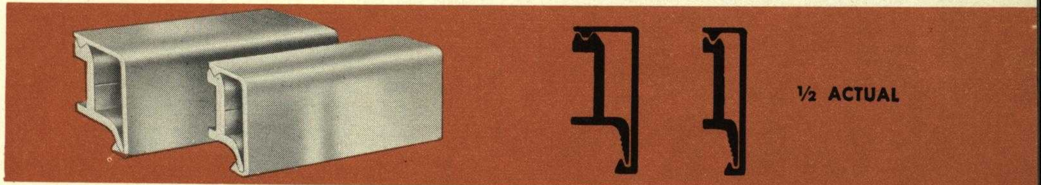
No. 60L. LEFT PLATE for No. 66 Chalk Trough. Wt. 3 oz.

No. 60R. RIGHT PLATE for No. 66 Chalk Trough. Wt. 3 oz.



NEW SIMPLEX CLIP-ON TRIM

This newest aluminum molding provides a trim-line look to all chalkboard and corkboard areas. Concealed fastening is provided by wall clips installed on 16-inch centers onto which the molding snaps.

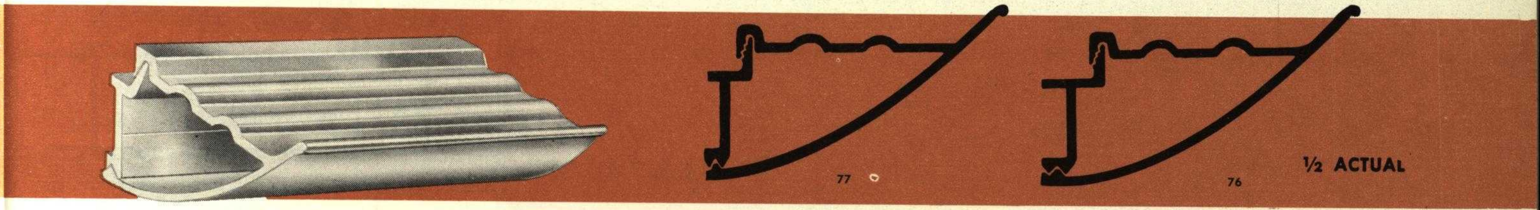


No. 72. SIMPLEX CLIP-ON ALUMINUM TRIM WITH 3/4 INCH RETURN. For ½ chalkboard top and ends and for ½ icnh cork. 1½ inches wide. Weight: 2 lineal feet equal 1 lb.

No. 73. CONCEALED CLIP. 3 inches long.

No. 74. SIMPLEX CLIP-ON ALUMINUM TRIM WITH 1/2 INCH RETURN. For ¼ inch chalkboard top and ends and for ¼ inch cork. 1½ inches wide. Weight: 2 lineal feet equal 1 lb.

No. 75. CONCEALED CLIP. 2 inches long.

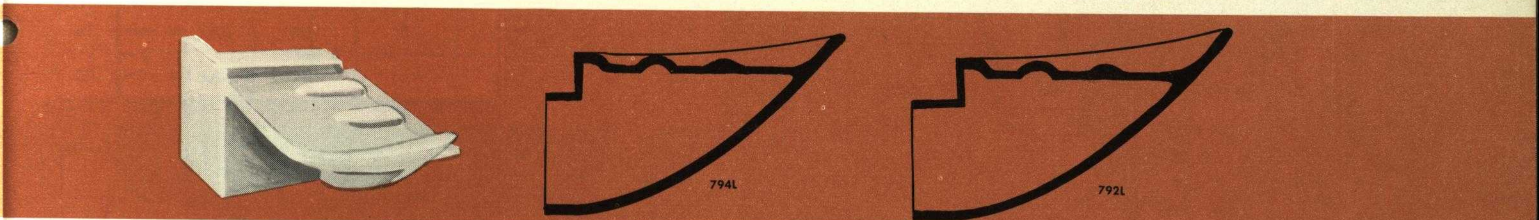


No. 76. SIMPLEX CLIP-ON ALUMINUM CHALK TROUGH FOR 1/2 INCH BOARD. Weight: 1 lineal foot equals 1 lb.

No. 73. CONCEALED CLIP. 3 inches long.

No. 77. SIMPLEX CLIP-ON ALUMINUM CHALK TROUGH FOR 1/4 INCH BOARD. Weight: 1 lineal foot equals 1 lb.

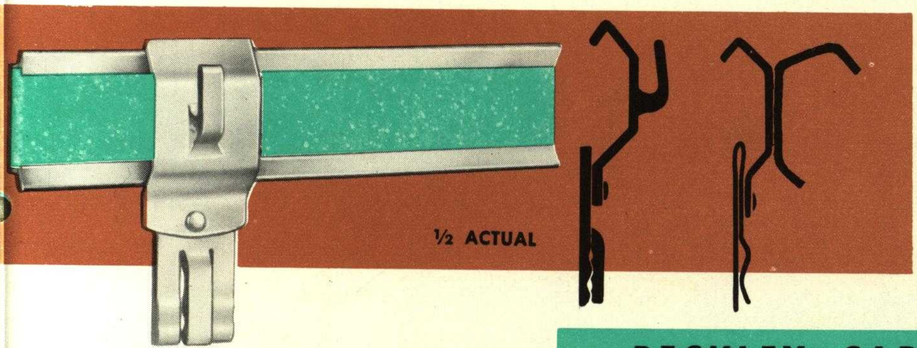
No. 75. CONCEALED CLIP. 2 inches long.



CHALK TROUGH CLOSURES

Shaped closures for right and left sides provide neat, functional finish to chalk trough ends. Use this chalk trough and closures with any type of chalkboard trim. Wt. 12 oz. each.

No. 792L. Left closure for ½ inch chalk trough.
No. 792R. Right closure for ½ inch chalk trough.
No. 794L. Left closure for ¼ inch chalk trough.
No. 794R. Right closure for ¼ inch chalk trough.



PEERLESS MAP AND DISPLAY RAIL

Over all width of rail is 1¼ in.; lengths 6, 7, 8, 9, or 10 ft. Cork insert (specify color—tan, green or gray) is ¼ in. thick by ¾ in. wide. Installation screws and washers furnished. Rail available with or without cork insert, and with or without one hook for every 3 ft. of rail. Flag holder also available. Both hooks and flag holders slide freely.

FOR ON-THE-JOB INSTALLATIONS

(1) MATERIALS

(1a) CHALKBOARDS—Chalkboards shall

be ....

1. ¼ inch Litegreen silicate surface SlatoSteel, 20 (or 24) gauge steel with porcelain enamel coating, fired at not over 1250°, bonded to hardboard (or plywood) with .001 inch aluminum foil liner securely laminated. (Also available with 26 gauge galvanealed liner)
2. ½ inch Litegreen silicate surface SlatoSteel, 20 (or 24) gauge steel with porcelain enamel coating, fired at not over 1250°, bonded to wood fiber backing.
3. 3/16 inch Slatebestos, (Litegreen or black) combining 80% asbestos and 20% cement under high pressure, with 2 coats chlorinated rubber sealer on back and 1 on front, with 3 surface coats on front.
4. ¼ inch or ½ inch Videoplate, (Litegreen or black) made of ligno-cellulose plastic material of felted wood fibers and special plasticizing agents combined under high temperature and pressure, with 2 coats chlorinated rubber sealer on back and 2 surface coats on front.
5. ¼ inch Slatoboard, (Litegreen or black) made of ligno-cellulose plastic material of felted wood fibers and special plasticizing agents combined under high temperature and pressure.

as manufactured by Beckley-Cardy Company, Chicago, or its equivalent, meeting fully this manufacturer's standards.

All chalkboards shall have surfaces true and smooth, free from defects. Joint edges shall be sharp and at 90 degree angle with top hanging edge.

(1b) CEMENT—Cement shall be Beckley-Cardy Chalkboard Cement or equal.

(1c) METAL CHALKBOARD JOINTS — Chalkboard joints shall be Simplex metal joining strips, finished same as chalkboard surface. All joints shall be without surface defects.

(1d) METAL MOLDINGS — Moldings and chalk trough shall be Simplex aluminum, Clip-In or Snap-On with anodized finish, free from surface defects, as manufactured by Beckley-Cardy Company, Chicago, or its equivalent, meeting fully this manufacturer's standard of quality.

(1e) TACKBOARDS—Tackboards shall be

....

1. ¼ inch Simplex Corkboard without backing, made of quality linen finish compressed cork.
2. ½ inch Peerless Corkboard of ⅛ inch cork on ⅜ inch fiber backing, made of quality linen finish compressed cork.
3. ½ inch Duplex Corkboard of ¼ inch cork on ¼ inch Masonite quarter board, made of quality linen finish compressed cork.
4. ¼ inch Defiance Corkboard without backing, made of quality pebble finish cork.
5. ½ inch Challenger Corkboard of ⅛ inch cork on ⅜ inch fiber backing, made of quality pebble finish cork.
6. ½ inch Contender Corkboard of ¼ inch cork on ¼ inch Masonite quarter board, made of quality pebble finish cork.
7. ¼ inch Colortak board of ¼ inch Masonite quarter board backing covered with decorative vinyl textured fabric.
8. ¼ inch Colortak Wrap-around board of ¼ inch Masonite quarter board backing covered on surface and sides with decorative vinyl textured fabric.
9. ½ inch Colortak board of ½ inch homasote tackboard backing covered with decorative vinyl textured fabric.
10. ½ inch Colortak Wrap-around board of ½ inch homasote tackboard backing covered on surface and sides with decorative vinyl textured fabric.

(1f) DISPLAY RAILS—Display rails shall be Peerless map and display rail. Specify with or without cork insert and spring clip hooks, as manufactured by Beckley-Cardy Company, Chicago, or equivalent, meeting fully this manufacturer's standard of quality.

(1g) PEGBOARD—Pegboard shall be ¼ inch thick, with neutral finish as furnished by Beckley-Cardy Company, Chicago, or its equivalent.

(2) SIZES AND LENGTHS

(2a) WIDTHS—All chalkboard widths (height from chalk trough to top) and bulletin board widths shall be designated on the detailed drawings and schedules.

(2b) CHALKBOARDS LENGTHS—All sections of Slatebestos chalkboard up to 8 feet shall be in one piece; all sections over 8 feet and up to 16 feet shall be in two pieces; longer sections shall be in multiples of 6, 7, or 8 feet or fractions thereof, with joints symmetrically spaced and with no piece for filling out less than 3 feet in its horizontal dimension. For Videoplate and Slatoboard, lengths may be up to 12 feet; SlatoSteel lengths may be up to 10 feet.

(2c) TACKBOARD LENGTHS—All sections of tackboard up to 12 feet shall be in one piece except Simplex which may be in lengths up to 75 feet without joints.

(2d) PEGBOARD LENGTHS—All sections of pegboard up to 8 feet shall be in one piece; longer sections shall be in even multiples with joints symmetrically spaced.

(3) STORING

All chalkboard and bulletin board material shall be properly stored and protected at the building site.

(4) ERECTION

(4a) Setting, leveling, and cutting of chalkboard shall be in accordance with manufacturer's recommendations.

(4b) Chalkboard, bulletin boards, and display rail shall not be set until plaster is completely dry.

(4c) Surfaces shall be plumb and in true plane with ⅛ inch clearance at top and ⅛ inch at bottom and ends of the spaces.

(4d) CHALKBOARDS—Chalkboard panels shall be secured to the wall with horizontal rows of spotting cement 6 inches from all joints. Cement shall be applied to the plaster in globules about the size of an egg. The top and bottom rows shall be from 10 to 12 inches from the board edge and from 12 to 16 inches on centers horizontally. The spots of the middle horizontal row shall stagger centrally between the spots of the top and bottom rows. The boards shall be firmly pressed in position over the cement and leveled plumb and true.

(4e) Top edge of chalkboards shall then be hung with 4D finish nails on 16 inch centers ⅛ inch from top edge. Bottom and ends shall not be nailed.

(4f) Two or more chalkboard panels shall be joined with Simplex metal joining strip. After affixing joint to first chalkboard panel, free side of the joining strip shall be nailed at top, center and bottom. Spotting and nailing each of the successive panels shall be continued. Chalkboard and tackboard joints shall be covered with mullion or map rail as designated. Sufficient pressure shall be maintained for at least 48 hours to assure thorough adhesion without springiness for the entire surface.

(4g) METAL MOLDINGS—All chalkboards and bulletin boards shall be set with edges adequately covered by molding. Trim and chalk trough shall be attached by screws according to manufacturers instructions.

(5) CLEANING AND BREAKING IN

(5a) Contractor shall clean all chalkboard and bulletin board surfaces. Any varnish or other finish appearing on these surfaces shall be removed and the surface refinished or new boards erected by the chalkboard contractor at the painting contractor's expense.

(5b) After cleaning, chalkboards shall be properly broken in according to the chalkboard manufacturer's instructions supplied.

(5c) In each room, where directed by the architect, permanently fasten the plate furnished by the chalkboard manufacturer giving directions for the care of chalkboard.

FOR CUSTOM-MADE UNITS

Furnish to attach to the wall custom-made units in such places as designated by the architect.

Chalkboard areas shall be Litegreen (or black) ½ inch **Videoplate**, or Litegreen ½ inch **SlatoSteel.** Bulletin board areas shall be ½ inch **Duplex**, tan (green or gray). Pegboard areas shall be pegboard with 9/32 perforations with 1 inch straight centers. Units shall be framed in 1 inch anodized aluminum trim with sections joined by mullion, joining strips, or map rail. Chalk trough under entire unit or under chalkboard only. Overall length may be up to 12 feet.

All above specified and shown on plans submitted. To be as manufactured by Beckley-Cardy Company, Chicago or its equivalent, meeting fully this manufacturer's standards of quality.

WARRANTY

All Beckley-Cardy chalkboards are fully guaranteed against defective materials and workmanship. Defective boards will be replaced or the complaint otherwise adjusted to satisfaction of purchaser.

YOUR SAMPLE PORTFOLIO

This kit is prepared with reference and testing material cut from actual stock.

The portfolio will fit your standard file and is keyed in accordance with the Architectural filing system. Write for your handy chalkboard and tackboard kit today.

CATALOG 260S

Ask for complete Catalog No. 260S describing Supertex shades custom-built for institutional requirements. Cloth samples and architectural specs are furnished on request. A complete line of school seating is also included.

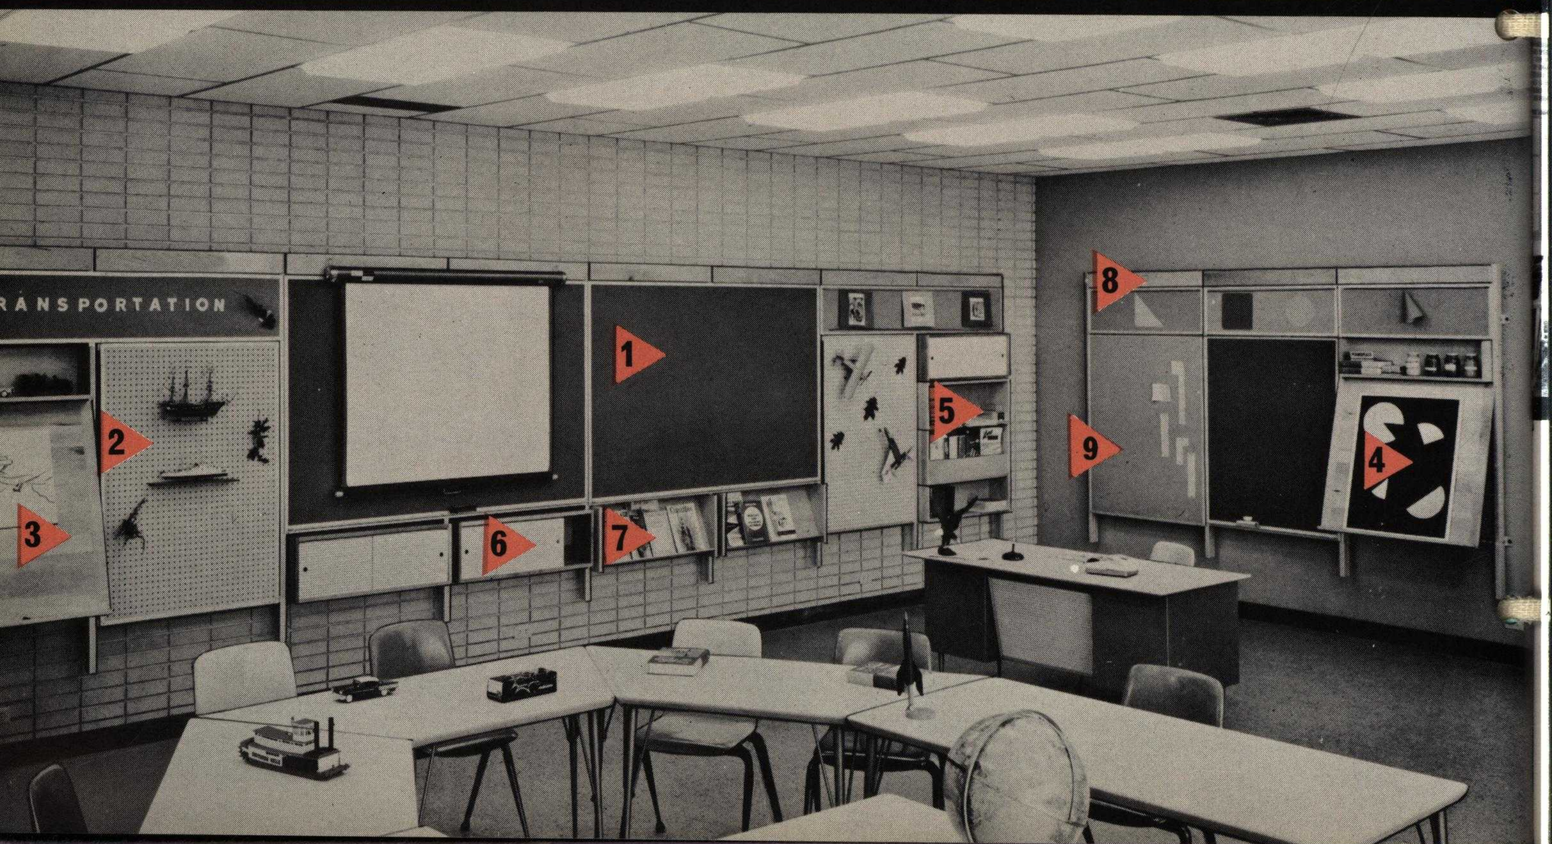
TODAY'S "LEARN BY DOING" CLASSROOMS call for functional flexibility in all equipment. Until now, school administrators and teachers, despite the use of modern movable furniture and cabinets have found themselves greatly limited in implementing their teaching programs due to inflexible permanent chalkboard, display and storage facilities.

Moduwall—and only Moduwall—assures the completion of a *totally* flexible classroom. Educators who have experienced the wonderful advantages of Moduwall are unanimous in their praise and approval . . . have requested it for all of their new and remodelled classrooms.

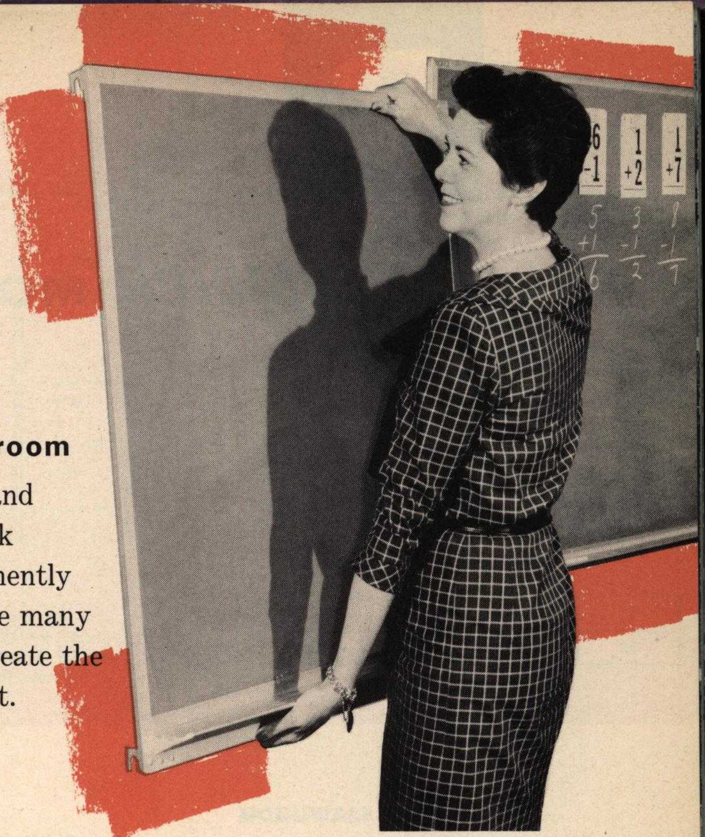
BRUNSWICK MODUWALL
Gives You Complete Classroom Flexibility Over The Years

From Class to Class...Semester to Semester...Year to Year

Brunswick Moduwall gives you complete classroom flexibility over the years . . . as school population shifts . . . as classroom purposes change. By simply changing the *kinds and heights* of units, you can transform a kindergarten into a fifth grade, a fifth grade into a social studies room, a math class into a kindergarten! Today's elementary schoolrooms become tomorrow's educationally perfect junior and senior high rooms—without costly reconstruction. With Moduwall your classrooms are never obsolete . . . always ready for change in grade or teaching function!



Brunswick MODUWALL



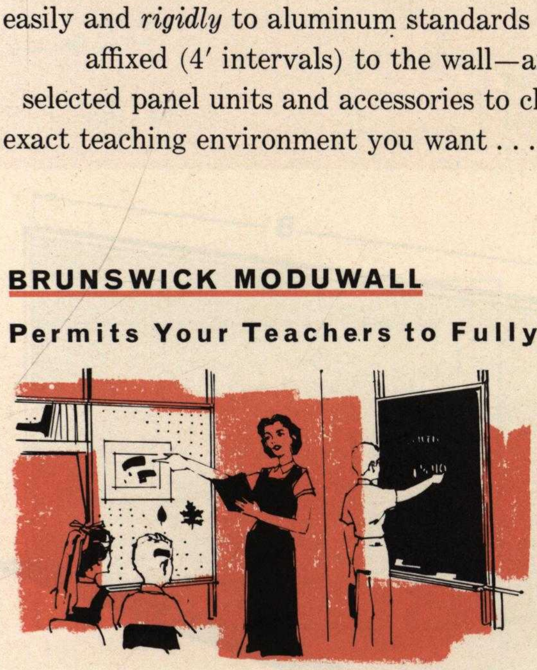
TEACHER'S DELIGHT

It's Easy To Change The Function Of Any Classroom

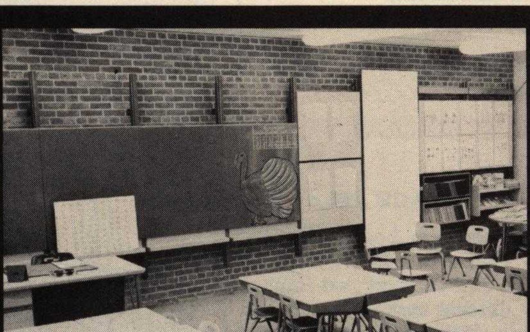
Yes, Moduwall panels can be changed in minutes . . . and all are completely interchangeable! Lightweight panels hook easily and *rigidly* to aluminum standards which are permanently affixed (4′ intervals) to the wall—any wall. There are many selected panel units and accessories to choose from—to create the exact teaching environment you want . . . when you want it.

BRUNSWICK MODUWALL

Permits Your Teachers to Fully Use Their Own Individual Teaching Techniques



Only Moduwall gives your teacher full freedom to use the teaching aids that best suit *her* individual purposes . . . and teaching techniques. She can change panels as instruction, projects, assignments change . . . from day to day, semester to semester, as she desires. She is no longer restricted by built-in chalkboard and display equipment. She can, literally, within one day, make immediate provision for conference, projection, pupil project display, lecture, individual or group chalkboard work!



AND MODUWALL IS ECONOMICAL, TOO!

Moduwall not only gives you scores of educational advantages . . . but with its unlimited flexibility, actually costs less to install and use now . . . and over the years than conventional fixed-to-the wall fixtures. Money is never tied up in unused chalkboard or tackboard when room functions change.

Actual dollars can be saved by the use of the right amount of chalkboard to fit the specific grade level—no wasted square footage.

YOUR CLASSROOMS ARE NEVER OBSOLETE!

No classroom need ever go unused or partially unused because of the fixed nature of wall equipment. When you build a new high school, by simply changing panels, your old high school becomes an elementary or junior high. Yes, you save literally thousands of dollars by the versatility and practicality of Brunswick Moduwall.

MODUWALL IS EXPANDABLE

The expandability of Moduwall now makes it unnecessary for the administrator or architect to outguess the wall requirements of his teaching staff. You can start with a minimum of usable wall—and expand your Moduwall installation by simply adding wall standards when the need (or money) arises!

New School . . . Remodeled Classroom . . . Brunswick MODUWALL Means Better Learning, Lasting Value

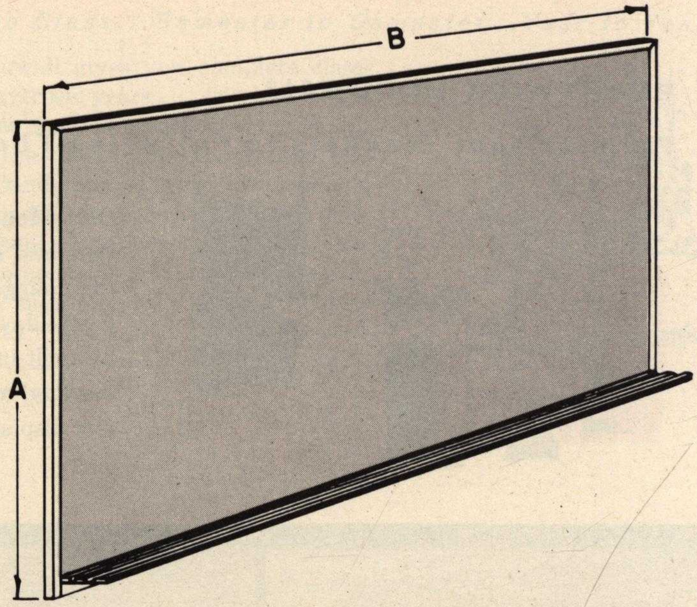
Brunswick MODUWALL

The 6 Most-Used
Chalkboard . . . Display . . . Storage Units
Required to Create
Educationally Perfect Classrooms

MODUWALL STEEL CHALKBOARD

Constructed of the highest grade specialized steel, ceramic surfaced to assure the finest writing and erasure qualities. Will take all types and colors of chalk. Ceramic surface can never become slick or glossy with use. Permanently affixed aluminum tray. Colors: Green, Gray.

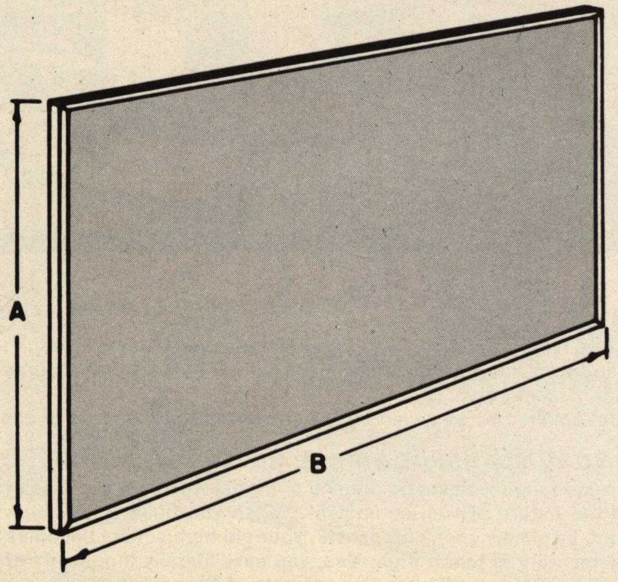
CODE No.	SIZE	A	B
M-243	4′ x 3′	3′	4′
M-244	4′ x 4′	4′	4′
M-283	8′ x 3′	3′	8′
M-284	8′ x 4′	4′	8′



MODUWALL TACKBOARD

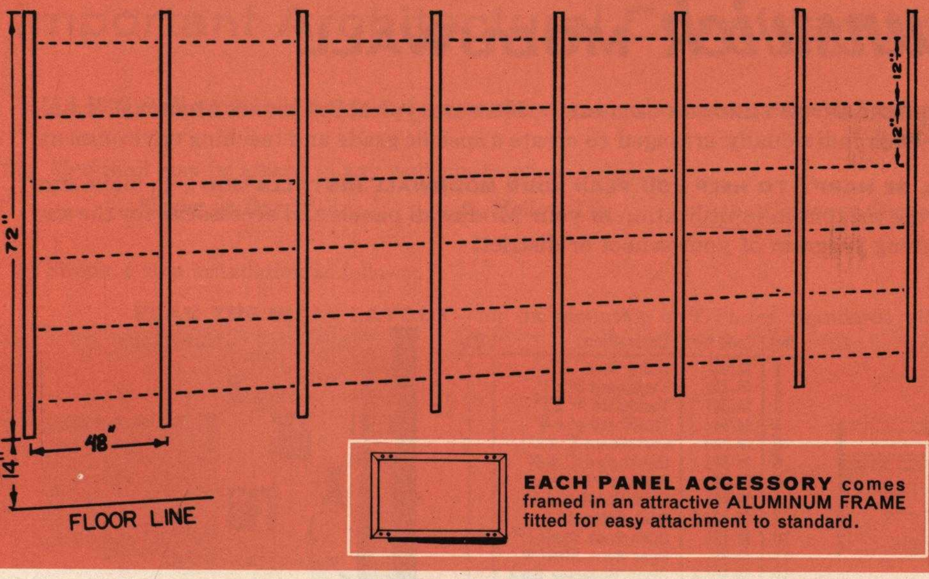
Surfaced with a layer of prime quality natural cork securely laminated to hardboard backing. Will take all types of display tacks, pins, etc. with standard tan or optional gray, green, blue, coral.

CODE No.	SIZE	A	B
M-341	4′ x 1′	1′	4′
M-343	4′ x 3′	3′	4′
M-344	4′ x 4′	4′	4′
M-381	8′ x 1′	1′	8′
M-383	8′ x 3′	3′	8′
M-384	8′ x 4′	4′	8′



Moduwall aluminum wall standards are placed at 4' intervals—all panels and accessories are constructed to accommodate this dimension. Standards are each 6' in height.

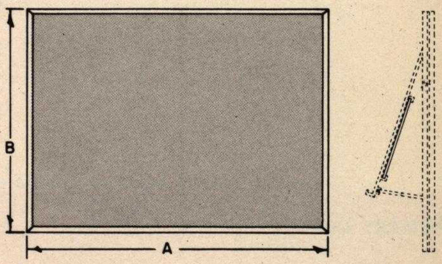
ONLY ONE BASIC INSTALLATION



EACH PANEL ACCESSORY comes framed in an attractive ALUMINUM FRAME fitted for easy attachment to standard.

MODUWALL FLANNELBOARD ACCESSORY

Stores behind standard easel. Special black flannel bonded to thick hardboard. Remains smooth, wrinkle-free always.

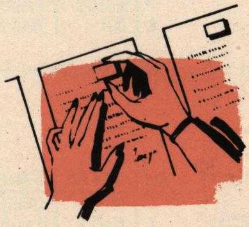


CODE No.	SIZE	A	B
M-6F	44" x 24"	44"	24"

Brunswick MODUWALL
BRUNSWICK CHALKBOARD IS
***Lifetime* GUARANTEED**

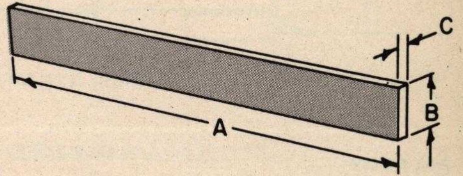
The fine quality materials and construction of Brunswick Steel Chalkboard enables us to guarantee its writing surface *for life*. This unconditional guarantee shall cover failures which occur during normal usage and shall not be construed to cover willful damage or misuse.

Use it With Magnetic Accessories—Steel chalkboard may be used with magnetic accessories to provide an important teaching aid—for copying, for demonstration, for display.

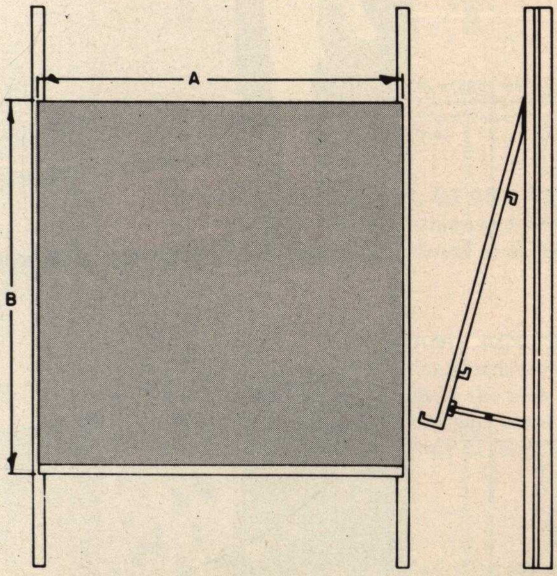


MODUWALL UTILITY RAIL

A practical attractive accessory—¾" Aluminum extrusion with 1⁵⁄₁₆" full length center tack strip—designed for use of sliding utility hangers.



CODE No.	SIZE	A	B
M-5u	47¾" x 3"	47¾"	3"



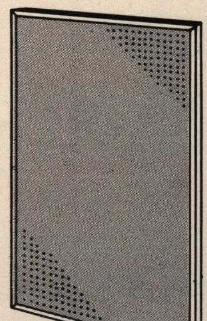
MODUWALL EASEL BOARD

Constructed of hardwood, plywood with ladder brackets at the base. Full length paint tray permanently attached at bottom. Storage rail at back holds flannelboard accessory.

CODE No.	SIZE	A	B
M-444	4' x 4'	4'	4'

MODUWALL PEGBOARD

Constructed of durable tempered hardboard. Standard perforations to take all pegboard accessories—light gray.



CODE No.	SIZE	A	B
M-4P	4' x 4'	4'	4'

Brunswick MODUWALL

FROM KINDERGARTEN THROUGH COLLEGE . . . Here are typical Brunswick Moduwall installations—each individually arranged to create a specific grade and teaching environment.

WE WILL BE HAPPY TO HELP YOU PLAN YOUR MODUWALL INSTALLATION—to make sure you get the maximum in utilization of your Moduwall panels and accessories for the size and teaching program of your school or district.

Important Architectural Considerations

- All Moduwall standards, panels and accessories are shipped complete, assembled ready for wall installation.

- Moduwall may be affixed to any wall construction, including

  1. Plaster or Dry Wall **2.** Hollow Tile **3.** Cinder or Concrete **4.** Brick or Solid Concrete

- Simple 4-step installation as follows:

1 PLAN THE WALL LAYOUT—for the mounting of T-Plates. Standards will then be affixed to these Plates. Note 3′ intervals.

C
T-PLATE

BRICK OR SOLID CONCRETE WALL CONSTRUCTION
E
T-PLATE
E
T-PLATE

NOTE: When the walls on which Moduwall standards are of composition or plaster, the T-Plates are not mounted directly on the wall surface. The wood mounting strip should be 8″ longer than the overall Moduwall installations. One mounting strip is used for the upper row of T-Plates and the other is used for the lower line of T-Plates.

3 MOUNT MODUWALL STANDARDS TO T-PLATES. The glove tight fit of the T-Plate tongues in the slots of the standard permits positioning and adjustment of all standards before the holes are drilled in the T-Plate tongues. Adjust all standards until plumb and level. Drill holes in the tongues of the T-Plates with a ⅜ths drill . . . insert bolts and tighten.

4 INSTALL PANELS AND ACCESSORY UNITS TO STANDARDS—insert the panel mounting bolts into the runner channels of the standards from either the open top end or the open bottom end of the channel. Properly space the supporting bolts to support the unit to be hung. (Tackboard, Chalkboard, etc. . . . and lock these bolts into position on the running channel by means of the lock nuts provided. Hang the panel, tackboard, chalkboard, etc. in position on the standard and lock securely in its position with the lock nuts as provided.

Installation Notice—The detailed Brunswick Moduwall Information and Specifications Manual is available for more complete Specifications, particularly on panel units and installation instruction detail.

Brunswick MODUWALL

General Specifications

Brunswick Moduwall shall consist of a series of components to be affixed to classroom and other walls within the school. These components shall consist of wall standards which shall be affixed to the walls and various units which may be attached to the wall standards. The units to be attached to the wall standards may include such items as steel chalkboard, tackboard, wall cabinets, magazine racks, and so on, as specified in further detail in Specification.

Wall standards shall be installed by________________ ________________(state whether contractor, dealer, owner, etc.). Other components shall be installed to wall standards by________________(contractor, dealer, owner).

All Brunswick Moduwall units shall be furnished by the manufacturer with attachment hardware. The manufacturer shall supply such items as T-Plates to be used for the attachment of wall standards to wall surface, as well as screw and nut assemblies for the fastening of wall standards to T-Plates. Manufacturer shall not provide bolts for attachment of T-Plates to the wall, since these bolts may be best obtained on the job site to suit the wall construction.

All parts shall be manufactured to the highest degree of quality and specification consistent with the product usage. All parts shall be guaranteed by the manufacturer for a full one year period from the date of installation, excepting the steel chalkboard writing surface which shall be guaranteed for life. The unconditional guarantee shall cover failures which occur during normal usage and shall not be construed to cover willful damage or misuse.

THE BRUNSWICK MODUWALL ALUMINUM WALL STANDARD

The Brunswick Moduwall Aluminum Wall Standard (S-1) shall be constructed of heavy structural extruded aluminum. The Wall Standards shall be furnished complete with T-Plates and necessary hardware for the attachment of the wall Standard to the T-Plates. T-Plates shall be bolted to the wall. The wall Standards shall be designed with a double row of 5/16″ x 5/8″ slots on 2″ centers to allow for complete vertical adjustment of all component accessories.

BULLETIN BOARD CORK

Made in the United States of America

Gold Seal Bulletin Board Cork has been manufactured for over half a century, and is the oldest and therefore the most proven bulletin board cork on the market. Ask the contractor who has used it for many years.

MOST COMPLETE COLOR RANGE ON THE MARKET . . . Gold Seal Bulletin Board Cork is available in **SEVEN TRUE AND DISTINCTIVE COLORS** properly designed for good light reflectance to promote restful vision and reduce fatigue.

DESIGNED FOR RUGGED USE . . . The composition withstands thumbtack perforations and maintains its original appearance for years and years. The use of a linseed oil binder results in a firm locking-in of cork and pigments . . . avoiding pickout.

DESIGNED FOR CONVENIENT HANDLING AND INSTALLATION . . . Because Gold Seal Bulletin Board Cork is reinforced with a backing of the finest quality burlap, it can be handled and installed without cracking. The use of burlap also permits removal from the wall when necessary. Because of extra width rolls, 73″ and 49″, neater installations can be made on standard size backing boards. Wall installations can be made up to 90 feet in length without a single seam.

Congoleum-Nairn Linoleum Paste, No. SU-20, is particularly adaptable for use with Gold Seal Bulletin Board Cork.

DESIGNED FOR EASY MAINTENANCE: Since Gold Seal Bulletin Board Cork colors are uniform throughout, maintenance is negligible. Warm water and mild soap is sufficient under normal circumstances.

Installation Specifications

MATERIALS—BULLETIN BOARDS:

The covering shall be Gold Seal Bulletin Board Cork.

ADHESIVE:

The adhesive for cementing the Bulletin Board Cork to walls shall be Linoleum Paste, SU-20. When increased resistance to moisture is desired, "Three-Twenty" Adhesive shall be used.

WALL CONSTRUCTION:

Walls to receive Gold Seal Bulletin Board Cork shall be:

1. Good quality plaster with a white coat finish erected in such a manner that when dry they shall be firm, hard, and smooth.
2. Brown coat to which cement has been added and which has been steel troweled to a smooth finish.
3. Finished with patent plasters properly troweled to be firm, hard and smooth.
4. Wallboards, such as U. S. Gypsum's Recessed Edge Sheetrock, installed according to the manufacturer's specifications.

WALL CONDITIONS:

Walls shall be smooth. Rough spots and trowel marks shall be sanded smooth with sandpaper. Cracks and identations shall be filled with a non-shrinking patching plaster compound and sanded to a smooth surface when dry.

Walls shall be clean. Loose, scaly paint, water-soluble paint, or wallpaper shall be removed.

Gloss-painted or enamel-painted walls shall be sanded with coarse sandpaper to provide a satisfactory bond.

Walls shall be dry. Plaster walls shall be dry as tested by the Congoleum-Nairn Plaster Moisture Detector.

Walls with exterior faces exposed to the elements or which are below grade are not approved under this specification for the installation of Gold Seal Bulletin Board Cork. Proper furring-out of the interior wall surface will provide an acceptable surface.

APPLICATION OF MATERIALS:

The Bulletin Board Cork, Sealer and Adhesives must be stored in the original packages at not less than 70°F. for at least 24 hours before installation. A temperature of at least 70°F. shall be maintained in the area receiving the installation for 24 hours prior to, during, and for 24 hours after the installation is complete.

Linoleum Paste, SU-20 shall be used to install Gold Seal Bulletin Board Cork on walls. When increased resistance to moisture is desired, Congoleum-Nairn "Three-Twenty" Adhesive shall be used. Starting at the established level horizontal guide lines, the Adhesive shall be spread over the wall with a fine notched flexible trowel, covering approximately 110 square feet per gallon. Apply the Bulletin Board Cork to the spread area and roll thoroughly with a rubber wall roller to assure contact of the Bulletin Board Cork and adhesive. At junctions with projections from the wall and at floor and ceiling, the Bulletin Board Cork shall be carefully scribed and cut so as to form a neat joint at these places. The Bulletin Board Cork shall never be forced into place or laid under pressure.

CLEANING OF WALLS:

Immediately after the installation is completed, the surface of the Bulletin Board Cork shall be cleaned thoroughly. Spots of adhesive can be removed with a damp cloth. Spots or smears of "Three-Twenty" Adhesive not readily removed with a damp cloth, can be removed by rubbing vigorously with a dry cloth.

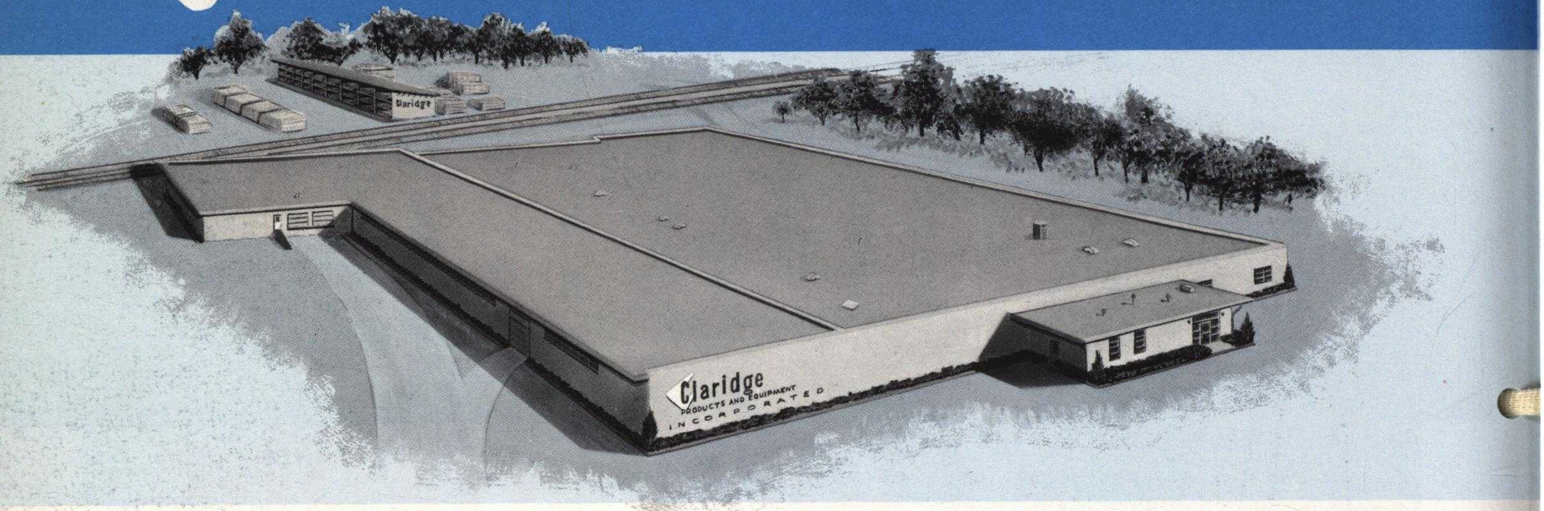
CLARIDGE PRODUCTS and EQUIPMENT, INCORPORATED
MANUFACTURERS
HARRISON, ARKANSAS

Claridge BACKGROUND and FACILITIES



Devoted Exclusively to the Manufacture of Chalkboards and Bulletin Boards

Since its inception, Claridge has devoted itself solely to the design and manufacture of finer chalkboards, bulletin boards, and related products. This is our only manufacturing activity. Engineering skill and many years of construction experience and craftsmanship, exclusively in this field, have made Claridge chalkboards outstanding, educationally and price-wise.

Our new plant, just completed, is equipped with the most modern, mechanized manufacturing processes. Motivated, too, by the determination to build the best, the entire Claridge organization continues to present to the school market throughout the world chalkboards and bulletin boards which meet the most exacting requirements of all types of building construction. We are greatly indebted to the support of thousands of school officials, architects, and contractors. Only through the loyal and increasing support of these people has our contribution toward better chalkboards been possible. In executing this program to the fullest, Claridge customers are assured of continued faithful performance and the meeting of every obligation.

MANUFACTURING FACILITIES

Our new plant, with more than 50,000 square feet of floor space under one roof, houses the most completely equipped chalkboard and bulletin board production facilities in the industry. Every phase of our production is under the supervision of craftsmen with years of experience in the construction and wood-working fields, in general, and in the highly specialized chalkboard field in particular. All raw materials are carefully selected and must pass rigid inspection before being placed into production. With this combination of the most modern and finest production facilities, skilled and experienced craftsmen, and highest grade materials, every Claridge installation insures fullest user satisfaction.

COMPLETE ENGINEERING SERVICE

We maintain a highly skilled engineering department with many years experience in all types of chalkboard installations. Whether your project is a modest district school or an elaborate city grade school, high school, or college, our staff will gladly assist you in all phases of your chalkboard planning.

On any difficult projects, unusual requirements, or special applications, our engineers are available for consultation at your convenience. Our engineering service can be invaluable to your planning, and can help you give your client utmost chalkboard satisfaction. This service is offered without obligation, and we would deem it a privilege to consult with you on any chalkboard and bulletin board problems.

3

Prepared to handle Small or the Biggest and Toughest

CHALKBOARD JOBS

1. ***Cutting Room***—Here is where all vitreous steel, plywood, and hardboard panels are cut to exact size for laminating.
2. ***Cork Cutting Room***—All cork is thoroughly inspected and cut to size for shipment or laminated to panel stock.
3. ***Glue Room***—Where chalkboard panels, mounted cork, and vitreous steel panels are laminated. Various types of adhesives are used, including contact cement, each specially adapted and tested for its particular purpose.
4. ***Chalkboard Surfacing***—Illustrating electronic oven and coating equipment by which the thermosetting resin surface is applied. Ovens are thermostatically controlled, insuring absolute uniformity in surface texture. When panels have cooled, chalkboards are ready for shipment.
5. ***Testing Room***—All factory built units are completely assembled and tested before shipping. Most units are shipped completely assembled. Only the largest units are partly disassembled before shipment. In that case all component parts are properly marked for easy erection on the job.
6. ***Assembly Line***—Here prefabricated chalkboards and bulletin boards are completely assembled. When they arrive on the job they can be attached to the wall without cutting, fitting or framing.
7. ***Prefab Crating Room***—All factory built units and prefabricated wall boards are packed in a separate department.
8. ***Panel Stock Crating Room***—Where all unframed chalkboards and bulletin boards are crated to insure the best possible packing and ultimate safe delivery. All boards are again individually and thoroughly inspected before crating.

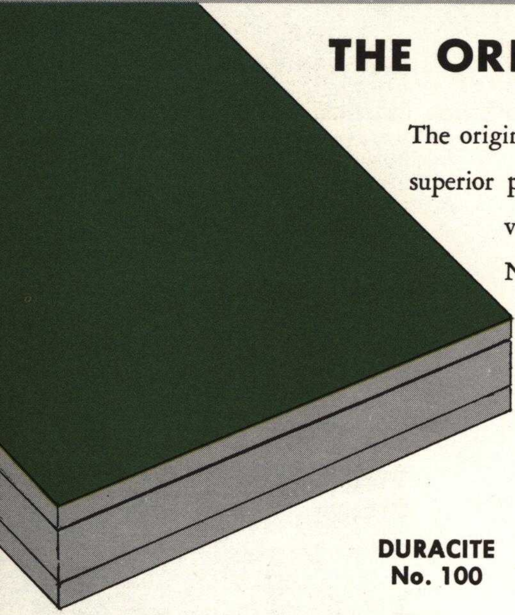
Claridge *Duracite* AND

THE ORIGINAL BALANCED CHALKBOARD



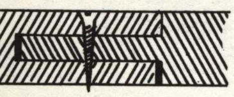
DURACITE
No. 100

The original one-half inch chalkboard is designed to be a permanent part of the building. Its superior performance, new efficiency in teaching, and longer life are assured by the most advanced method of manufacture backed by long experience and time tested materials. No other chalkboard has so many features which contribute to long life and unlimited service: thicker, stronger and more rigid panels, harder more durable writing surface, concealed lock joint, and new color harmony. It is adaptable for use in any school building, and under all climatic conditions.

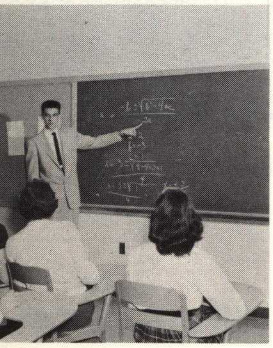
The close-grained surface is easily maintained. Erases clean. May be washed when necessary to remove chalk smudge. The surface is virtually dent proof, crack proof, non-breakable, color fast, in fact, almost indestructible. When properly installed, it is guaranteed for the life of the building. There is no finer, more economical, or serviceable board available at any price.

BALANCED PANELS—To avoid distortion it is necessary to have a perfectly balanced panel. Our 3 ply panel as used in No. 100 Duracite and No. 111 Durasteel avoids possible stress and strain present under certain climatic conditions in two ply boards. As a result there is less possibility of warping. This means easier erection resulting in lower installation costs.

INTERLOCKING JOINT ON No. 100 DURACITE AND No. 111 DURASTEEL

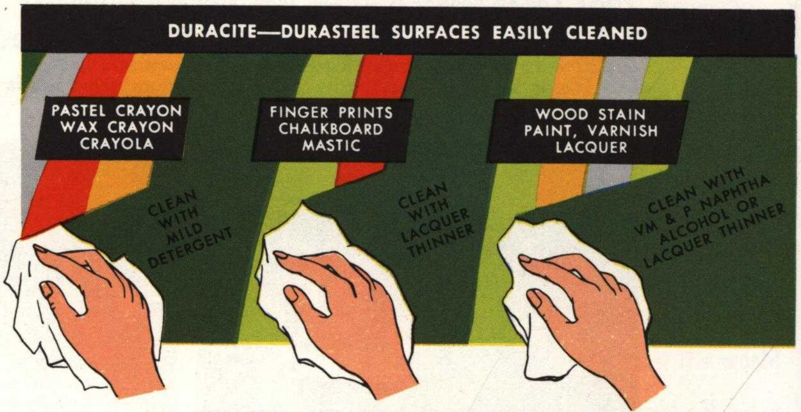


Improved interlocking joint keeps the face of adjoining panels in perfect alignment. Each joint is hand fitted and clearly marked at the factory, thus insuring a perfect fit. Mastic applied to the joint actually welds the panels end to end and prevents open seams. This is a distinctive Claridge feature.



NINE COLORS

The standard colors are Clearcite Green, Blue-Black, Dark Myrtle Green. Clearcite Green has a reflectance of 19%. This is well within the color spectrum of 15% to 20% reflectance established by lighting experts. However, to provide a wide selection of colors to harmonize with modern interior color schemes Duracite and Durasteel are also available in the following colors: Light Green, Powder Blue, Earth Brown, Coral, Charcoal Gray, and White.



DURACITE—DURASTEEL SURFACES EASILY CLEANED
PASTEL CRAYON

CLEAN WITH VM & P NAPHTHA ALCOHOL OR LACQUER THINNER

DURACITE—DURASTEEL SURFACES EASILY CLEANED

Almost any stain or substance coming in contact with the surface can be removed without injury to the chalkboard. Most complaints arise from stains made by colored chalk, wax crayon, scotch tape, glue, paint, hair oil, lip stick, finger prints, pencil marks, etc. Any household detergent or cleaning fluid, acetone, alcohol, or lacquer thinner may be used to remove foreign matter from the surface because the surface is more durable than ordinary chalkboard paint or lacquer surfaces. Even caustic soda of sufficient strength to destroy sheet aluminum does not affect the Duracite thermosetting resin surface.

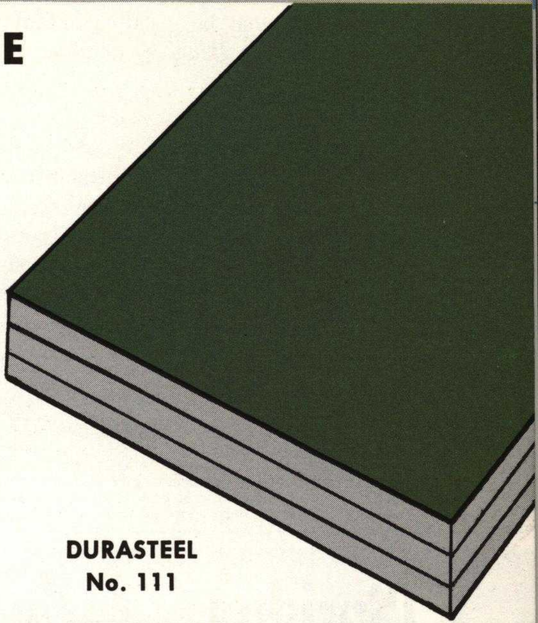
Durasteel CHALKBOARDS

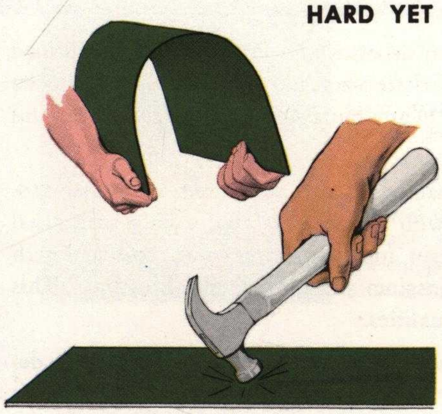
DESIGNED FOR LONG CAREFREE USE

CONSTRUCTION—DURACITE • DURASTEEL

Both chalkboards are identical in construction except that Durasteel has steel face for use with small magnets. The panel stock varies depending on whether one-quarter or one-half inch panels are used. The half inch boards are available in three ply perfectly balanced panels. The writing surface on Durasteel and Duracite is different from other chalkboards. It is not an ordinary lower cost paint or lacquer, as is generally used. The Duracite writing surface, which is used on both boards, is a thermosetting or heat cured resin combined with pigments and reinforced with magnesium silicate and silicon carbide. This surface is hard and tough; there is almost no wear out to it when used with standard grades of dustless chalk. It remains flat, without gloss. The original gloss reading ranges from 2.5% to 3.0% depending on the color. The allowable reading on the reflection meter is 6% which indicates that the surface is well within this light range.

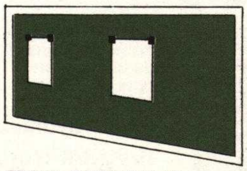


DURASTEEL
No. 111



HARD YET RESILIENT SURFACE

The chalkboard surface is practically wearproof. It will not craze or crack, and it is highly resistant to surface marring or scratching. It is tough, and so firmly bonded to the panel that flexing or bending, even at a sharp angle, does not affect it. Impact will not cause the surface to shatter.



FROM CHALKBOARD TO BULLETIN BOARD MAGNETICALLY

Small magnets placed at the corners of papers and notices convert this new Durasteel chalkboard to a bulletin board. No need for thumb tacks. Magnets hold papers in place until you're ready to remove them.

DURACITE AND DURASTEEL CHALKBOARD • LIFE OF THE BUILDING GUARANTEE

All chalkboards, when installed according to our printed instructions, will give entire satisfaction to the user. The writing surface will give full satisfaction under normal conditions of usage, and will not fade, spider check, chip, peel, pit, or become slick and glossy, and will require no more than normal maintenance. Should any chalkboard prove defective due to faulty workmanship or material at any time during the life of the building, such panels will be replaced. This guarantee extends to replacement of defective chalkboards only, and it does not include the cost of removal or re-installation, nor does it cover misuse or neglect. This statement is intended to insure the purchaser of having been supplied with perfect chalkboards at the time of shipment.

INDEPENDENT LABORATORY TEST

	Spec. Req.	Test Result
Abrasion Resistance	1700 cycles	1700+

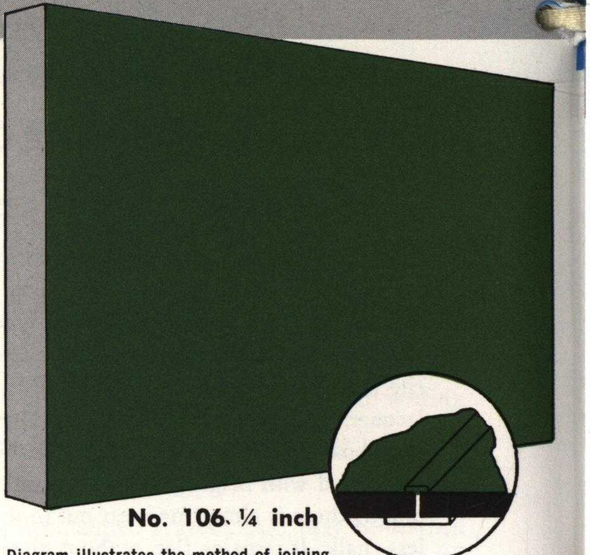
ARCHITECTS SPECIFICATIONS

MATERIALS: All chalkboards are to be (Duracite No. ______ or Durasteel No. ______ — indicate which). All spaces up to and including 12′ to be one panel; spaces 24′ and under to be two panels of equal length. Surface to be a thermosetting or heat cured resin combined with pigments and reinforced with magnesium silicate and silicon carbide, as manufactured by Claridge Products and Equipment, Inc., Harrison, Arkansas, or approved equal, and erected in exact accordance with printed instructions furnished by this manufacturer.

Claridge *Grapholite* CHALKBOARD

FOR SERVICE AND ECONOMY



No. 106. ¼ inch

Diagram illustrates the method of joining panels. We now use an improved extruded aluminum joint with rounded top, finished to match writing surface.

See Below for Complete Specifications

Base is shredded hardwood formed under hydraulic pressure into dense ¼ inch panels. Grapholite may be installed on any wall directly on plaster, cement block, or brick, and may be safely used under all climatic conditions.

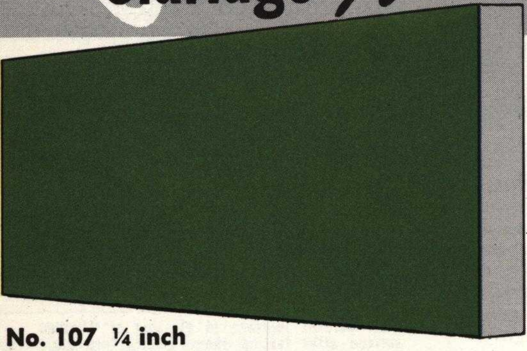
The surface is a thermosetting resin combined with various pigments and reinforced with magnesium silicate and silicon carbide. This provides the hardness and cutting qualities for perfect results and long life. New method of application holds the silicon carbide evenly and thoroughly suspended throughout the depth of the surface. This prevents breakthrough from chalk abrasion. Writing stands out, minimizing eye strain. Writing is easily erased. Grey smudge accumulating from dirty erasers washes off easily. Stains from wax crayon, colored chalk, hair oil, nail polish, paint, glue, etc., may be removed with naphtha, lacquer thinner, or any household detergent, without injuring the surface.

20 YEAR GUARANTEE

Grapholite Chalkboard, when installed according to our printed instructions, will give entire satisfaction to the user. The writing surface will give full satisfaction under normal conditions of usage, and will not fade, spider check, chip, peel, pit, or become slick and glossy, and will require no more than normal maintenance. Should any Grapholite chalkboard prove defective due to faulty workmanship or material at any time within twenty years from date of shipment, such chalkboards will be replaced. This guarantee extends to replacement of defective chalkboards only, and it does not include the cost of removal or re-installation, nor does it cover misuse or neglect. This statement is intended to insure the purchaser of having been supplied with perfect chalkboards at the time of shipment.

Claridge *Asbestocite* CHALKBOARD

ENGINEERED FOR LONG DEPENDABLE SERVICE



No. 107 ¼ inch

No. 109 ½ inch

Asbestocite is manufactured from long fiber asbestos and Portland cement formed under hydraulic pressure into panels of various sizes and thicknesses. Asbestocite has great tensile strength, and is adaptable to any building. It is easily installed and gives long, carefree classroom service.

The famous, thoroughly-tested Duracite chalkboard surface is used on all Asbestocite. This dense, closely grained surface, with abrasive material evenly suspended throughout the depth, is a thermo-setting resin, immune to free lime, combined with various pigments and reinforced with magnesium silicate and silicon carbide. This insures long life and unexcelled writing qualities.

Eye strain is virtually eliminated. Chalk smudge, oily finger prints, and wax deposits from colored chalk may be washed off with any household detergent. Hair oil, nail polish, paint stains, etc., may be removed with naphtha or lacquer thinner. In neither instance will any injury to the chalkboard surface result.

LIFE OF THE BUILDING GUARANTEE

Asbestocite Chalkboard, when installed according to our printed instructions, will give entire satisfaction to the user. The writing surface will give full satisfaction under normal conditions of usage, and will not fade, spider check, chip, peel, pit, or become slick and glossy, and will require no more than normal maintenance. Should any Asbestocite chalkboard prove defective due to faulty workmanship or material at any time during the life of the building, such chalkboards will be replaced. This guarantee extends to replacement of defective chalkboards only, and it does not include the cost of removal or re-installation, nor does it cover misuse or neglect. This statement is intended to insure the purchaser of having been supplied with perfect chalkboards at the time of shipment.

COLORS—Grapholite and Asbestocite Chalkboard are available in 9 colors: Clearcite Green, Blue Black, Dark Myrtle Green, Light Green, Powder Blue, Earth Brown, Coral, Charcoal Grey and White.

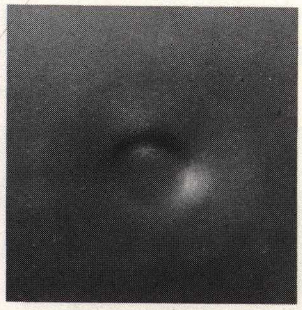
Claridge reserves the right to change specifications or add improvements without notice or obligation.

Claridge NEW IMPROVED Vitracite CHALKBOARD

New improved Vitracite Chalkboard combines every advanced feature of modern porcelain enameling technique. It is manufactured in accordance with the Performance Specifications for Porcelain Enamel Chalkboards as set up by the Porcelain Enamel Institute Inc., Washington, D. C. The frit is fired and fused to enameling stock at high temperature under very exacting controls. This produces a porcelain enamel chalkboard panel with excellent writing and erasing qualities, long life, and glare free light reflectance, which remains in effect after years and years of classroom use.

DURABLE, GLARE-FREE SURFACE

Under a twenty year accelerated chalk and eraser test there was no appreciable gloss or wear to the surface. The test was conducted with a 1" x 1" x 3" unit of dustless white lecturer's chalk and a new all-felt eraser. After the twenty years accelerated test the total increase in gloss was only 1½% (3 points are allowable), to give a reading of 6% on the reflectance meter. There was no measurable decrease in surface thickness, and at no time during the test, nor at the end of the test, were writing and erasing qualities impaired.



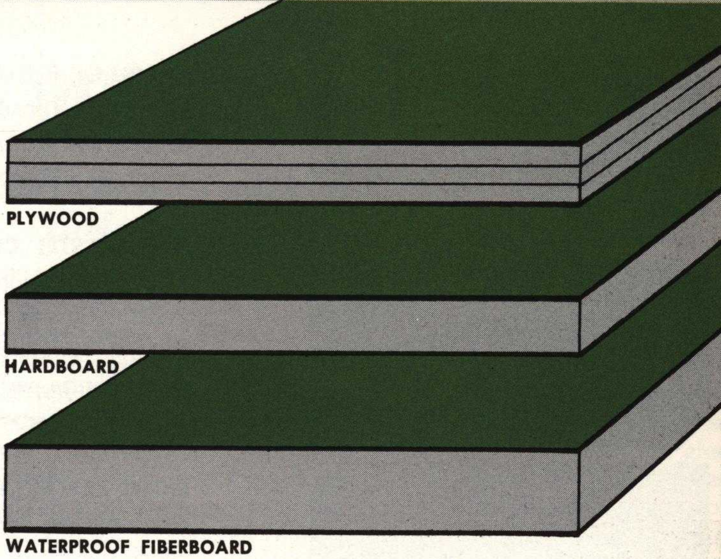
IMPACT RESISTANCE

The Vitracite porcelain surface is highly resistant to scratching, and will not craze or crack. For hardness it tests between 6 and 7 on Moe's Hardness Scale. Impact resistance: using a 1" diameter steel weight with an impact of 80 lbs. dropped onto a 1" ball resting on the Virtacite surface, the vitreous enamel is not chipped from the base metal, even after deforming to $\frac{3}{16}$" in depth.

PANEL CONSTRUCTION

The ceramic porcelain steel chalkboard face panel, the aluminum back panel, and the core stock are bonded together with high grade glue especially designed for this purpose. The glue line is actually stronger than the core stock. The steel face and the aluminum back cannot be removed without rupturing the core of the panel. Vitracite Chalkboard will not delaminate under any climatic conditions.

LIFETIME GUARANTEE—Under normal conditions of usage and maintenance, and when installed in accordance with Claridge instructions and recommendations, Vitracite Chalkboard is guaranteed for the life of the building. This guarantee is limited to the furnishing of chalkboards required to replace defective boards only. It does not include cost of removal or reinstallation. This guarantee is intended to insure the purchaser of having been supplied with perfect chalkboards at time of shipment.



NO MAINTENANCE—EASY TO CLEAN

There is no maintenance required except for ordinary cleaning. The Vitracite surface may be washed with soap and water or household detergent. It is impervious to lacquer thinner and other solvents. Therefore paint, lipstick, glue, hair oil, and other foreign substances coming in contact with the surface can be removed without injury to the chalkboard. Usually a damp cloth is all that is necessary to properly clean the surface.

SEVERAL COLORS AVAILABLE

To harmonize with modern interior color schemes, Nos. 114, 115 and 116 Vitracite are available in the following colors: Clearcite Green, Olive Green, Dark Myrtle Green, Earth Brown, Charcoal Gray, Blue, Black, Coral and White. Other colors available on special order.

Nos. 114-20, 115-20, 116-20, 114-18, 115-18 and 116-18 are available in Dark Green, Light Green, Blue, Black and White.

ARCHITECT'S SPECIFICATIONS

All chalkboards shall be Vitracite chalkboards (Note to architect—insert here the type of board desired) as manufactured by Claridge Products and Equipment, Incorporated, Harrison, Arkansas, or their approved equal.

The porcelain writing surface and panel construction shall be in strict accordance with the Porcelain Enamel Institute Recommendations for Porcelain Enamel Chalkboards.

Where possible all chalkboard shall be in one piece and erected in accordance with this manufacturer's instructions. Where the chalkboard assembly is over standard length, chalkboards shall be neatly joined with Claridge Close Fitting Extruded Divider Bars, finished to match the chalkboard surface.

FINISH

CLARIDGE BULLETIN BOARD is a resilient cork composition with new washable plastic finish made specifically for bulletin board use. It is absolutely uniform in density, and its specially compounded binder insures resilience and softness during the entire life of the material.

NEW PASTEL COLORS: With Claridge Bulletin Board you can add that final touch of functional color to any classroom decorating scheme because it is now available in new pastel shades—Dusty Green, Desert Sand, Coral, Lake Blue and Natural—as illustrated. In this range of modern tones you'll find a shade to match or harmonize perfectly with any of the lighter, brighter interiors featured in today's attractive classrooms.

LIGHT REFLECTANCE: The finely textured surface of Claridge Bulletin Board has relatively low light reflectance. This helps to reduce eyestrain and nervous fatigue which sometimes result from looking at wall areas of different brightnesses.

HOLDS TACKS FIRMLY: Claridge Bulletin Board takes tacks easily, holds them firmly, and retains its tack-holding qualities despite repeated use of the same spot. The soft texture makes tack removal easy. The resilient character of the cork composition makes tack holes self-sealing.

EASY TO INSTALL: Claridge Bulletin Board is available in continuous rolls or mounted on panels of various sizes and thicknesses as listed below. Bulletin boards of unmounted cork can be installed without seams.

EASY TO MAINTAIN: We have found a method of blending a colorless synthetic with our regular cork binder, which gives waterproofing qualities and yet does not affect the resiliency of the cork or interfere with its tacking qualities. Now Claridge Cork Bulletin Board may be washed or cleaned with most any solution to remove dirt, grime, stains, hair oil, lipstick, colored rayon, etc. Lacquer thinner, strong soap solutions, and detergents do not injure Claridge Bulletin Board. Soiled spots, finger prints, and dirt from workmen's hands are easily removed, leaving the finished job in perfect condition. Occasional washing with any household soap or detergent will retain that first day newness for years.

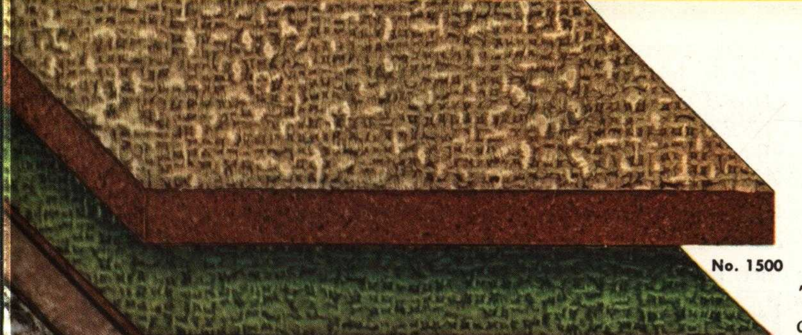
Claridge Fabricork

A NEW CONCEPT IN

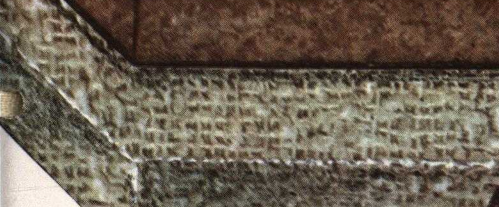
BULLETIN BOARDS

Soft resilient cork with durable fabric surface in seven beautiful colors



No. 1380 ALSO AVAILABLE WITH EDGES WRAPPED. No. 1380EW

There is no bulletin board that so effectively captures the mood i classroom decor as Fabricork. It blends to perfection with moder chalkboards, woods, aluminum trim, and wall finishes. It is by far th most resilient fabric-covered bulletin board obtainable. There is almos no wear out to Fabricork. It stays new looking for years. It resist abuse from thumb tacks, nails, pins, picture hooks, adhesive tape, glue and other objects used for posting better than cork. Punctures, bruises and cuts heal instantly. Fabricork is 100% washable. Spots and soi that could not be removed from ordinary cork wash away with ordinar soap and water. It is immune to alkalies, hair oil, grease, wax crayon glue, etc. The underlay is made of small particles of high-grade cor without pigmented glue or filler. The cork particles, under pressure are securely bonded to each other with glycol binders into sheets o various thicknesses and baked at a temperature of 250° F for eightee hours. Fabricork is available in panels with wrapped edges and rein forced corners neatly fitted. Refer to illustration No. 1380-EW at to of page. It is fastened to the wall using oval head screws and cu shaped washers.



Soft and Resilient

Live high-grade cork without cork bark and clap filler give Fabricork the resiliency of sponge rubber. When compressed, as illustrated, Fabricork rebounds instantly. Punctures heal quickly, and there is no tendency for the cork to break.

TYPE F

Claridge Factory-Built Chalkboard and Bulletin Board Units are the answer for economical chalkboard installations. Almost any desired size and arrangement can be had. No special wall construction, no grounds or costly erection. You can even completely finish and decorate classrooms and then erect chalkboards and bulletin boards.

Last minute changes in wall groupings of chalkboards and bulletin boards can be made without costly alterations. Boards are equipped with or without concealed hangers, as detailed, for easy erection and to meet varying conditions.

Claridge Factory-Built Units are substantially built and designed to fit into and harmonize with the finest appointments. Chalkboard may be any one of various colors as selected, with outstanding Duracite writing surface, or Vitracite vitreous enamel steel chalkboard. Both types of writing surfaces have excellent writing and erasing qualities. Bulletin boards are finest grade resilient cork or Fabricork. Boards are securely framed with extruded aluminum moulding etched and anodized satin finish. Wide extruded aluminum chalktrough to match, as shown in various details on pages 9, 10, and 11.

There is a wide range of sizes to meet every classroom need, up to a maximum of 5 feet in height and 16 feet in length on some styles, depending on materials specified. For details, consult specifications on pages 9, 10, and 11.

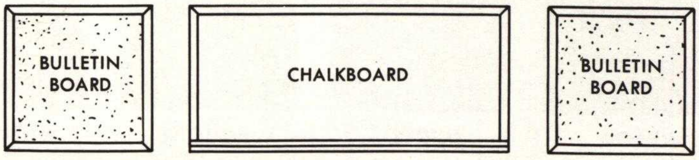
ARCHITECT'S SPECIFICATIONS

CLARIDGE FACTORY-BUILT UNITS

All chalkboards and bulletin boards shall be Claridge Factory-Built Units, Series (architect to insert series desired), as manufactured by Claridge Products and Equipment, Inc., Harrison, Arkansas, or their approved equal, in accordance with Claridge standards of construction and installation. Chalkboards shall be (architect to insert chalkboard desired). Bulletin board shall be Claridge plastic finish washable cork or Fabricork (architect to insert choice). Units shall be installed in strict accordance with manufacturer's printed instructions.

TYPICAL CHALKBOARD AND BULLETIN BOARD COMBINATIONS

Any Length or Combination May Be Attained in This Manner



FOR COMPLETE DETAILS REFER TO PAGES 9, 10 AND 11

Claridge FACTORY-BUILT UNITS: SERIES 1

CONCEALED HANGERS. CONCEALED SCREW-ON TRIM AND SPECIAL SNAP-ON TYPE CHALKTROUGH

Series 1 units are available with Duracite in various colors, Durasteel in various colors, or Vitracite vitreous enamel chalkboards in various colors. Bulletin board may be Claridge plastic finish washable cork in any of 5 colors or Fabricork in any of seven colors (refer to pages 6 and 7) as selected. The trim is heavy gauge extruded aluminum, fastened to the back of the panel so that no screws show on face of trim.

Chalktrough is specially designed for this unit. Extra heavy metal stock is supplied at point of screw contact. Although chalktrough and trim give appearance of being snapped on, there are no clips or grounds to loosen up, shift place, rust, or lose contact with the trim in any way. Corners are wrapped around, not open miters as on snap-on trim. All boards are available with or without map rail. Types A, B, C, and CO units available up to 4′ x 16′. Types D and F units up to 5′ x 16′. Longer panels must be joined on the job.

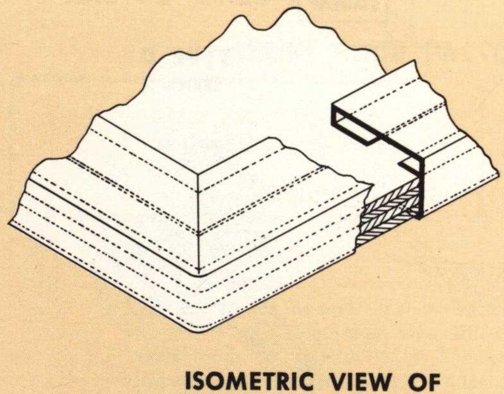
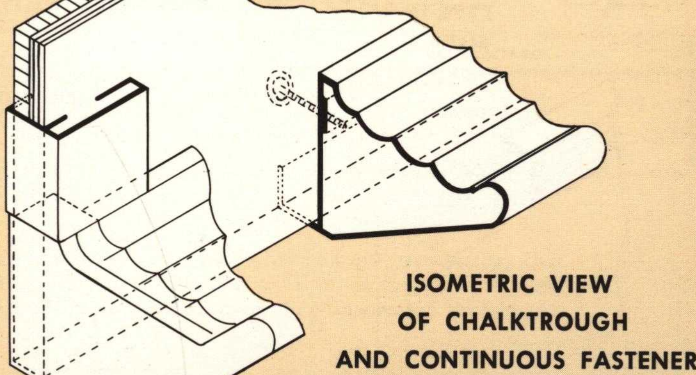
TYPE D



ISOMETRIC VIEW OF CORNER CONSTRUCTION

All chalkboards and bulletin boards have wrap around corners. There are no open miter edges at the corner. Mouldings are die punched and edge wrapped to prevent open joints or sharp edges at the corner.



ISOMETRIC VIEW OF CHALKTROUGH AND CONTINUOUS FASTENER

The chalktrough with continuous integral ground is bolted to the panel on 12″ centers. They are locked in constant contact over the entire length, not just at intervals as is generally the practice in the industry. There are no clips to rust, shift, loosen. And, since the board and chalktrough are held tight, there is no room for chalk dust or dirt to sift through and collect at the point where the two join.

Claridge

FACTORY-BUILT UNITS: SERIES 2 AND 3

CONCEALED HANGERS. CONCEALED SCREW-ON TRIM AND SCREW-ON CHALKTROUGH

Series 2 and 3 assemblies are alike except for the thickness of chalkboard and bulletin board. On Series 2 we use 1/4" chalkboard and 3/8" insulating board with 1/8" cork face for bulletin board. Series 2 units are substantially built, but because of thinner and lighter panels we do not recommend them over 4′ x 12′ in size, as larger boards lack stability. Series 3 units are well built with wrap around corners, trim fastened from the back, and heavy chalktrough bolted through the panel.

Series 3 Chalkboards can be had with Duracite surface in various colors, Durasteel in various colors, or Vitracite vitreous enamel boards in various colors. Standard for this unit is natural cork. However, colors are available if desired. Series 3 units have concealed hangers at top edge and angle brackets at 24" centers at bottom for the boards to rest on. Series 3 boards, Type A, B and C up to 4′ x 16′; Type CO 5′ x 16′; and Type D and F up to 5′ x 16′ in one panel. Longer lengths must be joined on the job.

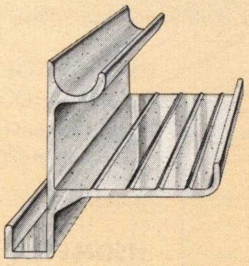
No. 262



No. 263

ISOMETRIC VIEW OF CHALKTROUGH

There are two chalktroughs available with Series 2, 3 and 4 units—No. 262 or 263. The latter has a dust receptacle above the trough, which collects most of the dust. As a result erasers don't pick up excess chalk dust, and chalkboard surfaces are kept cleaner.

Claridge reserves the right to change specifications or add improvements without notice or obligation.

Claridge FACTORY-BUILT UNITS: SERIES 4

FASTENED TO WALL WITH SCREWS. SCREW-ON TRIM AND CHALKTROUGH

Series 4 units are available with Duracite in various colors, Durasteel in various colors, or Vitracite vitreous enamel chalkboards in various colors. Bulletin board is tan Nucork. Grey, green, or coral cork available at extra cost. Or Fabricork in any of seven colors may be had (refer to pages 6 and 7). The perimeter trim is narrow, heavy gauge extruded aluminum, fastened with screws. The chalktrough is either 262 or 263 bolted through the panel. All boards are available with or without map rail. Type A, B and C in panels up to 4′ x 16′. Type CO panels up to 4′ x 16′. Type D and F in panels up to 4′ x 16′. Longer panels must be joined on the job.

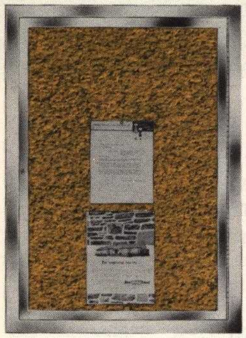
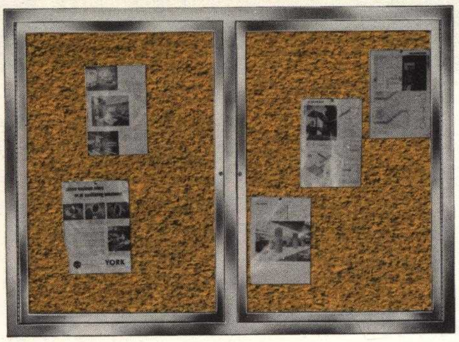
ALUMINUM BULLETIN BOARD CABINETS





Claridge Aluminum Bulletin Board Cabinets afford perfect protection for all bulletins, posters, etc. There are two models: Contemporary — extra heavy construction; and Deluxe — standard construction. Made of extruded aluminum 63S alloy with beautiful anodized satin finish. Hinged doors have continuous piano hinges. Doors are fitted with flat key tumbler locks. Contemporary model is also available with sliding glass doors and tumbler lock. Cases are available for surface or recess installation. Surface mounted cases are equipped with concealed hangers. Back panels are 1/4" cork mounted on 1/4" board. There are sizes for any height and width desired, from single door cases to multiples of 6 doors.

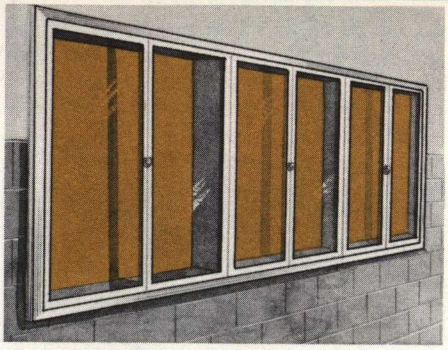
Claridge TROPHY and DISPLAY CASES



Claridge Variable Dimension Trophy and Display Cases are carefully designed and thoroughly built of 63S Alloy Extrusions, with anodized dull satin finish for lasting beauty. Locks, hinges and other hardware are solid brass, chrome plated. Widths and heights of cases are optional, with depth dependent on thickness of wall. All wood work for trophy and display cases to be furnished by others, although all glass doors, fixtures, glass shelves, and electrical fixtures can be furnished with cases if desired. However, to avoid the possibility of jurisdictional disputes we suggest the architect place the shelves, glazing, and electrical fixtures in the hardware, glazing, and electrical specifications. Claridge Display Cases can be made to fit almost every need. If the designs illustrated do not meet your requirements submit drawings or details of your problem, and we shall endeavor to solve it.

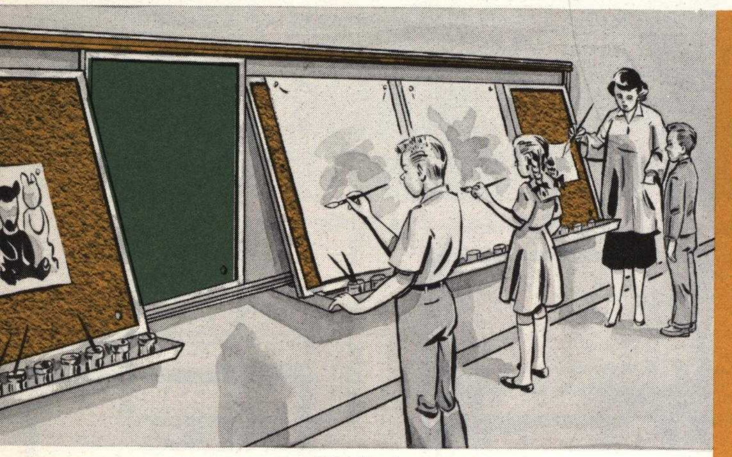
Claridge REVERSIBLE CHALKBOARDS

Claridge Dual-Purpose Chalkboards increase the function of every classroom by instantly adapting the room to numerous special subjects, art, music, nature study exhibition and other purposes. By adapting regular classrooms for special studies, most special purpose rooms can be eliminated and the entire building is available for complete occupancy at all times. This results in higher efficiency and greater economy. Chalkboards are our regular long-life Duracite on both sides, or Natural, Dusty Green, or Desert Sand Cork on reverse side as selected. All metal parts are extruded aluminum. Dull satin finish for beauty and long wear.



MODEL A

Model A installation provides greatest versatility. Chalkboards, display boards, work shelf for school craft, easel for art work, display panels for exhibition purposes—all are provided in one unit. Any student can set up any of the various arrangements instantly, and panels are always at proper height. Panels vary in size from 3′ x 3′ to 3′ x 4′ as desired. Tray and jar holder are made of steel and fasten to ends of swinging brackets, which are notched to hold work panels at desired angle.

MODEL B

This unique method of chalkboard and bulletin board arrangement is not only a space saver, but it also permits an instantaneous transformation of classroom chalkboard areas to display boards. Since both sides of the panels are available for either chalkboard or bulletin board, fewer units are required. This reduces material and labor costs to a minimum.

Panels vary in size from 3′x3′ to 3′x4′ as desired. All fixtures are extruded aluminum, etched and anodized, dull satin finish.

REVERSIBLE PANELS

These panels are available in various sizes, as ordered, for installation in wood frames. Panels have chalkboard surface on both sides, or cork on both sides, or cork on one side and chalkboard on opposite side, in combinations as may be selected. Frames are extruded aluminum, etched and anodized to dull satin finish.

Claridge Reversible CHALKBOARD AND BULLETIN BOARD

Chalkboard one side—Corkboard reverse side!

FLEXIBILITY PLUS

Widely acclaimed for their great versatility, Claridge Reversible prefabricated units may be extended from a basic 3′ to 24′ or more as desired in multiples of 3 feet. Each unit provides TWO usable surfaces—chalkboard and corkboard, all in one! Height is adjustable . . . and, best of all, there's space for storage behind each face panel!

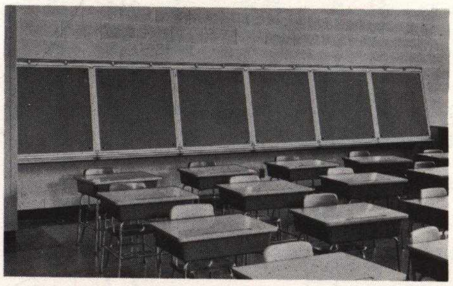
TILTED SURFACE

For the elimination of light reflection and glare, and for the promotion of better penmanship and easier writing, Claridge Reversible units are comfortably tilted! Penmanship experts everywhere recognize the advantage of a tilted chalkboard.

EXTRA STORAGE

Ingeniously concealed storage space helps the teacher keep materials "on location." Back is perforated with 3/16 inch holes on 1 inch centers to provide additional spaces for shelves and peg-board hanging fixtures. This feature saves much time and many unnecessary steps.

The depth of the unit at the chalk rail level encourages the construction of extra storage cabinets or book shelves.



ALL ALUMINUM CONSTRUCTION

To reduce weight, simplify installation, and eliminate expensive maintenance, everything in the Claridge Reversible unit except the chalkboard, corkboard, and back panel is made of aluminum, etched and anodized for permanent beauty.

PREFABRICATED

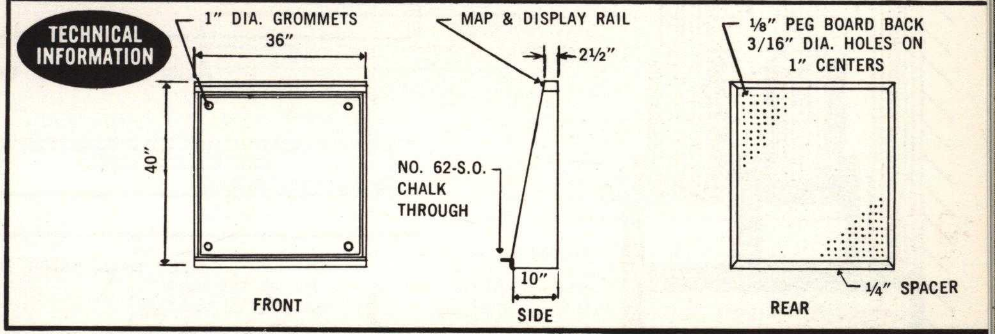
Claridge Reversible installation may be accomplished with exceptional speed and economy, with a minimum of expensive field labor, and with the elimination of grounds, adhesive, trim, backing, or shoring.

REVERSE WITHOUT LIFTING!

Chalkboard may be simply and easily removed and corkboard provided simply by turning the panel like a leaf in a notebook. Panel revolves easily without lifting it out of position. Any child can reverse it. No danger of falling to the floor or of dropping it on toes. It locks into a horizontal position allowing full access to storage behind chalkboard. Units are furnished complete with 2 map hooks per unit and chalk trough. Units may be extended to any desired length in multiples of 3 feet.

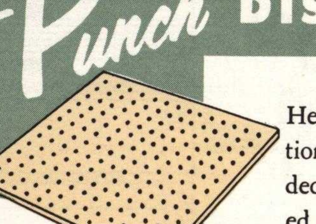
ADJUSTABLE

Claridge Reversible units may be converted from "8th grader height" to "1st grader height" in a matter of minutes. Each unit is complete in itself, making it possible to have individual units in the same wall section at various heights. Units may be adjusted a full ten inches, in one inch multiples. Only four fastenings per unit.



Claridge Multi-Punch DISPLAY BOARD

Adds function to the decorative touch



NATURAL LIGHT TAN

Ideal for almost any application. May be finished with clear lacquer, varnish, or the color of your choice.

No. 700 Size of panel—4′ x 8′. 1/8″ thick perforated with 3/16″ diameter holes on 1″ centers. Weight—1 lb. per sq. ft.

No. 701 Size of panel—4′ x 8′. 1/4″ thick perforated with 9/32″ holes on 1″ centers. Weight—1½ lb. per sq. ft.

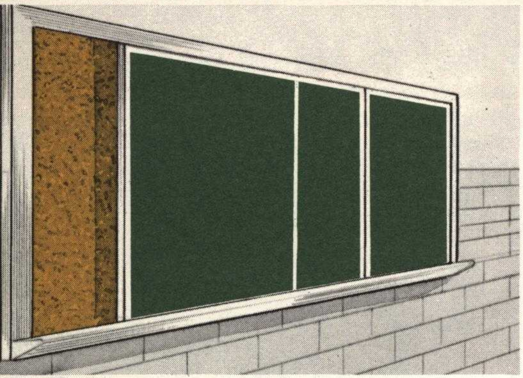
Here is a fresh approach to institutional decorating, acoustical treatment, decorative paneling, ventilation. Adapted quickly and easily for bulletin board, display board, shelf area, exhibition area.

Used in conjunction with hooks, this board offers an infinite variety of Multi-Punch applications. There is a provision for mounting virtually any item or product.

Multi-Punch Display Board is strong, durable, water-resistant. It may be painted any desired color, with any desired medium.

The material is made of high density ground hardwood particles. Bonded together under intense heat and pressure, special oils combine with natural hard wood resins to weld the fibers into a durable and luxuriously smooth finished sheet.

Claridge HORIZONTAL *SLIDING* CHALKBOARDS



Claridge Horizontal Sliding Chalkboard Assemblies may be provided in any desired length with extruded aluminum trim. Standard installations consist of two to four sliding units and a fixed chalkboard, cork bulletin board, or projection screen on the rear wall of sliding unit, or a combination of the three. Sliding chalkboard panels are Duracite, which provides a rigid writing panel (also available with Durasteel or Vitracite Chalkboard). All trim and chalkboard edging is extruded aluminum 63-S alloy with exposed surface etched and anodized in dull satin finish for lasting beauty. Chalkboards are suspended from top on extruded aluminum track on high strength molded Phenolic rollers with Oilite bronze bearings. Fixtures are Cadmium plated. Top suspension insures ease of operation, as the accumulation of chalk dust never interferes with easy movement of chalkboard.

SIZES

Horizontal sliding units are available in 3′, 3 ½′, and 4′ heights, and in almost any length desired, with the sliding units varying in length to meet requirements.

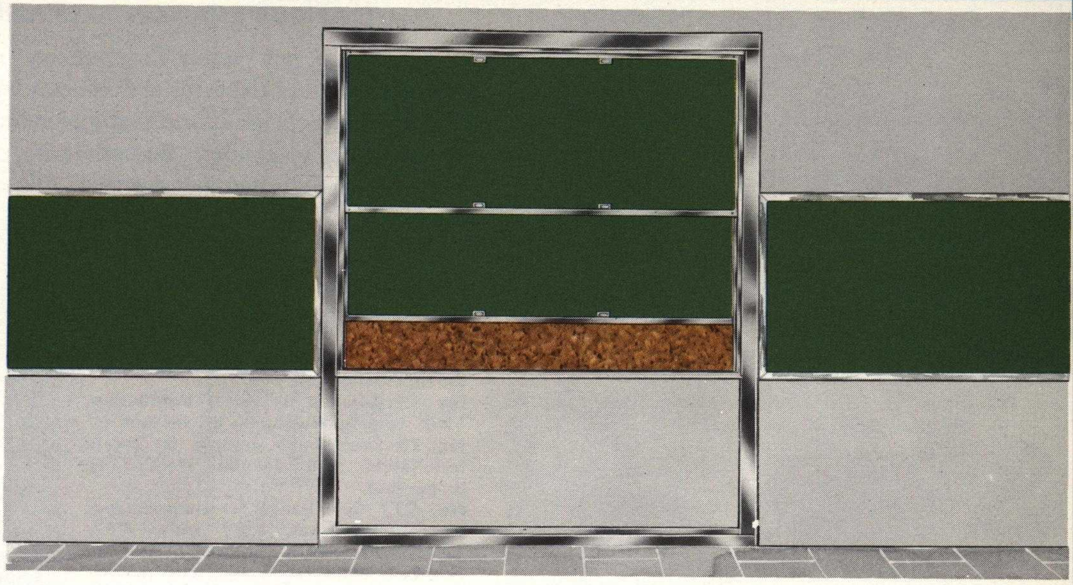
SPECIFICATIONS

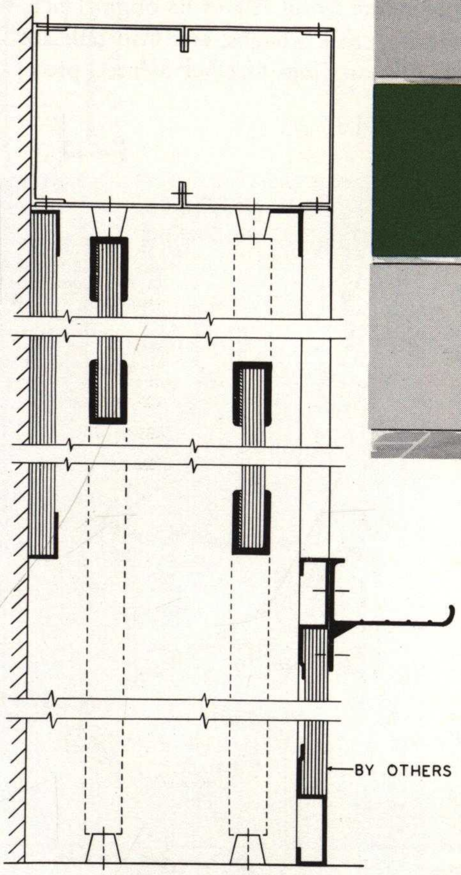
Furnish and install, where shown on plans, Horizontal Sliding Chalkboards as manufactured by Claridge Products and Equipment, Incorporated, Harrison, Arkansas, or an approved equal. All metal work to be 63-S extruded aluminum alloy, all exposed sections to be etched and anodized in dull satin finish. Sliding Chalkboards shall be Duracite with Clearcite Green Writing Surface (Durasteel or Vitracite — state which is desired) hung from the top on molded Phenolic rollers with Oilite bronze bearings. Same shall be of dimensions shown in details and in accordance with manufacturer's specifications and shop drawings as approved by the architect.

Claridge VERTICAL SLIDING CHALKBOARDS



CROSS SECTION

SHOWN QUARTER SIZE



SECTION A-A

Claridge Vertical Sliding Chalkboards are available in various widths up to 10 feet. Boards longer than 10 feet are too heavy for manual operation and also lack rigidity for practical, carefree operation. Chalkboard panels are counter-balanced by weights attached to cables operating over roller bearing sheaves. Frame work consists of 11 gauge aluminum casing, etched and anodized satin finish. Extruded aluminum side track insures smooth, easy operation. Chalkboards cannot bind or become dislocated in normal operation. Chalkboard panels move up and down independently of each other and can be lowered below line of vision so that back wall may be used for projection screen or fitted with permanent chalkboard or bulletin board.

STANDARD SIZES

LENGTH	HEIGHT	SLIDING BOARDS	APPROX. WT.
4′	10′	2	400 lbs.
5′	10′	2	550 lbs.
6′	10′	2	600 lbs.
8′	10′	2	650 lbs.
9′	10′	2	700 lbs.
10′	10′	2	750 lbs.

SPECIFICATIONS

Furnish and install where shown on plans Vertical Sliding Chalkboards as manufactured by Claridge Products and Equipment, Incorporated, Harrison, Arkansas, or approved equal. Frame work and trims to be 11 gauge aluminum housing, etched and anodized. Chalkboards are to be Duracite (also available with Durasteel and Vitracite—specify which), framed in extruded aluminum. Sliding panels to be guided up and down by extruded aluminum guides. Same shall be of dimensions shown in details and in accordance with manufacturer's specifications and shop drawings as approved by the architect.

CLARIDGE SNAP-ON EXTRUDED ALUMINUM TRIM

Modern design, new beauty for classrooms at minimum cost. Permanent installation for all chalkboards and bulletin boards. Maximum service at minimum upkeep. Soft, dull, brush-satin alumilite finish retains its original rich, spotless beauty indefinitely. Grounds, trim, chalk troughs, and map rails are completely co-ordinated and matched. All parts join together in neat, precision fit.

TYPICAL SNAP-ON SPECIFICATIONS

SCOPE — The contractor shall furnish and erect all chalkboard and corkboard or combination frame and trim as detailed on drawings or in accordance with manufacturer's approved shop drawings and as herein specified.

MATERIALS — All trim and chalk trough shall be snap-on type over direct to wall clips as furnished by Claridge Products and Equipment, Incorporated, Harrison, Arkansas, or approved equal.

TRIM — All perimeter trim shall be No. 273 or No. 272 as required to properly complete the job.

CHALK TROUGH — shall be No. 271 complete with end closures.

MAP RAILS — where called for map rails shall be No. 274 or No. 275 combination head trim and map rail as shown on drawings.

MAP RAIL ACCESSORIES — Furnish one pair of No. 76 roller brackets for each run. One No. 76 spring clip map hook for each 24″ of map rail, and 2 No. 76 F. H. flag holders for each run of map rail. Shop drawings are to be furnished for the architect's approval. All work shall be done in strict accordance with approved shop drawings.

TECHNICAL INFORMATION

No. 61 Edge trim for top and ends of ¼″ chalkboard or corkboard. Surface applied, screw on. Width 1″. Lengths 8′6″, 10′6″ and 12′6″. Weight: ¼ lb. per foot.

No. 61A Edge trim for top and ends of ½″ chalkboard or bulletin board. Surface applied, screw on. Width: 1″. Lengths 8′6″, 10′6″, 8′6″, 10′6″ and 12′6″. Weight: ¾ lb. per foot.

No. 61M Mullion trim for use with 61 and 61A perimeter trim. Width: 1″. Lengths 8′6″, 10′6″ and 12′6″. Weight: ¼ lb. per foot.

No. 51 Map rail with cork insert for surface mounting on No. 170 and 170A trim or mullion mounting with No. 61 and 169 trim or mounting on wood trim. Width: 1″. 8′0″, 10′0″, 12′0″ long. Weight: ½ lb. per foot.

No. 74 Wide map rail with cork insert used as mullion trim with No. 170 and 170A. Width: 2″; cork insert 1⅜″ wide. Lengths 8′6″, 10′6″ and 12′6″. Weight: ¼ lb. per foot.

No. 170 and 270 Screw-on perimeter trim for ½″ chalkboard or bulletin board; width 1½″; 8′6″, 10′6″ and 12′6″ lengths; weight ½ lb. per foot.

No. 170A & 270A Same as No. 170 and No. 270 except for ¼″ chalkboards.

No. 180 Screw-on perimeter trim for ½″ chalkboard or bulletin board; width face 1¼″ with 7/16″ return leg; 8′6″, 10′6″ and 12′6″ lengths; weight ¼ lb. per foot.

No. 181 Screw-on combination head trim and map rail with cork insert for ½‴ chalkboard and bulletin board; width face 1¼″ with 7/16″ return leg; 8′6″, 10′6″, 12′6″ lengths; weight ½ lb. per foot. Map hooks and other fixtures are same as No. 51 map rail.

No. 169 and 269 Screw-on mullion are the same except No. 269 has no center line; width 1½″; 8′6″, 10′6″ and 12′6″ lengths; weight ¼ lb. per foot.

No. 262 Chalktrough. Width, 2½″. Lengths: 8′6″, 10′6″, 12′6″, 17′0″ and 21′0″. Weight: ¾ lb. per foot.

No. 263 Chalktrough. Width: 2½″. Lengths: 8′6″, 10′6″ and 12′6″. Weight: ¾ lb. per foot.

No. 51C Spring clip hook for No. 51 map rail. (Shown on p. 21.)

No. 51 R.B. Roller brackets for No. 51 map rail. (Shown on p. 21.)

No. 51 F.H. Flag holder for No. 51 map rail. (Shown on p. 21.)

No. 51 E.S. End stops for No. 51 map rail. (Not illustrated.)

ARCHITECT'S SPECIFICATIONS FOR SCREW-ON TRIM

Furnish and install extruded aluminum anodized dull satin finish, screw-on chalkboard and bulletin board trim, as manufactured by Claridge Products and Equipment, Incorporated, Harrison, Arkansas, or approved equal. All trim, map rail, and chalk trough to be as required in specifications and as detailed on plans. Furnish one spring clip map hook for each 24″ of map rail, one pair roller brackets and one flag holder for each run of map rail. All trim and chalktrough to be furnished in stock lengths to be cut and fitted on the job. Contractors shall furnish shop drawings prepared in accordance with manufacturers installation recommendations for architect's approval.

Claridge reserves the right to change specifications or add improvements without notice or obligation.

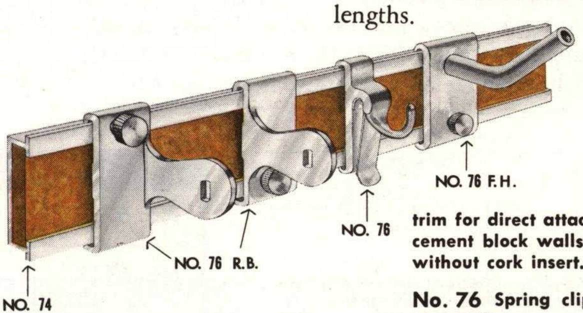
No. 51 ECONOMY EXTRUDED ALUMINUM DISPLAY RAIL

The Economy Display Rail gives an attractive appearance to any classroom. Designed for universal use. It is easily installed in old or new buildings and can be mounted on either wood or metal trim or directly to plaster or cement block walls.

Claridge Economy Display Rail is made of heavy gauge extruded aluminum. The cork insert is securely fastened and is available in tan or green color. Hooks are extra strong, equipped with spring clips. Rail is furnished with screws for fastening to wood trim. Cork insert is ¼ inch thick; overall width of rail approximately 1 inch. It is available in 6, 8, 10 and 12 foot lengths.

No. 74 DELUXE EXTRUDED ALUMINUM MAP RAIL

Our Deluxe Map Rail is designed to accommodate the same hooks and fixtures used on Claridge Snap-on Trim. Where aluminum trim is already in use and additional map rail is desired in corridors or rooms not having chalkboard, No. 74 may be added, and all fixtures will be interchangeable. Available with tan, grey, or green cork insert or without cork insert. May be screwed directly to wood, plaster, or block walls.



No. 74 Extruded aluminum map rail with cork insert. Overall width, 2″; cork insert, 1⅜″ wide; lengths: 8′6″, 10′6″, 12′6″. Weight: ¾ lb. per foot. Extra wide map rail for fastening to existing wood or metal trim for direct attachment to plaster or cement block walls. Available with or without cork insert.

No. 76 Spring clip hook for No. 74 map rail.

No. 76 R.B. Roller brackets for No. 74 map rail.

No. 76 F.H. Flag holders for No. 74 map rail.

No. 74 E.S. End stop (not illustrated).

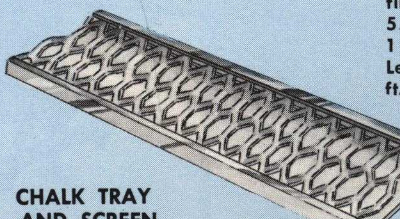
CHANNEL MOULDING

No. 805 anodized dull satin finish. ⅞″ opening; ⅛″ wall; 1⅛″ deep; 1¼″ outside. Lengths: 12′. Weight: ½ lb. per foot.

No. 805A anodized dull satin finish. Same design as 805. 9/16″ opening; ⅛″ wall; 1¼″ deep; 1⅜″ outside. Lengths: 12′. Weight: ½ lb. per ft.

No. 805B anodized dull satin finish. Same design as 805. 5/16″ opening; 3/32″ wall; 1″ deep; 1⅛″ outside. Lengths: 12′. Weight: ½ lb. per ft.

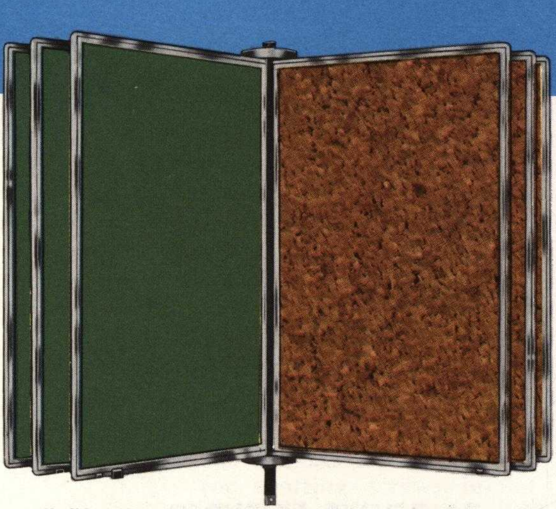


CHALK TRAY AND SCREEN

No. 800 Especially desirable for use in wood chalktrough. Made of heavy extruded aluminum anodized finish. 2-7/16″ wide at top, 2″ wide at base, ⅜″ deep. Lengths are 3 and 4 feet. Weight: approximately 1 lb. per lineal foot.

Claridge *Swing Leaf* BULLETIN BOARDS

Full View...Folds Completely



On the Claridge Swing Leaf Bulletin Board, material may be arranged according to a definite plan, always in presentable order, easily changed to keep your program or plan intact and always up-to-date. All material used daily may be grouped in proper manner. No searching through files—simply turn a wing, like a loose-leaf note book for desired charts or material. All wings may be folded to either side when not in use. When open, panels swing to a full 170° angle, practically flat against the wall and in full view. Substantially made wall pivot comprises upper and lower semi-circular brackets in which panels pivot. Main frame with upright strip fastens to wall. Frames are fabricated into one complete unit. All metal parts are beautifully finished. Posting panels are cork on both sides or green chalkboard one side and cork on the other, or chalkboard both sides, or with cork panels punched with 3/16 inch holes on 1 inch centers for peg board hangers, as selected.

Chalkboard
Corkboard
Pegboard

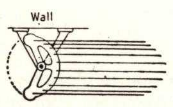


Diagram shows how all wings fold to either side, paralleling the wall. Minimum wall space required.

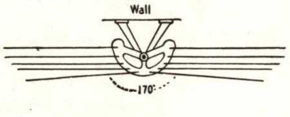

Diagram shows half the wings turned to each side, paralleling the wall. Note the wide angle of opening of adjacent surfaces.

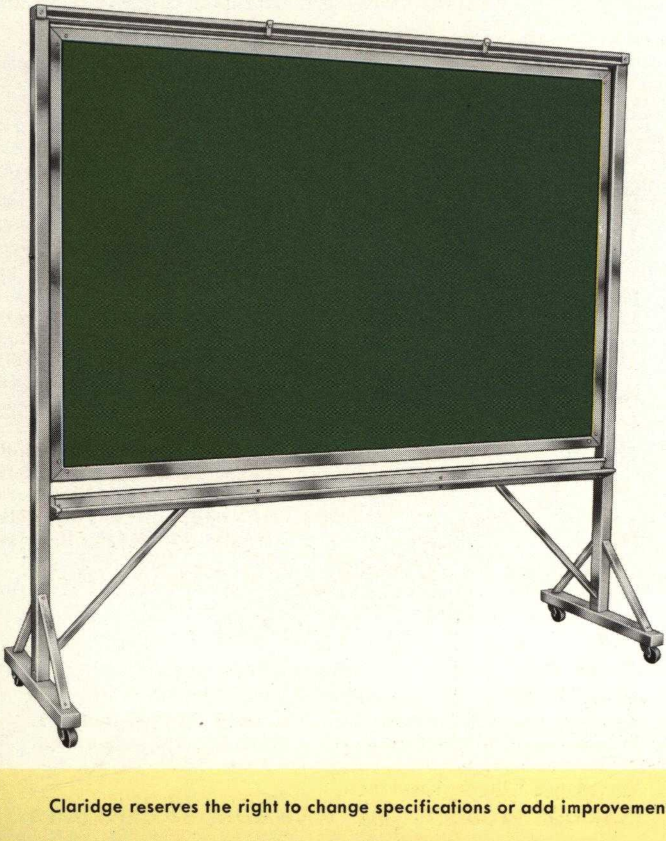
No. 6711	5	40 in.	30 in.	50 lbs.
No. 6712	5	40 in.	48 in.	60 lbs.

Claridge REVERSIBLE CHALKBOARDS ON EXTRUDED ALUMINUM STANDARDS



Claridge Revolving Two-Sided Chalkboard is mounted on heavy, rigid extruded aluminum standards equipped with large ball bearing rubber tired casters. This reversible, movable unit can be had with Duracite Chalkboard or Vitracite vitreous enamel chalkboard, with chalkboard on both sides or cork bulletin board on one side. The board revolves on two pins in horizontal plane, and may be used tilted at an angle or locked in vertical position. The frame and standards are of heavy gauge extruded aluminum, etched and anodized satin finish. The upright posts and cross pieces in the framework are 1½″ x 2″ rectangular tubing having ⅛″ thick walls. The chalkboard frame is 1⅝″ wide with ⅛″ thick wall. The chalk trough is 2½″ wide, extending the full width of board. Angle braces are also rectangular tubing. The entire unit is well balanced, thoroughly engineered, and constructed to meet the most exacting demands for a high grade movable chalkboard.

SIZES ARE THE OUTSIDE MEASUREMENTS OF THE CHALKBOARD

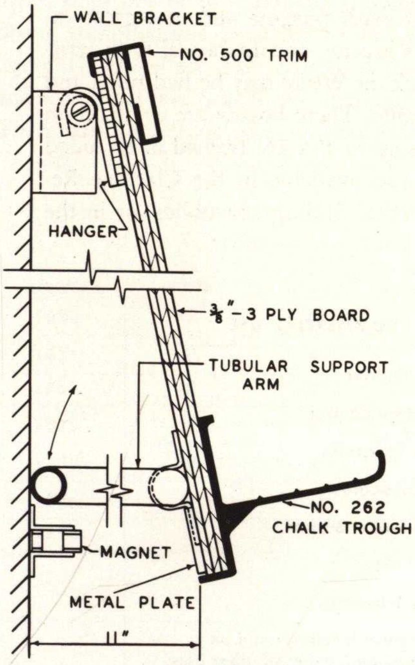
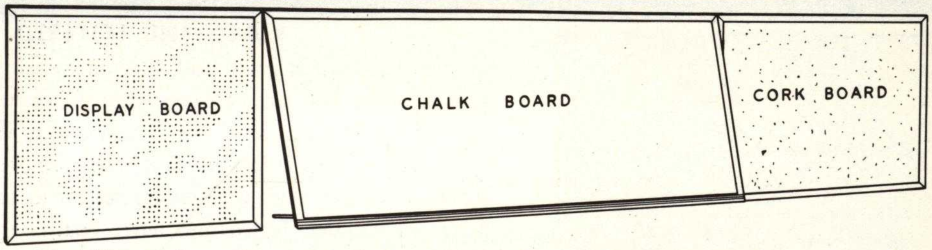
No. 46D	Size 4′	x 7′	Approx. weight 160 lbs.

Claridge VARIABLE ANGLE UNITS with MAGNETIC LATCH

CHALKBOARDS • BULLETIN BOARDS • DISPLAY BOARDS



CROSS SECTION



Variable angle units are prefabricated chalkboards, bulletin boards, and display boards completely built at the factory, ready to hang. Simply install two hangers and two magnetic latches to the wall and hang the chalkboard, bulletin board or display board in place. Units are interchangeable or may be moved from room to room. Units swing forward at bottom to eliminate light reflection and help promote easier writing and better penmanship.

CHALKBOARDS are 3 ply 7/16". Duracite or Vitracite in Clearcite Green, Dark Myrtle Green, Blue-Black, Coral or Charcoal Grey. Chalkboards are available with or without map rail.

BULLETIN BOARDS are tan or green cork mounted on 3/8" Fiberboard — or No. 1380 Fabricork in one of seven colors.

DISPLAY BOARDS are 1/4" perforated pegboards with holes for fixtures on one inch centers.

FRAMES AND FIXTURES are heavy gauge extruded aluminum, etched and anodized, substantially built to insure carefree operation.

SIZES AND WEIGHTS

CHALKBOARDS		BULLETIN BOARDS		DISPLAY BOARDS

4' x 8'	160 lbs.	4' x 8'	96 lbs.	4' x 8'	112 lbs.

PORTABLE CHALKBOARDS and BULLETIN BOARDS

Movable chalkboards and bulletin boards are adapted for many and varied uses: lecture rooms, Sunday Schools, business, shops, laboratories, etc. They are substantially constructed to withstand rough usage and can be quickly and easily disassembled for storage. All wood parts are oak finished natural; chalkboards are 1/4" 2 ply built up surfaced both sides and bulletin boards are 1/4 inch cork securely bonded to rigid back panels. Standards are equipped with mar-proof gliders.

RULED AND LETTERED CHALKBOARDS

Special chalkboards ruled and lettered for almost every purpose and in a great variety of styles and sizes are available. Duracite, Vitracite, and Durasteel with writing surfaces in Clearcite Green, Dark Green, Black, or White may be had ruled and lettered in various colors to meet most requirements. These boards are available in panels of various sizes without frames, or in sizes up to 4′ x 16′ framed in extruded aluminum frames. Ruled and letter boards are also available in the Claridge Reversible Chalkboards, Horizontal Sliding and Vertical Sliding assemblies, or in the Claridge Swing Leaf Units.

SCHOOL USE	COMMERCIAL USE
Rectangular Coordinates	Sales Graphs
Polar Coordinates	Inventory Control
Bookkeeping Ten Column Work Sheets	Work Schedules
General Ledger	Control Boards

Music Ruled	Time Tables
Charts	Route Schedules
Maps and other uses.	Production Schedules and an unlimited number of other uses.

MATH-MASTER® CHALKBOARD GRAPH SYSTEMS

Now every math and physics room can be properly equipped with non-expendable teaching aids mounted and individually framed as illustrated in Math-Master Graph Systems on Duracite or Vitracite Chalkboard. Frames are extruded aluminum, anodized in satin finish. Each board equipped with hangers. The lines are embossed on the chalkboard in accurate pattern. Math-Master Graph Boards are carried in stock only in sizes listed, but are available on any size panel or on vertical or horizontal sliding chalkboards, reversible panels, and swing leaf units.

RA16—Rectangular coordinates (algebraic applications) 1 inch squares, x and y axis in yellow. Size 3′6″ x 4′. Approximate weight 25 lbs.

RP16—Rectangular coordinates (physic applications) 1 inch squares, every fifth line in yellow. Size 3′6″ x 4′. Approximate weight 25 lbs.

PC16—Polar coordinates. Ten concentric circles two inches apart, 15 degree graduations. 0°-180° and 90°-270° in yellow. Size 3′6″ x 4′. Approximate weight 25 lbs.

CO16—Reversible board with PC16 on one side and RA16 on the other side. Size 3′6″ x 4′. Approximate weight 25 lbs.

SPECIAL SUNDAY SCHOOL CLASSROOM CHALKBOARD

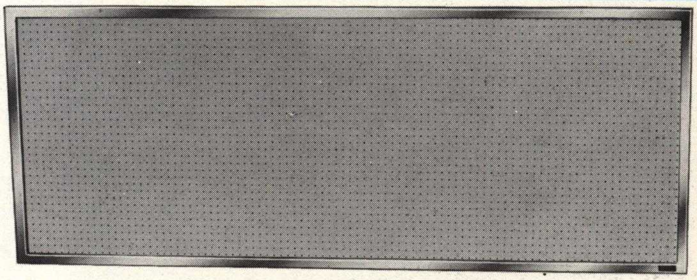
NO. 166 CHALKBOARD

This combination chalkboard and bulletin board has been especially designed for Sunday School use and has proven very popular. Thousands are in use; as many as a hundred units have been supplied for one Sunday School. The units consist of 3′ x 3′ Duracite chalkboard and a 2′ x 3′ bulletin board substantially mounted and framed in extruded aluminum with 2″ extruded aluminum chalktrough and map rail with cork insert at top. The board is equipped with concealed hangers. This is truly a beautiful, practical, and very durable unit to grace the most outstanding church school building. While the most popular size is 3′ x 5′ overall, it is available in any other size to meet all requirements.

No. 166 Sunday School Classroom Chalkboard. Size 3′ x 5′. Approximate shipping weight 75 lbs.

Claridge DISPLAY and DIRECTORY BOARDS

Space does not permit showing the many bulletin and display board combinations available in the Claridge line. The few items illustrated are only typical of the unlimited styles, sizes, and combinations which are manufactured to special order. There are special designs of changeable letter directory and announcement boards for schools, offices, hotels, factories, and every location where display or announcement boards are desired. If your particular needs cannot be met from the items illustrated, we suggest you submit a sketch and description of your requirements for quotation.



MULTI-PUNCH DISPLAY BOARDS

These boards are adapted for almost any display application. The panels are substantially framed with extruded aluminum, finished in dull satin, etched and anodized, and are equipped with concealed hangers. Multi-Punch Display Boards are strong, durable, and water resistant. They are available finished in Light Gray, Light Green, Brown, or Coral.

STANDARD SIZES

NUMBER	WIDTH	HEIGHT	APPROX. WEIGHT
1850	4′	3′	30 lbs.
1851	3′	4′	30 lbs.

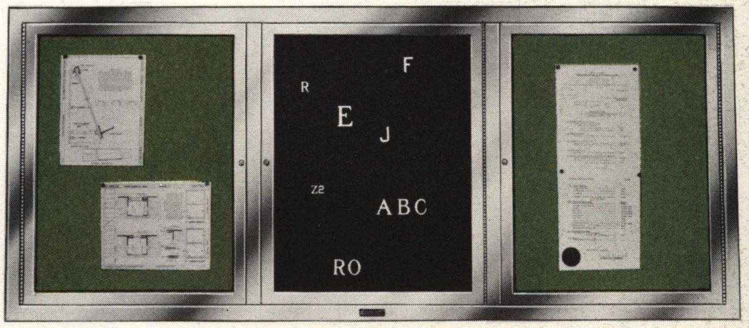
1855	7′	4′	85 lbs.
1856	8′	4′	100 lbs.



CONTEMPORARY MULTIPLE DOOR CHANGEABLE LETTER BULLETIN BOARDS

Our multiple door cabinets are of the finest construction. Frames are heavy aluminum tubing; corners are carefully mitered and reinforced with no screws showing. Glass doors are mounted on continuous piano hinge and equipped with tumbler flat key locks. Finished in dull satin, etched and anodized. Changeable letter compartments covered with black or green wool broadcloth, which holds letters firmly. Cork panels are available in brown, green, gray, blue and coral. Cabinets are available with either right or left or center location for changeable letter panel. Cabinets are available with fluorescent lights.

STANDARD SIZES

NUMBER	WIDTH	HEIGHT	DOORS	APPROX. WEIGHT
1820	4′	2′6″	2	60 lbs.
1821	4′	3′	2	70 lbs.

1805	3′	3′6″	One	70 lbs.

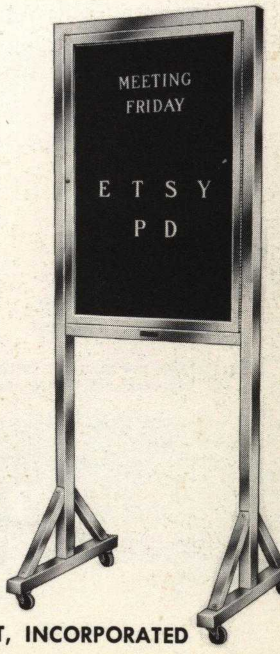
CONTEMPORARY PORTABLE CHANGEABLE LETTER BULLETIN BOARD

This elegant portable announcement board compliments any setting. Especially desirable for hotels, banks, clubs, theaters, churches, etc. to publicize special meetings and events, it is easily moved from place to place. Sturdy construction of heavy gauge aluminum tubing, beautifully finished in dull satin, etched and anodized. The grooved panel is covered with black or green wool broadcloth, which holds letters firmly. Also available with cork panel in brown, green, gray, blue or coral. Glass doors are hung on piano hinge, equipped with tumbler flat key lock.

The pillars are 1½″ x 2″ square tubing; the base is mounted on ball-bearing rubber casters. This announcement board is also available in other sizes up to 4′ in width.

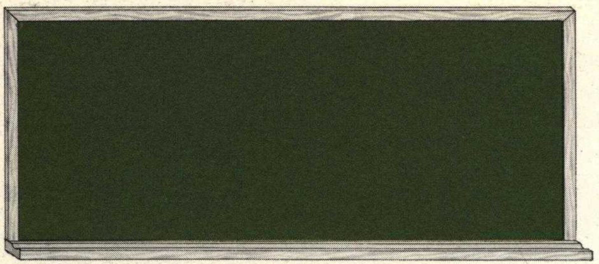
No. 1800

Overall height 72 inches. Overall width 27 inches. Posting area 22 x 34 inches. Approx. wt. 60 lbs.

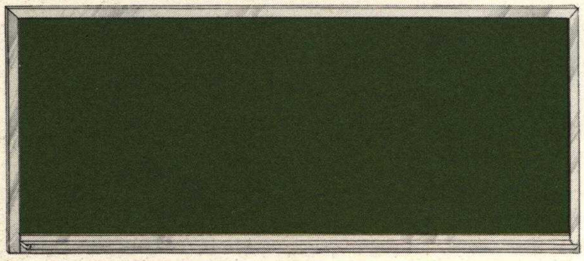


Claridge CHALKBOARDS and BULLETIN BOARDS

OAK WOOD AND EXTRUDED ALUMINUM FRAMED CHALKBOARDS • EQUIPPED WITH CONCEALED HANGERS



STYLE W WOOD FRAMES are oak, one inch thick, two inches wide, mitered corners, finish natural oak. Chalktrough is two inches wide.



STYLE A ALUMINUM FRAMES are 1½ inches wide, etched and anodized. Chalktrough is 2½ inches wide.

Chalkboard panels are Grapholite in either Clearcite Green or Blue-Black. These boards are manufactured to give unlimited service and to meet the requirements of any school or institution. All boards are equipped with concealed hangers for easy installation. Dimensions are overall length and width, including trim.

EDUCATIONAL EQUIPMENT COMPANY
CHALKBOARD AND TRIM COMPANY
11311 BUCKEYE RD. · CLEVELAND 4, OHIO

BENJAMIN ELECTRIC MFG. CO.
SUBSIDIARY OF THOMAS IND.

VITRO-BOARDS are made by Benjamin Electric Mfg. Co. of Des Plaines, Ill., a subsidiary of Thomas Industries—a large, well-capitalized, responsible organization, for over 50 years a leader in the advancement of better lighting and visual aids. Their development in chalkboards exemplifies a pioneering spirit, by furtherance of better seeing and visual instruction for students and teachers. Benjamin has the latest, most modern facilities required for the special processing methods used in the manufacture of VITRO STEEL BOARDS.

From coast to coast, from South America, Panama, Hawaii and Canada. The world's most widely used trouble-free chalkboard under all climatic conditions. Its development and research, as is our policy, was done in our own laboratories and not at the public's expense. Its quality excels all other chalkboards on the market. The integrity of the company and guarantee is equaled by none.

View of Benjamin Electric's laboratory which was the subject of a feature article in August, 1946, FINISH, entitled "We Built a Laboratory to Meet Our Needs." Our chalkboards are thoroughly tested and perfected in this laboratory to give the ultimate user a trouble-free product.

Guarantee

VITRO-BOARDS are guaranteed for the life of the building in which they are installed, providing their installation is in strict accordance with the distributor's written specifications and recommendations. This guarantee extends only to the replacement of the panel installed in the original building and does not include the cost of removal or reinstallation.

VITRO-BOARD
porcenell
porcelain steel chalkboard

VITRO-BOARD is made of an abrasive porcelain material fused into steel and containing highly improved, acid-resistant qualities. The porcelain covers the entire board, forming an unbreakable, moisture-proof seal. The individual particles that make up this surface make possible a stronger, harder, smoother, suede-like finish of extreme evenness. It is superior to any other chalkboard and will last a lifetime.

26-GAGE GALVANNEALED STEEL BACKING

SELECTED STEEL 20 gage is the most economical value in Benjamin chalkboards. Most other products made at Benjamin use 20-gage steel, since all chalkboard steel sheets cannot be used for a perfect writing surface; the choice sheets of steel are selected to be made into chalkboards. The others are channeled into smaller items where visual inspection is not as critical.

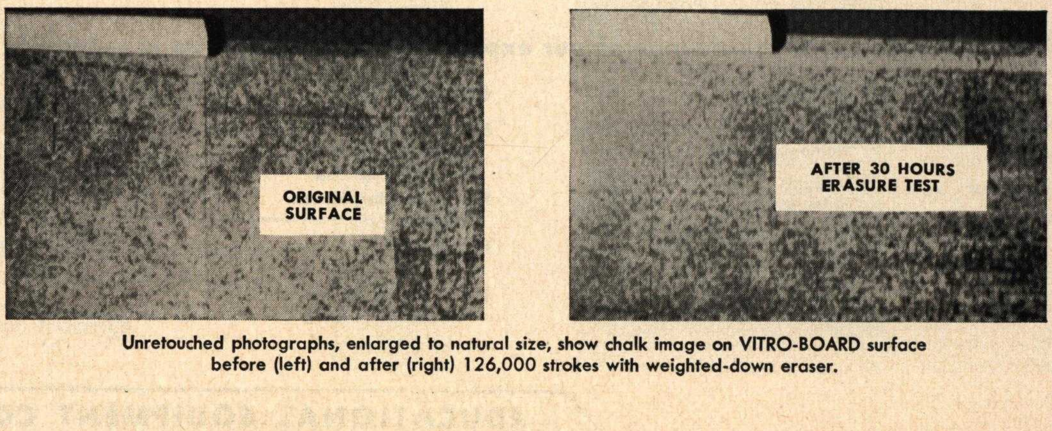
LABORATORY TEST PROVES:
NO TEXTURE CHANGE IN VITRO-BOARD AFTER 126,000 ERASER-STROKES!

In this test, conducted by an independent commercial testing laboratory, a standard chalkboard eraser was used. It was weighted down with a seven-pound weight, and loaded with precipitated calcium carbonate (ground-up chalk). This eraser was then drawn across the Vitro-Board surface 126,000 times at a rate of 35 cycles, or 70 strokes, per minute. This is the equivalent of 30 hours of continuous chalking and erasing. To show any change in the quality of the Vitro-Board writing surface after this test, the board was cleaned, and then a piece of chalk, laid lengthwise, was drawn across both the tested and original surface. As illustrated by the "before and after" photographs below, practically no change in texture or ability to pick up chalk could be noted.



ORIGINAL SURFACE
AFTER 30 HOURS ERASURE TEST

Unretouched photographs, enlarged to natural size, show chalk image on VITRO-BOARD surface before (left) and after (right) 126,000 strokes with weighted-down eraser.

specifications

I. general

Vitro-Board Porcelain Steel Chalkboards as manufactured by Benjamin Electric, a subsidiary of Thomas Industries. The chalkboard sheets shall meet all the requirements of the Porcelain Enamel Chalkboard specifications (P.E.I.) S-104, August, 1956.

II. porcelain on steel face sheet

A. Metal

The metal of the face sheet shall be 18-, or 20-gage (select gage) steel suitable for the performance requirements as specified herein, and thoroughly cleaned and pickled in accordance with good porcelain enameling shop practice before application of the coatings.

B. Porcelain Enamel

The finish or coating shall be porcelain enamel, defined substantially as a vitreous inorganic coating bonded to the metal in accordance with P.E.I. Code.

C. Ground Coat

The ground coat shall be applied to cover all areas of each unit on the face side. Ground coat shall be fired separately before the finish coats are applied.

D. Finish Coat

Finish coat shall be a matte porcelain enamel, defined as a vitreous inorganic material bonded to the ground coat, with a uniform surface texture. The hardness as measured by the Moh hardness scale shall not be less than 7. Without specular glare or reflection. The gloss variation, when measured by a 45-degree photovolt gloss meter, shall not exceed 3 units. The surface shall resist wear, abrasion, shock and scratches, and shall not crack, craze or lose its color, warp, buckle or delaminate during the period of guarantee. The gloss shall not increase by more than three (3) units when subjected to the wearability test of thirty (30) hours (126,000 strokes) specified under "Test Procedures", Paragraph 7 of the P.E.I. Chalkboard Specification, P.E.I. S-104.

The total reflection factor shall be within the range of 15 percent to 20 percent, as recommended by the A.I.A. Bulletin 31-F28.

III. core material

3. Core material ¼″ masonite with aluminum foil back.
4. Core material ¼″ exterior plywood with 26-gage galvanized steel back.
5. Core material special ½″ fiberboard with approved water-repellent back.

IV. lamination

Pressure laminated not less than 72,000 lbs. per 1 sq. ft. The bond and sheer strength of the adhesive, when set, shall exceed the strength of the core material.

V. lengths

All chalkboards 12 ft. or under shall be in one piece. The laminated panel shall be flat within 3/16″ along a line 8′0″ when the panel is laid horizontally on a flat surface.

VI. aluminum "clip-on" trim

Furnish and install complete (as per details) aluminum trim, chalk trough, map and display rail, etc., for all chalkboards, display and bulletin boards on walls, wardrobes, etc., in all classrooms, special rooms, corridors, offices, etc., where indicated on drawings.

All aluminum metal trim shall be dull alumilite finish.

All aluminum for trim shall be extruded shapes of approved sections and of thickness as indicated on drawings. All trim and chalk troughs shall be in single lengths, straight, true and free of defects. Up to 24′ in one length.

Sliding map hooks, clips and map winders for map and display rail, and flag holders shall be furnished as specified (specify quantities).

VII. grounds

Furnish and erect continuous tempered aluminum grounds, straight and true, blocked out with shims for proper alignment so face of ground becomes finish plaster line, securely fastened at intervals not over 12 in. on centers under chalkboards and not over 16 in. elsewhere. Where partition walls are to be unplastered, grounds shall be installed in such a manner as to receive extended trim for unplastered walls.

VIII. clips

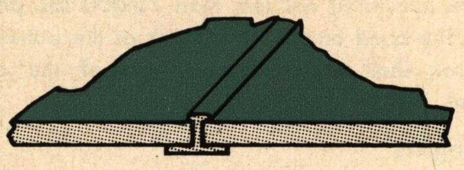
Trim and chalk trough clips, of approved sizes, thicknesses and spacings, shall be of tempered steel plate formed to receive clip-on trim and to lap edges of chalkboard not less than ¼ in. Clips are to be placed adjacent to all joints and adjacent to all corners at horizontal and vertical sections and at intermediate points not over 16 in. on centers. All mitered corners must have corner plates inside the trim to hold a perfect 45° miter indefinitely.

After chalkboards and corkboards have been installed, aluminum trim shall be completed by erecting all chalk troughs and trim. All work under this heading shall be erected by carpenters or under supervision of the manufacturer of trim.

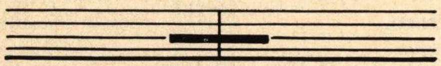
All above grounds and trim shall be "clip-on" all-metal trim as manufactured by Educational Equipment Company.

SUPERITE
composition chalkboard

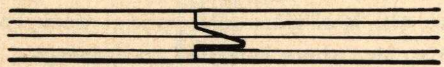
COLORS: Standard Green
Dark Green
Black
Gunmetal Gray
Charcoal Gray
Blue
Tan



½" and ¼" composition with joint strip



½" composition with steel spline



½" self-leveling tongue and groove joint

Superite Cement Asbestos Chalkboard, strong, rigid panel 3/16" and ¼" thick. Alkali-Proof Color Pigment, Silicon Carbide Abrasive. Chemically treated to withstand drastic climatic changes. Surface will not shatter. Available in lengths up to 10′, widths 3½ and 4′.

Superite composition chalkboard is composed of a plastic, containing fine, uniformly suspended silicon carbide, evenly applied to the specified thickness and baked on to provide a smooth, even finish. The tempered hardboard base panels are made from selected shredded hardwood fibers, integrally waterproofed to resist moisture, and fabricated under hydraulic pressure.

The writing surface, which is free from specular glare or reflection, is hard and will resist wear and breakthrough from chalk abrasion. Repeated washing will not harm this wear-resistant writing surface.

Superite colors are standard green and dark green, in eye-saving shades that give excellent visibility and contrast. Other colors are available on special orders.

Superite in ½" thickness is fabricated with two ¼" layers of tempered fiber hardboard. The writing surface is .012" to .014" thick. Superite is also available in single ¼" thickness, which requires our standard metal trim for writing joints.

Sizes use the same detail as Steel chalkboard shown on pages 12, 13, 14 and 15.

#9	Cement Asbestos	To prevent alkalies in body of chalkboard from attacking surface, a sealing process is used.	¼"	3′0" 3′6" 4′0"	10′0"	2 lbs.

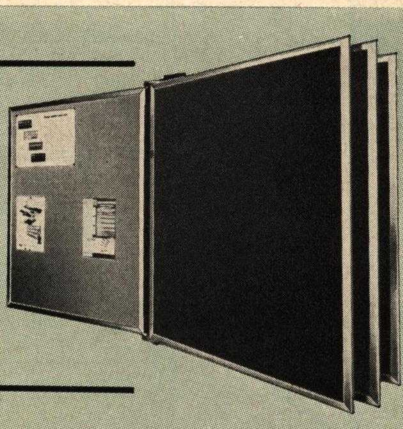
CORKBOARD

Educational Equipment Company furnishes the finest quality ¼″ cork reinforced with burlap backing, in standard range of colors.

Cork installations can be made to suit any requirement in combination with Vitro-Board and Superite Chalkboards as shown on details. Cork also makes an excellent bulletin board when cemented to smooth plaster, masonite or other wall surfaces.

Corkboard can be furnished in roll lots 4′ or 6′ wide in lengths up to 90′.

swinging leaf board



Panels swing 180°. Available in combinations of chalkboards, tackboards and movie screens. Fabricated in units of 2 to 6 leaves. All exposed parts around chalkboards are of anodized aluminum.

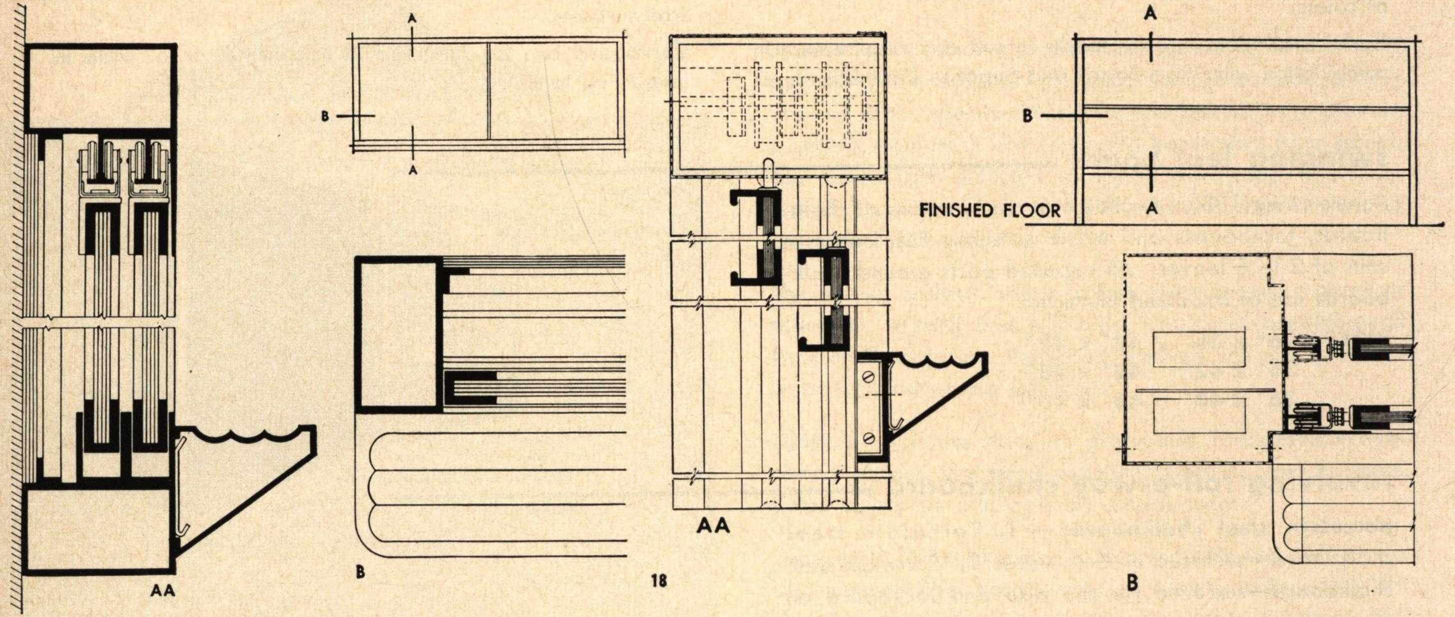
details: half full size



sliding chalkboard

Either horizontal or vertical sliding chalkboards can be furnished.

Horizontal: Horizontal sliding chalkboards are made of anodized tubular aluminum framing. Aluminum frames and aluminum tracks have ball-bearing nylon rollers. Ease of operation is assured by modern overhead-type hardware.

Either chalkboard or tackboard sliding panels may be used. Fixed chalkboard or tackboard panel behind the sliding panels is optional. It may be replaced with a projection screen.

Vitro-Board porcelain steel chalkboards are used for standard construction.

Vertical: Vertical chalkboards are manually operated and counterbalanced. They are constructed of aluminum or steel casing and use reinforced extruded chalkboard frames and tracks. Chalkboards are attached to the counterbalancing lead weights with a sprocket chain passing over ball-bearing sheaves. Chalkboard panels are operated independently of each other. The wall behind the chalkboard can be used for a projection screen when all leaves are in the lowered position.

Maximum recommended size of individual panels is 12′ x 4′. Where larger panels are required, electrically operated units are recommended. Information on Electrical Sliding Chalkboard furnished upon request.

one of the largest sliding chalkboards

Photo shows recent installation of one of our largest Vertical Sliding Chalkboards for Case Institute of Technology, Cleveland, Ohio. This push-button controlled, electrically operated chalkboard is 24 feet long and 8′-0″ high. The chalkboard can be readily raised to expose the permanent movie screen on the back wall. An additional feature of this unusual installation is the paneled curtain wall that is also electrically operated to conceal both the chalkboard and the screen.

Architect: Small, Smith, Reeb and Draz, Cleveland, Ohio.

bulletin board cases — trophy cases

Bulletin Board Cases: Educational Equipment Co. bulletin board cases may be installed on either plastered or unplastered walls. They provide an excellent method for posting bulletins in offices, corridors or lobbies.

Frames and door panels are constructed of anodized extruded aluminum. Hardware is solid brass with chromium plating. Cases feature a hinged glass door construction. It is recommended that glass be installed on the job by the glazing contractor.

Trophy Cases: Educational Equipment Co. trophy cases are unexcelled for displaying exhibits, artwork or trophies. They are recessed-type cases, and have frames and door panels constructed of anodized extruded aluminum. Door panels are of hinged construction and have locks provided. Hardware is solid brass with chromium plating except on sliding glass doors. See details.

Glazing of doors, glass shelves with brackets should be furnished by the glazing and hardware contractors. Millwork should be furnished under millwork specifications.

For speedy installations resulting in savings of time and money, the ready framed chalkboard is the answer.

These ready framed units are completely framed and finished at the factory and are delivered to the job ready for immediate installation.

Submit sketch showing sizes of chalkboard area and/or side or top corkboard panels, if desired. Also state preference of one of the four trim types as detailed on pages 10 and 11.

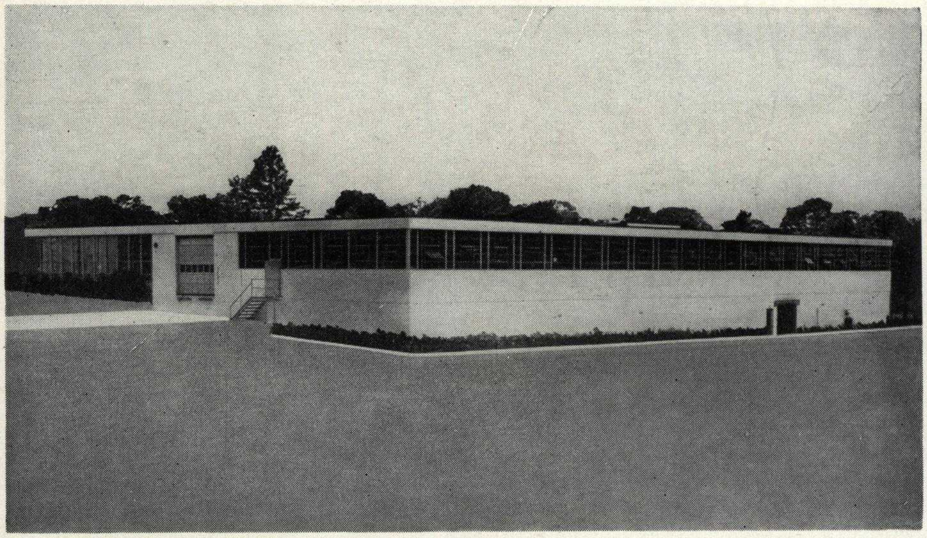
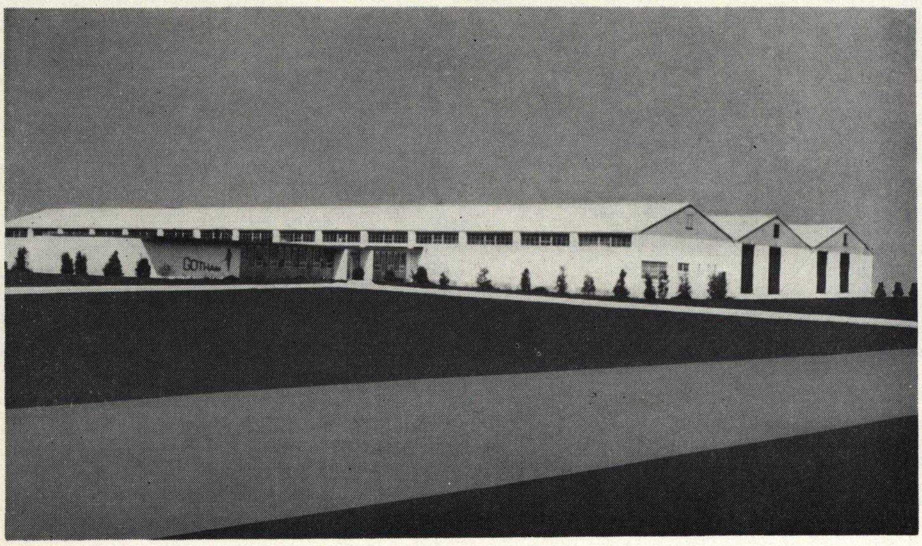
CHALKBOARDS and FRAMES

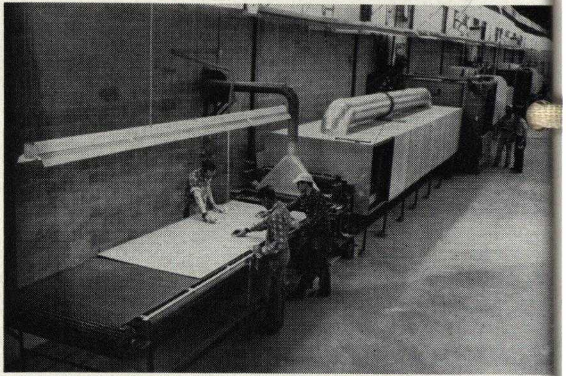
background...



plant at new rochelle, new york

plant at marked tree, arkansas





a fine product—a fine name

Our two factories, in New Rochelle, New York and Marked Tree, Arkansas, with 100,000 square feet of productive capacity, make Gotham the largest plant in the country devoted to the exclusive manufacture of chalkboard and related products.

Their ultra-modern equipment and facilities are designed to cope with the ever-increasing demand for Gotham's products — the most extensive line, we are proud to say, in the industry.

Both plants are geared to the single objective of manufacturing Gotham's functional and eye-pleasing products for installation in today's functional and eye-pleasing schools.

Gotham's formula for growth, underscored by steady expansion during the course of three decades, is constant change — constant improvement — constant search for new and better products to meet today's needs and tomorrow's trends.

That is why no chalkboard or chalkboard trim bears a finer name. That is why Gotham, year in and year out, has led the way. That is why those who want premium products at no premium in price insist on Gotham.

FOUR TYPES OF GOTHAM CHALKBOARD

1 CERAMO-STEEL

Highest quality board with porcelain enamel writing surface fused to 18 gauge steel with either ¼" plywood or wood core backed with .015 aluminum sheet or foil.

see page 4

2 VITRO-MATIC

A quality board with porcelain enamel writing surface fused to 24 gauge Armco aluminized steel with either ¼" plywood or wood core backed with .015 sheet aluminum or foil.

see page 5

3 HI-TEMP

An economy steel chalkboard with chalkboard surface fused at high temperature to 24 gauge corrosion resistant steel laminated to ¼" wood core with aluminum foil back. (Other core or backing materials are available.)

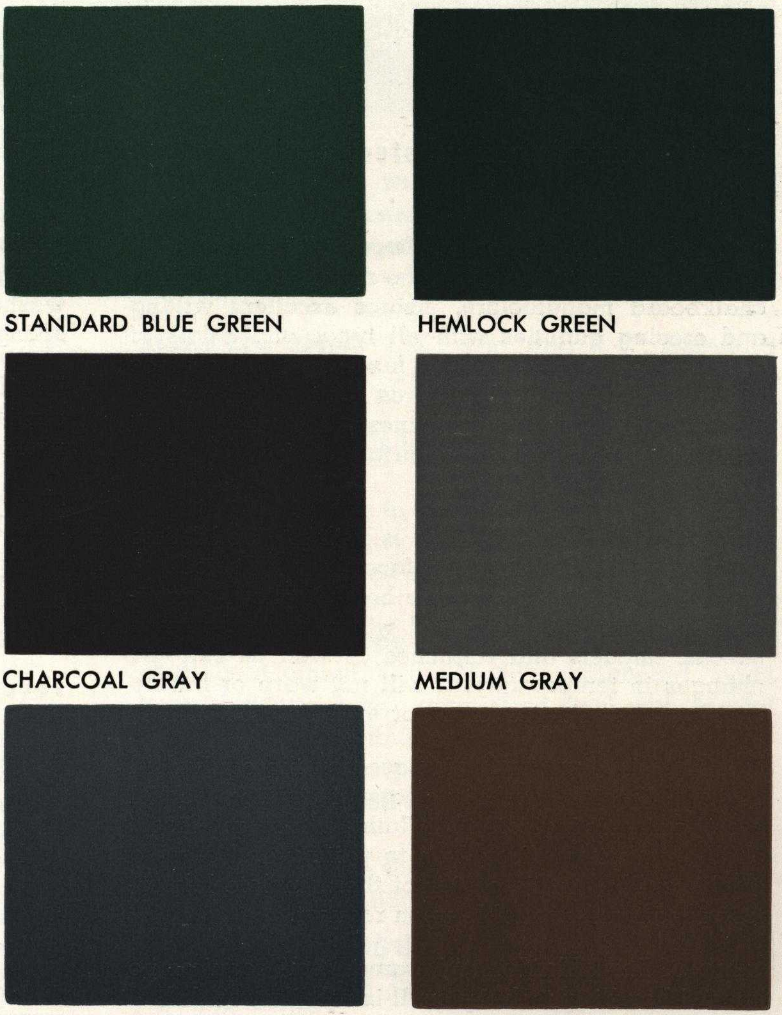
see page 6

4 COMPOSITION

High grade economy boards with a writing surface of silicon carbide and other abrasives, automatically sprayed on a choice of eight different backings to meet various requirements.

see page 7

six standard colors for all boards...



Ceramo-Steel high quality porcelain steel chalkboard

rough careful
cruel brave
earnest clever
savage cunning
tough smart

newest ceramic coated steel chalkboards

features

improved writing surface: "Ceramo-Steel" chalkboard writing surface, the new development in chalkboard manufacture, insures excellent writing and erasing qualities with all types and colors of chalk. The ceramic material fused onto the surface of "Ceramo-Steel" chalkboards contains abrasives throughout the entire thickness, thus making it impossible for the writing surface to become slick or glossy with use.

durability: "Ceramo-Steel" is built to give lifetime satisfaction. Its writing surface is unaffected by normal usage (see guarantee below). The 18 gauge steel is extremely tough and will withstand severe shocks, impacts and scratches as well as extreme changes in temperature. It will not warp or buckle and it cannot shatter, crack or explode.

accelerated wear test: Based on the equivalent of approximately seventy years of average school use, the results indicate that Gotham "Ceramo-Steel" chalkboard is unaffected as to writing and erasing qualities. Photostatic copies of the complete laboratory report are available upon request.

ease of installation: "Ceramo-Steel" requires no special handling techniques. It is readily cut, drilled and fitted on the job and no special tools are required.

maintenance: No special care is required for "Ceramo-Steel" chalkboards, for they are easily washed with warm water and a damp cloth or sponge.

lifetime guarantee: "Ceramo-Steel" chalkboard carries an unconditional lifetime guarantee under normal conditions of usage.

standard sizes: 3'-0", 3'-6" and 4'-0". Standard lengths up to 10'-0" in single sheets.

colors: Available in standard blue green, hemlock green, charcoal gray, medium gray, powder blue and earth brown. **See page 3.**

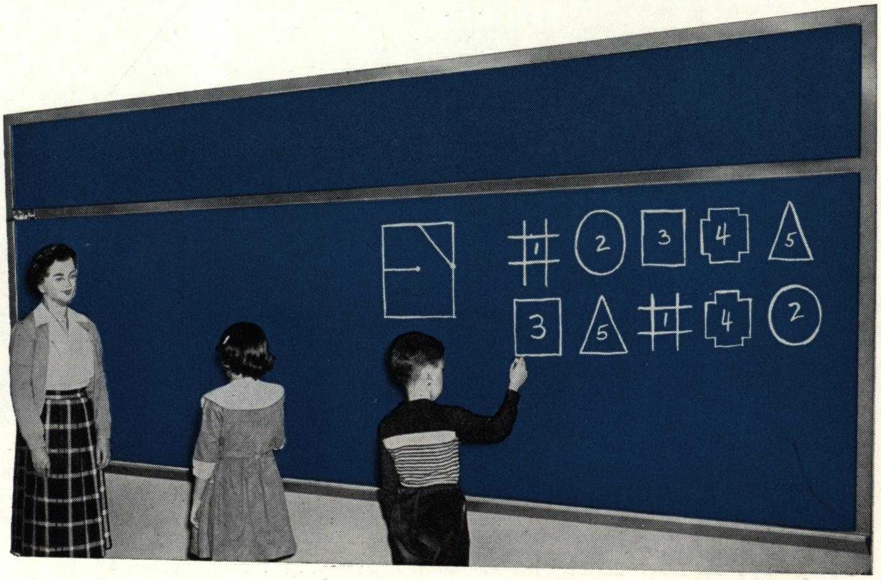
recommended specifications: All chalkboards shall be Gotham "Ceramo-Steel" chalkboard made from 18 gauge steel with a special ceramic porcelain coating. The steel is firmly laminated under pressure to ¼" wood core or plywood with a special waterproof cement, with .015 aluminum sheet or aluminum foil backing.

The writing surface shall not become slick or glossy with use and shall not chip, crack or peel.

ALL CHALKBOARDS SHALL BE IN CONFORMANCE WITH PORCELAIN ENAMEL INSTITUTE SPECIFICATION S:104.

Vitro-Matic quality porcelain steel chalkboard

Made from 24 gauge Armco aluminized steel with lifetime porcelain enamel finish, Gotham "Vitro-Matic" Chalkboard is the answer where durability, beauty and economy are factors of selection.



features

economy: Here is a porcelain enamel steel chalkboard that is lower in price than slate and glass and that is within the price range of better grades of composition chalkboards.

tough and durable: The lifetime porcelain enamel finish endows "Vitro-Matic" with a tough, durable chalkboard surface which becomes neither slick nor glossy with continued use.

superior writing surface: The special qualities of "Vitro-Matic" insure ease of writing and erasing with all types and colors of chalk and erasers.

ease of installation: Its relative light weight — only two pounds per square foot — makes "Vitro-Matic" easy to handle. No special tools are required. These chalkboards can be drilled, sawed, punched, sheared and nailed on the job without any damage to the surface.

maintenance: "Vitro-Matic" chalkboards can be easily cleaned and washed as often as necessary. Periodic use of porcelain enamel cleanser will remove all residual chalkdust, wax, glue, etc.

guarantee: The writing surface of "Vitro-Matic" has an unconditional lifetime guarantee against cracking, chipping or glossing, under normal conditions of usage.

standard sizes: 3'-0", 3'-6" and 4'-0". Standard lengths up to 10'-0" in single sheets.

weight: Two pounds per square foot.

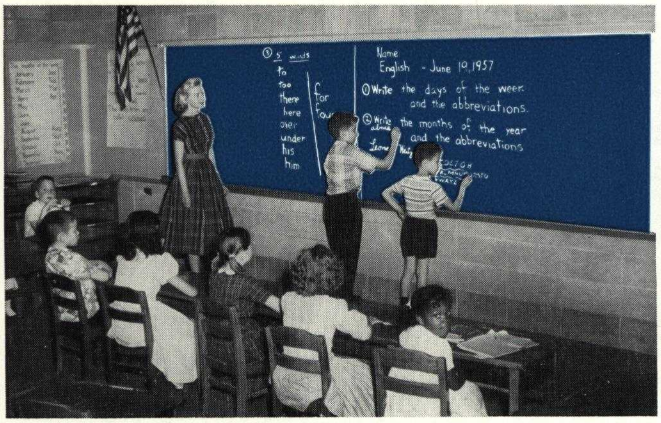
colors: Available in standard blue green, hemlock green, charcoal gray, medium gray, powder blue and earth brown. See **page 3.**

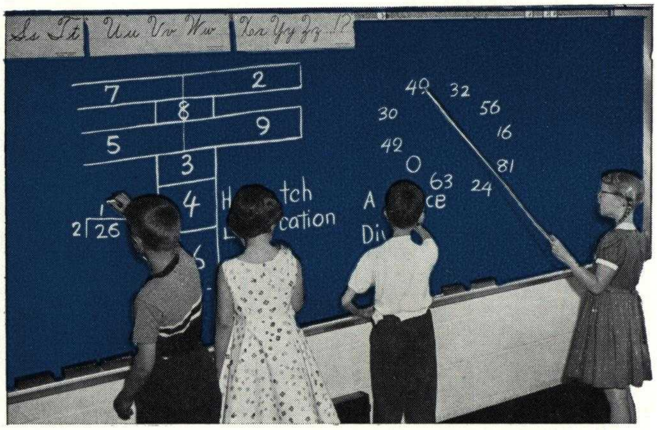
recommended specifications: All chalkboards shall be Gotham "Vitro-Matic" chalkboard made from 24 gauge Armco aluminized steel with special porcelain enamel finish, laminated under pressure to ¼" wood core or plywood with .015 sheet aluminum or aluminum foil backing.

The writing surface shall not become slick or glossy with use and shall not chip, crack or peel.

ALL CHALKBOARDS SHALL BE IN CONFORMANCE WITH PORCELAIN ENAMEL INSTITUTE SPECIFICATION S:104.

Hi-Temp economy steel chalkboards





features

economy: A new steel chalkboard that costs no more than better grade composition chalkboards.

improved material: "Hi-Temp" steel chalkboards are fabricated from specially plated, 24 gauge corrosion resistant steel sheets. This steel is chemically treated to provide superior bonding surface of chalkboard material.

writing surface: "Hi-Temp" chalkboard surface is applied to 24 gauge corrosion resistant steel sheets with automatic spraying equipment, in temperature controlled, dust-free spray rooms, and then fused at high temperature to the steel sheet in rigidly controlled, automatic ovens. This process provides a uniform, superior chalkboard writing surface, which is durable, rugged, and fade resistant.

ease of installation: "Hi-Temp's" light weight—approximately 2 pounds per square foot—makes it easy to handle. It can be cut, drilled, sawed, or nailed without damage to the surface.

guarantee: "Hi-Temp" steel chalkboards are guaranteed for a period of twenty-five years against fading, chipping, or becoming glossy under normal conditions of classroom usage.

standard sizes: "Hi-Temp" steel chalkboard is available in 3'-0", 3'-6" and 4'-0" heights. Standard lengths available up to 12'-0" in single pieces.

colors: Available in standard blue green, hemlock green, charcoal gray, medium gray, powder blue and earth brown. **See page 3.**

recommended specifications: All chalkboards shall be Gotham "Hi-Temp" chalkboard, made from 24 gauge corrosion resistant steel, laminated to ¼" wood core with aluminum foil backing. (Other core or backing material is optional.)

composition chalkboard

Gotham's well-known and economical composition chalkboards can now be blended or contrasted with the smartness and good taste found in today's contemporary classroom interiors.

The writing surface is composed of silicon carbide and other abrasives suspended in a durable synthetic plastic coating for highest abrasion resistance, chalking and erasing qualities.

All Gotham chalkboards are sprayed, sanded and baked by a fully-automatic system.

In installing these chalkboards, Gotham aluminum metal joints for abutting sections can be used. These joints, too, are furnished in colors to match or contrast with the chalkboards.

specifications

All chalkboards shall be GOTHAM (type) in (color). **See page 3.**

Chalkboards shall be set in accordance with standard practice and recommendations of manufacturer. GOTHAM spotting cement shall be applied in spots every 12" o. c. both horizontally and vertically. Boards shall be firmly pressed into position and leveled plumb and true.

Pressure shall be maintained against the boards for a minimum of 48 hours.

colors: Available in standard blue green, hemlock green, charcoal gray, medium gray, powder blue and earth brown. **See page 3.**

chalkboard	description	weight	thickness	standard sizes
STANDARD STRUCTO-BOARD #205	U. S. Gypsum's Structo-Board, wood fibre body formed under heat and pressure into smooth homogeneous hardboard with Gotham's superior chalkboard surface.	1.0 pounds per sq. ft.	1/4"	width 3'-0" 3'-6" 4'-0" maximum single length 12'-0"
TEMPERED-STRUCTO-BOARD #200	U. S. Gypsum Structo-Board, wood fibre body specially treated with tempering oil, polymerized by baking, to increase hardness and reduce moisture absorption.	1.1 pounds per sq. ft.		
STANDARD STRUCTO-BOARD #245	Composed of two sheets ¼" Standard Structo-Board laminated under pressure. Available with tongue and groove joints, or metal joiners in colors to match.	2.0 pounds per sq. ft.	7/16"	
TEMPERED-STRUCTO-BOARD #240	Composed of two sheets ¼" Tempered Structo-Board laminated under pressure. Tongue and groove joints or metal joiners in colors to match.	2.2 pounds per sq. ft.		
PRESDWOOD #210	Masonite Standard Presdwood stong, homogeneous, grainless panels, composed entirely of exploded wood fibers permanently bonded together with natural lignin, with Gotham's superior chalkboard surface.	1.3 pounds per sq. ft.	1/4"	width 3'-0" 3'-6" 4'-0" maximum single length 16'-0"
TEMPERED-PRESDWOOD #220	Masonite Tempered Presdwood panels are manufactured with special tempering liquid that is polymerized by baking. This process reduces rate of moisture absorption and increases resistance to abrasion seven times.	1.4 pounds per sq. ft.		
TEMPERED-PRESDWOOD #250	Two sheets of ¼" Tempered Presdwood are laminated under pressure to form extremely strong, rigid and waterproof panels. Tongue and groove joints or metal joiners in colors to match.	2.8 pounds per sq. ft.	1/2"	
FLEXBOARD #230	Chalkboard base is a cement-asbestos fireproof panel with an extremely small expansion rate. Gotham's special sealing process prior to application of chalkboard surface prevents the alkalis in body of chalkboard from attacking the surface. (Also available in ¼" thickness—Flexboard #235)	1.8 pounds per sq. ft.	3/16"	width 3'-0" 3'-6" 4'-0" maximum single length 10'-0"

COLOR-CORK for bulletin boards and tack boards

Used for both unmounted and mounted bulletin boards and tackboards, Gotham COLOR-CORK is a burlap-backed cork board with a vinyl coating. Introduced by Gotham, COLOR-CORK meets the highest quality standards and is backed by 60 years of manufacturing experience and a continuous program of research and product improvement. Despite its many advantages, versatility and harmonious contemporary colors, COLOR-CORK is moderate in cost.

sixteen colors

The 16 handsome hues of COLOR-CORK (see opposite page) provide a rainbow of color for mix or match interior color schemes. This wide variety permits blending and complementing of color in all chalk board and bulletin board areas.

washable vinyl coating

COLOR-CORK meets all threats to its original fresh, handsome appearance with a tough, durable, washable vinyl coating. Due to this water and soil resistant surface, all traces of dirt and other discoloration can be removed quickly and easily with soap and water.

color throughout

Each rich color of COLOR-CORK is an integral part of the material itself. This feature further assures that COLOR-CORK used in bulletin boards and other applications will remain attractive throughout many years of service.

resistance

COLOR-CORK affords reliable, long-lasting resistance to most common chemicals, scratching, cracking, and abrasion.

uses

Because of its strength, resilience, washability and wide range of colors, COLOR-CORK is an ideal surfacing material for temporary and permanent display walls and areas in museums, libraries, auditoriums and theatres. COLOR-CORK is also highly recommended as a durable, washable, colorfast covering for all interior walls and floors. In such applications, its acoustical properties are an added major advantage.

dimensions

Gotham COLOR-CORK is made in two thicknesses—⅛" and ¼"—and is available in lengths up to 90' and heights up 78". Mounted COLOR-CORK is furnished in maximum lengths of 12'-0" and maximum widths of 4'-0".

specifications

All surfaces for bulletin boards and/or tackboards shall be COLOR-CORK as manufactured by Gotham, with colors selected from 16 standard colors of Gotham COLOR-CORK. All cork shall have vinyl surfacing, contain color throughout thickness, and have burlap backing. All corkboard and/or tackboards shall be installed in accordance with manufacturers directions.

tests* by recognized independent laboratories

• washability

Sample was soiled with water based and oil based artificial soil mediums containing coal and siliconous dust. Rating—Most of soil was readily removed by washing soap or synthetic detergent. Comparative washability tests were made on a typical textured vinyl coating covering. Color-cork showed superior washability properties. #171,530

• moisture resistance

Sample was subjected to a water-filled tube 12" long x ¼" I.D. the edge of which was sealed to surface of material at 77°F., 50% relative humidity for 48 hours. Results are given as the reduction of the water level in m.l. in the tube over a 48 hour period. 4 hrs.—0.0, 8 hrs.—0.0, 24 hrs.—0.5, 36 hrs.—0.7, 48 hrs.—0.9. Rating—Color-cork has good resistance to penetration by surface moisture. #59232C.

Sample tested to determine water absorption. Results are given in ml. per square inch per hour. Rating—The surface of Color-cork repels water. A very small quantity of water is absorbed through microscopic pores in the coating. #171,530

• stain resistance

Sample was subjected to drop of ink placed on surface. Results were determined by waiting one minute before wiping with a dry cloth and then with a damp cloth. Dry cloth left a faint stain; damp cloth, no stain. #171,212

• flexibility

Sample was subjected to 180° of bending around a 1½ inch mandrel at 72°F. No cracks appeared. #171,212

• residual indentation

Sample was supported on a steel plate and subjected to an 80 lb. indenting load consisting of a flat cylindrical steel bar 1.5 inches in diameter, stated load applied for 10 minutes. Results are given as the residual indentation found, stated in % of original thickness of the material at the times listed in hours after removal of the load. 1 hr.—0.21, 4 hrs.—0.08, 8 hrs.—0.00, 24 hrs.—0.00. Rating—The material has recovery characteristics which cause complete disappearance of the indentation within 8 hours after removal of the load. #59232B

*Tests #171,212 and 171,530 were conducted by Davis & Bennett, Inc.
All other tests by United States Testing Company, Inc.

natural cork

Natural cork bulletin boards in thicknesses of ⅛" and ¼" also available. Maximum unmounted size 90 feet by 4 feet. Maximum mounted size 12 feet by 4 feet.

Gotham also has available a wide variety of vinyl tackboard materials.

color consultant, Eleanor Pepper
professor, Department of Interior Design, Pratt Institute
for additional information on these and other COLOR-CORK applications see:

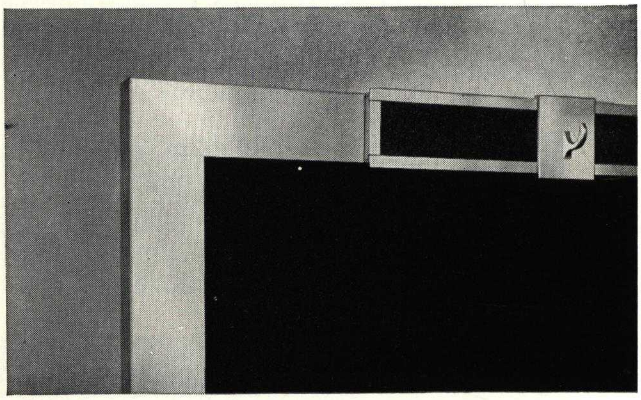
Snap-Tite eliminates all visible screws



Details: See pages 12-13

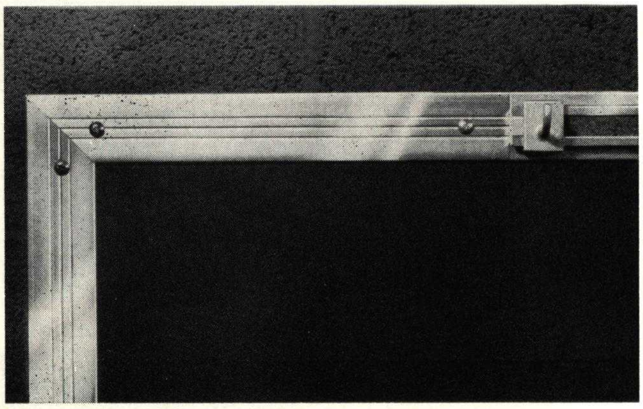
This superior trim has established the highest standards in its many years of performance. Snap-Tite is a trim that meets fully those requirements and features that architects agree are important:

features

durable: Extruded aluminum frames provide extra rigidity and strength which make Snap-Tite a permanent installation for the life of the building.

appearance: Neat and smart, Snap-Tite has an anodized finish which adds to the attractiveness of the modern classroom. There can be no unsightly butt-joints because aluminum extrusion permits installa-

Screw-Tite economy with beauty



Details: See pages 14-15

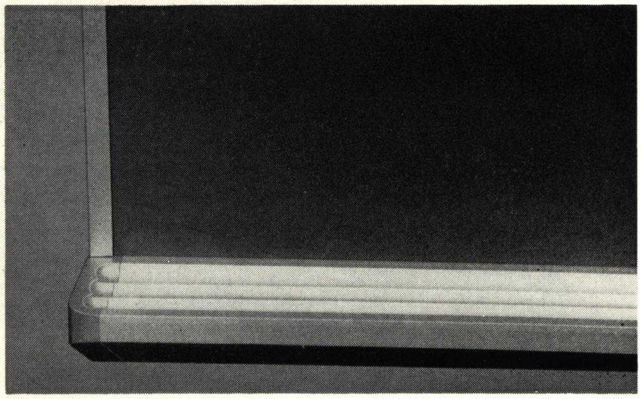
To assist those progressive architects who are seeking new methods of gaining beauty and utility, while reducing costs, Gotham presents Screw-Tite economy trim—extruded anodized aluminum frames for chalkboards and corkboards in single continuous lengths.

Screw-Tite is an extremely efficient, versatile and thoroughly practical approach to the problem of trim.

features

economy: Architects can now specify aluminum

Slip-Tite eliminates grounds



Details: See pages 16-17

The most modern and economical approach to the problem of neat, long lasting aluminum frames. Sliptite completely eliminates grounds, yet maintains the beauty and utility of anodized aluminum frames.

features

economy: The elimination of grounds and simplicity of installation greatly reduces the cost.

tion in single lengths. And, of course, Snap-Tite eliminates all visible screws.

maintenance: None required, for the anodized aluminum eliminates the necessity for painting and upkeep.

variability of design: Snap-Tite trim lends itself to the flexibility of design that architects desire in classroom layout of chalkboards and corkboards.

ease of installation: Snap-Tite trim is easily installed. It requires no special tools and is readily cut and mitred on the job.

---

frames within the price range of steel and wood frames.

ease of maintenance: There are no painting finishing or maintenance problems with Screw-Tite.

durable: Screw-Tite trim looks better and functions better — and for a longer period of time. Its firmness and strength are underscored by the Gotham guarantee.

ease of installation: Screw-Tite is easily installed. It needs no special equipment and can be conveniently cut and mitred on the job.

---

durable: The rigidity and durability of aluminum frames has been proven over a period of many years.

maintenance: No maintenance is required with anodized aluminum frames.

ease of installation: Slip-tite is easily installed. No special tools are required, and the aluminum is easily cut and mitred on the job.

trim

recommended specifications

ALUMINUM *Snap-Tite, Screw-Tite* **OR** *Slip-Tite* **TRIM:**

(a) Furnish and install complete as per details (indicate Snap-Tite, Screw-Tite or Slip-Tite) aluminum trim, chalk trough, map and display rail, and grounds, for all chalkboards, display and bulletin boards on walls, wardrobes, etc., in all class rooms, special rooms, corridors, offices, etc. where indicated on drawings.

(b) All aluminum metal trim shall be dull anodized finish.

(c) All aluminum for trim, chalk trough, wardrobe trim and display board frames shall be extruded shapes of approved sections and of thickness as indicated on detail drawings. All trim and chalk trough shall be in single lengths up to 24 ft. long, straight, true and free of defects.

(d) Sliding map hooks and map winders for map and display rail shall be furnished as specified . . .

(e) **For Snap-Tite only.** Furnish and erect continuous galvanized steel grounds of 16 gauge metal, straight and true, blocked out with metal shims for proper alignment so that face of ground becomes finish plaster line, securely fastened at intervals not over 16" on centers under chalkboards and not over 20" elsewhere. Where cinder concrete blocks or hollow tile blocks are used for partitions, or furring, the grounds shall be secured by toggle bolts of proper size. Where partition walls are to be unplastered, grounds shall be installed in such a manner as to receive extended trim for unplastered walls. Ground pieces may be substituted for continuous grounds on unplastered walls.

(f) **For Snap-Tite only.** Trim and chalk trough clips, of approved sizes, thicknesses and spacings, shall be cadmium plated steel formed to receive snap-on trim and to lap edges of chalkboard not less than ¼". Clamps, of approved sizes, thicknesses and spacings, shall be cadmium plated steel and secured to grounds in such manner as to provide permanent alignment of chalkboard face. Clips and clamps are to be placed adjacent to all joints and adjacent to all corners at horizontal and vertical sections and at intermediate points not over 16" on centers.

(g) **For Screw-Tite only.** All chalk rails and trim shall be drilled in the field to receive cadmium plated screws.

(h) After chalkboards and corkboards have been installed, the aluminum trim shall be completed by erecting all chalk troughs and trim. All work under this heading shall be erected by or under the supervision of the manufacturer of the trim.

(j) **For Slip-Tite only.** All chalk rails shall be firmly bolted to wall before erection of chalkboards. Map rails shall be bolted through chalkboards to wall surfaces. All remaining perimeter trim shall be held in place by aluminum clips, as detailed.

All work under this heading shall be installed under the supervision of the manufacturer of the trim.

(k) All the above shall be Snap-Tite, Screw-Tite or Slip-Tite aluminum trim as manufactured by the Gotham Chalkboard and Trim Co., Inc.

ready framed boards

Gotham's economy Ready-Framed Chalkboard and Corkboard combines ease of installation, flexibility of design and economy of cost. Principles of prefabrication and precision factory production have been employed in the manufacture of Ready-Framed boards thus insuring that specifications will be met. Ready-Framed boards are delivered to the building site completely assembled for quick, simple and economical installation.

ready-framed boards

recommended specifications

All chalkboards and corkboards shall be Gotham Ready-framed (specify type) trim. Chalkboards shall be (specify type). Corkboards shall be (specify type). They shall be shipped to the job site completely framed and ready for field installation. All mitres, butt joints, etc., shall be made at the factory and all trim securely fastened to the chalkboards and corkboards.

Continuous 16 gauge galvanized steel hanging bars shall be fastened to all boards at the top of each unit at the factory. Continuous hanging bars shall be furnished for fastening to walls behind chalkboards and corkboards.

Adjustable clips shall be furnished for positioning all boards along bottom edge. These clips shall be installed 24" O.C. Spotting cement shall be furnished for use across horizontal center of all units.

recommended size limitations *

type and thickness of chalkboard and corkboard	"J" Trim	DeLuxe	Screw-Tite	Snap-Tite
¼" composition chalkboards: or ⅛" cork mounted on ⅜" backing or ¼" cork mounted on ¼" backing	12′-0″	12′-0″	12′-0″	12′-0″
½" composition chalkboards: or combination chalkboard-corkboard units	16′-0″	16′-0″	16′-0″	16′-0″
Ceramo-Steel, Vitro-Matic or Hi-Temp steel chalkboards	16′-0″	16′-0″	16′-0″	16′-0″

* These limitations in size are recommended for efficiency, ease of handling and economy of fabrication. Larger size units can be furnished.

vertical

manually operated

Gotham counter-balanced chalkboards are constructed of steel casing using reinforced extruded chalkboard frames and tracks. Lead weights are used for counter-balancing. Chalkboards are attached to the lead weights with a sprocket chain passing over ball-bearing sheaves. Chalkboard panels can be moved up or down independently of each other. With all leaves in lowered position, the wall behind the chalkboard may be used for projection screen. Special nylon ball bearing rollers insure ease of operation. Maximum recommended size of individual panels is dependent upon type of chalkboards used. For "Ceramo-Steel" or "Vitro-Matic" chalkboard, 10' x 4' is maximum size. For Composition chalkboards, 12' x 4' is maximum size of individual panels. Where larger panels are required an intermediate vertical mullion piece is recommended.

electrically operated

Details and information for electrically operated counter-balanced chalkboards furnished on request. These chalkboards must be custom designed to suit the individual construction problem.

sliding

chalkboards and corkboards

Gotham horizontal sliding chalkboards are constructed of anodized tubular aluminum framing, aluminum frames for chalkboards and aluminum tracks with ball-bearing nylon rollers. Improved overhead type hardware insures maximum ease of operation.

Sliding panels may either be chalkboard or corkboard. Fixed chalkboard or corkboard panel behind sliding panels is optional and may be replaced with a projection screen.

All of Gotham's superior chalkboards may be specified for standard construction.

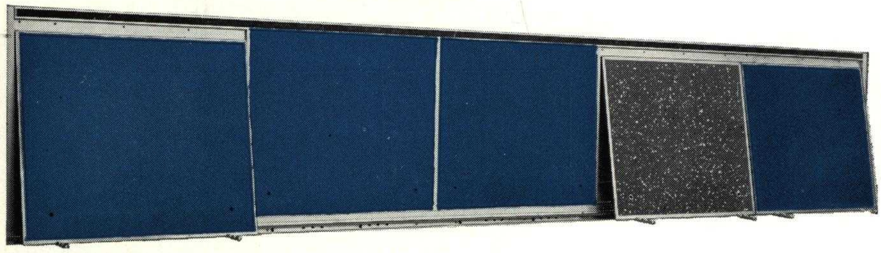
reversible easels



item #400

These multi-purpose reversible boards are readily adaptable to all classrooms needs. They are ideal as chalkboards, as tackboards and as adjustable easels. The map and display rail at the top facilitates the hanging of charts and maps and may also be used as a tack strip.

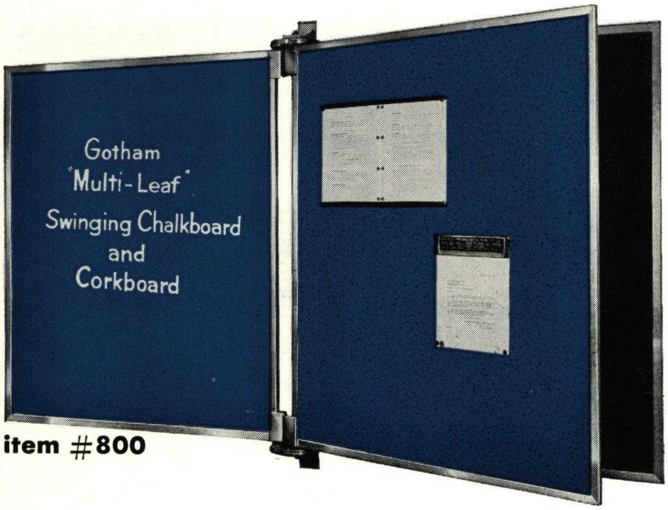
recommended specifications

All reversible easel boards shall be as manufactured by GOTHAM CHALKBOARD & TRIM CO., INC. and shall consist of extruded aluminum framing and channels for chalkboards. Map and display rail at the top shall be provided with sliding map hooks and/or paper clips as specified. The aluminum framing shall be fastened to wood grounds as provided by the Contractor. Arm brackets shall be of aluminum and notched for three different positions. Aluminum paint trays shall be attached to the arm brackets in such a manner as to be removable. The brackets are to be fastened so that they may be swung into a concealed position beneath the chalk tray when not in use.

Easel boards shall be of GOTHAM "Structo-board" on one side and GOTHAM "Unmounted" cork on the reverse side.

All aluminum shall be anodized.

swinging



item #800

"Multi-Leaf" boards, framed with extruded aluminum sections, aluminum hardware and cadmium plated steel brackets, are at once economical and broadly adaptable. These boards can be furnished with chalkboard writing surface on one side, two sides, or chalkboard surface on one side and corkboard on the reverse side.

"Multi-Leaf" is fabricated in units of two to six leaves with the maximum size of each leaf 4'-0" x 4'-0". Each leaf opens to a 180° position independently of the other leaves.

Gotham Composition Chalkboards are recommended for use in "Multi-Leaf" panels.

item #420

This *"Roll-A-Way"* aluminum-framed two-sided chalkboard, mounted on an all-extruded aluminum stand with ball-bearing rubber casters, offers ready mobility with attractive design.
"Roll-A-Way" chalkboards can be equipped with any of the Gotham chalkboards — surfaced on one or both sides, or with chalkboard on one side and corkboard on the reverse side.
Maximum size of chalkboard panel is 8'-0" x 4'-0". Item 420: Aluminum display rail standard equipment. (As Illustrated)
Item 430: Available without display rail.

cases

Gotham display cases are constructed of anodized extruded aluminum frames and door panels. Piano hinges, locks, knobs, catches, etc. are all solid brass with chromium plating.

They may be installed on either plastered or unplastered walls and provide an excellent means for posting notices and bulletins in lobbies, corridors and offices. These cases feature a hinged glass door construction. **Sliding doors are also available.**

It is recommended that glass be installed at the job site by the glazing contractor on the #300 Series. **#900 Series are glazed at the factory.**

KOROK®

World's Largest Selling
Steel Chalkboard

CHALKBOARD

KOROK INC.
DIVISION THE ENAMEL PRODUCTS COMPANY

KOROK®

permanent modern steel chalkboard

KOROK is the most durable of chalkboards and is maintenance free. Its superior surface texture permits easy writing and erasure. The surface hardness eliminates pampering. Wash with water and any household cleanser when needed and the KOROK Chalkboard will look like new for the life of the building. KOROK is also a magnetic tackboard. With the use of magnets —bulletins, displays and other papers may be supported on the entire surface.

KOROK INC., DIVISION, THE ENAMEL PRODUCTS COMPANY, manufacturer of KOROK ceramic porcelain-on-steel chalkboard is backed by a half century of continuous experience. It is the only ceramic porcelain enameling manufacturer of its kind that not only produces the writing surface but also has national distribution through its own distributors in franchised territories who render a complete installation service.

KOROK MARK I AND KOROK MARK III — For years KOROK Mark I Chalkboard has been the epitome of quality. Now, after thorough testing by an impartial laboratory, KOROK Mark III Chalkboard has been introduced in conjunction with Mark I. Mark III is the optimum balance between maximum in quality and economy. Both are backed by identical guarantees.

Standard colors—at no extra cost. KOROK green, blue, tan, slate grey and grey, have been scientifically developed in conjunction with lighting engineers and color consultants. Each of these colors have been field tested to provide optimum contrast, reflectance and visability to assure maximum eye ease. Each color blends with or complements the colors most commonly used in today's classrooms.

Projection Grey Chalkboard available in Mark I only, can be used as a projection screen, as well as chalkboard and magnetic tackboard. As a projection screen it provides sharp definition of projected images. Its low color intensity provides excellent writing contrast with special chalk. The practicality of projection grey has been proven in IBM Sales training offices throughout the country.

specifications

(Architect should select the method of installation before specifying chalkboard. See index to installations on page 5 and specifications and details on pages 6 through 17.)

1. GENERAL—All chalkboards shall be KOROK porcelain enamel steel chalkboards as manufactured by KOROK INC., Division, The Enamel Products Company of Cleveland, Ohio, in accordance with The Performance Specifications for Porcelain Enamel Chalkboards S-104 of The Porcelain Enamel Institute. The chalkboard shall be capable of supporting papers by means of magnets. The writing surface shall be in KOROK Standard colors as selected by architect and shall resist wear and damage from shock and abrasion and shall not dent, shatter or crack. It shall retain its original color, writing and erasing qualities and shall not become glossy or shiny in normal schoolroom use. Steel chalkboards shall be guaranteed, under normal conditions of usage for the life of the building in which they are installed in accordance with the manufacturer's directions.

2. FACING SHEET—*(include here either paragraph 2a or 2b depending on final choice of the Mark I or Mark III facing.)*

alternate 2a—Mark I facing

A vitreous ceramic material shall be fused to both front and back surfaces of 18 gauge enameling iron at temperatures in excess of 1500°F. Thereafter a hard vitreous ceramic chalkboard facing coat shall be fused to the front with controlled thickness to maintain uniformity of color and writability.

alternate 2b—Mark III facing

The chalkboard shall consist of 24 gauge steel with a base coat on front and back surfaces. Thereafter a hard vitreous ceramic chalkboard facing coat shall be fused to the front surface.

3. LAMINATING INSTRUCTIONS—Factory laminated chalkboards shall be balanced and moisture sealed by the use of a core material and aluminum backing sheet. The surface facing and the backing shall be bonded to the core material by means of a special flexible adhesive developed for this purpose with no unbonded areas. The face and back shall not be removable without rupturing the core material nor shall either panel delaminate under normal schoolroom use.

Jointing of chalkboards shall be reinforced with a 14 gauge steel spline tightly fitted into rabbeted grooves. The chalkboard facing shall butt smoothly and exposed metal joint covers shall not be used.

4. CORE MATERIAL—*(Include here either paragraph 4a or 4b depending on choice of Mark I or Mark III Facing.)*

alternate 4a for Mark I facing

The core material shall be either fir plywood or ¼″ standard Masonite as specified by the architect and the hardened aluminum backing sheet shall be .015 in thickness.

alternate 4b for Mark III facing

The core material shall be ¼″ fir plywood or hard board as specified by the architect and the backing sheet of hardened aluminum shall be .005 in thickness.

5. TACKBOARD—*(See pages 18 and 19 for selection and specifications.)*

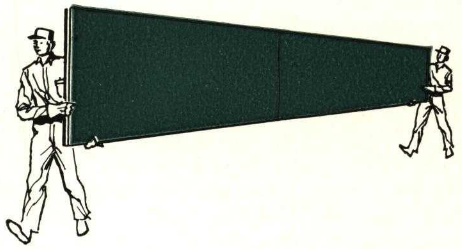
6. TRIM—All exposed aluminum trim shall be 6063T5 anodized satin aluminum finish.

7. ACCESSORIES—shall be as follows: *(Architect should insert schedule, see pages 6 through 17 for selections.)*

8. INSTALLATION—*(Insert specification on installation selected from pages 6 through 17.)*

KOROK®

extra-length chalkboards



NEW. Extra-length ready-framed boards (see Page 11) now available up to 21 feet long in both KOROK Mark I and Mark III chalkboards. Core material is ½-inch fiberboard. Backing sheet material for lengths up to 10 feet is .015 aluminum sheet for Mark I and .005 for Mark III; for lengths over 10 feet backing sheet material is 26 gauge galvanealed sheet steel for both Mark I and Mark III. Continuous factory lamination process affords factory-perfected seams and maximum flatness of both chalkboard and tackboard. One-piece continuous chalktray is pre-fitted and shipped in separate container ready for easy assembly at location.

CAUTION to ARCHITECTS. Extra-length ready-framed boards should be specified only where feasible. It is suggested that the KOROK installer be consulted to determine whether the width of corridors, location of doors, staircases, etc., will permit movement of extra-length boards to location.

standard chalkboard panel sizes

Widths—36″, 42″, 48″.

Lengths—60″, 72″, 80″, 84″, 90″, 96″, 108″, 120″.

Smaller sizes or sizes between standard sizes are also available.

GUARANTEE

All KOROK Chalkboards are guaranteed under normal conditions of usage, for the life of the building in which they are installed in accordance with the manufacturer's directions. Defective panels will be replaced.

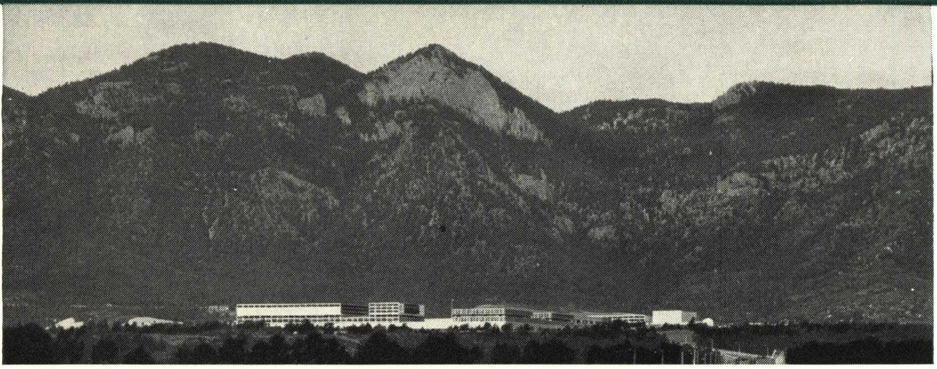
METHODS OF INSTALLATION

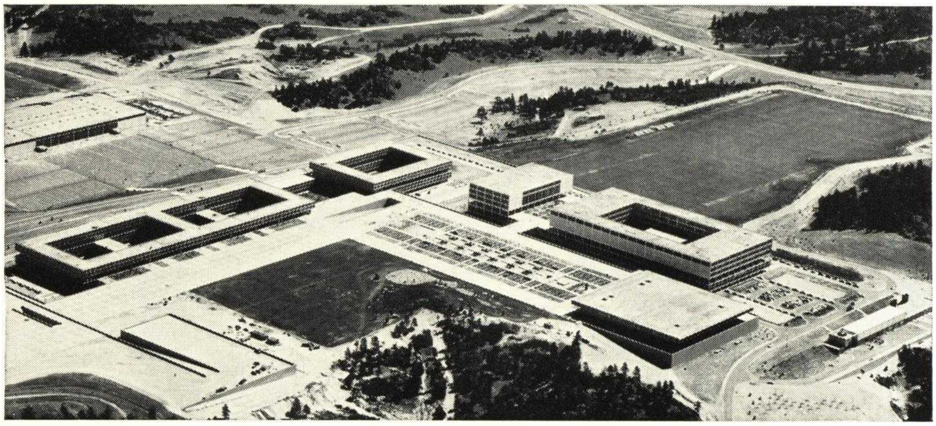
custom
Air Force Academy

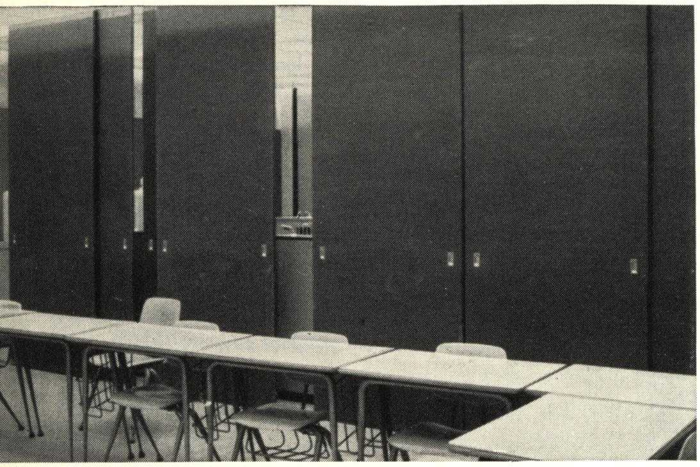
The largest single chalkboard installation in history was completed in 1958 at the United States Air Force Academy at Colorado Springs where 168,000 square feet of KOROK steel chalkboards were used exclusively. Designed by Skidmore Owings and Merrill, Architects, this job involved custom details throughout. It is an outstanding example of how KOROK-trained personnel—from the factory to the final installation team—were coordinated successfully. KOROK—and only KOROK—controls the actual manufacture of steel chalkboards to their final installation.

In special purpose classrooms there are chalkboards with permanent graph lines and in various colors, including KOROK projection grey. Here the versatility and permanence of KOROK steel chalkboards is a vital teaching aid in this up-to-date educational monument.

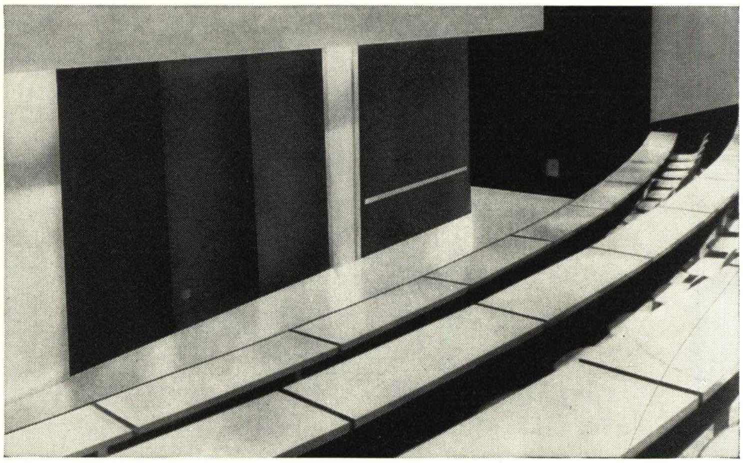
The typical classroom is inside and windowless, the entire front wall area is covered from floor to ceiling with horizontal sliding chalkboards and the remaining three walls are banded with five-foot high chalkboards.





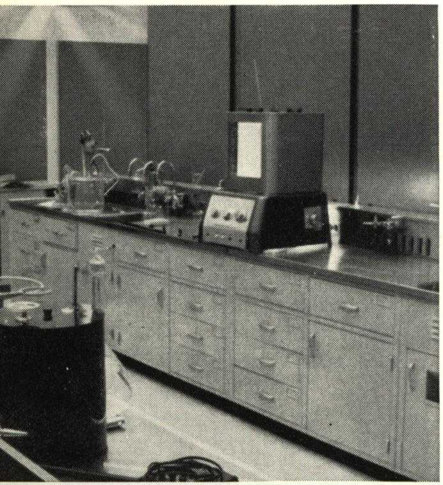


Sliding chalkwalls in chemistry rooms.

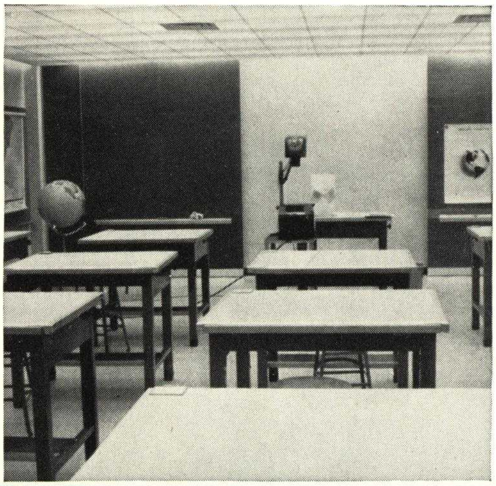


Lecture room amphitheatre with 10 by 10 foot horizontally sliding chalkwall panels.

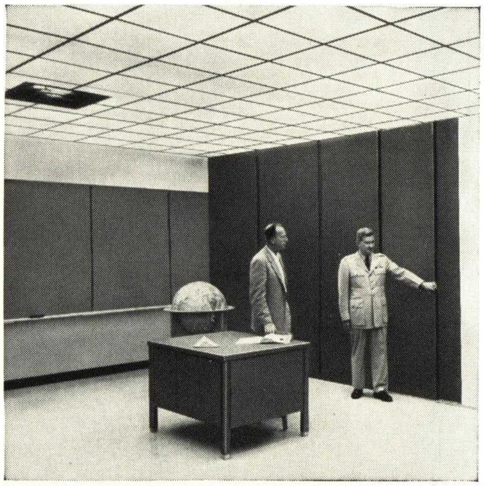
Fixed chalkboards and sliding chalkwalls in typical physics laboratory.



Sliding chalkwall and projection grey chalkboard in drafting room.



Fixed chalkboards and sliding chalkwall in typical classroom.



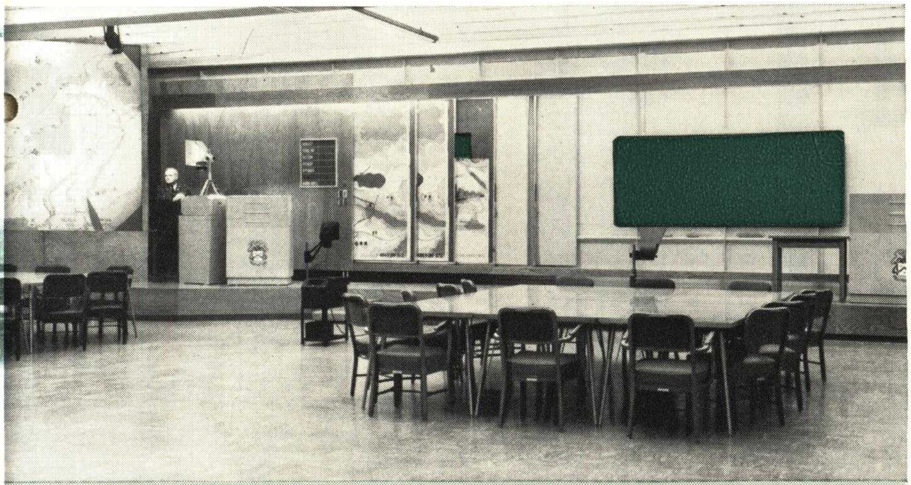
custom
Army Command and General Staff College

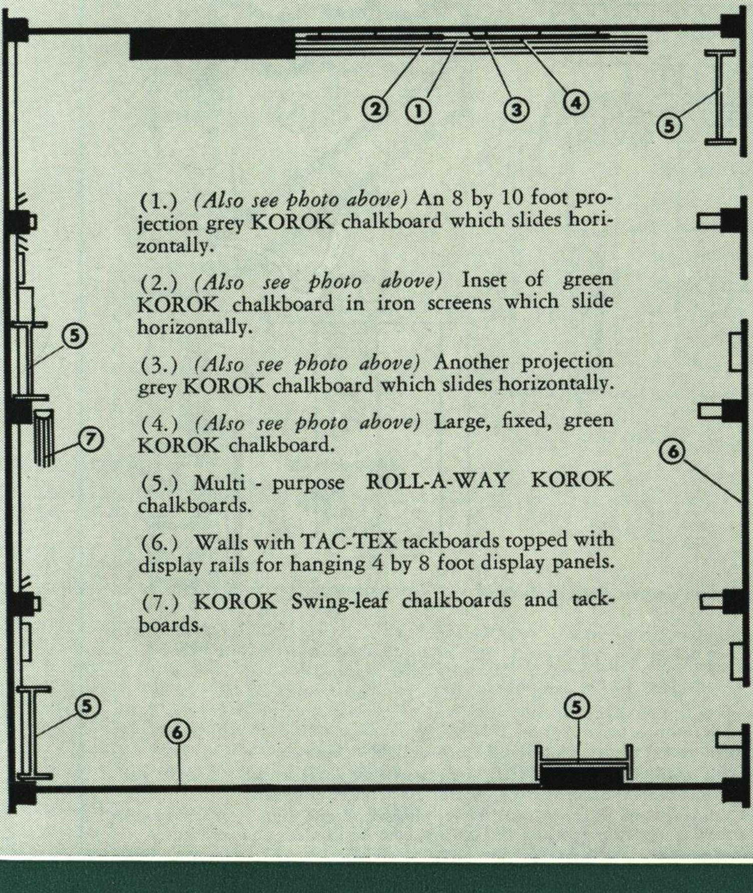
Chalkboards at the U. S. Army Command and General Staff College at Fort Leavenworth, Kansas are floor-to-ceiling horizontal sliding type. In photograph below they are shown partially nested behind the panel hideaway at left center.

Here projection grey boards show the wide versatility of KOROK Steel Chalkboards. Magnetic mock-ups and colored chalk, including fluorescent chalk and charcoal, are superimposed over the projected images to show action and changing conditions.

The multiple uses of KOROK Steel Chalkboards also enable the instructor to demonstrate and explain highly technical and complex subjects which instruction was limited heretofore to costly working models.

KOROK Projection Grey was developed originally to meet specifications of the International Business Machine Corporation for their numerous IBM training centers. Since then this color has been adopted as the standard projection chalkboard color in U. S. Military educational establishments. Special colored and fluorescent chalk has been developed by leading chalk manufacturers for KOROK's Projection Grey Boards.





(1.) *(Also see photo above)* An 8 by 10 foot projection grey KOROK chalkboard which slides horizontally.

(2.) *(Also see photo above)* Inset of green KOROK chalkboard in iron screens which slide horizontally.

(3.) *(Also see photo above)* Another projection grey KOROK chalkboard which slides horizontally.

(4.) *(Also see photo above)* Large, fixed, green KOROK chalkboard.

(5.) Multi - purpose ROLL-A-WAY KOROK chalkboards.

(6.) Walls with TAC-TEX tackboards topped with display rails for hanging 4 by 8 foot display panels.

(7.) KOROK Swing-leaf chalkboards and tackboards.

standard

KOROK, Inc., Division The Enamel Products Company, manufacturer of KOROK ceramic steel chalkboards, is backed by a half century of continuous experience. It is the only ceramic porcelain enameling manufacturer of its kind that not only produces the writing surface but also has a national distribution through its own distributors who render a complete installation service, see page 18.

A fine chalkboard deserves to be properly installed. In this catalog KOROK presents 10 standard methods of installation fully detailed with complete specifications. Each method has been field-tested; each has its specific purpose and its own system of materials; each has the flexibility to give the user the exact combination of chalkboard and tackboard surfaces desired.

specifications

(Refer to page 3 for general specifications and for chalkboards [specify laminated panel, ¼″ core] and see page 18 for tackboard.)

INSTALLATION

Chalkboard and tackboard shall be recessed (or surface-mounted) with KOROK snap-on aluminum trim as detailed.

Grounds shall be tempered aluminum (or wood) as detailed; shall be aligned and shimmed to a true plane and shall be secured with screws and rawl plugs, nails, or expansion bolts to suit wall conditions; maximum spacing of fasteners to be on 12″ centers under chalkboard and 20″ centers elsewhere.

Clips shall be secured with cadmium plated sheet metal screws, maximum spacing 12″ centers under the chalkboard, 20″ centers elsewhere.

Chalkboard and tackboard shall be set plumb and true using KOROK spotting adhesive applied in spots on 12″ centers, both horizontally and vertically.

specifications

(Refer to page 3 for general specifications and for chalkboard [specify facing sheet only] and see page 18 for tackboard.)

INSTALLATION

Chalkboard and tackboard shall be Custom Bonded with KOROK snap-on aluminum trim as detailed.

Grounds shall be wood as detailed; shall be aligned and shimmed to a true plane and secured with nails. Clips shall be secured with cadmium plated sheet metal screws, maximum spacing 12" centers are under the chalkboard, 20" centers elsewhere.

The chalkboard facing shall be bonded with KOROK #200 contact adhesive to ½ inch plasterboard which has been previously bonded to the wall with KOROK #100 adhesive. Within 48 hours the laminated installation shall develop 300 P.S.I. in shear at room temperature. Thereafter, and for the life of the building in which installation is made, there shall be no failure because of climatic changes, freezing, high humidity, or normal expansion and contraction.

Tackboard shall be mounted to wall with KOROK adhesive.

display rails and accessories

The choice of 2" map rails or 1" map rails will depend upon the personal preference of the architect or educator. KOROK can provide either. Note, however, that cork inserts are available only with the 2" map rail.

specifications

(Refer to page 3 for general specifications and for chalkboard [specify facing sheet only and note that Mark III is recommended for smooth walls only] and see page 18 for tackboard.)

INSTALLATION

Chalkboard and tackboard shall be installed "Direct-To-Wall" (DTW) with KOROK snap-on metal trim as detailed.

Grounds are not required.

The chalkboard shall be KOROK Mark I Facing adhered directly to smooth plaster or masonry wall with KOROK #100 adhesive with no unbonded areas.

Wall areas to be covered shall be built up to a true plane by leveling depressions with KOROK #100. All joints shall be butted and backed with 24 gauge galvanized steel strips.

Tackboard shall be mounted to wall with KOROK approved adhesive.

Chalk trough is secured directly to the wall with rawl plugs and screws or expansion bolts as conditions require. Maximum spacing of fasteners shall be on 12″ centers. Top and side mouldings shall be secured in like manner on 20″ centers.

display rails and accessories

The choice of 2″ map rails or 1″ map rails will depend upon the personal preference of the architect or educator. KOROK can provide either. Note, however, that cork inserts are available only with the 2″ map rail.

methods of installation

fixed (3″—1′-0″)
adjustable

KOROK adjustable hangers with clips are available where vertical adjustment of chalkboard and tackboard is required. Units are preframed at factory and installation is simplified by merely attaching adustable hangers to the wall with approved fasteners to suit job conditions. Panels are held in place with special clips developed for use with hangers. Clips and hangers are of rigid design and fastened in such a manner as to permit easy adjustability to various heights as required.

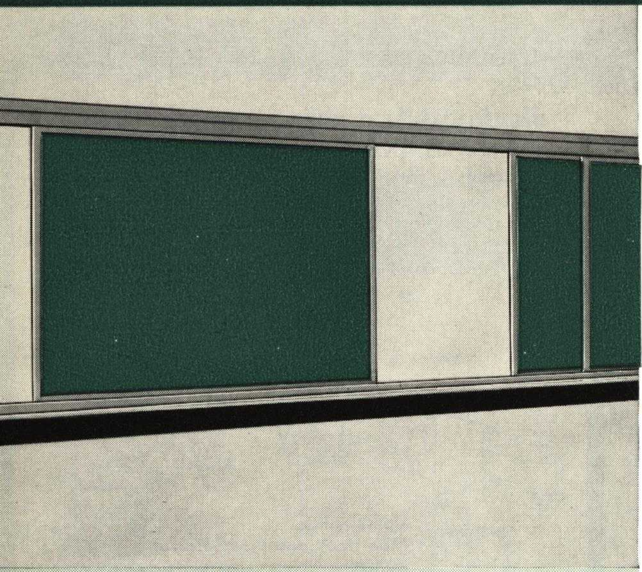
specifications

(Refer to page 3 for general specifications and for chalkboards [specify facing sheet only] and see page 18 for tackboards.)

INSTALLATION

Chalkboards and tackboards shall be factory laminated and preframed, as detailed.
Grounds are not required.
Facing sheet shall be factory laminated to ½″ core material and balanced with moisture-proof backing sheet, and the backing shall be bonded to the core material by means of special flexible adhesive with no unbonded areas.
Preframed boards shall be fastened to the wall by means of screws through the panel or trim. (If adjustable hangers are required substitute the following for the above paragraph:)
Preframed boards shall be installed by means of adjustable hangers and clips.

HORIZONTAL SLIDING INSTALLATIONS



"F" series

Horizontal sliding chalkboards give extra chalkboard and tackboard surfaces with minimum wall space. Chalkboard, projection screen and tackboard can be easily interchanged on the single wall facing the students. Students can see the maximum number of visual aids without turning in their seats.

The teacher can write exams on chalkboards, prepare exhibits, et cetera and keep them concealed until required. Sliding panels can be a combination of chalkboards and tackboards; chalkboards alone; or tackboards alone. Fixed chalkboard or tackboard panels hehind the sliding panels are optional, or this area may be used for a projection screen or storage area.

The details shown are for 2-track units. Units having 1, 3 or 4 tracks are also available; details on request.

Units are available up to and including 24′0″ x 4′0″ with all horizontal trim members to be in one piece. Larger units are made in two or more sections.

specifications

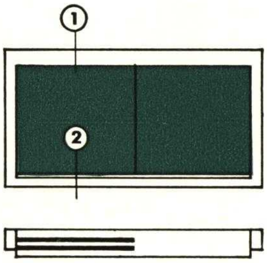
Furnish and install KOROK Horizontal Sliding chalkboard with panel units and track assembly as detailed on drawings.

Chalkboard to be (architect to select KOROK Mark I or Mark III—see page 3).

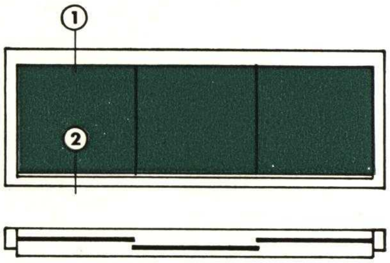
Tackboard to be (as selected by architect—see page 18).

Frame and exposed metal members to be of 6063T5 satin finished anodized aluminum extrusions with all corners reinforced with steel angles to form a rigid frame of sufficient strength to eliminate all vibration and chatter.

Rolling hardware to be of nylon tipped, ball-bearing rollers of sufficient size and number to enable smooth and easy operation of the panels.



2 track—2 panels

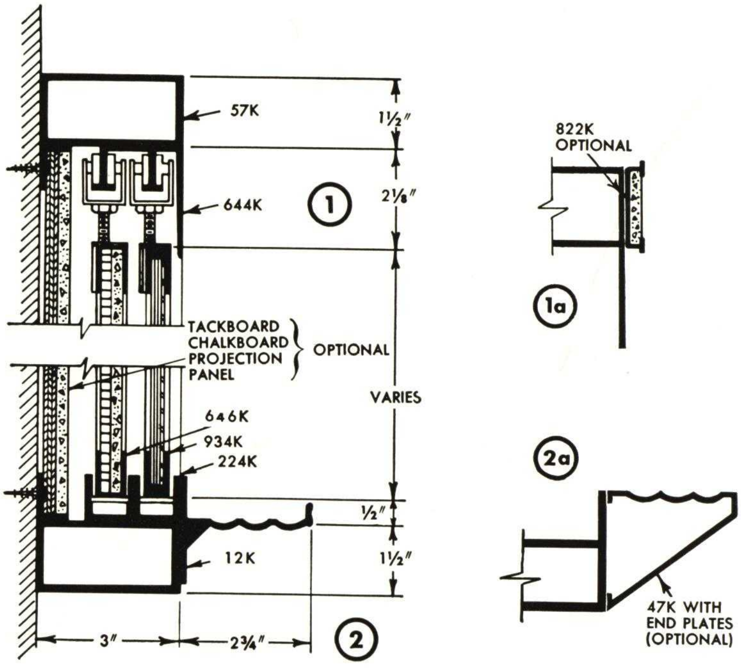


2 track—3 panels

2 track—4 panels

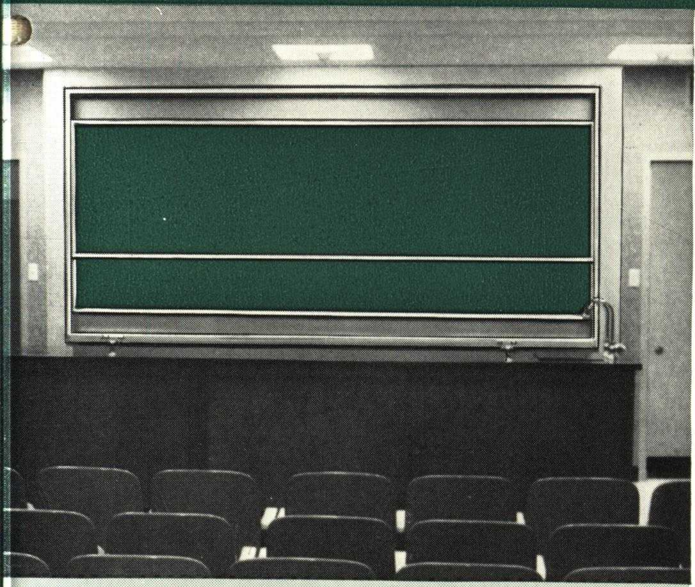
The sketches above show three arrangements of panels in a two track unit. Three or four track units permit even more flexibility of arrangement. KOROK engineers will be happy to work with the architect on special or unusual installations. See pages 3 and 4 of this catalog for a few examples of our custom work.

Scale 3″ = 1′-0″



VERTICAL SLIDING INSTALLATIONS

KOROK®



"E" series vertical sliders

These units provide maximum chalkboard and/or tackboard surface at the focal point in classrooms. The lecturer has the largest possible working surface within a step of his lecturn or microphone.

The panels can be moved up or down independently of each other and both can be lowered below the chalk tray and, when in this position, a projection screen, a fixed chalkboard or a fixed tackboard can occupy the space. See sketches in upper right-hand corner of this page. Note that when the unit is mounted above cabinets only half of the wall can be exposed.

Details show 2 track, 2 panel units. Units with 3 tracks and 3 panels are also available; details on request. KOROK Inc. will also be happy to work with the architect on custom or unusual installations, see pages 3 and 4 of this catalog.

Counterbalanced design assure easy manual operations of panels up to 12 ft. in width. Electric motor operation is recommended for wider units.

specifications

Furnish and install KOROK Vertical Sliding Chalkboard as detailed on drawing. Chalkboard to be KOROK Mark III in standard colors with plywood core and backed with a 24 gauge galvanized steel sheet. Tackboard shall be Tacktex cork in standard colors. Panels shall be trimmed with aluminum angles, anodized satin finished, reinforced with steel to minimized deflection.

Housing shall be of heavy extruded anodized satin finished, tempered, 6063-ST5 aluminum and designed to carry the complete load independent of walls.

Operation shall be by heavy duty chains and sprockets. Each panel shall be guided by a minimum of 4 self adjusting nylon rollers and 4 nylon tipped guides. Operation shall be easy, smooth, quiet and trouble-free.

(If unit is to be motor operated add the following:)

Unit shall be motor operated with an electric motor for each panel. Unit shall be equipped with push button, three position (up, down and stop) control switches and limit switches ready for hook up to 115 volt AC outlet.

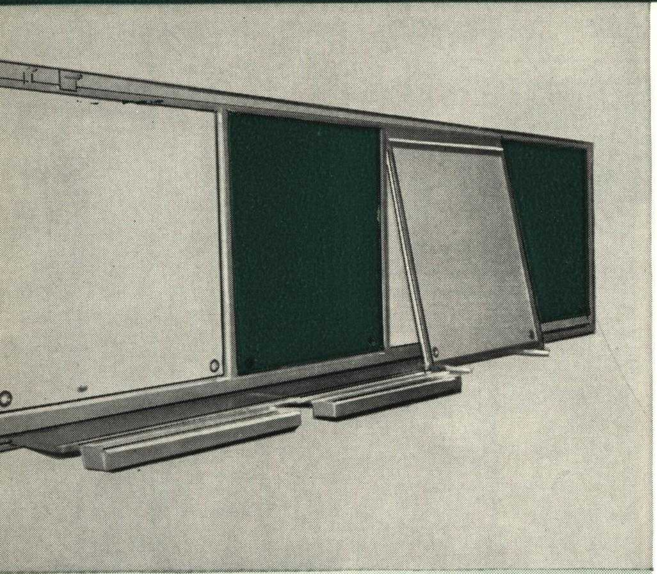
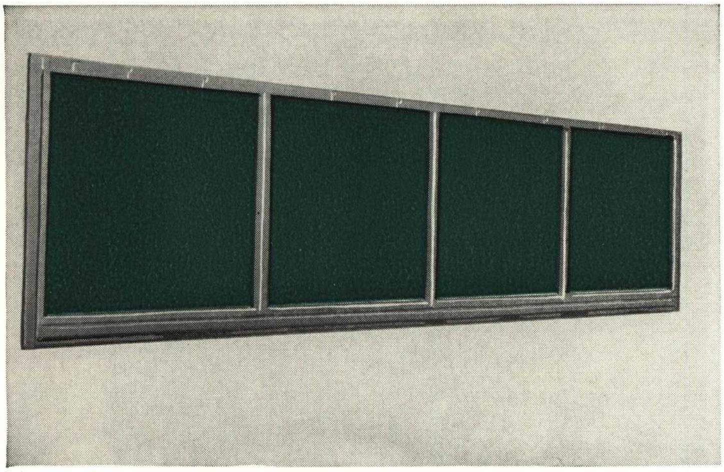
REVERSIBLE EASEL BOARD INSTALLATIONS





Ideal for multipurpose classrooms, this installation permits chalkboard panels to be removed and reversed converting chalkboard areas into tackboard areas. Or, the panels can be tilted to make easels by using the brackets which swing out from concealed position under chalktray. Steel paint trays are provided for attachment to the easel brackets. These various arrangements are easily set up by students.

Made in single or multiple units with individual panels in any size up to 48″ high and 54″ wide.

To provide additional storage, steel cabinets are available for recessing into the wall in back of the panel.

specifications

Furnish and install KOROK Reversible Easel Boards as shown in plans and elevations. All panels to be easily removable and reversible with chalkboard on one side and tackboard on the other side. Chalkboard shall be (architect to select KOROK Mark I or Mark III—see page 3) in standard KOROK color to be selected. Tackboard to be TAC-TEX.

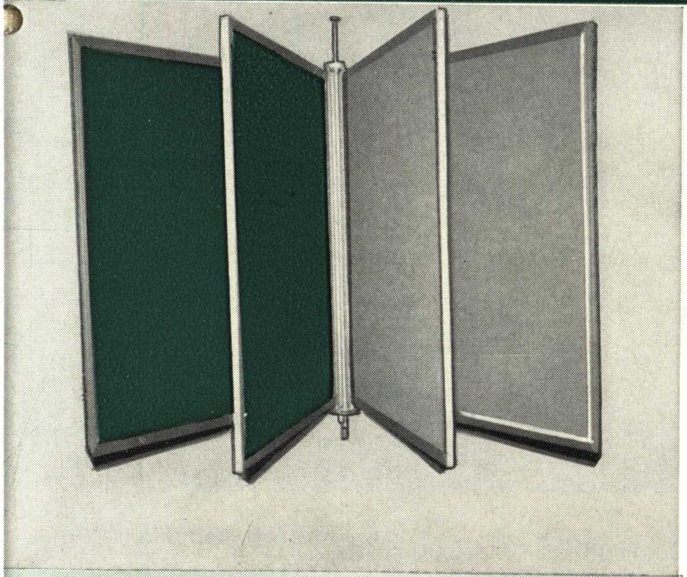
Vinyl tackboard (or TAC-TEX Cork—see page 18) in standard TAC-TEX color to be selected. Frame of individual panels as well as unit frame shall be 6063T5 satin finished anodized aluminum extrusions. Provide finger grip at the bottom of panels. Unit frame shall incorporate concealed spring clips to hold panels rigid when in vertical position for use as chalkboard or tackboard.

Easel brackets shall be notched for three different settings, shall include means to attach paint tray, and shall swing under chalktray when not in use. Steel paint tray shall be provided for each panel.

(If storage cabinets are required, add the following:)

Provide steel storage cabinets as indicated on the drawings. Openings for said cabinets shall be built into the wall by the general contractor; cabinets shall be furnished by the chalkboard supplier.

SWING-LEAF INSTALLATIONS



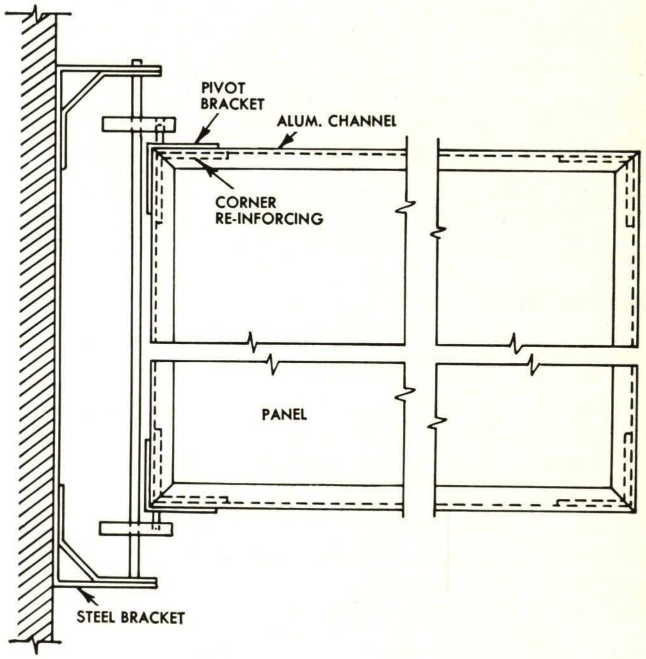
These units facilitate the arrangement of lecture or study aids in the proper sequence. The panels may be turned like the pages of a book as the material they contain is discussed.

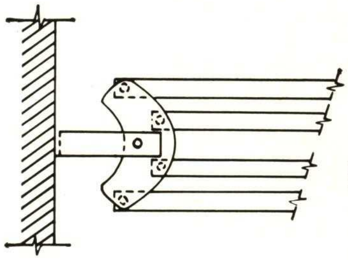
Being very versatile, these units are frequently used to complement other types of installations, see page 5 of this catalog.

Standard units consist of 2 to 6 panels (units with up to 12 panels are available if specified). Panel can be faced with either chalkboard on both sides or chalkboard on one side and tackboard on the other side, or cork on both sides. Pegboard is also available if specified. KOROK engineers will be happy to work with the architect on special or unusual panels.

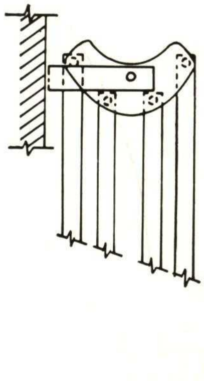
When not in use, entire unit swings 180° to either side, and lays flat against wall.

6″ = 1′-0″ no exposed fastenings.





PLAN VIEW
PANELS EXTENDED



PLAN VIEW
PANELS NEXT TO WALL

specifications

Furnish and install KOROK Swing Leaf Chalkboard and/or Tackboard Units as shown in plans and elevations. Each unit shall be furnished with ______ panels trimmed with heavy satin finished anodized aluminum channels. Corners of panels shall be reinforced with concealed steel angles and secured with machine screws. Brackets and hardware shall be finished to match frames. All panels shall swing 180° in either direction or fold flat against the wall to either side.

Faces of panels shall be KOROK Mark III Chalkboard and TAC-TEX Cork in standard colors according to the following schedule(s): (Architect to supply schedule.)

BULLETIN BOARD CASES

specifications

Furnish and install KOROK Hinged Door Display or Trophy Case Fronts where shown on the plans and elevations. All exposed metal shall be extruded aluminum 6063-ST5 alloy, anodized satin finish. Doors shall be ¼″ plate glass framed with heavy aluminum channels reinforced at all corners. Door framing shall not depend upon the glass for rigidity. Doors shall be equipped with continuous chrome plated brass piano hinges, locks, and elbow catches.

The rear wall of the case shall be fitted with TAC-TEX vinyl (or cork, see page 18) Tackboard in standard TAC-TEX color to be selected.

specifications

Furnish and install KOROK Sliding Door Display or Trophy Case Front where shown in the plans and elevations. All exposed metal shall be extruded aluminum 6063-ST5 alloy, anodized satin finish. Doors shall be ¼″ plate glass with special extruded aluminum "H" moulding at top and bottom and shall be provided with lock. Each door shall have finger slot; doors shall slide smoothly, easily and quietly and shall have nylon glides at the bottom and rubber guides at the top.

The rear wall of the case shall be fitted with TAC-TEX vinyl (or cork, see page 18) Tackboard in standard TAC-TEX color to be selected.

(Note: we suggest that the wooden portion of the display or trophy case, shelves, lighting fixtures, etc. be specified in other more appropriate parts of the specifications.)

KOROK, INC. proudly presents the new TAC-TEX line of tackboards made of KOROK-approved materials. These boards are designed for easy insertion and withdrawal of tacks, yet they hold tacks firmly. Tack holding power is retained even after repeated use of the same spot.

TAC-TEX VINYL

TAC-TEX VINYL TACKBOARDS consist of an embossed, self-healing, pliable vinyl surface laminated to fiberboard or cork with an adhesive specifically formulated for vinyl materials. The vinyl surface is impervious to water; marks made by ink, glue, crayon, etc. can be readily removed with water and mild detergent.

edge treatments

TAC-TEX VINYL TACKBOARD is available with plain edges for use with field-applied trim to match chalkboard trim, with factory-applied aluminum trim, and with wrapped edges when no trim is desired.

colors

TAC-TEX VINYL TACKBOARDS are available in eight standard, bright pastel colors which have been selected and field-tested to harmonize with colors commonly used in decorating contemporary classrooms. Special colors and patterns are available on request.

specifications

All bulletin and tackboard shown in plans and elevations shall be TAC-TEX VINYL No. _____ (see page 19) as furnished by KOROK, INC. in standard color(s) to be selected by architect. Edges shall be (state whether plain, aluminum trimmed or wrapped edges are desired). It shall be installed as detailed, by KOROK-trained personnel, according to manufacturer's instructions and thoroughly cleaned upon completion of installation.

TAC-TEX CORK

TAC-TEX CORK TACKBOARDS have a plastic impregnated surface for easy cleaning. Dirty finger marks and other smears are readily removed with a damp cloth. More stubborn stains are removed by scrubbing with abrasive soap and hot water. TAC-TEX cork has an exceptionally high cork granule content and has the excellent self-healing properties long associated with cork materials. (TAC-TEX CORK is also available without plastic impregnated surface.)

colors

TAC-TEX CORK is available in three standard colors which are uniform throughout, have excellent light reflectance, and harmonize with colors used in contemporary classroom decor. Special colors are available on request.

specifications

All bulletin and tackboard shown on plans and elevations shall be TAC-TEX CORK with plastic impregnated surface as furnished by KOROK, INC. in standard colors to be selected by architect. It shall be installed by KOROK-trained personnel according to manufacturer's instructions and thoroughly cleaned upon completion of installation. Where drawings indicate that it is to be applied to smooth plaster walls, use top quality linoleum paste. Where mounted cork is required it shall be factory cemented to 1/4″ hardboard for sizes up to 4 feet by 12 feet. For longer lengths it shall be field cemented to hardboard previously affixed to the walls by nails or screws.

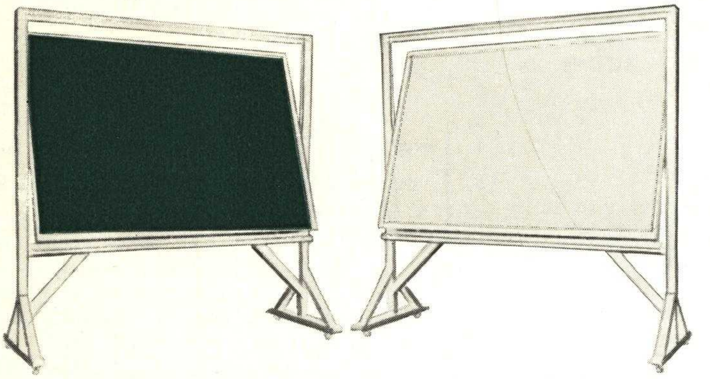
KOROK® CHALKBOARDS

ROLL-A-WAY chalkboards or tack boards

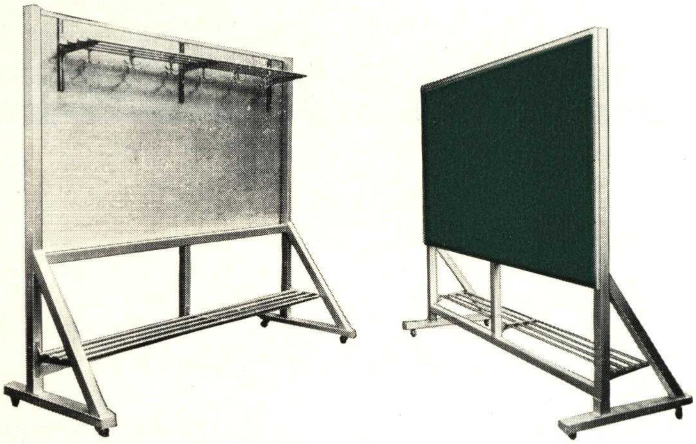
revolving—series H



Revolving Roll-A-Way Chalkboards or Tackboards are available with panel sizes from 3′ x 3′ to 4′ x 8′, with KOROK chalkboard on both sides, or cork one side and chalkboard other side.

Entire unit, including diagonal struts, is constructed of 2″ x 2″ x 1/8″ anodized satin finished aluminum tubing, with heavy aluminum plate corner angles, finish to match. Swivel ball-bearing rubber-wheeled casters permit ease of movement . . . (locking casters are available on request). Panel is framed with aluminum channel; it is centered and perfectly balanced. The panel is pivoted on a steel pin in a brass bushing; locking device is concealed underneath chalktray. To unlock simply pull catch and rotate. Map rail with accessories at head piece are optional equipment.

portable valet—series P-V and aluminum coat and hat and boot rack



Ideal for schools, churches, etc. where closets are unavailable and a combination heavy-duty portable Valet is required. Valet is similar in construction to revolving portable chalkboard except panel is permanently fixed to aluminum frame. Panel sizes are 3′ x 3′ to 4′ x 8′.

Unit is constructed of 2″ x 2″ x 1/8″ square aluminum tubing, anodized satin finish, reinforced with heavy aluminum plate at corners. Ball-bearing casters are optional equipment. KOROK chalkboard or TAC-TEX tackboard is available at front of unit. Reverse side of panel is finished with aluminum paint to match frame. Corkboard is mounted to 3/8″ plywood, which is trimmed with aluminum channel fastened to aluminum frame, thus helping to reinforce entire unit for a rigid portable coat and hat rack. Coat and hat racks are constructed of heavy aluminum tubing with rigid metal supports, available with or without coat hooks.

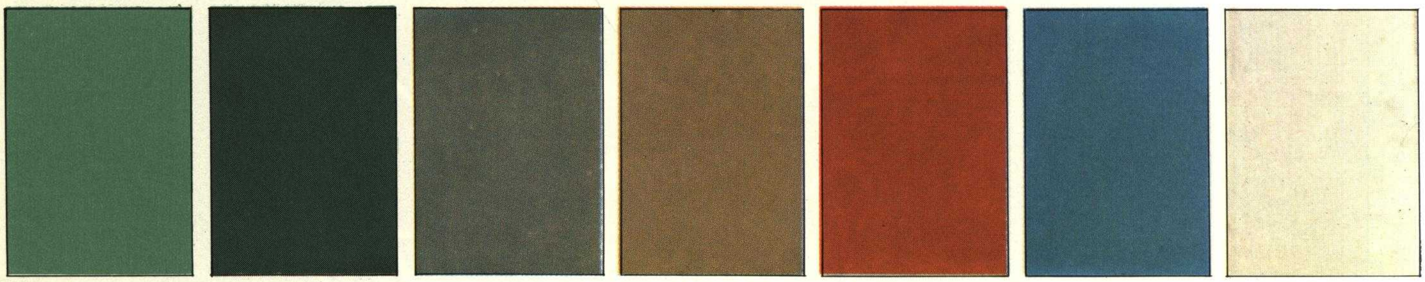
TABLE OF CONTENTS—*See Back Cover*

LOXIT CHALKBOARDS IN COLOR

Combines the latest scientific chalkboard color design with smart modern interior decoration. Available in the following Chalkboards KOMPO-LUX, PETRALOX, PORCELOX, (Porcelain Steel) and TRU-LUX.



RITE SPRING GREEN	RITE DARK GREEN	RITE GRAY	RITE TAN	RITE CORAL	RITE BLUE	RITE WHITE (IVORY)

BOARD TYPE	RITE SPRING GREEN	RITE DARK GREEN	RITE GRAY	RITE TAN	RITE CORAL	RITE BLUE	RITE WHITE (IVORY)	RITE BLACK
KOMPO-LUX ¼″	RS-100	RD-101	RG-102	RT-103	RC-104	RB-105	RW-106	RBB-107
PETRALOX	PRS-300	PRD-301	PRG-302	PRT-303	PRC-304	PRB-305	PRW-306	PRBB-307
TRU-LUX	TRS-400	TRD-401	TRG-402	TRT-403	TRC-404	TRB-405	TRW-406	TRBB-407

All eight colors are just RITE for low reflectance and high readability. Laboratory tests show a gloss of 3 to 4 on a Photovolt "C" unit. A reflectance of only 12% is shown on a Baumgartner reflectometer. Even after continued writing and erasing, it shows only 15% to 16% reflectance. Proper classroom reflectance should not be over 20%.

COLORED CRAYONS Loxit recommends Binney & Smith "Kleerwae" Colored Dustless Chalkboard Crayons, or approved equal for use with all Loxit Colored Chalkboards.

IMPROVED WASHABLE PETRALOX* CEMENT-ASBESTOS CHALKBOARDS

AVAILABLE in heights of 3½ and 4 feet and lengths of 4, 5, 6, 7, 8 feet. (Can easily be cut to required sizes on job.)

LOXIT PETRALOX CEMENT-ASBESTOS CHALKBOARDS have the fine writing surface and low reflectance for easy reading of high quality chalkboards. They erase easily and completely. They can be washed as often as desired since the finish is waterproof and the boards are treated with a waterproof back coating to seal out moisture. The base material is a combination of asbestos fibers and Portland cement compressed under high pressure to produce a board that has the stone-like characteristics expressed in its trade name—PETRALOX. The board is carefully prepared to provide a proper surface for the finish and assure uniformity in thickness.

Loxit PETRALOX Cement-Asbestos Chalkboards have a negligible co-efficient of expansion and contraction. They are fire-resistant, waterproof, easy to install and easy to maintain.

GUARANTEE: When installed in accordance with Loxit directions and subjected to normal chalkboard usage and maintenance, they are guaranteed against all chalkboard defects including bleeding for a period of ten years. Limited to furnishing of replacement chalkboards only.

TYPICAL LOXIT SHORT SPECIFICATION

All chalkboards shall be Loxit Washable PETRALOX Cement-Asbestos chalkboards PRS-300 RITE SPRING GREEN 3⁄16″ THICK *(or for alternate number and color see color chart above)* as manufactured by Loxit Systems, Inc., 1217 W. Washington Blvd., Chicago 7, Illinois, or approved equal. All chalkboards shall be in one piece up to eight feet long. Where the total length of chalkboards exceeds eight feet, same shall be neatly spliced with a Loxit metal divider strip finished to match the boards. All boards shall be installed strictly in accordance with manufacturer's shop drawings and/or directions using Loxit M-300 Super Adhesive.

LOXIT M-300 SUPER CHALKBOARD ADHESIVES

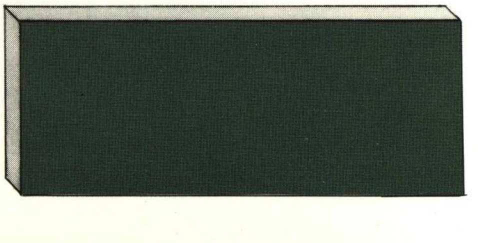
LOXIT
Super CEMENT
LOXIT SYSTEMS INC

A rubber base super adhesive. Easily applied, adheres readily with a firm bond. Available in quarts, gallons and 5-gallon drums. The best adhesive for LOXIT CHALKBOARDS and Loxikork mounted Tackboards. Instructions for proper use on every container.

For LOXITEX TACKBOARDS use M-350 SUPER adhesive.
For unmounted cork use M-250 STIKTITE adhesive.

LOXIT COMPOSITION CHALKBOARDS

KOMPO-LUX • KOMPO-CITE



The LOXIT COMPOSITION LINE of chalkboards meets all classroom requirements—Excellent Writing Surface—Easy Erasing—Strong—Waterproof. They can be washed as often as desired.

Available in ¼″ thickness—in standard heights of 3′—3½′—4′. Lengths of 3′ to 12′ in one piece. Can easily be cut to required sizes on job.

*Indicates Loxit Trademarks

LOXIT KOMPO-LUX* CHALKBOARDS

Available in EIGHT Beautiful Colors

TYPICAL LOXIT SPECIFICATION

Chalkboards shall be LOXIT KOMPO-LUX RS-100 RITE SPRING GREEN ***(or specify alternate number and color. See page 2.)***

¼″ chalkboards as manufactured by Loxit Systems, Inc., 1217 W. Washington Blvd., Chicago 7, Illinois, or approved equal. All boards shall be in one piece up to 12 feet long. Where the total length of chalkboards exceeds 12′ same shall be spliced with Loxit metal divider strips finished to match boards.

All boards shall have a base of smooth, grainless, long-fiber, all-wood material, carefully tempered and waterproofed. The writing surface shall consist of a primer and ground coat which shall be baked to a hard, non-porous surface by high temperature baking. This surface shall be water rubbed and followed with two coats of synthetic-plastic-resin-silicate compound sprayed on mechanically, after which the board shall be re-baked at high temperature to obtain a hard even chalkboard finish. Boards shall be installed strictly in accordance with manufacturer's shop drawings, and/or recommendations, using LOXIT M-300 Super Chalkboard adhesive.

GUARANTEE: When installed in accordance with LOXIT directions and subjected to normal chalkboard usage and maintenance, LOXIT KOMPO-LUX chalkboards are guaranteed for a period of 10 years against all chalkboard defects. Limited to furnishing of replacement chalkboards only.

LOXIT KOMPO-CITE* CHALKBOARDS

Available in TWO Colors Only. KR-99 RITE SPRING GREEN, KRD-98 RITE DARK GREEN

The same painstaking manufacturing care goes into the production of KOMPO-CITE Thrift Chalkboards as in the KOMPO-LUX boards. The same ingredients are used in the finish giving the same hard, non-porous, high-temperature baked texture although the finish is not as thick. The writing surface has the same smooth, even-writing qualities and has the same low reflectance for easy reading. It erases easily and completely and can be washed as often as desired.

TYPICAL LOXIT SPECIFICATION

All chalkboards shall be LOXIT KOMPO-CITE KR-99 RITE SPRING GREEN ¼″ board or ***(KRD-98 RITE DARK GREEN ¼″ board).***

All boards shall be in one piece up to 12 feet long. Where the total length of chalkboards exceeds 12 feet, same shall be neatly spliced with Loxit metal divider strips finished to match boards.

All boards shall have base of smooth, grainless, long fiber all-wood material, carefully waterproofed and tempered. The writing surface shall consist of a primer ground coat which shall be baked and water-rubbed followed with one coat of a synthetic-plastic-resin-silicate compound mechanically sprayed on. Same shall be converted to a hard non-porous surface by high-temperature baking. All boards shall be installed strictly in accordance with manufacturer's shop drawings and/or recommendations using Loxit M-300 Super Chalkboard Adhesive.

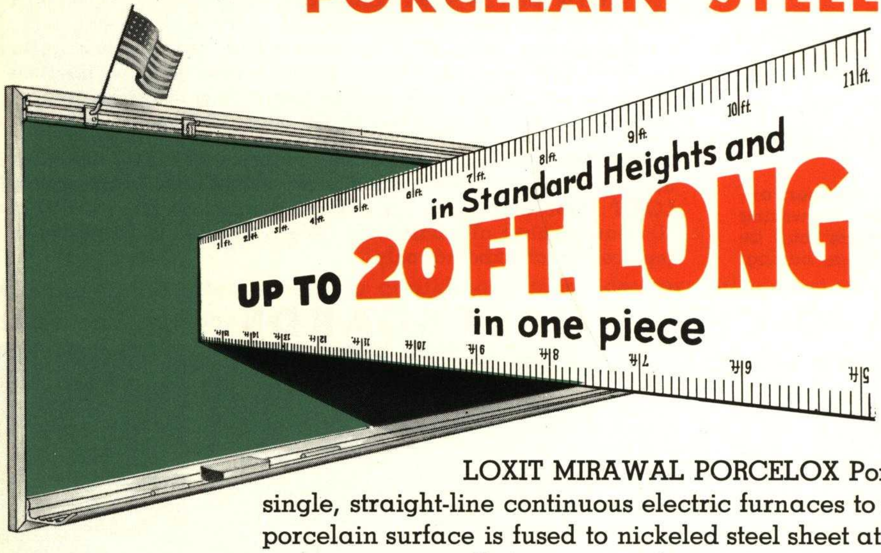
LOXIT MIRAWAL PORCELOX* (See page 12 for another New Board)

PORCELAIN STEEL CHALKBOARDS



Available in eight attractive colors—RITE SPRING GREEN, RITE DARK GREEN, RITE GRAY, RITE TAN, RITE CORAL, RITE BLUE, RITE WHITE (IVORY) AND RITE BLACK.

LOX-85 NU-VICTORY

(Available up to 4′ x 20′ in one piece.) Light gauge porcelain steel face laminated to 3/8″ LOX-A-KORE* with porcelain steel backing to balance chalkboard face sheet.

LOXIT MIRAWAL PORCELOX Porcelain Steel Chalkboards are produced in single, straight-line continuous electric furnaces to make the long lengths possible. The vitreous porcelain surface is fused to nickeled steel sheet at a closely controlled temperature of 1550°F, making it unexcelled as a porcelainized coating for all chalkboard uses.

Available to be trimmed on the job or as "PREFABS"—completely trimmed ready for fast, economical application directly on walls. Magnets can be used with all LOXIT MIRAWAL PORCELOX Chalkboards. Standard Heights 3′—3½′—4′. Standard Lengths in even feet up to 20′ long. ***(Intermediate lengths available on order.)***

CONSIDER THESE ADVANTAGES!

Available to you ONLY in LOXIT MIRAWAL PORCELOX

1. TWO TYPES AVAILABLE

LOX-85 NU-VICTORY LOXIT MIRAWAL PORCELOX—a light gauge porcelain steel chalkboard face sheet laminated to 3/8″ LOX-A-KORE with a porcelainized steel backing. Available up to 4′ x 20′—in one piece. It is approximately 1/2″ thick and will line up with Loxitex and mounted Loxikork tack boards without shimming. It is a balanced panel and can be applied to wall without adhesives, and it stays straight.

LOX-86 NU-IMPERIAL—available up to 4′ x 12′ on special order—laminated to 1/4″ exterior grade plywood with rust resistant metal backing sheet.

2. DURABLE AND PERMANENT

The vitreous inorganic porcelain chalkboard surface will not craze or crack. Shrinkage and expansion is negligible. Will take magnets.

3. SCRATCH AND IMPACT RESISTANT

The flint-hard porcelain surface provides high resistance against scratching and marring. Tests at least 6.5 on scale of Hardness of Minerals.

4. SANITARY AND EASY TO CLEAN

The glass-hard porcelain surface is impervious to acids, odors, greases and solvents. Easily cleaned with a damp cloth.

5. FIREPROOF CONSTRUCTION

LOXIT MIRAWAL PORCELOX chalkboards are fireproof. Will not support combustion.

6. LIGHT WEIGHT—SIMPLE TO INSTALL

The thinness of gauge about 0.020, which is adequate for all chalkboard requirements makes them light in weight, simple to install and easy to handle during erection.

7. EIGHT BEAUTIFUL FADEPROOF SCHOOL COLORS

Rite Spring Green, Rite Dark Green, Rite Gray, Rite Tan, Rite Coral, Rite Blue, Rite White (Ivory), and Rite Black.

8. COLORED CRAYONS

Loxit recommends Binney & Smith "Kleerwae" Colored Dustless Chalkboard Crayons, or approved equal for use with all Loxit Colored Chalkboards.

9. MAINTENANCE FREE AND ECONOMICAL

They are maintenance free except for cleaning. Will meet any reasonable budget both in the construction of the building and in its maintenance.

10. TRIMMED

Available untrimmed to be installed and trimmed on the job, or as "PREFABS" COMPLETELY TRIMMED ready to set in place, using any of the methods shown on page 6 or with the Loxit Miracle Adjustable Chalkboard Setting System as shown on page 7.

LOXIT MIRAWAL PORCELOX* PORCELAIN STEEL CHALKBOARDS

No adhesives are required for Loxit Nu-Victory boards.

A. TYPICAL LOXIT NU-VICTORY PORCELAIN STEEL CHALKBOARD SPECIFICATION

All chalkboards shall be LOXIT MIRAWAL PORCELOX ***(here specify number and color selection taken from color chart "A" such as LOX-RS-85 NU-VICTORY Rite Spring Green Chalkboards)*** as manufactured by Loxit Systems, Inc., 1217 W. Washington Blvd., Chicago 7, Illinois, or approved equal.

Chalkboards shall be high pressure laminated, three ply, fully balanced panels consisting of a light gauge porcelain steel chalkboard facing, (approximately 0.020) laminated to 3/8" LOX-A-KORE to which a porcelain steel backing sheet shall be laminated to balance panel. The chalkboard facing and backing sheets shall be processed in strict accordance with the recognized procedures of the PORCELAIN ENAMEL INSTITUTE for Architecturally Fired Porcelain. The chalkboard surface shall be composed of three coats of porcelain enamel as hereinafter specified. The base metal shall be enameling steel fully covered on both surfaces with a porcelain enamel ground coat and fired at temperatures sufficient to completely fuse the ground coats to the base metal. Base metal having aluminum or other processed firing agents will not be acceptable. On the chalkboard face of the metal sheet an intermediate coat of porcelain shall be applied over the ground coat, after which a writing surface shall be applied over the intermediate coat, both as separate operations and in thicknesses consistent with the standards recognized by the P.E.I. They shall be fired at a closely controlled temperature not less than 1550°F. The writing surface shall have a reflectance not greater than 20% nor less than 15% as recommended by the American Standard for School Lighting—and a hardness of not less than 6.5 when tested by Scale of Hardness of Minerals. The porcelain steel backing sheet shall be processed in the same manner as the chalkboard facing but need not be of chalkboard texture nor match in color.

All chalkboard panels shall be in one piece up to 4 feet in height and 20 feet in length, and in two panels of equal length for spans up to 36 feet inclusive.

Note to Architect: If chalkboards are to be set up and trimmed on the job see page 10 for Loxit TRU-SNAP aluminum trim or page 11 for Loxit SCREW-ON trim and specifications, and add this sentence "where total length of chalkboard assembly exceeds 20′, chalkboard shall be neatly spliced using Loxit metal dividers finished to match boards."

Note to Architect: If chalkboards are to be pre-fabricated—as we strongly recommend—add the prefabrication specification "B" shown below to typical specification "A" above.

B. TYPICAL LOXIT STANDARD PREFAB SPECIFICATION

All Loxit NU-VICTORY Porcelox chalkboard panels shall be completely factory prefabricated and trimmed by manufacturer ready to hang on wall—using Loxit channel section BB-244 S on jambs complete with head returns, combination channel map rail BB-824 S, with cork insert for head trim ***(see page 9 for colors)*** and angle chalktrough BB-830 S for sill. Chalktrough shall be pre-drilled and fitted but shipped separately for safety in transit for assembling at job. Furnish one combination map hook and paper clip for each 24" of map rail and one flag holder and one pair of roller brackets for each length of map rail. All trim and accessories shall be virgin 6063-T5 extruded aluminum anodized with Loxit never-tarnish Glo-Dull® finish. Chalkboard panels shall be secured to wall with screws and plugs and/or toggles as required.

Note to Architect: For short combination prefab and setting chalkboard specifications see page 6.

Note to Architect: See page 6 for specific methods of setting prefabricated chalkboard and tackboard panels as recommended by Loxit. If one of these methods is preferred to the above general clause underlined, substitute for the portion that is underlined the following—using the Loxit Chalkboard Setting System CSS-101 ***(or the alternate method preferred).***

Note to Architect: If the Loxit Miracle Chalkboard Adjustable Setting System is preferred, see page 7, and substitute for the portion that is underlined the following—using the Loxit Miracle Chalkboard Adjustable Setting System CSS-100.

TACKBOARDS—See page 8 for LOXITEX tackboards including prefabs and page 9 for LOXIKORK tackboards including prefabs.

GUARANTEE: Loxit guarantees that all NU-VICTORY LOXIT MIRAWAL PORCELOX chalkboards are manufactured in accordance with the performance specifications established and recommended by the Porcelain Enamel Institute Inc. PEI: S-104 dated August 1956. They are guaranteed to provide satisfactory trouble-free service for the lifetime of the building when installed in same, in accordance with Loxit recommendations and subjected to normal schoolroom usage and maintenance. This guarantee is limited to the furnishing of replacement chalkboards only.

VALUABLE PREFABRICATION INFORMATION

Loxit factory prefabricated "Pre-Fab" Chalkboards and Tackboards not only assure a precision trimmed panel but they greatly simplify the field work by reducing the time, effort and expense of installation to a fraction of what field trimmed boards cost.

In addition, factory prefabricated Chalkboards and Tackboards are far more flexible than field installed and trimmed boards. By using the proper type of board and the proper type of installation the boards are adjustable, and either removable or exchangeable.

Detail sheets suitable for tracing showing the prefabrication and installation methods of chalkboards and tackboards are available upon request without obligation. See pages 6 and 7.

PRE-FABRICATED NU-VICTORY CHALKBOARDS

Available in standard heights and up to 16 feet long in one piece.

Prefabricated Tackboard Panels ½″ thick (T-901 C, T-501 C, T-401 C) are available up to 4 feet high and 16 feet long—in one piece. Panels using ¼″ cork mounted on ¼″ plywood or ¼″ hard board are limited to 4′ x 12′ in one piece. (See page 9).

Note to Architect: We recommend the use of our typical Standard "Prefab" Specification shown on page 5 as meeting all requirements for this very practical as well as very beautiful new type of chalkboard-tackboard construction, but the Typical Short Combination Prefab-Setting Chalkboard-Tackboard Specification which follows can be used if preferred.

TYPICAL SHORT LOXIT "PREFAB" CHALKBOARD SPECIFICATION—including setting system.

All Chalkboards and Tackboards shall be LOXIT Prefabs as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois, or approved equal, in accordance with the Loxit typical standard prefabrication specification and details. They shall be installed using Loxit Typical Chalkboard Setting System CSS-102. ***(Note to Architect: See page 6 for details showing CSS-100 as well as other alternates). If the Loxit Miracle Chalkboard Adjustable Setting System is preferred change portion underlined to read:*** Loxit Miracle Adjustable Chalkboard Setting System CSS-100.

KINDER-GARTEN
HIGH SCHOOL COLLEGE

USING LOXIT PREFABRICATED CHALKBOARDS AND TACKBOARDS

Due to rapidly changing school room requirements there is a need for a Chalkboard-Tackboard Setting System that will provide for the rapid, easy, changing of board heights above the floor, as well as for the easy changing of boards for other sizes, colors, locations or combinations.

The New LOXIT MIRACLE Adjustable Chalkboard and Tackboard Setting System offers a solution that is practical, safe, economical, easy to install and easy to use, in fact that solves all these problems. All parts are cadmium plated to match Loxit anodized "GLO-DULL" chalkboard trim finish.

The Loxit CH-9 Standards should be spaced about 30" o.c. and unless detailed or specified otherwise will be furnished on this basis, with quantities and kinds of clips required for the job. They can be installed by any carpenter or maintenance man. Directions accompany each shipment. Detail sheets suitable for tracing available upon request without obligation. Also sample model.

RECOMMENDED LOXIT SHORT SPECIFICATION

All chalkboards and tackboards shall be installed using the Loxit Miracle Chalkboard Adjustable Setting System CSS-100 as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois, strictly in accordance with manufacturer's shop drawings and/or directions.

NEW LOXIT WONDER* SHELVING SYSTEM

It is adjustable in every dimension, shelf height and spacing, number of shelves and length of assemblies. Brackets are cadmium plated to match Loxit Glo-Dull trim used on chalkboards and tackboards.

It can be used separately or in combination with the Loxit Miracle Chalkboard and Tackboard Setting System, as indicated above.

See page 12 for further details and specifications.

---

*Above systems covered by Urbain patent No. 2,285,632 and other patents applied for.

LOXIT *Colorful* LOXITEX* TACKBOARDS

The LOXIT LOXITEX line of tackboards provides a surface of genuine VICRTEX electrically-fused vinyl-coated fabrics laminated under high pressure to a treated pulpboard backing. LOXITEX is easily cleaned; is stain, fire and soil-resistant; will not crack, chip, peel or scratch. It is available in six fadeproof colors at no extra cost: Limed, White, Cinnabar Coral, Sand Tan, Celadon Blue, Sandalwood Brown and Willow Green in deep-molded, three-dimensional patterns to eliminate disturbing reflections. LOXITEX tackboards remain pliable and spongy even under long, hard usage. Pins and tacks go in easily, hold tight, and holes are self sealing when tacks are removed.

PRE-FAB TRIMMED LOXITEX TACKBOARD

A. TYPICAL LOXIT TACKBOARD SPECIFICATION

All tackboards shown in the drawing and/or called for in the specifications shall be LOXITEX tackboards as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois, or approved equal. They shall be fabricated from genuine heavy weight Vicrtex electrically-fused coated fabrics, in ***(Specify number and color here such as Willow Green T-206X).*** All tackboards shall be factory laminated under high pressure to a backing of treated pulpboard, assuring tight, uniform panels.

B. ***If panels are to be TRIMMED on job add to typical specification "A".*** All panels shall be cut flush on all four sides to be trimmed on job. Where total length of tackboards exceed 12′ the panels shall be neatly spliced with a Loxit metal divider finished in color to match boards.

C. ***If panels are to be furnished with HEMMED EDGES add to typical specification "A".*** All panels shall have hemmed edges with corners neatly tucked in. When total length of tackboards exceeds 12′ long the panels shall be neatly butted together.

D. ***If panels are to be prefabricated add to typical specification "A".*** All panels shall be LOXIT factory prefabricated ready to hang on the wall, using Loxit BB-244 S channel trim on the four sides. Same shall be of virgin 6063-T5 extruded aluminum anodized with the LOXIT never-tarnish GLO-DULL finish to match chalkboards. Panels shall be secured to walls with chrome plated oval head screws and plugs and/or toggles as required ***(or using the Loxit standard CSS-101, or other hanging system preferred as shown on page 6)*** tackboard setting system or approved equal. Furnish and apply Loxit M-350 super Loxit tackboard adhesive to back of panels and/or on walls in globs to bind the central area of panels to wall surface in accordance with manufacturer's directions. All panels shall be in one piece up to 4′ x 12′ long. When the length of tackboard exceeds 12′ long, the panels shall be neatly butted together.

Note to architect: PREFABRICATED Loxitex tackboard panels 4 feet in height are available in one piece up to 16 feet in length at a small increase in cost. If wanted substitute 4′ x 16′ for 4′ x 12′ underlined in prefabrication specifications "D" above.

E. ***Note to architect: BALANCED LOXITEX PANELS are available with hemmed edges or as "prefab" for easel use or to hang on walls without the use of adhesives and/or to be set up separately or in combination with chalkboards using the Loxit Miracle Adjustable Chalkboard and Tackboard Setting System. The length of balanced Loxitex panels for these uses is limited to 8′ long since no adhesives are required. It is possible to easily, quickly and economically relocate the panel or exchange them for panels of other sizes, colors or finish.***

F. ***If wall hung hemmed edged Balanced Loxitex tackboards are wanted add the following to typical specification "A".*** All panels shall be BALANCED panels with edges hemmed and corners neatly tucked in ready to hang on wall without adhesives. Same shall be applied to walls, using chrome plated oval head screws, washers and plugs and/or toggles as required for a secure, neat and workmanlike job strictly in accordance with manufacturer's shop drawings and/or directions. All panels shall be in one piece up to 4′ x 8′ in size.

G. ***If wall hung "Prefab" Balanced Loxitex tackboards are wanted add the following to the above specifications "A".*** All panels shall be Balanced Loxitex panels completely prefabricated ready to install without the use of adhesives. Same shall be trimmed on all four sides with Loxit BB-244 S channel trim which shall be virgin 6063-T5 extruded aluminum anodized with the never-tarnish Loxit Glo-Dull finish. All panels shall be secured to wall with the Loxit CSS-101 ***(or CSS-103—see page 6)*** Tackboard Setting System strictly in accordance with manufacturer's shop drawings and/or directions. All panels shall be in one piece up to 4′ x 8′ in size.

H. ***If Prefab Balanced Loxitex Tackboards are to be installed separately or in connection with chalkboard using the LOXIT MIRACLE Adjustable Chalkboard Setting System, substitute the following for the underlined portion of specification "G".*** All panels shall be installed using the LOXIT MIRACLE Adjustable Chalkboard Setting System CSS-100.

TYPICAL SHORT SPECIFICATION—All tackboards shall be LOXIKORK tackboards as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois, or approved equal. ***(Here specify name and number of board selected from schedule above).*** Boards shall be in one piece up to 4 x 12 feet. Where splices are required same shall be butted in a neat workmanlike manner ***(or if preferred, specify Loxit metal divider finished to match cork).*** All boards shall be set strictly in accordance with manufacturer's shop drawing and/or directions using Loxit M-300 super adhesive for mounted cork or M-250, if unmounted.

Note to Architect: Certain Prefabricated Loxikork tackboards are available in one piece up to 4 x 16 feet. When wanted use the following specification.

PREFABRICATED LOXIKORK SPECIFICATION—All tackboards shall be Loxikork prefabricated tackboards as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois, or approved equal. Same shall be Loxit number T-901 C ***(choose T-501 C or T-401 C if preferred).*** They shall be in one piece up to 4 x 16 feet. They shall be trimmed on all sides with Loxit BB-244 S channel trim which shall be virgin 6063-T5 extruded aluminum, anodized with Loxit never-tarnish Glo-Dull finish to match chalkboards. All boards shall be set strictly in accordance with manufacturer's shop drawings and/or directions using screws and plugs and/or toggles, and Loxit super adhesive M-300 following instructions on container as required.

BALANCED PREFAB LOXIKORK SPECIFICATION—All tackboards shall be Loxit Prefabricated BALANCED LOXIKORK Tackboards as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois. Boards shall be in one piece up to 4 x 8 feet. They shall be trimmed on all sides with Loxit BB-244 S channel trim. All trim shall be virgin 6063-T5 extruded aluminum anodized with Loxit never-tarnish Glo-Dull finish to match chalkboards. Same shall be installed as separate units or in combination with chalkboards using Loxit Miracle Adjustable Setting System CSS-101 strictly in accordance with manufacturer's shop drawings and/or directions.

LOXIT M-250 STIKTITE ADHESIVE

(For *unmounted* cork only)

Loxit M-250 Stiktite adhesive was developed especially for the installation of UNMOUNTED cork and NOT for use with Loxikork Mounted Panels or Chalkboards—See box below. Use strictly in accordance with directions on each container. Available in quart, gallon, and five gallon containers.

For Loxitex use LOXIT M-350 Super Adhesive
For Loxit Chalkboards and mounted cork use LOXIT M-300 Super Adhesive

†Due to the high cost of raw materials these three colors are available only on special order.

TYPICAL LOXIT SHORT *TRU-SNAP* TRIM SPECIFICATION

SCOPE AND MATERIALS—Furnish and install all chalkboards and tackboards using Loxit Tru-Snap extruded virgin 6063-T5 aluminum alloy chalkboard trim as manufactured by Loxit Systems, Inc., 1217 West Washington Blvd., Chicago 7, Illinois, or approved equal. Same shall be anodized in the Loxit never-tarnish GLO-DULL finish. Furnish in stock lengths to be cut, mitered and fitted on job. Same shall be complete with Loxit grounds as required.

TRIM—All jamb, mullion and head trim shall be Loxit fluted type trim. BB-805 C or BB-808 as required on job. ***(Plain trim is available if preferred).*** Same shall be complete with return corner fittings as required.

MAP RAILS—Where map rails are called for, same shall be Loxit BB-822 or BB-823 combination cork strip and map rail as required by job. ***(Note to Architect: Specify BB-820 if plain map rail without cork is preferred).***

CHALK TROUGHS—Chalk trough shall be Loxit closed horizontal type trough BB-832 complete with sweep-out end fittings. ***Note to Architect: If inclined closed type with crayon groove at the front is preferred, specify BB-838.***

ACCESSORIES—Contractor shall provide one pair of roller brackets and one flag holder for each run of map rail and one combination Loxit map hook and paper clip for each 24" of map rail.

SHOP DRAWINGS—Contractor shall furnish shop drawings to be provided by LOXIT SYSTEMS, INC. for architect's approval before starting job. He shall furnish manufacturer with complete information including overall job dimensions and such drawings, specifications and details as may be required by manufacturer in order to provide adequate shop drawings. All work shall be done strictly in accordance with manufacturers shop drawings and/or directions.

PROTECTION—The contractor shall be responsible for protection when, as, and if required.

TYPICAL LOXIT SHORT SCREW-ON TRIM SPECIFICATION

SCOPE AND MATERIAL—Furnish and install all chalkboard and tackboard trim as required by plans and specifications using LOXIT VICTORY SCREW-ON trim as detailed and specified in manufacturers 1958 chalkboard catalog or approved equal. Same shall include map rails, either as intermediate rails or as head trim as required. Furnish one combination map hook and paper clip for each 24″ of map rail; one flag holder and one pair of roller brackets for each span of map rail. Same shall be of virgin 6063-T5 aluminum alloy anodized in the Loxit never tarnish GLO-DULL finish. Materials shall be furnished in stock lengths to be cut, mitered and fitted on the job as required.

SHOP DRAWINGS—Contractor shall furnish shop drawings to be provided by LOXIT SYSTEMS, INC. for architect's approval before starting job. He shall furnish manufacturer with complete information including overall job dimensions and such drawings, specifications and details as may be required by manufacturer in order to provide adequate shop drawings. All work shall be done strictly in accordance with manufacturers shop drawings and/or directions.

PROTECTION—The contractor shall be responsible for protection when, as, and if required.

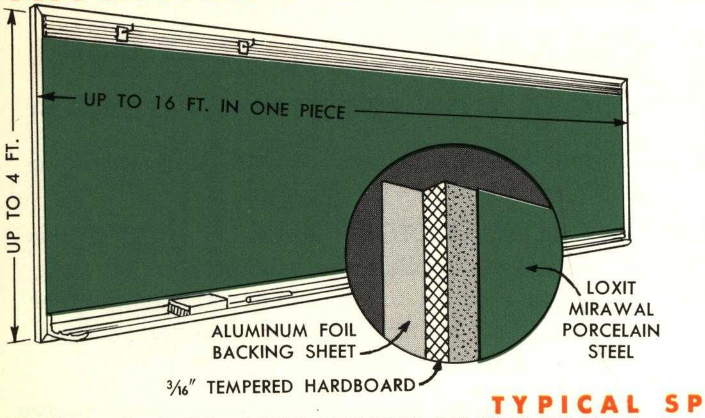
ANOTHER NEW LOXIT PORCELAIN STEEL CHALKBOARD

LOX-88 NU-SIMPLON



UP TO 16 FT. IN ONE PIECE
UP TO 4 FT.
ALUMINUM FOIL BACKING SHEET
LOXIT MIRAWAL PORCELAIN STEEL
3/16" TEMPERED HARDBOARD

This Loxit Mirawal Porcelain Steel Chalkboard is available in standard heights and up to 16′ long—and a full 3/16″ thick. It is available in the eight Loxit colors. (See page 4).

It can be pre-trimmed with a simple edging or applied direct to the wall to be trimmed after installation.

The same LOXIT MIRAWAL PORCELAIN STEEL sheet that is now used in its NU-VICTORY and NU-IMPERIAL boards is laminated to a 3/16″ tempered hard board which has been sealed against wall moisture with an aluminum foil vapor barrier backing sheet. The total thickness is 3/16″ plus.

This is a top quality PORCELAIN STEEL CHALKBOARD in a thrift price bracket. It writes beautifully, erases easily and can be washed as often as desired. It is easy to install and simple to maintain. LOXIT guarantees its new LOX-88 NU-SIMPLON Porcelain Steel Chalkboard as it does all of its products, in accordance with its high quality standards of doing business.

TYPICAL SPECIFICATIONS

Chalkboards shall be LOXIT LOX-RS-88 NU-SIMPLON Rite Spring Green Porcelain Chalkboard ***(or specify color and symbol RD, RG etc. as shown on page 4)*** as manufactured by Loxit Systems, Inc., 1217 W. Washington Blvd., Chicago 7, Illinois, or approved equal.

Porcelain Steel Chalkboard facings shall be high pressure laminated to 3/16″ tempered hardboard core panels which shall be back-sealed against moisture absorption with a vapor barrier composed of a sheet of aluminum foil laminated under high pressure.

The chalkboard facings shall be processed in strict accordance with the recognized procedures of the PORCELAIN ENAMEL INSTITUTE for Architecturally Fired Porcelain.

The base metal shall be enameling steel fully covered on both faces with a porcelain enamel ground coat and fired at temperatures sufficient to completely fuse the ground coat to the base metal. Base metal having aluminum or other processed firing agents will not be acceptable. A writing surface of porcelain shall be applied over the ground coat, as a separate operation, in a thickness consistent with the standards recognized by the P. E. I., and shall be fired at a closely controlled temperature not less than 1550° F. The writing surface shall have a reflectance not greater than 20% nor less than 15% as recommended by the American Standard for School Lighting—and a hardness of not less than 6.5 when tested by Scale of Hardness of Minerals.

All chalkboard panels shall be in one piece up to 4 feet in height and 16 feet in length, and in two panels of equal length for spans up to 32 feet inclusive. Where the total length of chalkboard exceeds 16′—and the boards are not pre-trimmed—they shall be neatly spliced with a Loxit metal divider strip furnished to match the board.

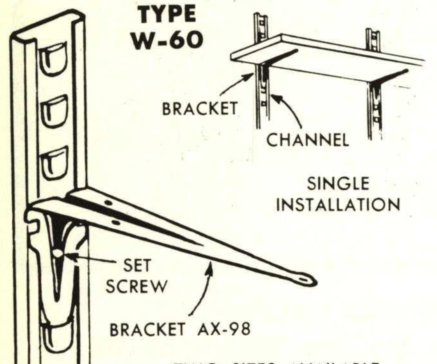
NOTE TO ARCHITECT: If boards are to be pre-trimmed specify— "All chalkboards shall be factory pre-trimmed with LOXIT GLO-DULL chalkboard edging. Furnish and install LOXIT BB-830 chalktrough and LOXIT BB-824 map rail with one map hook per 18″ of map rail, one pair of roller brackets and one flag holder per chalkboard unit."

If boards are to be trimmed after installation, specify — "All boards after installation shall be trimmed with LOXIT VICTORY SCREW-ON aluminum chalkboard trim. Furnish one map hook per 18″ of map rail, one pair of roller brackets and one flag holder per chalkboard unit."

All boards shall be installed strictly in accordance with manufacturer's shop drawings and/or directions, using LOXIT M-300 super chalkboard adhesive. ***(Specify back-plastering or other backing to build up a thickness of greater than 3/16″ if required).***

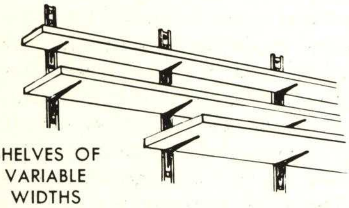
LOXIT WONDER* ADJUSTABLE SHELVING SYSTEM

TYPE W-60

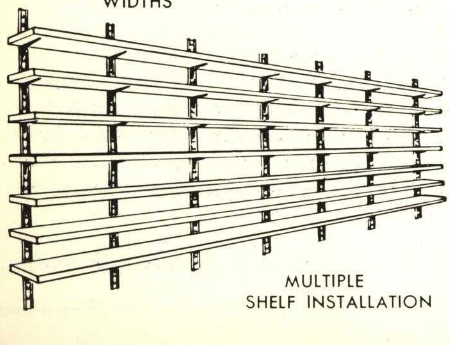


TWO SIZES AVAILABLE

3½″ for shelving up to 5″
7½″ for shelving up to 10″



SHELVES OF VARIABLE WIDTHS



MULTIPLE SHELF INSTALLATION

Loxit Wonder Adjustable Shelving System Type W-60 can be used separately or in combination with the Loxit Miracle Chalkboard Adjustable System by setting the narrow shelf above the board for various types of small displays, models, flowers, etc. and the wider shelf under the board for books and articles normally used in the class room. Very handy for one or a few short shelves hung on the wall almost anywhere and at any height—or for a stand of shelves as shown.

The new Loxit WONDER Shelving System is adjustable in every dimension. Shelf heights, shelf spacing, number of shelves, length of assemblies. Brackets are cadmium plated to match the Loxit Glo-Dull trim used on chalkboards and tackboards.

The brackets interlock in standards and when locked cannot be moved without unlocking.

Both types W-60 and W-70 are thrifty, neat, simple, practical and safe. They provide adjustable shelf assemblies that any carpenter or maintenance man can put up, adjust or move in a few minutes.

TYPICAL SHORT LOXIT SHELVING SPECIFICATION

TYPE W-60—Adjustable shelves shall be furnished as shown on drawings and/or called for in specifications using the Loxit Wonder adjustable shelving system Type W-60 as manufactured by Loxit Systems, Inc., 1217 W. Washington Blvd., Chicago 7, Illinois. Shelving shall be furnished by others. They shall be installed strictly in accordance with manufacturer's shop drawings and/or directions.

TYPE W-70—Loxit "Wonder" Adjustable Box Shelving System Type W-70 is a box type set up with almost unlimited possibilities in design and scope, and use of color and materials.

Note to Architect: If type W-70 is preferred simply substitute the type designated W-70 for W-60 in above specifications.

Detail sheets suitable for tracing available upon request without obligation, also sample models of standards and brackets.

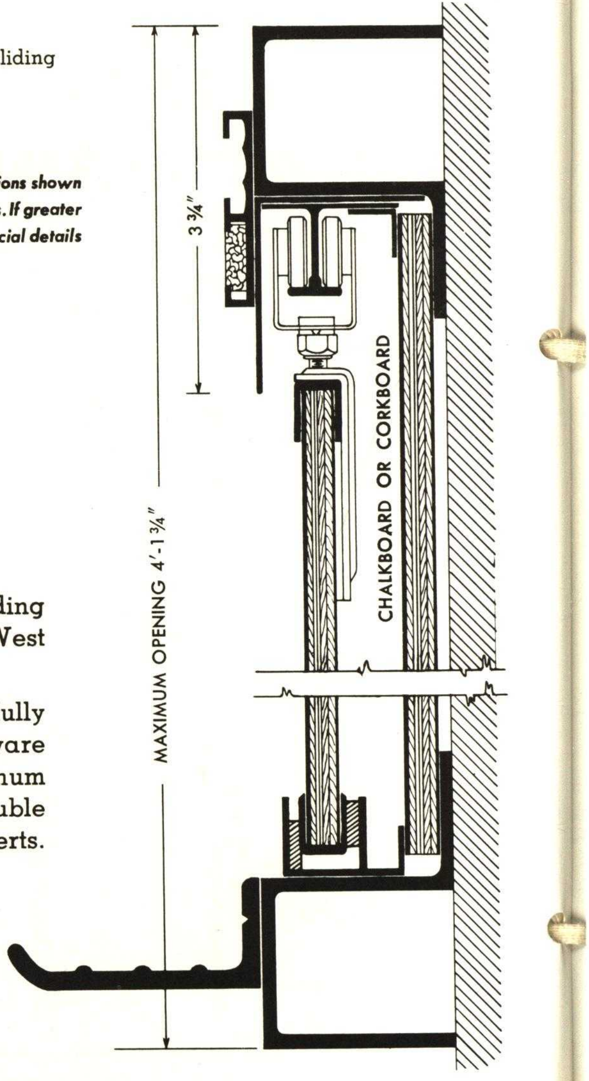
Fixed back panel with four sliding panels on two tracks.

Note to Architect: 16' O. D. dimensions shown above represent standard assemblies. If greater space is desired, we will furnish special details to meet job requirements.



SPECIFICATIONS

Where shown on plans furnish and install LOXIT Victory horizontal sliding chalkboards as manufactured by LOXIT SYSTEMS INC., 1217 West Washington Blvd., Chicago 7, Illinois, or approved equal.

All outer framing to be virgin 63-S extruded aluminum, heat treated, fully anodized in accordance with LOXIT GLO-DULL process. Sliding hardware shall be of overhead design consisting of heat treated extruded aluminum track and matching formed steel bracket carriages equipped with double pairs of heavy duty nylon rollers with self lubricating ball bearing inserts.

Chalkboards shall be of balanced panel design triple-ply laminated at 125 psi. to insure minimum panel deflection. Each sliding chalkboard panel shall be furnished in one piece free of joints and splices and surfaced with LOXIT RITE GREEN (or DARKRITE GREEN) KOMPO-LUX (or PORCELOX) finish. Manufacturer shall submit detailed shop drawings for Architects approval.

***NOTE TO THE ARCHITECT:** The free-sliding chalkboard panels in LOXIT'S vertical assemblies are engineered to meet the exact span and load requirements of each specified unit. Our research has provided us with panel construction designs which offer an absolute minimum of panel deflection through the center line of the board when subjected to direct horizontal pressure. LOXIT free-sliding chalkboards will not warp.*

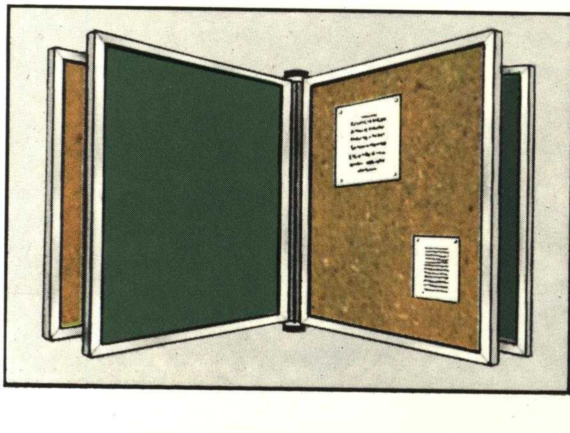
SPECIFICATIONS

Where shown on plans furnish and install LOXIT VERTICAL SLIDING CHALKBOARDS Type VX-30 (or VX-31), as manufactured by LOXIT SYSTEMS INC., 1217 West Washington Blvd., Chicago 7, Illinois.

All outer framing to be 14 ga. CRS with baked prime coat. Head assembly shall have machined aluminum pulley blocks equipped with pressed steel, self lubricated, ball bearing sheaves. Jamb track and guide members shall be of heat treated extruded aluminum fully anodized in accordance with LOXIT GLO-DULL process.

Sliding chalkboards to be of balanced panel design, triple-ply laminated at a minimum of 125 psi with thickness engineered to insure minimum panel deflection. Chalkboard surface shall be LOXIT RITE GREEN (or DARKRITE GREEN)—KOMPO-LUX (or PORCELOX) furnished in one piece free of joints and splices. Vertical edges of chalkboard panels shall be equipped with non-friction guides. Manufacturer shall submit detailed shop drawings for Architects approval.

LOXIT *VICTORY* "EASY-TO-SEE-AND-USE" SWING PANEL BULLETIN BOARD



Brackets are heavy semi-circular, beautifully finished fittings in which the panels pivot to a full 180° position. All trim is Loxit *GLO-DULL aluminum finish which stays permanently beautiful. It is designed to match the Loxit TRU-SNAP Chalkboard Trim.

All panels are finished both sides with RITE GREEN Chalkboard or LOXIKORK. Available in standard units of 4, 5, or 6 panels in sizes 36″ x 36″, 36″ x 42″, 36″ x 48″.

Special sizes and combinations of panel finishes—including RITE GREEN lined or scored boards—available on order.

*Reg. U. S. Pat. Office

LOXIT VICTORY REVERSIBLE EASEL BOARDS are available on order. Blueprints including scale details suitable for tracing and complete Loxit specifications covering same are available to architects on request.

LOXIT FLOOR LAYING SYSTEM

The Loxit wood floor laying system is designed to lay ordinary tongue and groove strip flooring mechanically. It is composed of a channel with turned-in edges and a uniquely designed clip. No nails, no adhesives, no wood sleepers. Limits expansion and compensates for reasonable contraction in wood floors. Especially recommended for large areas, and on concrete slab construction.

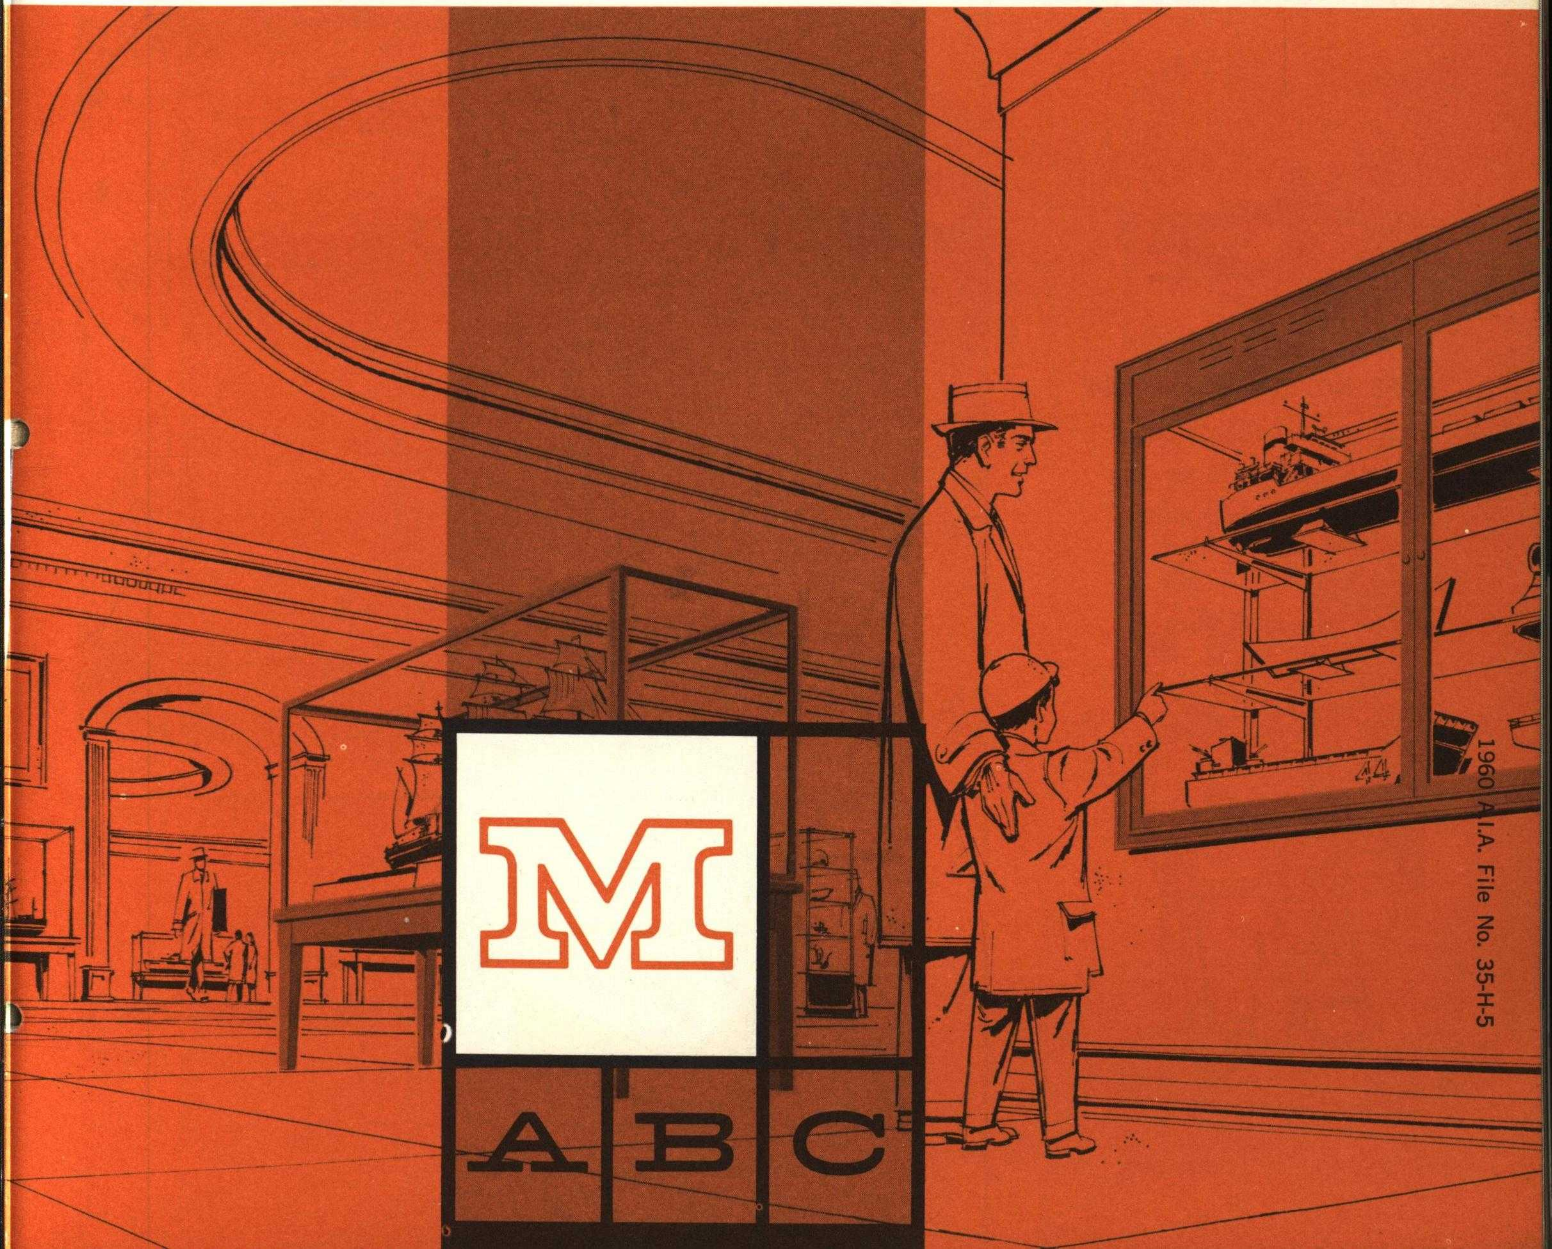
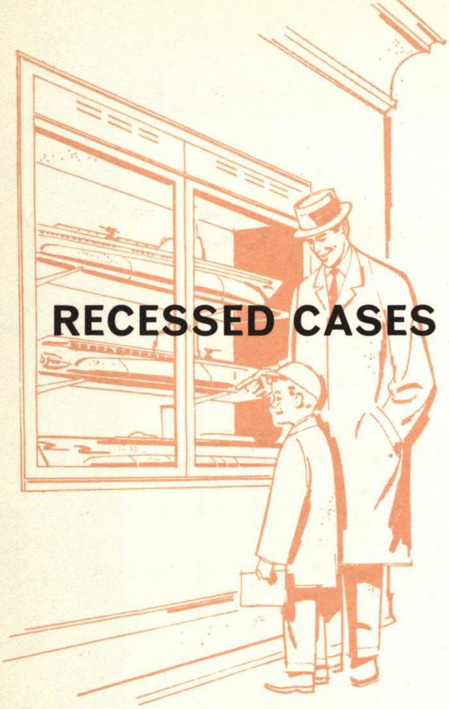
AISLE CASES • WALL CASES



1960 A.I.A. File No. 35-H-5

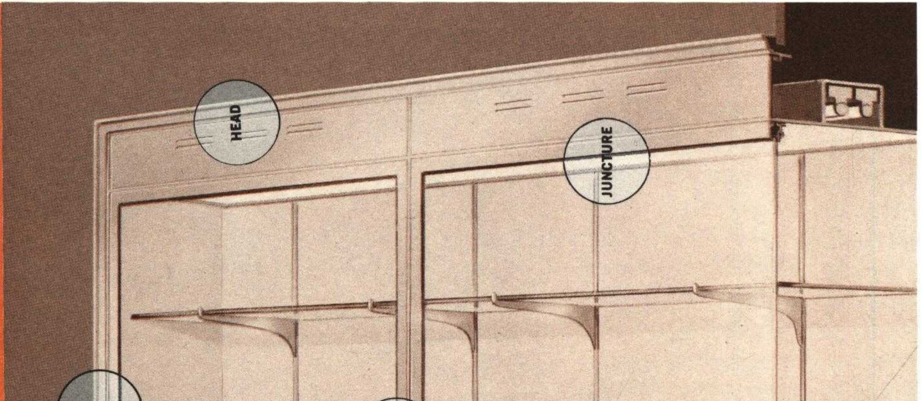
RECESSED CASES



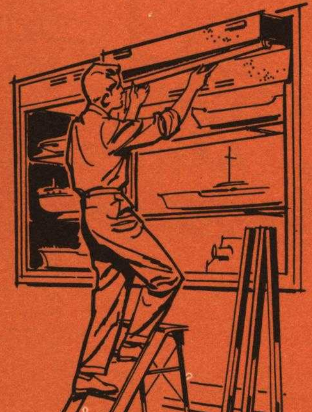
DESCRIPTION: Recessed exhibit cases are available with bronze or aluminum frames. If specified, removable panels may be substituted for standard hinged panels. Interiors may be wood or metal and may accommodate cork (bulletin case) or a grooved (directory cases) backboard. Case dimensions are variable to suit the wall openings or displayed materials. Glass shelving is ¼" plate with polished edges as required. Heavier shelving may be supplied on request. All shelves are supported on corner brackets or arm brackets. An overhead double line fluorescent light reflector is featured in Case #350, adjustable front to back for best lighting effect. Servicing is easy as the lighting unit is extractable through the front hinged access panel. Cases may be used singularly or in continuous runs with mullion dividers and diaphragms.

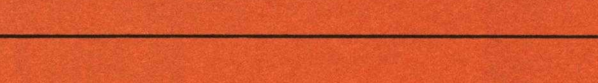
MODELS:

No. 350—Wall Case, adjustable overhead lighting and hinged access panel.
No. 300—Wall Case, fixed overhead lighting serviced from case interior.
No. 360—Bulletin Case, lighting omitted, but available. Cork faced backboard.
No. 370—Directory Case, lighting omitted, but available. Grooved backboard for changeable lettering.
No. 380—Poster Case, fixed overhead lighting and cork faced backboard.



TYPE NO. 350 WALL CASE
Front hinged access panel may be lowered to service adjustable lighting unit.





Double line light reflector is adjustable front to back.

LIGHTING ACCESS DETAIL

SPECIFICATIONS:

1. GENERAL CONDITIONS

a. The General Conditions of the contract for the construction of buildings, standard form of the American Institute of Architects and the Supplementary General Conditions are part of this contract.

2. SCOPE

a. Contract for this portion of the work shall furnish all materials, equipment, services and labor required for the fabrication, delivery and erection of case specified herein except electrical connections.

b. Materials

Frames	Anchors and Fasteners
Glass	Locks
Enclosure	Hardware

c. Shop drawings shall be submitted for this portion of the work for approval by the architect. No work shall be started until the shop drawings have been approved.

3. CASE MANUFACTURER

a. All exhibit cases shall be Type No. ____ as manufactured by the Michaels Art Bronze Co., Inc., as detailed on the contract drawings.

b. Cases of other qualified manufacturers shall be considered only by written approval of the architect prior to the bidding due date.

4. MATERIALS

a. Frame—Extruded aluminum alloy 6063-T5 or extruded architectural bronze alloy.

b. Glass—¼″ polished plate or other as specified.

c. Interiors—special as required for type.

d. Locks—Paracentric locks are standard in locked cases.

e. Hardware—Shelving supports are corner brackets or arm brackets as specified.

5. FINISH

a. Satin finish is standard for both aluminum and bronze. Other special finishes are available on request.

6. ERECTION

a. Erection shall be performed only by highly skilled mechanics experienced in this type of work, and under the direct supervision of a qualified representative of the case manufacturer.

b. Adjustment of the case shall be performed by the manufacturer after completion of the entire job.

c. Final cleaning and protection of finishes shall be the responsibility of the general contractor, who shall be required to provide suitable protection for the work during and after installation.

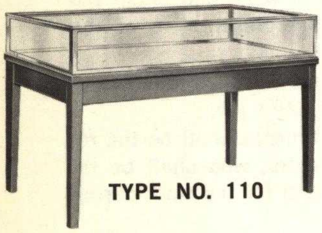
TABLE, AISLE AND WALL CASES:

DESCRIPTION: Michaels' exhibit cases are tastefully designed to blend with the quiet dignity of monumental building types. They have been used successfully in museums, art galleries, libraries, universities, clubs, banks, or governmental buildings. All Michaels' exhibit cases have interlocking metal frames built to guard against the ingress of dust, vermin and moisture. Cases can be completely dismantled and reassembled by ordinary mechanics.



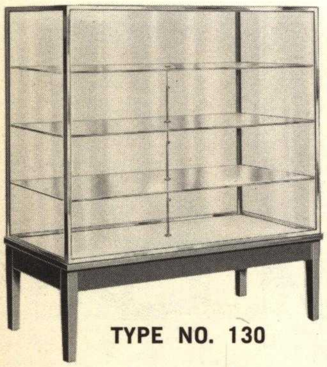
TYPE NO. 110

TABLE CASES:

No. 110 – Top lid hinged, having two point lock and lid supports. Dimensions overall: 36″ high, 60″ wide, 28″ deep. Base 29½″ high. Also available with apronless table.

No. 111 – Dimensions same as Type No. 110, except base is 26½″ high. Also available with apronless table.

No. 120 – Top sloped lids hinged, having two point lock and lid supports. Dimensions overall: 39″ high at center, 36″ high at side, 60″ long, 47½″ deep. Base 29½″high. Also available with apronless table.



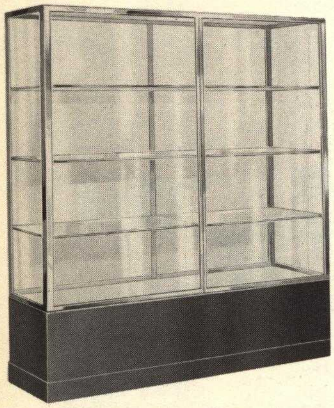
TYPE NO. 130

AISLE CASES:

No. 150 – Two hinged panels on each side. Six glass shelves adjustable every inch, supported by arm brackets on center standards. If preferred, removable panels can be substituted for hinged panels. Dimensions overall: 78″ high, 79⅝″ wide, 32″ deep. Base 20½″ high. Interior diaphragms of plywood may be used. Similar cases composed of any number of panel sections can be supplied.

No. 160 – End panels hinged. Three glass shelves adjustable every inch, supported on corner brackets and telescopic standards at center. Dimensions overall: 66″ high, 60″ wide, 24″ deep. Base 18½″ high. Also available with apronless table.

No. 170 – End panels hinged. If preferred, removable panels can be substituted for hinged panels. Dimensions overall: 74″ high, 68″ wide, 34″ deep. Base 32½″ high. Also available with apronless table.



TYPE NO. 160

WALL CASES:

No. 130 – Front panels hinged. Six glass shelves adjustable every inch. Solid back panels. If preferred, removable panels can be substituted for hinged panels. Dimensions overall: 78″ high, 83⅝″ wide, 15¾″ deep. Base 20½″ high. Similar cases composed of any number of panel sections can be supplied.

No. 140 – Front panel hinged. Three glass shelves adjustable every inch. Solid back panel. If preferred, removable panel can be substituted for hinged panel. Dimensions overall: 78″ high, 42″ wide, 15¾″ deep. Base 20½″ high.

No. 180 – Front center panel hinged. Six glass shelves adjustable every inch. Solid back panels. If preferred, removable panel can be substituted for hinged panel. Dimensions overall: 78″ high, 69¼″ wide, 15¾″ deep. Base 20½″ high. Center section 37⅝″ wide.

No. 190 – Corner wall case. Front center panel hinged. Three glass shelves adjustable every inch. Two back panels are solid, 29⅝″ deep overall. Two end panels are 16⅛″ deep and center face panel is 18¾″ wide. Overall height, 78″. Base height, 20½″.

No. 200 – Suspended Wall Case. Front panel hinged. If preferred, removable panel can be substituted for hinged panel. Dimensions: Should be determined by available wall space and type of exhibits. Suggested size: 37½″ wide, 47½″ high, 13½″ deep. Two glass shelves adjustable every inch. Similar cases composed of any number of panel sections can be supplied.

Complete catalogue on Time-Tight exhibit cases is available on request.

NATURAL SLATE CHALKBOARDS

. . . because young eyes deserve the best

long wearing dependability
excellent writing qualities
low maintenance cost

natural slate . . . 500 million years in the making

NATURAL SLATE BLACKBOARD CO. *pen argyl, pennsylvania*
MEMBER—PENNSYLVANIA SLATE PRODUCERS GUILD

SPECIFICATIONS

for slate chalkboard installations

Work Required—This contractor shall furnish and install Natural Slate Chalkboards (specify height: 3 ft., 3 ft. 6 in., and 4 ft. stock sizes) in all classrooms and other portions of the building as shown or noted on the plans, sections or detail drawings.

Quality and Finish—Chalkboards shall be of selected natural slate as quarried in the U. S. A., free from ribbons and physical properties that would impair its functional use and durability as a writing surface.

The exposed face shall be surfaced to its natural plane, honed to a smooth finish for easy writing and erasing.

Sizes and Lengths—Slate to be not less than ¼ in. nor more than ⅜ in. thick. A maximum deviation of 1/16 in. from this thickness will be permitted, when an average thickness of at least ¼ in. is maintained, except that double surfaced slate shall be uniform thickness.

The lengths of slabs in each space shall be in accordance with the U. S. Department of Commerce Simplified Practice Recommendations No. 15, as follows: Up to 5 ft., one slab; over 5 ft., but not exceeding 9 ft., two slabs; over 9 ft., but not exceeding 13 ft. 6 in., three slabs; over 13 ft. 6 in., but not exceeding 18 ft., four slabs; over 18 ft., but not exceeding 22 ft. 6 in., five slabs; over 22 ft. 6 in., but not exceeding 27 ft., six slabs.

Joints shall be symmetrically spaced, i.e., slabs forming each space shall be approximately equal in length with a variation not greater than 3 in. in either direction of what would be equal spacing. Allowance of ¼ in. clearance shall be made at trim in both length and width for fitting.

Spotting Compound—After plastered surfaces have hardened and immediately before setting the slate, "PYRAMID" SPOTTING and BEDDING COMPOUND or other approved fibrous, bituminous, compound shall be applied. "Spots" approximately ¼ in. thick and 4 to 6 in. in diameter shall be placed at intervals not exceeding 18 in. in each direction on back of each slab, after which each slab of the chalkboard shall be pressed into place forming a solid continuous, even plane, jointed between each slab.

Cement Joints—A thin strip of "PYRAMID" Jointing Compound shall be applied to the adjoining joint edges of each slab to form as tight and invisible joint as possible.

Rubbing Joints—Upon completion of setting, uneven joints shall be thoroughly honed and finished so that the space has the appearance of a continuous smooth plane.

Final Cleaning—All slate chalkboards shall be cleaned and left ready for use.

correlative provisions

Include Under Carpentry Work

Grounds—This contractor shall furnish and securely fasten kiln-dried wood "ground" strips (¾ in. thick or other thickness according to plastering) in accordance with detailed drawings at top, bottom and ends of all spaces to be occupied by blackboards. Grounds shall be set to accurate levels and true planes.

Trim—Wood trim furnished by the millman (see Mill Work) shall be securely fastened to "ground" strips by the carpenter. Trim to include chalk trough and apron as detailed. (If wire covers are to be installed in chalk troughs, specify here.) After Blackboards are installed, a quarter round shall be securely fastened to surrounding trims and chalk trough, firmly holding slate in place. Carpenter contractor will be responsible for any damage to Blackboards in so doing.

Include Under Plastering Work

This contractor shall plaster all spaces back of Blackboards with a scratch or brown coat, floated to a true plane and in perfect alignment within ¼ in. of the face of ground strips (Carpentry Work). Unfurred outside walls shall be given two coats of damp-proof paint before plastering.

Include Under Painting

All Blackboard trim (except inner loose quarter round) shall be completely finished before Blackboards are installed. Inner loose quarter round shall be finished (all except last coat, which shall be applied after quarter round is attached).

Painting contractor will be responsible for any damage to Blackboards by varnish or other painter's finish.

correlative provisions for metal trim

Metal trim furnished by either the slate contractor, or applicable contractor prevailing for the job, shall be aluminum with dull alumilite finish, as per detail illustrated, or approved equal. All trim and chalk trough shall be in single lengths insofar as possible, and shall be straight, true, and free of defects.

Sliding map hooks and map winders for map and display rail, together with flag holders, shall be furnished as specified. Specify (quantities).

Furnish and erect continuous metal grounds in true alignment, securely fastened by approved attachments for either plastered or unplastered walls.

Trim and chalk trough clips and clamps of approved sizes, thicknesses, and spacings shall be secured to grounds in such a manner to receive trim and to provide permanent alignment of chalkboard face.

Samples of metal trim, chalk trough, grounds, clips, and clamps shall be submitted for approval prior to starting the erecting work.

After chalkboards and corkboards have been installed, the chalk trough and metal trim shall be attached to the clips and clamps in an approved workmanlike manner, subject to the approval of the architect.

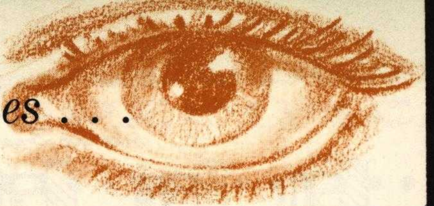
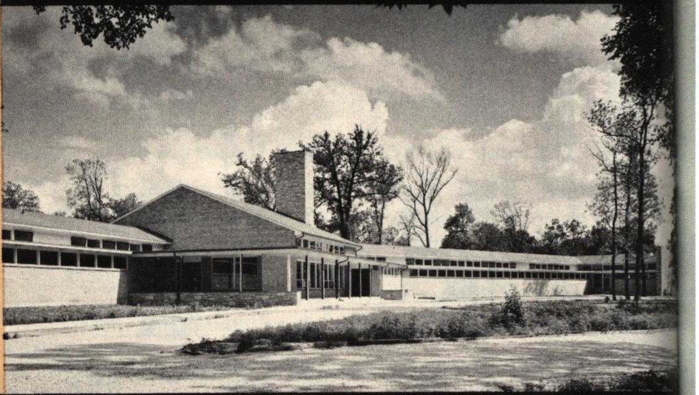
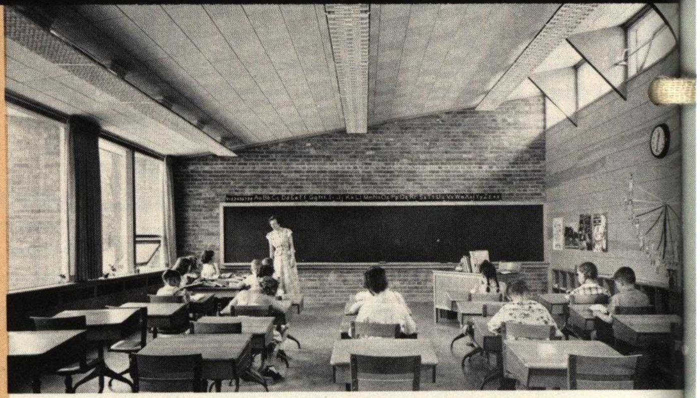
WOOD TRIM



natural slate provides . . . superior visibility





Optimum visibility . . . the ability to perceive the written message with a minimum of optical effort . . . is made possible by the high degree of contrast between message and background. Of all available boards, natural slate provides maximum contrast with chalk, assuring the quickest, easiest perception of the writing task with the least amount of eye strain.

Witness the following:

Research Division of NEA recommends high contrast between chalk and writing surface for maximum visibility.

Westinghouse research shows that high reflectivity in substitute boards provides less visibility and contrast than that obtained from a board of lower reflectivity. **Dr. M. A. Tinker** of the **University of Minnesota** has determined that a high degree of contrast is a more important factor than the supposed "eye ease" colors . . . that any sacrifice of this high degree of contrast between message and background is considered undesirable.

A thorough examination of the chalkboard question will prove Natural Slate to be easiest to see . . . to budget . . . to adapt to color schemes . . . best attention catcher . . . having longest life . . . best writing qualities. An honest appraisal of these facts will show that Natural Slate was, is and will be the classic chalkboard for classrooms past, present and future.

There are reasons which prompted the choice of slate chalkboards in such exemplary schools as are pictured here.
